Historically this period has been styled as the "Dark Age" of India, since no proper records covering the period are available. However, this period is of great importance with brisk social activities, as surmised from the references of later period works, and codification of various social aspects to avoid degeneration of society. This resulted into social awakening with different schools of thought. Literature of this period is considered to cover a very wide range of topics and it produced Sanskrit dictionaries, Sutra and Smriti texts, Shilpa Samhitas, other Samhitas (compilation texts) and commentories on earlier works in an attempt to interpret and search knowledge in Vedic as well as other earlier texts and to give a regularised structure with all its rigidity. The aphoristic Sutra literature is a special literary feature and reveals the nature of agriculture of the period in dealing with domestic duties connected with gardening and other agricultural aspects. It is also probable that independent agricultural texts might have been composed (Kautiyla's Arthashastra refers to some much older works entitled "Vrikshayurveda" and 'Krishi-tantra') Buddhist 'Jatakas' and Jain literature also produce a picture of this pre-Buddhist period.

It is generally noted that the whole Indian sub-continent was a net work of villages and some towns. Agriculturally they representated the intensive, extensive and mixed types of farming. Land holdings were from very small but manageable sizes to even 8,000 acres (1,000 Karisas) well fenced, watched, properly demarcated with stones, fences or irrigation channels as stated by R. N. Mehta (1939).** Drought and flood troubles were not uncommon the question posed even since the Rig Veda times. Many cultivated crops are mentioned. Flowers and fruits were innumerable with flourishing trade, and a good horticultural knowledge had developed as revealed by the maintenance of various parks and gardens as pleasure resorts and sources of fruits and vegetables. It is naturally expected that the various references to earlier 'Vrikshayurveda' works (either independently or forming parts of some of the 'Samhitas' Puranas, Arthashastras, etc., of later period) might be of the texts mostly belonging to this post-epic period. Cattle were the wealh, they were well cared for, and their various products better utilised. Breeding for quality was practised. However, the actual methods of cultivation of the various crops, to enlighten on the principles of crop husbandry cannot be properly stated from the available literature. It is surmised that there was much advancement in these respects. Some facts of cultivation are mentioned in Buddhist and some Sanskrit texts. This is also the period of introduction of many foreign cultivated plants.

Smriti literature and Dharma Shas-

tried to codify agricultural occupation to avoid confusion in society and to encourage development of efficiency in specific arts and professions ultimately for national welfare. Puranas of this period are considered to be not available. If available the medical and botanical (Vrikshayurveda) texts can give better information on the agricultural standard. It is observed that the degeneration of society had affected the agricultural field also, as Smritis had to codify the acts free from fear of any kind of pilferage from various agencies, within and without, by prescribing severe penalties against sources of troubles. Thus the need of this vital occupation.

Buddhist Period

This period is usually taken from 7th century B.C. till the start of Christian Era. It has produced some of the most important compilations as well as original works, based on references from many former ancient texts most of which are now considered extinct. Better known Sutras and other literature belong to this age—(Texts on agriculture, engineering, biology, chemistry, meteorology, astronomy, astrology, medicines, etc.). Kautilya's Arthashastra, Jain and Buddhist literature, records of Greek ambassador Megasthenes and other Greek writers are important references. All these produce a glorious picture of the administration, in which agriculture was a systematic and regulated State Department with extension type work.

Importance of the care of animal life and prevalence of vegetarianism received maximum support during this period. From this cult agriculture in widder spheres developed to a high status. Even hospitals for animals were opened by King Asoka. In the royal polity, as discussed by Kautilya, various duties of Revenue and Agriculture Departments are mentioned for the welfare of farmers (in irrigation, stock farming, arable farming for grain, fruits and vegetables). The rules for the guidance of these officers, in different sectors, are sufficiently exacting though brief. He advises every one to cultivate the land and even the "Sudras" were not forbidden as was done previously. Different crops—cereals, pulses, oilseeds, fibres, fruits, vegetables, etc., were grown and Pandits warned people about the on-coming droughts and floods, weather conditions, etc. A pattern of cooperation in agriculture and social life in villages seems to be the dominating feature of the latter half of this period. Various details of rules for different agricultural operations indicate that the practical side of good crop and animal husbandry was well understood. Agricultural aspects included the study of other sciences as 'Vrikshayurveda' formed a part of the broad agricultural science 'Krishitantra' (Kautilya, Chapt. 24), Plant Science, was studied and much valuable information is available (Mujumdar, 1927 and 1951).

Panini (middle of 6th century B.C.) who produced the famous Sanskrit grammer, referred to many works of Parashara besides that on agriculture. However, Parashara's agricultural text (in its original form) is not available. Study of different texts of Panini[5] gives very valuable information on agriculture. Even the commentary of Brihatsamhita (early 6th century A.D.) by Bhattapala (10th century A.D.) refers to some Samhita texts of this period, giving many references to varied agricultural aspects. Some texts on Veterinary Science belong to this period but they are not available in original form. Other medical texts cover many crops, their products and their nutritional and other properties. Authorities on Arthashastra and Rajniti were more liberal than those on Dharmashastra in allocating various professions to different classes.

Megsathenes in describing India of his times (4th century B.C.) referred to huge mountains with fruit trees, plains of great fertility, large-scale irrigation and double cropping and great skill of the cultivators. He referred to agricultural conditions[6] as: "In addition to cereals there grows throughout India much millet, which is kept well-watered by the propulsion of river streams, and much pulse of different sorts, and rice also and what is called 'bosporum,' as well as many other plants useful for food of which most grow spontaneously. The soil

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

yields, moreover, not a few other edible products fit for the subsistence of animals about which it would be tedious to write. It is accordingly affirmed that famine never visited India, and that there has never been a general scarcity in the supply of nourishing food. There is a double rainfall in the course of each year . . . always gather in good harvests annually. The points, moreover, of spontaneous growth, and esculent roots which grow in marshy places and are of varied sweetness, afford abundant sustenance for man." Kautilya had emphasised the importance of the State Administration of agriculture and other related departments for such prosperous agriculture. The observations of Megasthenes were confirmed and enriched further by other Greek authorities (Diodonis, Strarbo, Arrian) who came after him during the fourth and third century B.C.

Early Christian Era (Upto 650 A.D.)

The period is noted with brisk activities and great prosperity in many spheres and high standard of social life[7]; of many cultivated plants from the Middle East and East Sea Islands through trade and other channels. A broad outline of the progress in the art and science of crop production and other agricultural enterprises, as continued from the later Buddhist period and progressing further, can be had from Sukraneeti of first century A.D. and "Brihat-Samhita" of Varahamihir (early 6th century A.D.), medical texts, some 'Puranas', Sanskrit works of Kalidasa, and other texts and inscription records. Sukraneeti (Chapters IV. II. I.) refers to high intellectual standards and alround economic and industrially prosperous conditions. Cultivators' guilds are also noted. During the seventh century, the texts of famous Sanskrit authorities (Banabhatta, Dandin, Bhartruhari) and travel accounts of the Chinese travellers. (from 400-630 A.D.)[8] continue the prosperous picture of agricultural pursuits. Bhattapala (10th century) in his commentary on 'Brihat-Samhita' has elaborated the information by quoting from many previous works (particularly belonging to Buddhist period). Brihat-Samhita in its many chapters gives information on water findings (Dagargalshastra), arboriculture (Vrikshayurveda), various field and garden plant culture and maintenance, crop climatology, irrigation, planting treatment of seeds and planting material, crop protection, tillage and other aspects including partly the of physiology and morphology of plants. A careful management for good yields is stressed. In fact, the importance given is so much that in Sukraneeti (IV. 24. 224-26) it is stated "a successful agriculture is one which yields a profit twice the expenditure after duly considering the variations in actual produce; anything less than that is unsatisfactory."

Most of the "Purana" literatures of today belong to this period. These Puranas, besides giving the type of existing social life, refer to prospering agriculture and agricultural aspects. Some of the 'Puranas' contain very valuable information. Vatsyayana Kamsutra also indicates the high standard while referring to the arrangement and maintenance of the kitchen and flower and ornamental gardens for a house and which formed part of the duties of a housewife. The famous medical texts, "Charak" and "Sushruta" Samhitas of the early period (first and second century A.D.) mention many crops and other vegetation, give their various properties and uses in the control and cure of many diseases with elaborate information on diet. This gives a very wide list of cultivated plants and their uses. Different Sanskrit texts of Kalidasa, Harsha, Bana, Bhavabhuti and other authorities give marvelous descriptions of very well planned orchards and parks with bowers, rockeries, artificial water ways, inside pathways, fountains, etc., indicating a high standard of ornamental gardening during the later part of this period.

It is observed, broadly, that with the advent of civilization and wide extension trade and cultural contacts there was advancement in various arts, professions and sciences. Agriculture passed through similar evolution and became well established and was considered separately in many details. Like all ancient Hindu knowledge agricultural knowledge is mentioned broad

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ly in the Vedas. Gautama was the first known agricultural expert of great eminance in the pre-Rig Vedic period, and Kashyapa was the first to write an independent text on agriculture as a part of his Shilpa-Shastra during the Vedic period. The various texts show that more and more detailed information is available during later periods and thus agriculture too was undergoing evolution. As many texts of Buddhist period are available, specific information is largely for this period. By the end of this period a highly prosperous picture of agricultural pursuits is available. No caste was forbidden to cultivate land and the State had a strong administration to take care of the problems of farmers. This high standard is, of course, the result of gradual evolution built on the previous experiences.

INFLATION AND CAPITAL FORMATION

By A. K. PODDAR,
Deshbandhu College, University of Delhi

Although a host of complex factors and forces of diverse character are responsible for the chronic backwardness of the underdeveloped economy, there is a general consensus of opinion that by far the most important factor holding up the pace of economic growth is the low rate of capital formation. If this diagnosis is correct, it logically follows that the essence of the process of economic growth is in increase in the rate of capital formation which implies (to put it in the succint terminology of Paul Baran) the mobilization of the **potential** economic surplus and canalizing it into the channels of productive investment. It is sometimes suggested that inflation, deliberately created by credit expansion can considerably facilitate economic growth by accelerating the tempo of capital formation.

The case for inflation as a device of promoting capital formation rests upon the inadequacy of voluntary savings and its efficacy in generating **forced** savings. In an underdeveloped country characterised as it is by the low capacity to save, the spontaneous voluntary savings are extremely limited. Most of the savings which are made by the well-to-do sections are either spent on ostentatious consumption and social and religious ceremonies or are hoarded in the form of idle cash balances, gold, ornaments and jewellery. Besides, there is the technical problem of collecting the small bits of savings from myriad petty savers which becomes particularly difficult on account of the absence of a the small bits of savings from myriad inflation, on the other hand, by raising the prices of goods and services and compulsorily cutting down the aggregate consumption of the community creates forced savings which can be utilized by the Government for financing capital formation.

This method of forced savings was widely used during the war time and there appears to be a close analogy between the war economy and the developing economy. The crucial problem in the war economy as well as in the developing economy is to divert resources from the old to the new channels of production. In the war economy, the resources are required to be diverted from the civilian consumption to the production of war materials, while in the case of the development-seeking economy, the resources have to be canalised into the channels of capital formation. In either case, the process involves a reduction in the aggregate potential consumption. In fact, the case for inflation for capital formation would appear to be even stronger. The accumulation of capital achieved through inflation enlarges, the productive capacity of the economy. The forced savings involved are thus only temporary in character and conductive to a long-term rise in the standard of living. There is nothing corresponding to this in the case of war-time inflation

Besides generating forced savings, inflation also tends to increase voluntary savings. In a period of rising prices, the consumers are likely to postpone the consumption of durables and even to some extent semi-durables in the hope of lower prices in future. Inflation may also activate the idle cash balances and the hoardings of precious metals by the force of compulsion to draw upon them in order to maintain the standard of living.

By far the most significant effect of the inflationary rise in prices upon capital formation arises from the inflation of profits. As the prices of consumable goods rise, the wages and salaries tend to lag behind on account of the natural inertia of the "contract income" to move in response to changing prices. The consequ-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fall in real wages increases profits which has a two-fold effect on capital formation. First, the increase in profits has a stimulating effect upon the incentive to invest. Secondly, the share of profits increases relatively to that of wages and salaries which implies in effect a redistribution of income in favour of the class whose marginal propensity to save is higher than that of the wage and salary earning class. This is highly conducive to capital formation.

Copious historical instances can be cited in favour of inflation as a powerful source of capital accumulation. The phenomenon of profit inflation played a crucial role in the Industrial Revolution in England. In Japan, between 1880-1900, the rate of investment was doubled as a result of inflation combined with a system of agricultural taxation. In Soviet Russia during the period of the First and Second Five-Year Plans, forced savings and profits of the public enterprises constituted the major source of capital formation.

Inflation, however attractive it may appear at first glance is fraught with considerable risk and uncertainty. On closer scrutiny, many of the tall claims made in favour of inflation seem to lose ground.

The extent of forced saving depends upon the size of the **wage-price differential;** larger the gap between the wages and prices greater would be the forced savings. The inequality in the distribution of income which this creates, entails a heavy burden upon the common masses and thus undermines the democratic ideal of social justice. Even if this could be brushed aside as the inevitable cost of economic growth, there is no guarantee that such a policy would be successful for any long period of time. The condition for the successful generation of forced savings is that the working class must be prepared to accept a cut in real wages consequent upon price inflation. But as the phenomenon of inflation gathers momentum, the labourers become more alert and try to protect their interests demanding higher wages and sometimes an increase in wages greater than the rise in prices in anticipation of further price-rise. This problem is of special import in a democratic set-up where trade unions are a vital force to be reckoned with.

Inflation is likely to destroy some voluntary savings. First, the rising prices reduce the real income and thus the capacity to save. This reduces the **potential** savings, i.e., the savings which people might be induced to make without inflation. Secondly, because of the rising cost of living, the people may be compelled to draw upon the savings which form a part of current investment. In real terms inflation also reduces the value of the past savings.

An increase in the share of private profits by no means ensures saving of corresponding order by the profit earning class. As the investors of the underdeveloped countries are not imbued with the true capitalist spirit, an increase in their incomes may merely induce them to emulate the conspicuous consumption habits of the landed aristocracy and other dominant social classes.

An increase in savings similarly does not guarantee a corresponding increase in the rate of capital formation as inflation tends to encourage malinvestment. In the first place, in a period of continuous rising prices, the speculative forces become rampant and investment in inventories of goods and capital equipment become extremely profitable. Secondly, inflation tends to encourage investment in real estate like land, construction of high-price commercial buildings and apartments. Thirdly, at a time when the domestic currency depreciates in real value, the ownership of foreign assets including gold may become extremely popular. The expectation of an exchange depreciation may further strengthen this tendency.

It is clear, therefore, that inflation is an extremely delicate instrument and unless handled with due caution can jeopardize the whole economy. However, inflation can facilitate capital formation if it is contained within the limits of control and is accompanied by the necessary checks and balances.

Inflation is conducive to capital formation so long as there is a wage price differential. So long as the rise in money wages is in a proportion less than the rise in price,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

inflation can be carried on without any fear of dislocation. But as soon as the rise in wages tends to be equal to the rise in prices, inflationary pressure should be gradually toned down. In a typical underdeveloped economy this limit would be around 3 to 4% rise in prices per annum.

The method of inflation is likely to prove more fruitful and effective as an instrument of capital formation if it is used in conjunction with other monetary and fiscal devices. First, a heavy tax should be imposed up distributed profits and tax concessio should be granted on profits reinvested business. Secondly, a general expendit tax may be adopted to encourage savi and discourage consumption. Thirdly, order to discourage investment in specu tive fields, the capital gains arising out appreciation in the value of fixed ass like land, buildings and gold should be su jected to heavy taxation.

TAGORE'S KARNA AND KUNTI—A STUDY

By V. GOPALAM, M.A., L.T.

Tagore's dramatic genius appears at its best in the five dramas which he produced during the closing years of the last century. The dramas of the period are noted for their lyrical grace. They are splendid poetry, they portray rich scenes of nature, they transport the spectators into a fairy land of luminous mists, but they have little of the human element in them. The dramas of the later period are laden with symbolic meaning. The five dramas of the middle period have the true dramatic spirit in them. They are profound studies in human psychology. It has to be admitted that they cannot be called dramas in the strict sense of the term. They represent no action; they are only dialogues. But the dialogues are full of vital energy and the characters are powerfully drawn.

Kunti and Karna is the finest of the group. The dramatist borrows the story from the Mahabharata, but it is little more than the bare idea of the mother's meeting with the son that he borrows from the epic. The dialogue between the mother and the son as it is presented in the drama is entirely the product of the poet's imagination. Properly speaking, it is an imaginary conversation. Its very setting is different from that of the epic. The Karna of the drama has no knowledge of Kunti, nor has he any the least guess of her motive in coming to him. The dramatist's purpose in representing the meeting of the mother with the son is different from that of the epic poet. Tagore pre sents to us a picture of Kunti which is n where suggested by Vyasa. Karna does n suffer such a transformation as Kunti in th dramatist's hands, but he too undergoes change. He is more rigorously moral-minde than the epic hero; he appears in a different mood, a different spirit.

According to the story in the Mah bharata Karna has learnt the secret of h birth from Lord Krishna before Kunti g to him, and he has expressed his resolve t Krishna. Kunti, as the mother of t Pandavas, is well-known to him. The dram tist represents her as a stranger to Kar and ignores the incident of the Bhagava earlier visit to the hero to produce the effe of thrill in the listener's mind while Kun is unfolding her story to him. In the dram Karna notices Kunti, and asks her, "Tell who you are." Her answer is enigmatic him. He does not understand her meani when she says that she is the woman w first made him acquainted with the light is worshipping. But mysterious feelings working in his mind at sight of her. Insti tively, his heart is drawn towards her he questions her what mystery binds birth to her. By gradual stages she rev the hidden secret to him while he looks her bewildered to discover that the m of Arjuna, his mortal foe, is his mother.

The epic poet's purpose in describing meeting of the mother and the son is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bring out the nobility of the hero's nature, his high moral sense in remaining faithful to his patron. The hero comes to know that the Pandavas are his brothers, but he would not desert his master in the hour of need. He would fight against his own brothers in support of his benefactor. He is not lured by the prospect of becoming king of Hastinapura. The meeting ends when he gives his word to his mother that he will not enter into a mortal combat with any one of the brothers except Arjuna, and Kunti departs half satisfied with her mission. But the talk between the mother and the son in the drama is in an altogether different vein. The Karna of the drama does not feel the need to explain to Kunti why he is resolved to fight on the side of the Kauravas. He enters into no reflections on his duty to his patron. He gives her no scope to argue with him on the propriety of his joining the Pandavas. He is roused to indignation to hear that she had abandoned him, kept his birth a secret all these days and left him to suffer the indignity of a charioteer's son. He assails her with questions to explain her conduct. He gives her no such promise as the epic hero does, but dismisses her in contempt.

In fact, the dramatist's main purpose in the composition seems to be the representation of Kunti as a base dissembling woman. In the epic, she adopts no arts of dissimulation to win Karna to the side of the Pandavas. She makes no protestations of her love and affection for him. She tells him in plain terms that he is her son and invites him to take his place as the eldest of the Pandava brothers. But in the drama she tries to appear as if her heart is swelling with love of him. In revealing herself as his mother she makes much ado of the motherly feelings that swayed in her heart on the occasion when he stepped into the arena for a trial of arms and when Duryodhana made him king of Anga. The Kunti of the Mahabharata makes no reference to the past occasion in the present context. In the drama she makes herself contemptible in her talk from the beginning to the end. The very first question that Karna puts to her on hearing her tale reveals his doubt and distrust in her professions. He does not recognise her as his mother, but addresses her with gentle irony as a Mother of Kings and wishes to know on what errand she has come to him. When she observes that she is thirsting for his love he becomes more bitterly ironical, and calling her as the fortunate mother of five brave kings, he asks her if she can find a place for him who is only a small chieftain of lowly descent. She has not the understanding to perceive that he is ironical and readily answers him that she will hold him as the eldest of her sons.

Kunti's words awaken in the hero's mind a train of recollections to which he gives pathetic expression. He knows that there is a rumour which says that he had been deserted by his mother. He had a yearning to see that mother. He saw her often in his dreams, but her face was veiled and when he cried to her to open her veil and show him her face her figure vanished. He expresses his wonder if the same dream has come to him while he is awake. He is greatly agitated in his mind to think that the mother of his dreams has come to him on the eve of the battle and revealed to him that he is the brother of Arjuna. Bitter feelings of enmity are deeply implanted in his mind against Arjuna. He resents that at this hour of impending battle his half-forgotten mother should come to him and try to draw his heart out to Arjuna and his brothers

Kunti fails to notice the effect of perturbation which her words have produced in her son's mind. She hears him say that her words have drawn his heart out to Arjuna and his brothers, and she hopes that with one more stroke she can win him entirely. She eagerly appeals to him to come away with her to the Pandava camp without any delay. The hero observes that she has effected a great revolution in him. His heart responds to her call. The discovery that the Pandavas are his brothers has damped his martial spirit. His emotional outlook is suddenly changed. His struggle for victory and fame and the rage of hatred now look to him like the delirious dream of a night. He feels it bitterly that she has made her revelation at a very inopportune hour. He considers that her protestations of love are all false. In silent disgust he asks her if he can find his lost

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mother on the other side of the river supposing he would go there. His dark meaning that he has lost her for ever is not perceived by her. She mistakes that he is really in doubt and tries to dispel his misgivings by a rapturous exclamation indicative of a heart overflowing with love for him.

The hero can no more contain his indignation. Casting the veil of irony aside, he sternly questions her why she banished him, rendered him a castaway uprooted from his ancestral soil and left him adrift in a homeless current of indignity. By her unnatural conduct she created a bottomless chasm between Arjuna and himself and turned the natural attachment of kinship to the dread attraction of hate. At these words Kunti is awakened to a sense of her sinful action. She realises the truth of her son's indictment. She stands speechless while he is fiercely denouncing her un-motherly conduct. The hero grows more and more emotional. He considers that her shame permeates the vast darkness that envelops them and observes that it sends invisible shivers through his limbs. Quivering with rage, he tells her that he will be satisfied if she would at least let him know why she has come to him on this day, on the eve of the battle. By her own hands she has wrecked the heaven of his ancestral home. He asks her what she means in inviting him to the ruins of that wreckage. In Karna's bitter words to Kunti the dramatist expresses his own view of her as a callous-hearted woman.

Kunti is abashed at her son's reproaches, but she does not give up her efforts to win him to the Pandava side. She pleads guilty to his charge, admits that she has been a recreant mother, but excuses herself by explaining that under a deadly curse she could not reveal the secret of his birth in the past. Having thus glossed over her past conduct, once again she protests her love for him, declares that on account of separation from him her heart has shrivelled and that all her life's pleasures have run to waste, and implores him for generous words.

Karna is the very embodiment of generosity. He does forgive her so far as to address her as his mother. He subdues his feelings of rage and speaks to her in tears. From this change in his demeanour she is misled into the hope that she might win him over by other arguments. She confesses that she came to him with little hope of winning him back to her arms. But she puts it to him that he need not forgo his rank and position as the eldest of the Pandava brothers. The hero is too noble to be enticed by the invitation. He would not be persuaded to desert the couple who brought him up as their own child. His blunt answer to her is that he does not covet the glory of greater parentage than that of Adhiratha and his wife. Karna is magnanimous in his humility.

Kunti then plays upon another chord. She offers him the glory of kingship. The Pandavas will be the winners, and as their eldest brother he can become king of the land by changing sides and joining the Pandavas. The hero looks at her in utter contempt for the bait she has thrown him and ask her, "Must you who once refused me a mother's love tempt me with a kingdom ?" His words are an emphatic declaration to her that he is not the man to yield to her temptations. Coolly but severely, he expresses that he cannot look upon her as his mother. He speaks the psychological truth that the quick bond of kinship which she had severed can never grow again. If the charioteer's wife upon whom he would look as his mother. He should be a shameless man to desert his mother in the charioteer's house and call the Pandava queen-mother as his mother.

Kunti realises the futility of her dissembling tricks. She finally takes recourse to flattery and self-reproach. She expresses her admiration for him as a high-souled man and ruefully extols God's inscrutable ways of punishing sinners. She bewails that as a result of her sinful action in having abandoned him he would now smite her brothers. The rat has at last come out of the bag, and without knowing it Kunti has confessed the purpose of her visit to him. She betrays her anxiety for the safety of her five sons as the prime motive of her visit. The hero, however, does not soften at her wailing and grants her no concessions. He gives it to her to understand that she need have no anxiety about the safety of her five sons. He knows that victory is in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for the Pandavas and that the Kauravas will be defeated and destroyed. He has chosen to suffer destruction with the Kauravas. He looks into the future with a philosophic spirit of resignation. Once again referring to her callousness in having left him naked and unnamed to disgrace he begs her to leave him without pity to the calm expectation of defeat and death.

The Karna of the drama is a hero more sublime and pathetic than the Karna of the Mahabharata. He has also other traits which make the character more interesting. The dramatist has imparted to his hero an emotional and a critical spirit which we do not find in the epic hero. The epic hero also condemns his mother for her past action in having deserted him. He also considers that she came to him with no motherly feelings. But he speaks to her in calmness and serenity of mind. Tagore's hero is eloquent and passionate in expressing his condemnation of Kunti. He is full of moral indignation for her unmotherly conduct and he bursts into fiery denunciation. He subjects her to such critical questioning that he drives her to admit herself a recreant mother. The ancient poet represents the ideal of Matribhakti in his hero. While the hero knows that his mother's action is sinful, he yields to her entreaties to a certain extent. But the hero of the modern poet shows no such softness. He is a rigid moralist of the modern age. He does not hesitate to dismiss his mother in contempt when he finds that she is a base dissembler. Tagore has infused his own stern moral spirit into the hero of his conception.

THE FOURTH DIMENSION

BY SUDHIR CHANDRA MAJUMDAR

Every object we see round us has three dimensions—length, breadth and thickness. The third dimension is sometimes called height or depth. Indeed we consciously live in universe of three dimensions. But that does not rule out the possibility of the existence of more dimensions. Indeed there may be many more. Everyone would admit the existence of many things which we can neither see nor feel with our senses, and science has been daily bringing to light many more things than our forefathers could think of.

A point is said to have no dimension, a line has only one dimension (length), a surface has two dimensions (length and breadth) and a solid has all the above three dimensions. But true geometrical points, lines or surfaces cannot be drawn on paper nor can any be represented by models. But when the shadow of a board is cast on the floor, the boundary between the shadow and the lighted part of the floor may be taken to be a true straight line and the corner where two such lines meet may be taken to be a true point. Again if a glass jar is half filled with water and half with oil, the boundary between oil and water may be taken to be a true plane surface and where it meets the inner surface of the jar may be taken to be a true straight line.

But we cannot form an idea of any dimension beyond the third owing, perhaps, to our defective brain which has only three, but the chain of reason leads us to suppose at least the fourth. Our incapacity of idealising the fourth dimension has been compared with that of a small flat organism crawling on the surface of a big sheet of newspaper. Suppose it has no idea of the third dimension. All that it can do is to move in any direction, but all the time on the paper. Neither it can look above nor dig down. Indeed it does not understand that any side like 'above' or 'below' ever exists. Any thick line on the paper would appear to it the ultimate boundary of its world. Any new object (say an ink-pot)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dropped on the paper from above would surprise it as a miraculous appearance from nowhere. The object, too, would appear to be a circle or square according to the shape of the ink-pot. If a thick enclosure is drawn round both the organism and the ink-pot, the former would think both entrapped within a box. If now the ink-pot is picked up, the animalcule would be surprised how it could vanish when all sides were closed.

Similarly, this three-dimensional universe which we can perceive is nothing but the outer surface of a 'continuum' of four dimensions in which we see many things in their cross-sections only. It is a closed curve, **a hyper-sphere**, of four dimensions whose radius (forming the fourth dimension) is associated with Time. The radius goes on increasing as time advances causing the universe to expand like an inflated balloon. Sir Arthur Eddington, the noted British Physicist, has written an entire book on the theory of the "Expanding Universe." According to this theory, if we could move in the same direction in a straight line with the velocity of light, we would, after several million centuries, return circumpassing space, to the same spot whence we started. Again a distant star or nebula which shows itselfs in a certain direction in the sky, could be also seen by pointing a super-powerful telescope to the diametrically opposite part of the sky.

The Fourth Dimension is said to be not really Time, but the mysterious form Timexi (the symbol 'i' is used for the square root of minus one). If the units of length, breadth and height are each 186,000 miles, that of the fourth dimension is 1 second xi, from the fact that light and other electro-magnetic waves travel at 186000 miles per second. Time does not flow past us, the space remaining constant; but this three-dimensional space itself moves uniformly and is brought to different time-levels.

A point (0 dimesion) drawn away in one direction traces out a straight line (1 dimension). If it is drawn perpendicular to itself, it will describe a rectangle (2 dimensions). Draw it in a direction perpendicular to it (as in raising a card vertically from the surface of a table) and it will describe a rectangular solid (3 dimensions). Imagine what the solid can describe if similarly drawn. When you draw a plane figure in a direction perpendicular to it even through a very short distance (as in the card raised), the new position occupied by it, is wholly different from the original position. Imagine a big wooden chest drawn away in some direction so that the whole of it is outside its original position (without overlapping).

The straight line has 2 ends (initial and final positions of the original point drawn away). The rectangle has 4 corners (2 initial and 2 final ends of the straight line drawn away) and 4 edges (1 initial, 1 final and 2 traced out by the 2 ends). The solid has 8 corners (4 initial and 4 final of the rectangle drawn away), 12 edges (4 initial, 4 final and 4 traced out by the corners of the rectangle) and 6 plane faces (1 initial, 1 final and 4 traced out by the edges of the rectangle). Similarly, a hyper-solid will contain 16 corners, 32 edges, 24 faces and bounded by 8 solid sides.

Again two lines cut at a point, two planes intersect along a straight line and so two solids (one in the space in which we live, the other outside it) must intersect in a plane. But any solid which we see (say the match-box on your table), when its dimensions are produced indefinitely, will cover the whole space or universe which we perceive or live in and hence the second intersecting solid must be somewhere beyond this apparent universe. Imagine a big book on the table intersecting another such external solid along a particular page of the book having no other part common between them.

Again you can rotate a straight line (rod) about a point in the middle and also can rotate a plane (say, a postcard) about a straight lnie through the middle. Can you similarly rotate a solid (say, a book) with a plane (page) remaining fixed? Put a book on the table and move it and turn it round but all the while on the surface of the table and hence it cannot rotate about a fixed straight line. So when you turn a brick or a box it is never outside the solid which we see and live in. If the card moved on a table is cut in the form of a man, its right hand will remain right until it is bodily lifted from the table and turned upside

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

down. Mr. H. G. Wells in a scientific fiction gives us the picture of a man who by taking a turn outside space interchanged his left and right.

I give another example. Here also a book is taken as the example of a solid, each page in it as a surface, each line of print as a line and each printed letter as a point. An ant crawling on the page is also taken as the example of a moving point. The ant from the left or right of a line of print, can read only one letter, others falling behind it. But if the ant moves along the 2nd dimension (breadth), it would read the entire line. But still, it can read only one line, others falling behind it. If the ant can fly and rise in the 3rd dimension (height), it can read the whole page. Similarly, if anyone could rise in the 4th dimension, he would read all the pages without opening the book. The enemy who cannot see anything from outside the wall of a city, can see all from an aeroplane. So it may be the case that disembodied spirits from the 4th dimension would see the contents of a closed box, or take away anything from it.

Again, draw a piece of India rubber, its length increases, but breadth diminishes: pull it both lengthwise and breadthwise (or pour out the liquid contents of a jar onto a shallow dish), the thickness diminishes. When the rubber is pulled (or a gas expands) in all three dimensions what diminishes? Density: and this may be one aspect of the fourth dimension.

Returning to the two-dimensional organism crawling on a newspaper, let us make a hole in the paper and pass a thread through it. The thread should be of varying thickness and colours. When we would pull the thread through the hole, the animalcule which sees only its cross-section on the paper will see a circular object whose size and colour are changing. Similarly the plants and animals on earth that grow, decay and die may have a predetermined Future towards the fourth dimension presenting only their cross-sections to us, which change with Time. Again Mr. H. G. Wells gives us the picture of a man exploring the Future by riding his "Time Machine." And all these threads of individual lives may be bound up with a Frame of Evolution which moves on towards the Past (or better, we are moving towards the Future).

If a heavy lead ball is put on an outstretched rubber sheet, it will bend down the sheet and any other lighter ball will roll down to meet it. So the curvature in space is due to heavy masses causing lighter things to be attracted (Gravitation). But since heavy masses are scattered everywhere in Space, it continually gets bent and closes upon itself. The attraction follows the track of Time and to one who wants to get away from this pull at immense speed, the relative speed of Time slows down until brought to a stand-still. Time may be compared to a very long train running very fast. We standing by it or walking in the same direction will see it passing away. But a cyclist running beside it at higher and higher speeds would see it slowing down until it will not at all pass away from him.

INDIA : A NEED FOR EMOTIONAL INTEGRATION

By SUDHANSU MOHAN BANERJEE

In a famous ode to Mother India Rabindranath Tagore once hailed her in his inimitable poetic language as the great ocean of universalism standing at whose shores we bow to Man the Eternal and the Universal. On another occasion he had said "I love India not because I cultivate the idolatory of geography, nor because I have had the chance to be born on her soil, but because she has saved through tumultous ages, the living words that have issued from the illumined consciousness of her great sons."

To-day we stand at the cross roads of history in a strange world, vacillating between deep disillusionments and great expectations amidst strife, strain, struggle and disaster. To-day human mind faced as it is with an imminent doom is hungry for something deeper in terms of moral. aesthetic and spiritual development and anything which raises man above his level gives the human personality a new dimension of spiritual quality and moral depth So when we meet in a Conference of this nature trying to appraise our literary and cultural values we must not fail to take a synoptic view and look to not merely the means but the ends also. Literateurs are not merely photographers and interpreters but seers and creators also. We want to light our little lamps from the Olympic torch they hold and we bow to the creative artists of India assembled here to-day whom we welcome.

I recall that when a few years ago, when the 'Prabasi Banga Sahitya Sammelan' changed its nnme to All India Bengali Sahitya Sammelan, I had welcomed it because it was not only a correct lead but emphasised the true significance of Bengal's literary movement—which was in a way the harbinger of an All India renaissance, the messenger of a hope when spring could not be far behind. This is not merely a poetic hyperbole but a logical deduction from facts which history supports. We have been accused often of a mercurial temper, of an unsteady demeanour of being great as individuals but poor as a collective entity lacking in strength and personality in stability of character and being unnecessarily sentimental and emotional. All these charges may or may not correct within limits, but there is one thing that will not be disputed. Our forefathers had a capacity to dream, had courage to convince and could muster confidence to win. The Codes and conventions of a culture pattern, the ways of life and habits of mind are poised on a dream. Bengal had that quality in good measure. To give an example we can fairly trace these trends in three ages of her growth when she sent her cultural ambassadors across the seas and over the borders and in different parts of India. This cultural co-operation was not in any sense a conquest. Take any age of expansion in her Pala-Sena era, the Vaishnava middle age or the Nineteenth Century movements. There was an impact, there was a flowering. there was rejuvenescence, there was an achievement which others also shared. It was neither imperious nor imperial in any sense. We sent our hermits, we sent our philosophers. Our saints and sramanas went to other lands to the islands of the East, to Cambodia, Champa, to Bali, to Ceylon, to Nepal, Pamir, to Tibet, to Japan. She let the legions thunder past and plunged in deep thought again. We went as servants not as Masters. Taranath, Chandra Goumi, Bodhideva, Atisa Dipankara, Basu, Bandhu, Jaideva, Sri Chaitanya and the stalwarts of the Nineteenth Century conceived of India as a fundamental unit and became "Bharat Parikrama pathik."

This fundamental unity is inherent in the Indian concept of flife, in the Indian integration of thought. To give only one example—take the case of Ramayana. What a cementing factor it has been in Indian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Throughout India this one theme, this one great story of life have—solaced many, whether we were reading it in Pampa Ramayana, or in Kamban or in Tulsidas or in Kritibas or in Valmiki's or in Puttappa's Ramayandarsanam—a unique work of 1000 pages and 25000 verses as we have Mahabharatam of Sripad Krishnamurti Sastri in Andhra, whether by the side of the Brahmaputra or by the Ganges or by Godavari or Krishna or in the banks of Tapti or Narmada. Rightly did Subrabmanyam Bharati say that Mother India has 300 million faces. She talks in eighteen languages but her mind is one.

Nineteenth Century in India was an age when new wine was being poured into old bottles and the stirring within was translated and transmitted mainly through a progressive outlook towards a creative idealism not divorced from the basic trend of old achievements. The acceptance of the new with the old was the great contribution which Bengal made to India under the inspiring guidance of its stalwarts from Rammohun onwards. It was a galaxy of gallants. The result of this shake up was a political consolidation, an economic readjustment, a sociological upheaval, an agrarian dissatisfaction and simultaneously an intellectual flowering. The nature, import and impact of this renaissance have been debated by scholars. Was it really a rediscovery than a discovery or a nascence? Had it anything to do with the underdogs or have nots? Was the concept of a classless society even an embryo? Did not the forces of counter reformation gain a footing? Were Bankim and Vivekananda not also traditionalists? Sri Aurobindo's estimate of it seems to be a somewhat full explanation of the phenomenon. From this meeting of a foreign art and civilisation with a temperament differing from the temperament which created them, there issues, as there usually does issue from such meeting, an original art and an original civilisation. Originality does not lie in rejecting outside influences but in accepting them as new mould into which our own individuality may seem. That is what happened in Bengal. It was not merely the story of a conscience, but the story of a society electric with thought and loaded to the brim with passion and that is how we created a language, a literature and a nation.

But behind this synthesis was the back-ground of India-consciousness. In this great land of ours, Empires have risen and fallen, different faiths have flourished and declined, we have suffered aggression and oppression. We have spoken in different languages, used diverse scripts. Nature and man have heaped numerous calamities upon us, yet we had been able to maintain a common existence, preserve our common culture and retain our vital and creative powers. Even only yesterday in bondage and slavery we produced such giants of men as Rammohun and Ram Krishna, Gandhi and Tagore, Raman and Aurobindo, Dayananda and Vivekananda, Jagadish Bose and C. V. Raman, Bharati and Vallathole, not to speak of hundreds of others, of eminent scholars and scientists, poets and prophets. It appears that the main reason for our survival is that our collective consciousness rests on a foundation which is stronger, deeper and wider than the mountains, the ocean and the sky. Our collective consciousness i.e., our culture has never remained imprisoned within racial, religious or linguistic boundaries as President Prasad had aptly pointed out. I recall the prophetic words of Gandhiji "I do not want my house to be walled on all sides and my windows to be stuffed. I want the culture of all lands to be blown about my house as freely as possible. But I refuse to be blown off my feet by any of them. Mine is not a religion of the prison house. It has room for the best among God's creation, but it is proof against insolence, pride of race, religion or culture." Ours is a great country stretching from the Himalayas to Kanyakumari. I come from the north, you come from the south. But we have a common heritage. I pride as much in your Nataraja and Parvati as you do in my Buddha and Abalokiteswara. We are the joint inheritors of a fulfilled renown.

This is our God. That is the Tirubaymori as we say in Tamil the song of songs which will radiate in a thousand tunes fulfilling itself in a thousand ways. That is the unity in diversity. That is 'Oru Chitram'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

our picture. A Panchali Saptham of a Subramanya Bharati or the cry of Viduthlai or the poignant sorrow of a Magdalana Mariam, of a Vallathole or the story of a Pingala or a Tyagaraja's songs or Vireshligam's novels are our joint heritage as a poem of Tagore or a Bankim's romance or a Sarat Chandra's story or a Nripatunga's homily, Durbinita's verse, Madhura Chenna or Bendre's lyrics. As Oswald Spengler or Arnold Toynbee will tell you, history is not so much migration of peoples but a movement of ideas. It transcends local limits and administrative boundaries. The whole of India bears the impress of certain common movement of thought and life resulting in the development of certain common ideals and institutions which distinguish it as Vincent Smith says as an 'Unit in the—history of the social, religious and intellectual development of mankind.' Politically and unlike China it has not been regimented. It has of course lost its unity in variety. That has been her failure as well as success. It is not merely the story of Maurayas, Kushas, Statabahanas, Huns and Sakas or Guptas Pallavas, Chalukyas or Cholas, or Pathans, Moguls, Sikhs, Maharattas or the British. It is something more than that,—something moving and living, more organic than a rigid continuity. There need be no obscurantist tyranny. It has not been sufficiently realised that by the end of the Tenth Century with the so called disappearance of Buddhism or to be more correct its reabsorption in the Hindu fold, the whole of India from Kashmir to Cape Comorin, from Guzrat to Assam, was apart from political fissures here and there, one fundamental unit. Barring local colours, it had the same social organisation on the basis of caste and the Dharma Shastras, it had the same religious outlook in the worship of Siva, Vishnu and Debi or Durga, it had the same background of philosophy which accepted the main doctrines of Paramatma, Jivatma, Maya and reincarnation.

We thus got in the old days an unity of thought and theme in vaishnava lyrics, in Saiva literature, in Ramayani lores, in the pattern of our dramas, in the style of story telling and later in a sense of the same patriotic values, broad humanism, rational and scientific approach to life.

Though there has been this fundamental unity in diversity from the days of Sankara and Ramanuja to the days of Gandhi and Rabindranath, from Tolkappism and Sangham texts, to Gitanjali and Pathe Dabi. Critics have pointed out that the India-consciousness and its expression in literature were more in theory than in practice particularly in view of the many languages in which we speak and its different modes of development and expression. Moreover, all the world over angry young men are "far more interested in producing something hard hitting, something that will make an immediate impact." They are in need of a cause.

To-day when we speak of Indian Literature and its many facets in Bengali, Marathi, Tamil, Gujarati, Kerala or Hindi versions we have to keep a note of these fundamentals. To-day when we read Gujarati literature we need not think merely of Umasankar Joshi or Sundaram or Kanaiyalal Munshi but also of Narsingdas, Mehta, Valan, Padlipta Charya, Dalpatram Nanalal, Gobordhan Chandra Tripathi. The same is true of other regional literatures. When we talk of Subrahmanya Bharati or his famous songs, such as, Vidhuthlai, Viddhitelai, Viduhlai freedom, freedom, freedom of his Kananpathis or Krishna lyrics, our mind goes back not only to Sangham literature but also to Nayanmars and Alwars. In Marathi, we value not only the old Masters such as, Dhaneswar, Namadeva, Ekanath, Ramdas, but men such as Keralashri Devala, Kolhatkar, Godakiri, Tombe, Barde, Mama Warerkar who was to have presided over this section, has links with Bengal in more ways than one. A prolific writer, a translator of repute, many Bengali authors are known in Maharashtra through his translations. He has made Sarat Chandra a living idol of Maharashtra as in Bengal.

Hindi also is on its march. It is said that it is the language of the region which has borne the brunt of history. In any case being born of Apavramsa it is a language of protest of the people. All its varieties such as Brajabuli, Khoribuli, Ondhi, Maithili are straight from the heart of the proletariat

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Along with Kabir and Tulsidas, we welcome today literatures such as Bharatendu, Harishchandra, Mahabirprosad, Premchand, Nirala, Janendrakumar, Nagarjuna, Subhadrakumari, Pant and many others.

To-day the great problem is the adventure of being human. Life and literature must conform to it. This thought is all the more uppermost today when we stand face to face with a crisis of civilisation where the vanquished man has yet to win back his lost human heritage. Any cultural movement anywhere in the world is not simply the creation of a national art or literature or a national government or the propagation of this or that 'ism or to have a planned economy but to create a renaissance which may synthesise the vital social urges underneath the surface of turmoil with the attempt to create new values where the starvation of the spirit is as much manifest as the starvation of the body, where the plenty promised by science has not yet percolated to the disinherited, lowly and the lost, where the very basis of human co-existence is still in jeopardy, where we are every day mocked by power, pride and prejudice. The world today hungers for a voice which would overleap the frontiers of nations and classes and clans over the din and bustle of tanks and bombers, where one would say with Rolland 'I will not rest', where each will meet with each, country with country, race with race, knowledge with knowledge, endeavour with endeavour, where in the words of our great poet :

"The mind is without fear and the head is held high
Where knowledge is free
Where the world is not broken up into fragments by narrow domestic walls,
Where words come out from the depths of truth,
Where tireless striving stretches its arms towards perfection,
Where the clear stream of reason not lost its way into the dreary sand of dead habit ;
Where the mind is led by thee into ever-widening thought and action
Into that heaven of freedom my father let my country awake."

[Summary of an inaugural address delivered at All-India Bengali Literary Conference held at Calcutta in December, 1961.]

PLAN PROGRESS AND NATIONAL INCOME

By KARUNA K. NANDI

One of the usually accepted criteria of progress, achieved as a result of planned development of a national economy, has been claimed to be reflected in the incidence of rises in national incomes. It has thus been asserted that, in India, the national income has risen by as much as 42 per cent during the ten years ending 1960-61.* To the uninitiate not fully versed in the mechanism of computing such statistical data, this might indeed appear as an indication of phenomenal progress. But statistical data represent the truth or otherwise of a given set of circumstances or facts in accordance with the particular technique that may have been pressed to their compilation. The claim that India's national income had risen by 42 per cent, as asserted, has been based on computing the income in question upon current prices prevailing during the period 1960-61. This method of computing the incidence of rise in national income may very well be extremely misleading and might present an entirely false picture of the situation, especially having regard to the fact that price levels have been steadily spiralling upwards during the ten-year period germane to the calculation and that they had moved a considerable altitude upwards in comparison with the base year in relation to which the rise in the national income has been computed. It is safer, therefore, as is the usual practice elsewhere in the more progressive countries of the world, and which would moreover present a

* Reserve Bank Bulletin Statistics, September, 1961, Pp. 1389.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more correct picture of the situation, to compute such incidences of rise in national income on the basis of prices prevalent at the beginning of the period during which the income has to be assessed. In fact, it is usual in most countries of the world to calculate the national income of any one year upon a base some five to ten years earlier. Thus, in computing the progress in national income in 1960, both the U.K. and the U.S.A. are found to have taken as base the prices prevalant in 1954, with calculations also demonstrating the differences that would accrue when the same were estimated on the basis of current prices. The Indian income calculations, however, are found to have been predicated on the 1948-49 national income both at current and constant prices, thus the calculations at current prices artificially inflating the visible national income on the background of the much lower national income in *real terms* at 1948-49 prices with which comparison is made. This would appear to be quite obvious when regard is had to the indices of wholesale prices (at 1952-53 prices) which is found to have increased to 124.4 by September, 1961 and cost of living indices (with 1949 as base) rising to as much as 128 by August, 1961.

The anxiety for window-dressing the claimed successes of the First and the Second Plans, presumably, has led to the calculation of these incomes at current prices. When, however, the national income is computed on the basis of prices prevalent in 1948-49, as should have been the case if it were intended to present a more realistic picture of the situation, national income instead of having risen at the average rate of 4.2 per cent per annum, as has been claimed, would be found to have risen at the rate of 3.0 per cent (simple) per annum, during the first Four Years of the Second Plan, and the simple average increase during the period from 1951-52 to 1960-61 at 1948-49 prices would be found to have worked out at just about 3 per cent per annum. But calculated at current prices, as has been done by the appropriate Government agencies, the statistical data referred to above, unduly inflate the annual averages as demonstrated. Obviously, this must have been done deliberately to boost the claims for the Plans which would otherwise, be untenable. The following table gives a comparative analysis of movements of national income in India, U.K. and the U.S.A. during recent years:

TABLE I.

Behaviour of Wholesale and Consumer Indices and National Incomes

Country	Period	Average annual increase in Wholesale prices per cent.		Average annual increase in national income at current prices period	per cent
U.S.A.	11 years	1.75% (1947-49=100)	2.42% (1947-49=100)	10 years	7.33
U.K.	5 „	Not available	2.38% (Jan. 1956=100)	10 „	8.55
India	5 „	7.29% (1955-56=100)	6.25% (1955-56=100)	First 4 „ of 2nd Plan	3.03 (at 1948-49 prices)

It would be obvious that when regard is had to the "population explosion" that has occured during the past decade, as revealed by the 1961 Census figures, and along with that the steep spiralling of prices during the past five years, calculation of national income has little significance as an index of the progress of the national economy under the Plans if that be computed on the basis of current prices. Per capita income in India during the years 1951-52 to 1959-60 will be found to have risen, with yearly step at the rate of 1.29 per cent per annum. Table II below will give a break-down of this which will be revealing :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

TABLE II

Annual Increase in Per Capita Income at Yearly Step in India at 1948-49 Prices (Per Capita Income)

Year	According to earlier Central Statistical Organization Figures		According to Figures based on 1941, 1951 and 1961 Census Results	
	Rs.	Annual Percentage Increase	Rs.	Annual Percentage Increase
1951-52	250.1		250.3	..
1952-53	256.6	2.59	255.7	2.15
1953-54	268.7	4.71	266.2	4.10
1954-55	271.9	1.19	267.8	0.60
1955-56	273.6	0.62	267.8	0.00
1956-57	283.5	3.62	275.6	2.90
1957-58	277.1	—2.25	267.4	—2.98
1958-59	292.6	5.60	280.2	4.79
1959-60	291.6	0.35	276.9	—1.18
Annual average Increase during 8 years		2.05	..	1.29

When this is compared with the corresponding figures in the U.K. for instance, which have been calculated to have risen at the average rate of 1.3 per cent, it would not, at least visibly, appear have been substantially more favourable. But when regard is had to the basic differences in the incidences of per capita incomes in the two countries, which has been calculated at Rs. 3,704 as against Rs. 250.3, it would be obvious how dismally inadequate has been the progress in this country which, however, has been sought to be so unduly inflated by resort to admittedly unscientific bases of calculation. To arrive at any reasonable estimate of the incidences of rise in both national and per capita incomes, therefore, these basic factors should be taken fully into consideration as well as adjustments provided for in the light of our net population increases which, according to the latest census figures, has been at the rate of well above 2 per cent per annum. The reversal of the Government's price policy (if, of course, they have any policy at all in this regard) would also be indicated in this context. But of this more will be said in a later stage in this discussion.

A look at conditions in other more progressive and fully developed economies may be somewhat revealing. In the U.S.A., for instance, wholesale prices increased on the average at 1.75 per cent during eleven years with a corresponding rise in consumer prices, during the same period at 2.4 per cent. At the same time, national income at current prices was found to have risen by an average of 7.33 per cent per annum during ten of this eleven year period. In the U.K., on the other hand, the retail price index worked upwards at an average of 2.38 per cent during the last five years (wholesale price indices have not been available) and national income at current prices moved upwards by an average of 8.55 per cent per annum during ten years. In both countries wholesale and retail price indices show a slow and gradual rise which indicate either ample supplies or more successful controls or, perhaps, both at the same time and the much higher rate of rise in national incomes at current prices indicate a substantial improvement in per capita incomes in *real terms* after allowing due margins for the calculated upward tilts in prices and costs of living.

The situation in India would appear to be quite the other way about. The claims to stupendous are obviously more imaginary than real. The price indices are found to have shot up during the last five years by 7.29 per cent (wholesale) and 6.25 per cent (retail)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

respectively, although authority still brazenly insists on its claim that prices would be held at their current levels. They would not take any account of the fact that these two indices were at 92.5 (base=1952-53) and 96 (base=1949) respectively in 1955-56 and the latest figures now are 124.4 and 128 respectively. Economic growth without price stability would be quite as illusive as, for instance, endeavouring to hold the moon in one's mirror and will lead merely to a false sense of exultation without any substance whatever to sustain it.

When regard is had to the rise of the Indian national income at constant prices, our performance in this country would appear to have been not merely unsatisfactory, but even positively dismal. The average rise in national income during the years 1955-56 to 1959-60 as already demonstrated works out (at constant prices) at only 3.03 per cent per annum, while the corresponding rises in the price level and cost of living indices have been at the rate of 7.29 per cent and 6.25 per cent respectively. It should not be entirely surprising if, on this background, there had not been an actual net decrease in per capita *real income* during the same period when regard is had to the fact that during the years 1955-56 to 1959-60 there has been a very substantial additional burden laid upon the people of the country by way of additional taxation both direct (which has been really comparatively inconsiderable) and indirect (which, on the contrary has, in fact, been quite overwhelming.)

This particular aspect should also be viewed in the light of the great deal of discussion that has been recently held on the need for "holding the price line at the present level." Government's assurance that the price line would be held would, however, appear to be largely wishful speculation in the context of their obvious indifference to the continuous spurts in consumer prices that has been in evidence and which they are apparently unable to deal with adequately. They seem to be satisfied that they had, by merely holding out such assurances, done all that could during expected of them and, if prices nevertheless spiral way to mounting heights, there is nothing calcu they can do about it. It is significant that canc

the Third Plan has not taken into account probable further upward rises in prices. In context especial note should be taken of the prognostications of a school of thought that very probable that during the Third Plan period that is, during the years 1961 to 1966, prices cost of living may rise by as much as even further 50 per cent, envisaging in current movements the incipient beginnings of a gallop inflation.

In fact, it would appear on a closer analysis of the processes and consequences of development planning in this country over the last ten years more, that Government's estimate of resources fixation of priorities and targets and the revision of the taxation structure to conform to the needs of these processes, have all, from the very inception, been oblivious to the corresponding needs of enunciating adequate price-wage policies and their practical implementation as an essential condition of successful development planning. On the contrary, a glib endeavour has been lately evidence to justify the current and mounting inflationary pressures on the price structure the plea that they are inevitable concomitants of a progressive economy. This is a dangerous attitude for it predicates either crass ignorance of the disastrous potentials of such run-away economic forces or a helplessness to deal with them to the extent of holding their operations within rigidly predetermined boundaries. There may be some justification for looking upon a certain measure of price rises as an inevitable index of wider activity in a developing economy. But the measure of such rises must be confined within certain limits or they would be bound to destroy the very basis of the progress aimed at in development economics. The Government's economic advisers and counsellors should may be pertinent to observe in this context note of a very significant pronouncement by great Prof. A. C. Pigou in this context. He that although price rises of between 1 and 2 cent in a developing economy may be considered as being congenial to economic activity, and in this line of beyond 2 per cent, must be as a harbinger of galloping inflation which the most deadening effect of all known upon a developing country.

INDOLOGY AND THE EASTERN PEOPLE : A Short Note

By PROSENJIT SINGHA, M.A.,

Adhyapaka, History and Social Studies, V. B. University, Santiniketan

THE science of ethnology defines and classifies various physical types in mankind and helps us a to know the actual relations of the different races existing among the great families of the nations, mainly on the basis of physical characters, linguistic peculiarities, etc.

This article contains a general and brief discussion on the ethnological character of the habitants of *Prachya Des'a, i.e.*, Eastern India.

Sir Herbert Risley, in the census report for 1901, propounded the theory of the seven geographical regions on the basis of the ethnological classification of the people of India, which had been accepted by most of the scholars those days.

It is interesting to note that from a very remote antiquity India had attracted those tribes from outside, who later settled in different corners of the country and developed distinctive types of culture with peculiar traits that can be detected even at the present time. Dr. B. S. Guha in his learned article 'Indian aborigines and who they are', says, "speaking very broadly, they may be divided into three groups according to their distribution, namely, the tribes living in the Northern and North-Eastern Zone in the mountain valleys and Eastern Frontiers of India. There is a second group which occupies the central belt of the older hills and plateaus along the dividing line between Peninsular India and Indo-Gangetic plains. In addition, there are tribes scattered over the extreme corners of South-Western India, in the hills and converging lines of the Ghats. These groups are distinguished from one another in language, culture and physical characters although within each group there are affinites in these respects to a large extent."

It is assumed that the North-Eastern part of India was invaded by a particular group of invaders belonging to a Southern Group of the Mongoloid race, most probably, the inhabitants of North-Western China. According to Rapson, they came into India partly from Tibet, down the valley of Brahmaputra and partly from China, through Burma by the Mekong, the Salween and the Irrawady. It is said, their progress was checked for the time-being by the original dwellers of the invaded Eastern India and partly by the dense wild forest. Later history shows, the struggle between the newcomers and the original settlers began on a violent note and in course of time through mutual understanding and compromises gradually the cleavage was converted into friendliness. Thus, marriage and other social intercourse began to take place between the two different groups. Lastly, it may be concluded that there came into existence a new group of mankind in Eastern India which played an important role in Indian history.

In Eastern India, scholars think, before the Mongoloid and Mongolo-Dravidian types existed, the existence of the Proto-Australoid group can be traced out. The science of ethnology says, there are two kinds of physical characters, namely Indefinite and Definite. The former class, usually called descriptive, includes the colour of the skin, form of the eyes, the colour and type of hair and finally the shape of face and features. The second class is concerned only with the examination of skulls. 'Heads with a proportionate breadth of 80 per cent and over are classed as broad or Brachy-Cephallic; those with an index under 80, but not under 75, are called medium heads or Mosati (Meso)-Cephallic ; long or Dolicho-Cephallic heads are those in which the ratio of breadth to length is below 75 per cent (Imp. Gaztt. Vol. I).

In the Eastern region of India, we got two separate classes, one predominating Burma, Assam, the sub-Himalayan tracts (which includes Bhutan and Nepal) and the other in Bengal-Orissa. The Mongoloid type exists in Burma, Assam and in the sub-Himalayan tracts. They are represented by the Kanets of Lahul and Kulu, the Lepchas of Darjeeling and Sikkim, Limbus-murmis and the Gurungs of Nepal, the Bodos of Assam and lastly, the Burmese. The main characteristics of their feature are as follows :

The head is broad, complexion dark with a yellowish tinge, hair on face scanty, stature is short or below average, nose fine to broad, face is characteristically flat and eyelids are often oblique.

The second class, *i.e.*, Mongolo-Dravidian and Aryo-Dravidian, exists in Bihar, Bengal (West and East) and in Orissa. The speciality of the features are thus :

The head is broad, complexion dark, hairy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the face usually plentiful, stature medium, nose medium with a tendency towards broadness. This type is stated to be an intermixture of the Dravidian, Mongoloid and the Indo-Aryan blood. Rapson opines that the region in which it prevails, lay beyond the geographical ken of the earlier literature. 'The epics' and 'the *Puranas*' have mentioned it for the first time, when it was occupied by a number of people among whom the Vangas (from whom Bengal has inherited its name) and the Kalingas of Orissa were the Chief. However, this brief analysis shows that the Eastern People of India are Brachy-Cephallic or broad-headed.

A study of the linguistic history of India, as already hinted, shows that the mid-land languages and outerband languages are separate. This happened, perhaps, due to the invaders, who came later, having had a clash with the *Rig-Vedic* Aryans. Thus, in the East, the languages of Oriya, Bengali and Assamese—all outerband languages, remained unaffected in their essence by the speech of the mid-land or Madhyadesa. In the East (Prachya), the Magdhi-Apavramsa was divided into three groups. The southern group 'Bengali' and in the exrteme North-East the group turned into 'Assamese'.

Prof. Levi and Dr. Suniti Chatterjee have shown the existence of Austro-Asiatic languages in Eastern India besides the languages of the above-mentioned groups. Schmidt has proved the relation between the Munda language and the Nicoborese, the Khasi and the Mon-Khmer and established the existence of a linguistic family, called Austro-Asiatic. It comprises, according to him, of the following groups—

1. Mixed group
2. Non-Khmer
3. Senoi (Sakai)—Semang in Melacca
4. Palong-wa-Riang
5. Khasi
6. Nicobarese and
7. Munda or Kol.

Prof. Jean Przyluski in his learned essay, 'Non-Aryan loans in Indo-Aryan' says that a good number of words of the Sanskrit vocabulary are loans from the Austro-Asiatic family of languages. C[illegible] names some Austro-Asiatic words found in spira[illegible] Malaya, like Kadali, Linga, Tambula, cal[illegible] which are also found in the Sanskrit language. canc[illegible] Prof. Jules Bloch, in an article on Sanskrit and Dravidian, criticizes those, who are in fa[illegible] of the Dravidian influence only and tries to p[illegible] the strong influence of the Munda language on [illegible] languages of the Indo-Aryan group. In respe[illegible] the geographical studies of North-Eastern I[illegible] the Proto-Austroloid elements can be traced [illegible] in names like Anga-Vanga or Kamarupa-Na[illegible] etc.

Dr. Chatterjee opines, the presence in [illegible] Indo-Aryan speeches of a considerable member [illegible] Austric words (allied, it would seem, more to [illegible] Mon-Khmer than to the Kol or Munda group [illegible] of very great significance in the study of the [illegible] gins of the Hindu people and Hindu culture [illegible] Northern India. According to him, the Gang[illegible] plain was flooded by the Austric speaking pe[illegible] and gradually they merged into the Aryan a[illegible] Dravidian masses of Northern India and [illegible] verted themselves into the Aryan speaking c[illegible] and groups.

As regards the Munda language, Dr. Sten Ka[illegible] says that, it, most probably, was spoken in Ce[illegible] India and all over the Gangetic plain of India. T[illegible] geographical names Pulinda-Kulinda, Mek[illegible] Utkala (with the group Udra-Pundra-Munda [illegible] Kosala-Tosala, Anga-Vanga, Kalinga-Trilinga, e[illegible] belonging to the Austric group, form a long ch[illegible] from the East of Kashmir to the plateau of [illegible] Peninsula. Prof. Levi holds the opinion, in e[illegible] such ethnic pair, the twin bears the same na[illegible] differentiated only by the initial V and T, K a[illegible] P, Zero and V, Possibly, this process was fore[illegible] to the Indo-Europeans as well as to the Dravidian[illegible] It may be concluded that, these words came fr[illegible] the Austro-Asiatic languages mentioned form[illegible] Pulinda-Kulinda, Anga-Vanga and Kalin[illegible] Trilinga may be grouped together. It is interesti[illegible] to note from the philological point of view, e[illegible] has got a usual sound in the interior which can [illegible] an infix. An assumption can be made that [illegible] geographical names of India those which begin w[illegible] Kam, Kal, Kar, Tam, Tar, Pal and Par, occasion[illegible] preserved the indications of the Austro-Asi[illegible] past.

In this way, surveying the philological and anth[illegible] pological changes that occured from the ear[illegible] times, the students of linguistics and anthropo[illegible] may be interested in the history of the social [illegible] reilgious evolution of the present population li[illegible] in the Eastern or Prachya division of India.

LORD CURZON'S PARTITION

A Retrospect

By S. CHAUDHURY

In view of the recent happenings in Assam, it is interesting to recall the speeches delivered by Lord Curzon at Chittagong, Dacca and Mymensingh on 15th, 18th and 20th February, 1904, explaining the reasons why he advocated the creation of an Eastern Bengal and Assam province and trying to allay the fears and suspicions of the people of Bengal.

Lord Curzon was fully conscious that his proposals were not popular. He said at Chittagong—"I do not by any means brush aside the objections that have been raised to the transfer, some of which appear to me to possess weight. I shall have an opportunity of saying something about them when I proceed to Dacca and Mymensingh where the arguments in question possess perhaps a greater force."

At Dacca he said—"It is beyond dispute that Bengal must be relieved. . . . No other local government in India administers much more than half the number of people than there are in Bengal. No argument indeed can possibly get over the fact that the charge is too heavy and those who are pleading most strongly for the essential unity of the Bengal nation, as they call it, and the cruelty and hardship of ever sundering do not see that they are doing the worst possible service to their cause for they compel us to look ahead to a time when the numbers must be swollen by the laws of nature to a figure which would produce a complete administrative breakdown and when the partition, which they now decray, will be forced upon Bengal in circumstances of infinitely greater pain and hardship than any that are now in contemplation. . . . ."

"I shall not, I think, be far wrong if I say that almost the whole of the suspicion or opposition rests on two apprehensions. The first is that part of Bengal is about to be handed over to a backward and inefficient administration; the second is that the people are going to be deprived of valuable rights and privileges which they at present enjoy. . . .

"But even supposing that the fear was well-grounded, does it not argue the most extraordinary lack of self-confidence to urge that these enlightened districts, priding themselves as they do on their culture, their education and their advancement and counting millions of people, are going to be annexed by a province which is like an infant to them in respect of development and stature? Gentlemen, the population of the entire area of Bengal which it has been proposed to transfer amounts to 11½ millions of people; the entire population of Assam is only 6 millions as it is and of these, nearly 3 millions are Bengalees already. Do you mean to tell me that this 14½ millions of Bengalees, representing as you tell me the flower of the race, are going to be absorbed, obliterated and destroyed because it is proposed to amalgamate with them for administrative purposes only less than 1½ millions of a race, *i.e.*, the Assamese, whom you declare to be in everyway, inferior to your own? Such an apprehension would be the most lamantable confession of weakness in the future of the Bengali race which it is possible to conceive. Surely I need not point out to an intelligent audience that no administrative arrangement can possibly turn one people to another or make 14½ millions of people speak any language but their own."

At Mymensingh Lord Curzon again discussed this question. He said—

"Your address also spoke of educational losses as resulting from the change. If I thought for a moment that this would be the result, I should hesitate greatly in recommending it. Here again it is rather difficult to gather what is signified by a mere generalisation for when it is said that Calcutta is the centre of light and learning to which all educated Bengal naturally turns, the answer is that, of course, it will continue to be so in the future, and that parents, if they choose, will send their sons there as before. . . .

There is one source of local objection to which I may allude in passing. The hostility to the proposal is said to be largely fomented by people of Bikrampur who supply a number of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

very admirable subordinate native officers to the Government offices in Calcutta and who think they might lose the field. I suppose I might answer that the fate of provinces can hardly be decided by the interests of small individual classes within them. But I prefer to point out that the excellent Vikrampur men who are found, I am told, as far as Shillong on the east and Behar on the West, are not at all likely to lose the openings which they have won by their abilities and that as good native officials are a continual necessity in this country, so where they are produced, they may rely upon their continual employment. . . . ."

"As regards the loss of language, that is a criticism, which I have sought without success to understand. Why a Bengali should cease to speak Bengali because a Chief Commissioner or a Lieutenant-Governor came to reside at Dacca, or why, 14½ millions of Bengalis should abandon their own tongue because they enter into a partnership with 1½ millions of Assamese, I cannot see, nor has anyone succeeded in explaining it to me. Probability would seem to point entirely in the opposite direction and to suggest that Assamese, whether it be a dialect of Bengali or whether it be a separate language (as to which the experts appear to differ), will be the one to disappear."

"I come to the sentimental objection which is based upon the conception of nationality and which expresses dismay at the partition of what is called the Bengali nation. Pray do not think that I wish to disparage in the smallest degree the force of sentiment in human affairs and still less that particular form of sentiment that springs from the pride of race. On the contrary it has spurred mankind to some of the noblest and purest deeds and the man who is not attached to his country and his race is not fit to exist at all. There is no reason why Bengalis should entertain this sentiment less warmly than any other people. But I cannot see how the argument applies in the present case. If a Scotsman crosses the Tweed and comes to England, he does not cease to be a Scotsman. If a Sikh comes to Bengal he does not cease to be Sikh. But here the case is not even one of crossing a border. The from a single Bengali being taken away from his present place or town or district or division. He would remain there precisely as before with the sole difference that the Bengal people, instead of being the predominant element in one local administration, would in future, become the predominant element in two. We offer to the Bengali nation the opportunity of forming a second centre round a second centre, and if a reduplication of its political existence is to be regarded as injurious to its future, Bengal nationality, must, I think, be very distrustful of its own powers. It is curious that among the appeals that have been addressed to me, frequent allusion is made to the fact that Eastern Bengal once constituted an independent kingdom, the people of which I believe still call themselves Bengals and not Bengalis, and yet when the offer is made of a resurrection of that unit, the objection is raised that history and nationality are both being flouted and ignored.

There can be no doubt that the partition agitation is a very important landmark in the struggle for independence. At the same time judged by the experience and various developments of the last 56 years, one cannot help wondering if Lord Curzon's proposals were as bad as they were considered at that time. Many persons are now inclined to believe that Lord Curzon's partition was better in many respects than the territorial redistribution of Lord Hardinge, and that it could possibly have averted the partition of the country. But this is a question which requires a separate treatment and on which opinion may differ.

STUDENT-TEACHER DELINQUENCY—A CHALLENGING PROBLEM

By S. K. DAS

A Pervasive complaint is in the air that, in the present decade, the students, barring very few exceptions, are found showing a deplorable lack of interest in their studies with the consequence that, ill-equipped as they are, they often find themselves at sea when confronted with question papers at examinations. A general consensus of opinion also prevails that the troubles that are often seen at examination halls are engineered by the delinquent students with a view to cover their drawbacks and the grim consequences of apprehended failure at examinations which loom large behind them. They are found to fritter away time and energy by engendering strikes not only over their own real or imaginary grievances, but also over other issues with which they are not directly concerned, viz., teachers' grievances, etc; they are as well seen to take part in turbulent and obstreperous activities detrimental to their interest as students, such as, political agitations, strikes over political issues, etc., by enlisting their allegiance to one or the other political parties. What is worse and forebodes ill for the country, they are seen even to indulge in unsocial acts and behaviour that have drawn wide denunciation and condemnation. It is also alleged that unlike the teachers of yore, most of the teachers in the present generation maintain a very tenuous link with the students and are found abusing their position as teachers; they have practically flung to the winds the sacred duty of teaching and have abdicated the role of the guide and philosopher to the students. They have virtually succumbed to a schizophrenia of mad lust for money and are found running at breakneck speed to exploit every opportunity of earning money without the least consideration, as to how far and to what extent such activities might be pursued without detriment to the sacred task with which they have been charged. The present generation of students and teachers might say that such a dark picture and pessimistic view are unwarranted and should be dismissed as being the outcome of a morbid mind and palsied decrepitude with which a moribund society has been seized; they might as well contend that for a nation, if it were to transcend living death, activities at all levels must proliferate in different directions so as to impel it to a dynamic life in a world throbbing with activities. But it should be remembered that a dynamic society, by the very term, implies a society impatient of any delinquency and from which delinquency has been banished. There is no gainsaying that the delinquency that is now being seen in the students and the teachers is sufficient to cause alarm. The leaders as well as the general public have, therefore, ample reason to regret such aberrations leading to degeneration of the students, the future scopes of the country, and of the teachers on whom rests the onerous responsibility of turning out able men of character in whose safe hands the ship of the state might, in due course, be handed over without the least hesitation. They hold that the present drift presages nothing but darkness and confusion for the future of the country, and that the situation must be tackled with strong and firm hands for retrieving the position.

It is, however, an encouraging and healthy sign that the spotlight has been thrown on the present challenging problem of student-teacher delinquency, and that it has evoked wide interest. The utterances in public meetings, the ventilations in the newspaper-columns, etc., throw practically the entire blame on the students and the teacher community. The students who do not attend to their studies and indulge in undesirable acts and behaviour and the teachers who fail to discharge the sacred duty entrusted on them are no doubt at fault. But the thoughtful section of the public, conscious of the stark reality, wonder whether this by itself gives the entire story; if not, they enquire what has gone awry and what are the other causes for this delinquency. Where lies the Pandoras' box and what defies solution?

It should be remembered that mere placing the blame on one section or the other will not serve any useful purpose and improve the situation. For finding out the solution, it is first of all necessary to check in the aetiology of the trouble;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it should be inquired why the students in the present age have developed such a mentality and have been caught in the saturnalia of agitations, and what have led the teachers to ignore their primary task of teaching and indulge in activities detrimental to the sacred duty of guiding the students to the cherished goal. It is worthwhile to remember that no stroke of genius can stay the trend and wean away the students and the teachers from the unholy and desperate course; what is of paramount importance is that the origin of the cancerous growth should be traced, its prognosis studied, and determined action taken to uproot the evil with all ruthlessness, so that the nation might live and march unhampered on the road to healthy progress.

But one should beware, of the ominous sign that has appeared on the horizon; it is unfortunate that those who are publicly expressing horror at the student-teacher delinquency, have thrown a veil over their own responsibilities,—the responsibilities of the leaders of society, the guardians of the students, and of the general public in this connection. It should be borne in mind that reports of rampant corruption, bribery, nepotism, and other unsocial acts by the adult members of the society, irrespective of the position they hold or the social strata form which they come, which meet the eyes of the students every morning when they open the daily newspapers, and the surfeit of anomalies with which they find the atmosphere supercharged, cannot but have a disturbing effect on the young and sensitive minds. It is a truism that the character, conduct, and behaviour of students in the impressionable age are greatly influenced by the milieu in which they live their lives. When the students find that they are living in an atmospher when the elders who are expected to show the way, are indulging in questionable behaviour, thousand and one questions naturally crop up in the young minds and clouds of doubt descend on them. It would not, therefore, be surprising if, in such circumstances, a sense of despair should drive them to the unhappy conclusion about the futility of devoting time and energy to studies. In such an unhealthy and unwholesome atmosphere, where scant respect is shown for human values, where empty preaching and cacophony of conflicting ideologies have become the order of the day, and where indulging in temper tantrum is an every day occurrence in

public meetings, deliberations in the legislatures, local bodies, etc., it is idle to expect from the students any behaviour other than an ecological one.

Students in the past had the opportunity of attending to their studies in a calm and sober atmosphere unruffled by extraneous influences. They had also before them men of impeccable character with high ideals and progressive ideas who remained steadfast and unperturbed before outside influences, and dominated different spheres of public life. It was such characters that provided the inspiration and urge to the student community to shape their character and conduct. In the present disturbed age, retributive action, moral suasions, or ladling out sermons cannot be expected to produce any beneficial effect unless that calm and sober atmosphere can be resuscitated and the norm of public behaviour and morale at all levels raised to a standard commensurate with high ideals and progressive ideas. In this connection it is pertinent to note that at present there prevades a tendency for exhortations to follow the high ideals and ideas advocated by different authorities in the past, viz., those laid down in religious texts, such as the Hindu Shastras, the Quoran, the Holy Bible, etc., or those prescribed by the thinkers in social, political, economic or other fields, viz., Mill, Locke, Adam Smith, Marx, Engels, and others. It should be understood that it would not be profitable to ask the present generation to follow those ideals and ideas without adjusting the same to the needs of the times, as the economic, social, political, and other conditions as well as the milieu have since undergone immense change. It is worthwhile to recall here what Dajislas said about "ideals" and "Ideas" in his "Anatomy of a Moral": "an ideal stems from the inner difficulties and contradictions of man and society ....The rise of ideals, of 'ultimate goals', does not depend, or rather depends very little, upon human will, because ideals arise out of objective exigencies, out of life and reality. Ideals too are mortal and ephemeral. They arrive and coexist with the reality which produced them and disappear with it in order to make room for other Ideals'.....In reality, there are no 'ultimate ideals' which can be fully realised because their realisation would mean an end to progress and the life of society." As regards "ideas to inspire

thrown all comtemporary forms and ideas into a veracious wheel which incessantly grinds them between its stones . . . . Every new idea, if it is really new, reflects some new reality, some change either in the material world or in scientific discovery or artistic creation. Restless, relentless reality constantly impinges on human mind which must react to it in order to explain, adapt and lead it."

In this connection it may be pointed out that the introspective section of the public place a considerable amount of the responsibility for the students' unrest and disorder on the political parties and on the *upas* injected by political leaders who are unremitting in their exhortation to the students to join political activities. The bizarre attractions which such activities hold out have an irersistible charm ; there can, therefore, be hardly any mitigating factor which might even partially absolve the political leaders from responsibility. The general consensus is that participation by students in political activities where different political parties with warring creeds viz., with each other, cannot but have a deleterious effect on discipline, and distract attention of the students from their main objective. They also state that the recreational and other diversions before that are at present being provided by government, and other private and quasi-private organizations, and which mostly pass off as "culture" (!), *viz.*, music, dance, theatre, radio, cinema, football, cricket, etc., aid and abet the development of undesirable behaviour patterns. Such a glut of diversions, moreover, hardly leave the students any opportunity for undisturbed serious study. It is also disquieting to find that, even in the midst of such a noisy atmosphere, should any student prove ingenious enough to manage to snatch a few hours for serious study, his efforts are likely to be nullified by the ubiquitous enemy, the amplifiers, whose owners appear to possess scant respect and consideration for others' convenience.

When such is the situation, the teachers would naturally find themselves helpless against the forces in action. To protect themselves from a sinking sense of insecurity they would not risk sticking their neck out and would rather wisely play the dumb; they would studiously avoid the protection of the guide and philosopher to the students when they know that it is the men in position, power, and authority, who are behind the move for creating such a senseless and thoughtless milieu. Moreover, if the teachers, hag-ridden over fighting the present-day rocketing high prices, find little energy left for giving proper attention to the students, and as men of moderate means get exacerbated at the innumberable and seemingly insurmountable problems facing them for establishing their children in life under the present conditions where, it is generally feared nepotism is fairly and widely prevalent, it is useless to put the entire blame on them. That such a fear is not without foundation is anybody's guess. When one finds that such an undesirable situation prevails in the advanced and enlightened countries of the West as well, a fact whose corroboration one might find in an interesting incident recorded by Vance Packard in his book,—"The Status Seekers"—one need hardly wonder should one find that nepotism has also taken its roots in this country. The incident recorded is : "Herbert Kubly recalls his astonishment when he went abroad to serve as a Fulbright Professor. Sixteen Fulbright Professors were on board his ship. One of their objectives, while in Italy, was to present a strong case for American Democracy. Kubly recalls : "our first lesson in democracy came quickly, even before we left New York. When we embarked we discovered that some one in Washington had booked professors from Harvard and Yale into first-class cabins and those of us not in the Ivy League into second-class cabins". When, therefore, the various difficulties which the teachers are, perforce, required to face are considered, any reasonable man should arrive at the inescapable and unhappy conclusion that in the prevailing atmosphere, they have mostly become victims of circumstances over which they have hardly any control.

The arguments in the foregoing paras have been advanced not with the purpose of absolving the teachers from responsibility but with a view to bring out the situation in bold relief. Unless proper conditions and a proper atmosphere can be created, it cannot be stated how far and to what extent the blame may squarely be laid on their shoulders. The reasons why the leaders of society, the guardians of the students, and the general public are vociferous in placing almost the entire blame on the teachers and the students and why they are trying to shirk their own responsibilities are not far to seek. One should think that, apparently, they have as well been caught in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

maelstrom and they find themselves either helpless or too involved. Such a situation has arisen, as many believe, because of the overwhelming economic and other problems of the day which are throttling the very existence of the common man, and the existing climate where it is money that talks and has become the predominant determining factor for buying prestige, influence, and recognition. The thoughtful sections of the public express the view that it is these factors which have impelled the teachers to keep themselves busy and fully engaged in a drive for earning as much extra money as possible by tapping all possible sources. The *raison d'etre* for such a mad rush, they contend, lies in the fact that the normal income yielded by any occupation is too inadequate either for meeting the present-day ever-rising cost of living or for buying increasing luxuries now-a-days considered indispensable for establishing prestige and influence; they also lack the purchasing power for buying position as socialites in the hierarchies of high societies, etc., or for utilising opportunities for seizing power with its concomittant advantages. They fear that the present generation have, in all probability, arrived at the unhappy conclusion that it is useless to strive for attaining those qualities that counted in the past, *viz.*, learning, knowledge, modesty, etc., and to persevere with them in this industrial age where cadillac-civilization rules supreme, since those qualities have lost their old values and are now given little recognition because they are not deemed requisite and sufficient for earning the necessary money.

When the country has been entangled in such a predicament, the people must realise the portentous situation and without the least delay plunge themselves into a relentless fight to save the nation from the impending disaster that is threatening the country; it brooks no delay. When the welfare of the students, the country's future hopes, are in jeopardy, the leaders must rise to the occasion, put their heads together for contemplation, and find the answer. Such a desperate situation as the present one, may only be attributed to somnolence by atrophy of philosophic impulse by which, it is generally feared, the nation has been overtaken. In order to rescue it from the present morass and save the nation from decadence, it is urgent to communicate a sense of purpose to the national life, make a determined drive for purging it of undesirable tendencies, and stir it to healthy activities. Unless a placid atmosphere can be created, a new era ushered in by a complete reorientation of human relations, and the constellation of interests and pressures uprooted, so that the teachers may carry on their sacred duty honourably without serious distraction and the students get proper opportunity for undisturbed serious study, all devices to meet the challenging problem of student-teacher delinqency, it is regretted, cannot but be expected to end in smoke.

—:o:—

CHRONOLOGY OF HINDU ASTRONOMY

By A. N. CHANDRA

ALMOST all the Astronomical references in the *Vedic* literature are expressed in a mystic language and through allegorical legends, as this was the usual practice with these poetical people. At such a distant date, therefore, when both the *Vedic* age and its culture have become a matter of legend to us, it is very difficult to interpret the proper significance of these allegorical hymns and to find out the extent of their astronomical knowledge. During the later Brahmana period, however, their knowledge of astronomy advanced to a great extent and this branch of science became a part of the curriculum for the students. In fact, both Jyotisha (ज्योतिष) covering Astrology and Astronomy and Nakshatra-Vidya (science of stars) were taught. In the *Upanishadas*[1] it is written that once upon a time Narada approached the holy saint Sanatakumara and begged Supreme Knowledge from him. On being asked what he has already learnt, Narada replied that he has acquired knowledge in various branches of Arts and Science, one of which is Nakshatra-Vidya, which literally means knowledge of stars. Another branch of knowledge

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which he mentioned was Brahma-Vidya which comprises five subjects, one of which was Jyotisha.

In the ancient days Ganita (Mathematics), Nakshatra-Vidya (Science of Stars) and Jyotisha (Astrology and Astronomy) were held in very high esteem as these were necessary for performing Yajna (sacrifices) which ultimately, it was believed, led to realisation of Soul. The alter (वेदी) where these Yajnas or sacrifices were performed had to conform to specified shapes and sizes. The actual rituals also had to be undertaken under certain particular combinations of the heavenly bodies.[2] Thus, they had to watch the heavens and find out the movement of these bodies which ultimately opened further sources of knowledge to them.

The process of development of Astronomy in ancient India mainly passed through three periods, *viz.*, (i) the *Vedic*, Brahmana and the *Upanishadas* periods (ii) the post-*Vedic* or the *Vedanga* Jyotisha period, and (iii) the later or the modern period upto about 11th or 12th century A.D. The first period dates back from about 11,000 B.C., to about 1,500 B.C., the second from then onwards to about 500 A.D. and the third for the succeeding period.[3]

In the *Rig-Veda*,[4] in the later Brahmanas and in the *Upanishadas*, it is written that the Universe is comprised of the Earth, the Sky and the Heavens. The Earth was known to be spherical in shape[5] and was believed to be suspended freely in the Air. In the Satapatha Brahmana, it is stated that the Earth is Parimandala, (परिमन्डल) that is, round in shape. The area of the Earth has also been discussed in the *Ri-Samhita*. The factors of axial rotation and orbital motion of the Earth caused by the Sun[6] was also known to the *Vedic* Indians.[7] Prof. Ludwig found evidences in the *Rig-Veda* that the annual revolution of the Earth round the Sun was also known to them.[8] The Sun was believed to have seven horses, probably indicating the seven colour spectra of the Sun's rays and it was said that the Sun caused winds. In Aitteriya Brahmana[9] it is stated that the Sun never sets or rises and the Sun was also supposed to hold the Earth and other heavenly bodies in their proper places. The existence of the Zodiacal belt was also known to them,[10] and it was held that Varuna constructed this broad path for the Sun. Prof. B. B. Datta is of opinion that they knew that "the ecliptic is divided into twelve part or Signs of the Zodiac, corresponding to the twelve months of the year, the Sun moving through the successive signs during the successive months. The Sun is called by different names at different parts of the Zodiac and thus has originated the doctrine of the twelve Adityas or Suns." The fact that Moon shines from borrowed light of the Sun was not new to them. Although opinion in this respect differs, some scholars hold that five Planets were known to them. Planet Sukra or Vena and Manthani are mentioned by their names. The twenty-seven Nakshatras (Asterisms) were also known and it was said that the Moon was wedded to these Nakshatras. In the *Yajur Veda* a complete list of the Nakshatras is given. At that time Krittika used to top the list instead of Aswini. During the time when Aitteriya Brahmana was compiled the calculation of Tithis was known. It was mentioned that the Tithis are to be counted from the setting and the rising of the Moon.

Prof. P. C. Sen Gupta[11] has stated that the *Vedic* Indians depended more upon the observed positions of the Sun and the Moon and calculation was often discredited. It has been stated in the Taitteriya Brahmana[12] that the *Vedic* Astronomers knew the method of making celestial observations and could ascertain the motion of the Sun by observing the Stars rising and setting with the Sun. Observation in respect of Solar eclipse is also found in the *Rig-Veda*. It is stated that Atri observed a total eclipse of the Sun, caused by Swarvanu, covering the Sun. He also knew the calculations and could predict the occurrence, duration, beginning and the end of an eclipse. The lunar eclipse is also mentioned.[13] Equinoxes and Solastices were known to them and they knew how to determine the four cardinal directions by means of the gnomon.

Apart from Atri, Briddya Garga was one of the oldest Astronomers. In *Mahabharata*, his name has been mentioned in two places.[14] It has been stated that he lived by the river Saraswati and was proficient in the knowledge of time and the motion of Planets and Stars. Many *rishis* used to come to him for learning this science. Later, it is said, he became the Court Astrologer and Astronomer to Pithu the son of Vena. At the time when *Mahabharata* in its present form was com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

piled, he was considered to be one of the oldest Astronomers. According to Prof. P. C. Sen Gupta[15] Lagdha, who was the author of the Yajusha Jyotisha, comes next. He found that the summer solastice passes through the Nakshatra Asleshya and the winter solastice through the first point of Dhanista. The next names in order of antiquity are that of Garga II and Parasara. Other Astronomers of comparatively less fame were Rishiputra, Kapilacharya, Kashyapa, Devala, etc., and they were also astrologers. No idea can be made accurately when they lived and what they achieved in the field of Astronomy or Astrology.

In the field of post-*Vedic* Astronomy, the record that can help us is the Panchasiddhantika and Brihatsamhita of Varahamihira (550 A.D.), in which he has summarised the materials obtained in the old Surya, Paulisha, Romaka, Vaisista and Paitamaha Siddhantas. As regards these, his opinion was that the Paulisha Siddhanta was accurate, Romaka Siddhanta stood near to it, and the most accurate was Surya Siddhanta; the remaining two are far from truth. The original period of these siddhantas cannot be determined accurately but some scholars time these to the period dating from 100 A.D. to 500 A.D. Anyway, these were quite well-known during the time of Varahamihira. Romaka Siddhanta bears a distinctly Greek name and is perhaps the sum total of the then Greek Astronomical ideas transmitted to India through the invaders. Opinion has also been offered that the old Surya Siddhanta, as existed before Varaha, was extinct and he made it up-to-date by borrowing the Astronomical constants from Aryabhatta 1's Ardharatrika.

The period from 500 B.C. to 500 A.D. can be called the dark age of Indian Astronomy as during this period no important discovery was made. The knowledge that was gathered previously was believed to have been compiled during this period. The scientific study of Astronomy in India dates back to the year 499 A.D., when Aryabhatta I, of Gusumpura (near Patna) began to teach Astronomy to his pupils at the age of 23. We find Latadeva, Nassanka, Panduranga-swami and Bhaskara 1 as his direct pupils. The next Astronomer of renown is Brahmagupta, who was born in 598 A.D. He was the author of *Brahma Sphuta-Siddhanta*, which he wrote at the age of 30 and his other work Khandakhadakya was written when he was 67 years old. This second book gives a simpler method of computation of the longitude of the Planets according to Aryabhatta's theory.

Aryabhatta was the first Astronomer who believed that the Sun was stationery and the Earth moved round it.[16] He proved that the Planets are moving in an elliptical path. Varahamihira started to count the year when the Sun entered Aswini instead of Krittika. He also found out movements of some of the Comets and foretold when these will reappear. Next Astronomers of renown are Manjal (932 A.D.), Prithudakaswami (928 A.D.), Bhattatpala (960 A.D.) and Sripati (1039 A.D.). Manjal wrote a book on Astronomy (Laghumanasa) and found out the process to determine the precession and even Bhaskaracharya had to accept his theory. Bhaskaracharya was born in 1114 A.D. and compiled a book named Siddhanta-Shiromani and this is the last renowned book compiled in modern times. Most of the important and difficult theories of Astronomy, such as, determination of parallax, conjunction of Planets, etc., were discussed by him. Prithudakaswami, another Astronomer, used to observe the Stars and the Planets from Peihowa a place near Kurukshetra. He wrote a note on Brahma-Sphuta-Siddhanta.

---

1. *Chandogya Upanishada* (7|1|1 and 7|1-2) :

ॐ । अधोहि भगव इति होपसाद सनत्कुमारं नारदस्तं होवाच पद्वेत्थ तेन मोपसीर ततस्त ऊर्ध्वं वक्षामिति स होवाच ॥

"Oh Lord, teach me" said Narada and presented himself to Sanatakumara. Sanatakumara said, "Be my disciple with what you know. I shall teach what more there is to know". Then Narada said :

ऋग्वेदं भगवोहध्येमि·····ब्रह्मविदयां···नक्षतत्रविदयां···सर्प-देवजनविदयामेनद् भगवोहध्योमि ॥

Here Narada tells what he knows and in it is included Bhramha-Vidya and Nakshatra-Vidya.

2. *Taitteria Samhita* (7|5|9), *i.e.*, the full Moon of Chaitra is the beginning of the year and the *Yajnas* should be started on that day.

3. Some references to the Astronomical data in the Brahmanas and the *Samhitas* have enabled eminent Indian scholars to fix the periods of certain occasions mentioned therein to about 3100 B.C. References to the month Tapas in the *Vedic* literature identifies it with the Lunar month Phalguna but in *Vedanga* Jyotisha period, this is referred to as the Lunar month of Magha. This change is ascribed to the precession of the solstices between the period from about 3100 B.C. to 1400 B.C. So the period of *Vedanga Jyotisha* has been fixed at or about 1500 B.C., by the scholars. Also from the following verse found in *Vedanga Jyotisha* (reproduced from Panjika Samskara—by Dr. K. M. Bose, D.Sc.), it has been found that the period of *Vedanga Jyotisha* was at about 1413 B.C.

दवराक्रमेते सोमार्कौ यरा साकं सरासरौ ।

स्यान्नदाहहदियुतां माघस्तपः शुक्रोहयनं ह्युदक् ॥

4. *Rig-Veda* (1. 115. 1; ii, 11, 40, etc.).

5. *Rig-Veda* (i. 33.8).

6. "The reckoning of the Sun's daily journey cited by Sayana, perhaps from some text of the *Vedas*, is much nearer the truth than that of the *Puranas* being something more than 20,000 miles, and being, in fact, the Equatorial circumference of the Earth."—Bently—*Hindu Astronomy*.

7. Dr. Ekendra Nath Ghosh in his "Studies in *Rig-Vedic* Deities—Astronomical and Meteorological", published in the *Journal of Asiatic Society of Bengal*, 1932.

8. *Vedic Mathematics*—Prof. B. B. Datta, M.Sc., P.R.S., D.Sc., In Ramakrishna Centenary Issue also, *Rig-Veda* (viii, 2, x, i). The Earth revolves round the Sun in its own orbit is also mentioned in *Yajur Veda* (iii, 6).

9. *Aitteriya Brahmana* (iii, 44).

10. *Rig-Veda* (i. 28. 8).

11. Ramakrishna Centenary Issue—*Hindu Astronomy*.

12. *Taitteriya Brahmana* (i. 5. 2. 1).

13. "Eclipse Mathematics is based on the *Veda* itself. It is described as the Aruna-Ketu-Chayana in the Taitteriya Aranyaka. That there was continued observation of Astronomical phenomenon in India can be easily admitted when we find ancient Indian Astronomers speak of the motion of the *Sapta-Rishis*. This is the apparent forward motion of the Great Bear with respect to the solstitial colours (Indian) considered fixed. Two great circles through the pole of the ecliptic passing through the first and last stars of the Great Bear constitute an angle of 36 degrees. The time taken to sweep this angle is given to be roughly 28,000 years, which is approximately the value given in the *Ri-Veda, viz.*, 2,800 years, this phenomenon must have happened between the years 5,900 B.C. and 3,100 B.C.—*The Astrological Magazine*—Editorial, June, 1955, issue.

14. *Mahabharata* (ix. 37—14-17; xii. 59.-111).

A VISITOR'S REMINISCENCES OF KASHMIR
The Paradise on Earth

By ARVIND MALAVIYA

SINCE Kalidas opened his immortal classic, "Kumarasambhava," with the verse* referring to the Himalayas as a measuring-rod spanning the wide land from the East to the Western Seas, a metaphor suggesting that the culture developed in the Himalayan region could serve as the measuring-rod of the world culture, the Himalayas have formed a part and parcel of our literature and culture. From the very Vedic era the Himalayas have been a source of inspiration to the poets and painters, sages and saints alike. The beauty of the Kashmir valley situated in the lap of the Himalayas—has enthralled artists and nature-lovers since time immemorial, Poets, painters and writers have sought to capture, through their respective media, its blossoming splendour of myriads of multi-coloured flowers, the verdant pastures and hill-slopes, the blooming fruit orchards, the snow-clad peaks, the swift-running streams and green meadows and towering pine trees.

After climbing 10,000 feet and soon after entering the Banihal pass—now called Jawahar Tunnel—which serves as the gateway to Kashmir valley, one is in what the Persian poets have called the "Paradise on Earth." Eighty miles long and about twenty-five miles across at the widest point, Kashmir is separated from the rest of India by the Pir Panial range. North and east of the valley stand the snow—capped peaks of the Himalayas, with Nanga Parvat (26, 660 ft.) somewhere in the centre, beyond which lies Tibet, China and Soviet Turkistan. Curling its westernly way lazily down the valley is the river Jhelum which flows through a narrow gorge into Pakistan. Situated at a mean height of some 6,000 ft. above sea level, the valley of Kashmir, with its scenic grandeur, affords opportunities for a holiday unrivalled in Asia and perhaps in the world.

Towards the centre of the valley stands the capital city of Srinagar built on both sides of the river Jhelum, spanned by seven bridges. Srinagar is, indeed, the Venice of the East, for, apart from the river, the city lies on the edge of the Dal lake, five miles long and some two and a half miles wide. There are well-equipped modern hotels, picturesque houses and house-boats which represent the *sine qua non* of living in Srinagar. Well-fitted, some of them even exquisitely furnished, the house-boats can be moored on the river or some shady spot on the edge of the lake and thus give one a thrilling experience of "living on the water."

The Manasbal Lake

Gone are the lovely lotus from the Dal lake. Instead, golden, yellow and brown rushes abound and reddish tinged willows overhang the water ruffled waters of the innumerable canals. On the surrounding heights, in the late autumn, like silent sentinels of dark green against the early snows stand the towering pines—heralding the time, not long off, when hoary winter will blanket everything under its snowy carpet.

On the Dal lake itself, there is the Chinar (the four trees of Chinar situated on an island in the midst of the lake) and the Nehru Park (an embodiment of the French sea-side riviera) which can be reached on a Shikara—an altogether unforgettable experience.

---

* अस्त्युत्तरस्यां स्यौ दिशि देवतात्मा हिमालयो नाम नगाधिराजः।
पूर्वापरौ तोयनिधी वास्य स्थितः पृथिव्याश्च मानदण्डः ॥

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It is indeed a great pleasure to recollect the spiritual enjoyment that one derives by a climb to the Shankaracharya peak in the city, by having a "darshan" of the deity and by having a view of the Dal lake and the Char Chinar in the lake from this peak.

The Temple of Shankaracharya, Srinagar

The tourist can indulge in a lot of sight-seeing in Srinagar. More or less on the Dal lake and only a few miles from the city, are the famous Nishat and Shalimar Gardens and the Chashma Shahi. These gardens have been laid out by the Moghals in imitation of patterned Persian carpets; they proudly display all the hues of the rainbow at their most gorgeous. Framed against the background of the hills and commanding a fine view of the lake, the gardens are a feast of colour from spring to autumn. With their majestic Chinar trees, they are favourite picinic spots.

Not only are there places worth a visit in Srinagar itself, it abounds with attractions around too. Verinag, the octagonal-shaped stream, supposed to be the source of the river Jhelum, Gulmarg, the "Golfer's paradise," Sonmarg, the valley of glaciers, Wular lake, the largest fresh water lake in Asia through which the Jhelum passes, Khir Bhawani, the temple of the Goddess Bhawani situated amidst a tank, the changing colour of whose water is believed to determine the destiny of Kashmir, the Martand temple, the temple of the Sun God, Anant Nag, and so on and so forth.

A visit to Kokarnag, on way to Pahalgam, with its invigorating and bracing climate, captivating scenic-beauty, cool and refreshing water-stream is an altogether novel experience.

The visit to Kashmir is never complete without at least a week's stay in Pahalgam. In the Lidder valley, 60 miles by road from Srinagar, it is situated at a height of 7,000 ft. The meeting point of two snow-fed rivers, the Sheshnag and the Aru, over-hung by forests of blue-pine and fir, not even a day's march from perennial snows, Pahalgam is surely one of the loveliest spots in the whole of Kashmir. Tourists with a taste for adventure will want to visit the sacred Cave of Amarnath, 28 miles into the hinterland of ice and rock. The angler will find several excellent beats on the Lidder—incidentally, Kashmir's record catch of a 14 lb. brown trout has been bagged on this river. There is a sporting nine-hole course for golfers who do not take themselves too seriously. Most visitors live in tents in Pahalgam but there are modest hotels too. A trek on pony-back to the Chandanvari, the snowbridge, is a must for a visitor here.

Dal Lake with its Kashmir Houseboats and Shikaras

The Kashmiris are fine craftsmen and their wood-work—Kashmir can boast of excellent walnut wood—papier-mache, embroidery and silverware will invitingly attract the attention of visitors. Kashmir shawls are known the world-over, and shawl-makers have lost none of the fineness of execution of their famous forebears. Kashmir is also well-known for her pure saffron

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and honey and rich and juicy fruits and dry-fruits. A visitor to this valley is eagerly waited for bringing these gifts for his near and dear.

The people of this valley make an interesting study. Peaceful by nature, they are singular by virtue of their simplicity, unsophistry and industriousness. They are poor but honest, hard-working and men of character. They are hospitable—if ever you be stranded in an out-of-the-way place, you can be sure of being well looked after. Nature in its beauty has inspired in the Kashmiris a sense of aesthetic beauty which finds expression in their numerous art works. Their children are conspicuous by their sweet charm, health and innocent smile. Poverty compels them to beg but they are not profes[illegible] beggars: Beauty "begs" in Kashmir but be[illegible] there is in every nook and corner.

Kashmir's beauty is at its zenith in a[illegible] —a season which has been called "the sea[illegible] the falling fruit and the long journey to obli[illegible] One lives through days of persistent mellow [illegible] xication. "All that is beautiful drifts away [illegible] the waters," we might well mourn with the [illegible] Old Man," of Yeats. Never mind if it does [illegible] "a thing of beauty is joy for ever," Keats [illegible] minds us. The thing that matters is that the [illegible] xication of beauty lingers, even after the [illegible] mism engendered by such thought is [illegible] forgotten—even for the good.

AN ABSTRACT PARADISE FOR CHILDREN

REVOLUTIONARY park planning to release children into the realm of imagination and phantasy—Novel developments to be shown at the 1963 International Horticultural Exhibition in Hamburg

BY BERND W. WESSLING

Gardens and parks, green areas and grounds where children can play are things that belong together. They have a psychological effect on people, *i.e.*, they give pleasure, full rein to imagination, they promote and develop a certain feeling for shapes and forms. The psychological effects of playgrounds on children, the importance of which has been allowed for in paedagogical and educational methods, had already been recognized by Spinoza, Pestalozzi, August Hermann Franke (the famous founder of the Institutes at Halle) and Froebel himself. Children are to be released from any compulsion, are to get out of dark and unsuitable homes, the gloomy life of sunless backyards, and they are to be prevented from their dangerous playing on roads. Moreover, the modern educational, paedagogical and social-hygienic ideas are being realized in these modern playing facilities for children.

The sponsors of the International Horticultural Exhibition to be held in Hamburg in 1963, have given wide scope to the idea of children being allowed to play in open nature. Part of the old city wall of old Hamburg is being re-arranged according to the plans of well-known architects into a kind of playing ground [illegible] scape for children, which will not only be un[illegible] of its kind, but which will also be layed [illegible] according to basic educational, psychological [illegible] aesthetic aspects. The total area of 4,000 s[illegible] feet will have a playhouse for children, a [illegible] playing field for ball games and roller skat[illegible] a lawn, playing ground, sandpits, facilities [illegible] playing in shallow basins filled with water, [illegible] open air stage, a dolls corner, a clim[illegible] mountain, a marble hill, water mills and s[illegible] gates. An attraction for playing, no doubt, wi[illegible] be an abstract landscape from pre-fabri[illegible] concrete parts, which has been designed by [illegible] Aaron of the Creative Plaything Inc. of [illegible] York.

Children want to have free scope for [illegible] phantasy and imagination. That is why educ[illegible] psychologists and gardening architects think [illegible] the bizarre branches of the surrealist clim[illegible] trees, the modern abstract landscape, shutes [illegible] sculptures because of their vagueness of form [illegible] a much wider rein to the imagination of chil[illegible] than does conventional equipment. In his re[illegible] able book "Small Cultural History of Games [illegible] Playing" published in the series to be sold [illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

occasion of the International Horticultural Exhibition in Hamburg, Gerhard Aick says that modern playing equipment by its very adaptability to the imagination of the individual child has something magic about it; it gives rein to child-like phantasy, to the search and triumphant feeling of children when they have turned these objects into real things in their imagination. Children do not want prescribed and straitjacketed forms, for any object attains its beauty solely from the imagination of the child. It is a reflection of a thing which the child projects into the object. Modern playing equipment in an excellent manner gives the child the opportunity of enjoying beauty."

What the International Horticultural Exhibition in Hamburg will show are the latest developments in this field. The sponsoring organization will not only endeavour to show novel equipment, but fully equipped playing landscapes, but will with its revolutionary planning also help to contribute to "releasing of children." "The East Bloc in its educational theory returned to the cramming of knowledge into any people as was usual during the Age of Enlightenment. The West is under the pressure not to be outweighed by robots, and surrounded by dangers on all sides. And yet, in our world of ever growing data, facts and figures that have to be mastered, and of compulsion to learn as a prerequisite for survival, games and plays have retained their paramount significance for life in modern society." Thus the organization sponsoring the Exhibition describes the spiritual and cultural background of its endeavours. Doubtless it will be successful in rousing international educational and psychological expert circles to take up the discussion on contemporary principles of education and the psychological theory of games and plays in their effect upon children.

——: O :——

GEORGE THOMPSON—A FORGOTTEN

Political Teacher of Nineteenth Century Bengal

By Prof. D. L. NATH, M.A.

वाचनालय, कांगड़ी गुरुकुल

Few do, perhaps, remember George Thompson (1804-1878) whose speeches on Indian affairs held in England and India roused political consciousness amongst the educated people of Bengal in the first half of the nineteenth century. In fact, he was regarded in the last century by some of his country men as the father of political education in India. Thompson's speeches on Indian political problems were collected in a small volume and published at Calcutta in 1843. As the political aspirations of the enlightened Bengali mind found expression in his speeches they became very popular and the volume shortly went out of print. It is well-known, a new political era began in our country with the establishment of the Indian Association. National feelings were intensified due to the activities of the above association. The "Hindoo Mela" of Nabagopal Mitra assumed a form of emotional nationalism which was sometime carried to a ridiculous extreme. It is perhaps, for these reasons that the most valuable utterances of George Thompson regarding Indian problems received little attention during the latter part of the Century.

Fortunately, in the nineties, the political ideas of George Thompson were again brought to light by one Shri Raj Jogeswar Mitra. After about half-a-Century he reproduced the "intellectual treasure-trove" of George Thompson (Published in 1895 by S. K. Lahiri & Co.), and dedicated it to Rashtraguru Surendranath Banerjee. In course of his dedication Shri Mitra expressed great admiration for George Thompson whom he described as the "Father of Political Education in India".

This is no doubt very significant. Bholanath Chandra while giving an account of the speeches of George Thompson in the *Calcutta University Magazine*, Nov. 1895, said : "Time has not lessened their value. Progressive enlightenment has not affected their interest. They exercised a potent charm on a generation which heard them in elo-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

quent utterance. To the generation of the present day they will prove an interesting as well as profitable reading. There is bullion in the lesson of our first political teacher that will last long. Every young man ought to have a copy of them."

The intelligentsia of our country entered a still new phase of political thought after the partition of Bengal in 1905. The anti-British feeling which was already running high reached a very high pitch after the partition. A few yars after the partition the political ideas of Mahatma Gandhi began to be strongly felt in Bengal. He launched political movements more than once—the motive of which was not only to offer passive resistance to Imperialist rulers but also to love everything 'National'. In the process of this nationalisation, contributions of some foreigners which were of immense value, began to be forgotten by our countrymen. It was only Rabindranath, who, in some of his essays wanted to draw our attention to the noble lives and high philanthropic ideals of these foreigners.

Much emphasis has of late been laid on David Hare, Derozio and Richardson's zeal to bring about a renaissance in modern Bengal. Their efforts in this direction were of no mean order indeed. But at the same time it must be remembered that their attention was confined to the cultural sphere only. The ralistic problms of the country at large were not much touched upon by them. Even the patriotic note in Derozio's 'Fakeer of Jungheera' is mainly a vague emotion. He was a free-thinker no doubt, but it must be admitted, his free-thinking did not evoke much interest in practical politics and the general condition of the country which was groaning under the misrule of the East India Company. It was George Thompson, who for the first time, attracted in a very effective manner, the attention of enlightened "Young Bengal" to the practical political problems of the day.

As the most prominent member of the British India Society of London, George Thompson became acquainted, to some extent, with the problems of India. Even with that limited knowledge he travelled widely in Great Britain to make the British public acquainted with contemporary Indian problems. As a humanitarian he not only loved India but wanted her all-round progress. When he was invited by Dwarakanath Tagore to visit India he did not hesitate to accept the invitation as it would give him an opportunity to gather first-hand knowledge of a country [illegible] he loved so much. He travelled with Dwarakan[illegible] in the same steamer and landed at Calcutta [illegible] December, 1842.

After his arrival in Calcutta he tried to [illegible]spire reforming "Young Bengal" with a [illegible] of speeches. He told them to be thoroughly [illegible]quainted with the actual problems of the co[illegible] and to undo the wrongs (of course through co[illegible]titutional means) committed by their r[illegible] George Thompson's spirited political utterance[illegible] although reasonable were considered as "[illegible]tious" and he was nick-named "Thompson—[illegible] grievance-monger" by the European and [illegible] Anglo-Indian Press. The enthusiastic political [illegible]ciples of Thompson who already started a [illegible] weekly, *The Spectator*, to discuss the contempo[illegible] social and political problems converted it to [illegible] weekly when they came in contact with him. T[illegible] also formed the first political organisation [illegible] Bengal, "The Bengal British India Society" [illegible] 1843 with George Thompson as its first Presi[illegible] The aim of this political association was to d[illegible]cuss and adopt as far as practicable such measu[illegible] as could improve the condition of the co[illegible] Within the short space of an article it is not p[illegible]sible to give a full description of this Associat[illegible] But one thing most worthy to note is that w[illegible] the teachings of Derozio created a taste for [illegible] thought in the enlightened Bengali youth, [illegible] teachings of George Thompson created a taste [illegible] politics among them when they were mature [illegible] age and experience.

While recalling the contributions of [illegible] group of reformers who brought about a c[illegible] in the first half of the nineteenth century, [illegible] Bholanath Chandra writes in the *Calcutta Un[illegible]sity Magazine* in 1895 :

"Raja Rammohan Roy, Raja Radhak[illegible] Dev, Baboo Russomoy Dutt, Baboo Motty [illegible] Seal and Baboo Prasanna Commar Tagore [illegible] it within them and the light came out of [illegible] with more or less brilliance. Then came the [illegible] of public teaching with David Hare's exc[illegible] fruiting in the Institute of Hindu College. [illegible]zio's teaching turned out the first batch of [illegible] forming Young Bengal. Let us see what T[illegible]son's teachings have turned out. Indeed, they [illegible]duced a generation of political "Young Be[illegible] —a set of men who presented a very di[illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The duteous and knew-crooking Baboo,
That doting on his own obsequious bondage,
Wears out his time, much like his master's ass".

According to Bholanath Chandra these spirited "Young Bengal" who were imbued with a new political outlook belonged to the "Thompsonian School". Prominent among them were Tarachand Chakravarti, the Bengali Cato, Chandra Sekhar Deb, the Rev. K. M. Banerjee, Ramgopal Ghosh, Peary Chand Mitra, Dukhinaranjan Mukherjee, Digambar Mitra, Shyama Charan Sen and Kalachand Sett. They were the brave persons who had sown the seeds of first political consciousness in Bengal. 'The Friend of India' tauntingly compared their 'thundering Balakhana' speeches with the actual thunderings then going on at Bala Hissar at Kabul.

There is no denying the fact that the influence of "Bengal British India Society" was not very effective as the political programme chalked out by this Association could not be carried to the end. Time was not yet ripe for giving practical shape to the progressive political ideas of George Thompson. Yet it must be said to the credit of the "Thompsonians" that they were the first political-minded persons of Bengal who tried to determine the actual condition of the ryots and made an attempt to redress their grievances. Ram Gopal Ghosh, one of the most prominent "Thompsonians" 'with his noble swelling public spirit and sufficiency of means', carried on active propaganda and made vigorous speeches to uphold the rights of the poor peasants whose sufferings were boundless owing to the oppression of the cruel Indigo-planters. Babu Bholanath Chandra comments : "To this first seed (Bengal British India Society) sown by George Thompson, M.P. may remotely be traced the outcome of all other associations, including the very Congress itself".

INDIA'S CRIMINAL TRIBES

By P. S. SHARMA

It would be expedient at the very outset to demolish the misconception in the mind of the average reader that criminal tribes are the same as aboriginal tribes or at least belong to the same racial or cultural stock. This misconception seems to arise from nomadism of the primitive tribes—a characteristic which blurs the distinction between them and the criminal and vagrant population. Besides the Mongoloid element in the Cis-Himalayan region, the criminal tribes of northern India have a mixture of races, cultures and social status in varying proportions from the purest Brahmin to the hybrid Kahar or down to the Korwa of Uttar Pradesh.

According to Dr. D. N. Majumdar, "the attractive features of the women and their easy virtue help in their tempting overtures to men of substance and leisure and thus consciously or unconsciously they have canalised alien blood into the veins of the tribe, so that the racial purity of the criminal tribes like that of the castes, is a myth."

Relics of mediaeval feudalism and mercenary associates of adventurers and disgruntled claimants, each criminal tribe has evolved a distinct **modus vivendi** for committing crimes like cattle-lifting, crop-stealing, pick-pocketing and dacoity.

Origin and Crime Specialisation

Beyond a certain point, the origin or continuous history of any of the criminal tribes is lost in obscurity. The relevant information is, therefore, based upon legends and hearsay. Most of the criminal tribes claim Rajput descent but due to frequent miscegenation of these tribes with outsiders, they can safely be described as of mixed origin and composition. So also, specialisation in certain crimes by a tribe depends greatly on local conditions, surroundings and environments. Let us discuss the principal criminal tribes one by one.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bawarias

In Platts' opinion, the word 'Bawaria' is taken from Hindi Baola or Baora meaning crazy. Dalton traces its origin to Sanskrit Barbar—a barbarian. Ibbetson connects them to Bawar or leather noose for ensnaring wild animals and John Shakespeare to Shagalkhore—or jackal-eaters.

Legend goes that once Emperor Akbar demanded a dola from King Sandal of Chittorgarh. On a point-blank refusal, a battle was fought near a baoli. The Rajputs were defeated and began to be called Bawalias or Bawarias.

Bawarias also trace their origin to Chandra and Jora who had served Fattah and Jaimal of Chittor as musketeers.

Whaterfield believes that a Rajput chief of Gujerat once presented a royal princess to the Emperor. The Princess did not like the idea and on the way, under pretext of drinking water, drowned herself in a baoli. Her disconsolants began to live a nomadic life near the baoli and became known as Bawarias.

In the past, Bawarias were notorious for committing daylight robberies, but have now adopted shrewder and less violent methods and are adepts in languages and code words. They are expert camp-robbers and nakabzans, pose as **fakirs** and **sanyasins** and carry weapons underneath their clothes. They put on masks and can imitate voices of rats and cats. Their chief weapon Gyan (used for boring holes) they call Gyandas so that it may pass for one of their odd associates. They use a regular system of signs for the guidance of fellow tribals.

The Bhatus

Bhatus belong to an aboriginal tribe, follow Hindu customs, though some of them are influenced by Christianity and Islam. William Crocke holds that Bhatus are a branch of Sansiyas, while others connect them with Bhats or Bards and poets. Belief is also current that the word Bhatu is derived from the Hindi word Bahutor (arm-breaker) referring to their favourite device of incapacitating opponents.

The men are wiry and muscu[illegible] women fair and good-looking. They are ve[illegible] dangerous criminals and go on crim[illegible] expeditions invoking their deity Maha[illegible] They keep in touch which goldsmiths a[illegible] unscrupulous persons by offering them g[illegible] and even their womenfolk. They encourag[illegible] their womenfolk to have immoral intim[illegible] with rich people so that the commission [illegible] crime is facilitated. Their favour[illegible] weapon for breaking open doors and w[illegible] is a gahdala.

Doms, Haburas and Sansiyas

Doms, Haburas and Sansiyas are am[illegible] the most dangerous of criminal tribes [illegible] India. Low-statured and dark-complexion[illegible] Doms were formerly known as blood-thir[illegible] executioners and murderers.

Legend has it that Doms are degener[illegible] ed Brahmins who worshipped malevol[illegible] goddesses and accepted alms at cremati[illegible] grounds. Webster describes them as "a tr[illegible] hopelessly wild and savage in their nature as noted for aversion to work. Th[illegible] women pose as hawkers and gain necess[illegible] information. They are adepts in Tapp[illegible] Bazi or passing brass for gold. They h[illegible] no organised gangs.

Haburas are offshoots of Sansiyas a[illegible] profess to be descendents of Rana Pratap [illegible] Chittorgarh. They wander in gangs a[illegible] waylay caravans and wedding parties. Th[illegible] generally carry a bludgeon.

Haburas take on the guise of Brahm[illegible] on pilgrimage, constables, professi[illegible] mendicants and beggars.

The origin of Sansis is traced to Mew[illegible] Alwar and Bharatpur where they w[illegible] minstrels to Jats. Sansis claim Sahasma[illegible] notorious dacoit, as their ancestor. Oth[illegible] regard them as descendants of Sansi, ill[illegible] timate child of an unmarried princ[illegible] Sansis are skilful camp-stealers. They [illegible] proficient in passing on base coins. [illegible] special feature of Sansi dacoity is the s[illegible] denness of attack and rapidity of [illegible] blows. They stay at river banks [illegible] boundaries of two stations. They dis[illegible] of stolen property through kalals or g[illegible] smiths.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Among other criminal tribes are Mahatams, Karwals, Minas and Kanjars who even rear up their females for purposes of prostitution.

In fine, criminal tribes are of composite origin; their modus operandi in committing crime vary; their anti-social activities are mostly against property and they rarely resort to violence. They take elaborate precautions against being caught and connive at—even actively encourage—immoral intimacy of their women folk for achieving their nefarious ends.

The criminal tribes have continued as nomadic professional criminals since generations past, but are gradually adjusting themselves to growing civilising influences.

BIOGRAPHICAL SKETCH*

By S. C. MITRA

Indian Institute of Social Welfare and Business Management, Calcutta

I was born on the 28th October 1895 in Calcutta, the last of 7 brothers and 3 sisters. My father was an eminent lawyer of his times and a devoted scholar having won academic distinctions and a gold medal from the Asiatic Society of Bengal. History and literature were his special subjects. My mother was one of the earlier batches of the pupils of the school established by J. E. Drinkwater Bethune in 1849 for the education of the girls of Bengal. She had full faith in the teachings of the religious texts and never failed to fast and follow other injunctions prescribed for different religious ceremonies. She was vigorant but at the same time a strict disciplinarian, sympathetic and always ready to help others in distress. Herself having a keen desire to learn she set a high value to educational attainments and placed it next only to moral development. Both my parents had that in their character (how should one describe it) which made not only their children but others also look upto them with respect, love, confidence and also fear. Without making any attempt to discover reasons or find faults, may I just mention that it is this type of disintegration of personality traits that we miss in the parents of today and which in my opinion is one of the factors responsible for the numerous individual and social problems that surround the youths of our country now.

I was a sickly child and on account of my frequent illnesses did not join school before the age of eight. There was, however, an intellectual atmosphere in our home as all of my brothers were reading in schools and colleges, some specializing in sciences and others in arts. My curiosity to know and learn was sharpened by listening to the intellectual discussions on various topics they used to have amongst themselves and amongst their friends also who used to gather almost everyday at our house.

My father died prematurely immediately after my admission to school. I passed all school examinations creditably and was due to appear at the Matriculation Examination in 1911. But sometime before that I began to have troubles with my eyes, very soon I lost my power of vision completely, became absolutely blind and was kept confined in a dark room for six months. My family members naturally began to think that I was not destined to have the usual school and college education. My brothers, therefore, took an unusual step, which was considered to be rather bold and unorthodox too at that time. They noticed the presence in me of some musical

*Prof. S. C. Mitra who is one of the senior-most Psychologists was requested to contribute an autobiographical article for inclusion in the present issue of the Journal of himself. It provides glimpses into the growth, development and expansion of Psychology in Indian Universities and this would be one of the authentic source materials for one who ventures to write the history of Psychology in India.

Digitized by Arya Samaj Foundation Chennai and eGangotri

abilities and made all arrangements for my regular training in music. Neighbours foretold an ugly and gloomy future for me and accused my brothers of spoiling me and giving me up to the devil. Thanks to my brothers' endeavours, however, I still retain some capacity for playing on the violin which I learnt at that time. Gradually and very slowly, however, I began to recover my sight but study was absolutely forbidden by the eye-specialists—a prescription which, however, I secretly and consistently violated.

In 1912, on of my brothers was posted at Cuttack and he took me there with him. It was at Cuttack that I had one unique experience of my life. I met there Subhas Bose who was then a student and was preparing to sit for the Matriculation evamination of the year 1913. We soon became close friends. His extra-ordinarily high intellectual calibre, his wide and penetrating studies even at that early age, of Sanskrit, Bengali and English literature, and philosophy too, his intense love for his country, and above all his eager and earnest quest for religion created a bond between us which remains as firm today as it was fifty years ago. Swami Vivekananda's writings used to inspire and guide me and when these were introduced to Subhas he thought he got in them just what he had been seeking all along. Certainly it can be said today that while others read those writings he lived them.

After losing two years of my academic career, I passed the Matriculation examination in 1913 and got myself admitted to the Scottish Churches' college. Subhas joined the Presidency college. It was, however, agreed between us that after graduating, both of us would take up the Experimental Psychology course for our Post-graduate study because we expected to find in that course the scientific foundation of all that we have learnt about our Yoga system and Yogic practices. That was the motive for my joining the Experimental Psychology Department after graduating with Honours in Philosophy in 1917. The Department had recently been created by Sir Asutosh. I may mention that all through my graduation course I won many prizes and medals for proficiency not only in Philosophy but in Mathematics too, a subject for which I have still the liveliest interest. I recall how the Professors of Mathematics tried their best to dissuade me from taking up Honours in Philosophy and insisted that I should join the mathematics Honours course. I take this opportunity of paying my respects to my teachers of the Scottish Churches College, Profs. Urquhart, Mill, Ewart, Douglas, Cameron, M. M. Bose, many of whom are no longer in the land of the living and our late Kali Pandit Mahasaya always bubbling with witty remarks and humorous anecdotes.

I learnt much from Experimental Psychology but the primary motive was not fully satisfied. My revered teachers, late Dr. N. N. Sengupta and Late Dr. G. Bose, however, opened up new lines of thought for me and revealed to me the immense possibilities for the practical utilization of the results of scientific experiments in Psychology. Dr. Sengupta's lectures on General and Social Psychology and Dr. Bose's on Abnormal Psychology, particularly on Psychoanalysis made profound impressions on me and I became keenly interested in pursuing these branches of psychology. The late versatile Professor Hariti Bhattacharyya was one of my ideal teachers. His thorough mastery over different Philosophical systems, Eastern as well as Western, his acquaintance with modern systems of psychology, his brilliant discourses, his lively gait and always smiling face and his ever-ready wit inspired any serious student who came into contact with him.

I passed the M.A. examination in 1919. On account of financial conditions of our family at that time I had to find some ways of earning money. After submitting many applications here and there I accepted a job of clerkship in the Finance Department of the Central Government at Delhi. When I had served there for some time and was preparing to appear at the Accountantship examination, on the passing of which my promotion depended, Sir Asutosh enquired whether I would be willing to accept a post of Lecturership in the Psychology Department. He could not, he said, guarantee my future prospects as he was then in a rather violent conflict with the Government over his scheme of Postgraduate studies in the University. I eagerly accepted the offer, gave up the permanent Government post for an uncertain position in the University and joined the department as a teacher in 1920. I married in 1921 and our only issue, a daughter, was born in 1922.

It was Sir Ashutosh, again, who took the initiative in sending me over to Germany to visit the first Psychological Laboratory of the world at the University of Leipzig. I went to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in 1924. Wundt had died a few years ago. Prof. F. Kreuger was then the Director of the Laboratory where I was privileged to work under the direct supervision of Prof. Kirschmann. Prof. Sander, one of the modern leaders in Psychology, now at Bonn University, was at that time in Leipzig and so also was W. Wirth who has enriched psychophysics with his valuable contributions. I had an opportunity of meeting J. M. Cattell who for a short time had been revisiting the University where he had previously worked for so many years with Wundt though often differing from the latter. Carrying out successfully an experiment on monocular and binocular perception of brightness I was admitted to the Doctorate Degree of that University in 1926. Among my examiners, apart from these of the Psychology department, were Prof. Hans Driesch who introduced the idea of Vitalism and Theoder Litt whose contributions to pedagogy were rich and varied. I was the first Indian student who got an opportunity of working in the pioneer psychological laboratory of the world and perhaps still continue to be the only one.

I shall refrain from describing other aspects of life there besides the academic, partly because it will be completely out of date and would not be of any interest to modern students and also because it would unnecessarily lengthen the article. What struck me most was the extremely cordial and sincere way in which I was taken in there by the Professors and my fellow students as one of them. On my return, I took up my duties at the Department and devoted myself to the task of teaching and spreading the knowledge of psychology amongst the educated and the laity. I joined the Indian Psychological Association which had just been started and tried to serve it to the best of my ability in various capacities, as Secretary, as the Editor of its Journal, The Indian Journal of Psychology, and till lately as its President.

As it would be apparent to any one who has cared to read some of the articles that I had published both in the English and Bengali languages and the papers that I read at different Congresses and conferences, Laboratory experiments in psychology never satisfied me wholly. While the experimental method is certainly one of the most fruitful methods of exploring the capacities and aptitudes, trends and tendencies, of individuals and groups, one should not limit his studies to these topics alone for understaning the ways of the mind's functioning. There is more in the mind than laboratory experiments can discover. Dr. G. Bose, a medical man by profession, an ardent student of psychology and of Indian philosophy, the formost psychoanalyst of India, pointed out to us another way of approach which promised a deeper understanding of the subtle and intricate workings of the mind. That path was the path of psychoanalysis. I had myself analysed by Dr. Bose and that experience was an unique one for me for I found in it the real foundations of all that was taught theoretically in the class-room and preached through the medium of the text-books. I became an active member of the Indian Psychoanalytical Society founded by Dr. Bose in 1922 and have since written much on the subject. One of the articles, I am happy to mention, attracted the notice of Freud himself who communicated his appreciation to Dr. Bose. I was elected a Fellow of the National Institute of Sciences of India in 1943.

The department of psychology had been in the meantime steadily growing. Not only was the number of students increasing but the syllabus also was being modified from time to time. I had my share in bringing about these modifications and was responsible for introducing Indian Psychology as an optional paper in the Post-graduate course. Late M. N. Banerjee, the first M.Sc., in Experimental Psychology in India, teacher of mine and later one of my Senior colleagues had in his Presidential address to the Section of Psychology in the Indian Science Congress and myself too in a similar Presidential address in 1938 tried to draw the attention of all concerned to the fact that the knowledge derievd from the study of the new subject was being wasted for want of an organization and suitable opportunities to utilize it in the practical fields of life. At the Jubilee session of the Indian Science Congress, we had the good fortune of having Prof. C. Spearman, Prof. C. Myers and others amidst us and Dr. G. Bose, the then Head of the Psychology Department, lost no time in drawing up, in consultation with them, a scheme for starting an Applied Section of the Department where Educational and Vocational guidance would be given. The Section became very popular and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

soon educational and vocational guidance became one of the regular activities of the Department. Individuals and factories approached us for advice and guidance. A Certificate Course in Applied Psychology, a one-year postgraduate course, was started soon after, where students received their theoretical and practical training in the various branches of Applied Psychology. In 1955, a scheme for further expansion on the basis of the recommendations of a committee formed by the Syndicate of the University during Late Dr. J. C. Ghosh's Vice-Chancellorship, was submitted to the University Grants' Commission through the University, the final outcome of which is still being awaited.

It is easy to point out the gradual growth of the department but it must be remembered that every small step of dvelopment could only be taken after successfully overcoming resistances from various quarters, expected and unexpected. Open hostility, innuendos and insinuations had to be faced by those championing the cause of the spread of modern psychology. I do not regret it. On the contrary, I am convinced now that conflict is one of the inevitable facts of life and no one can by-pass it.

On the death of Prof. G. Bose, who had been the first to occupy the chair of Professorship in Psychology in the University of Calcutta, I was appointed in his place in 1953. I served to the best of my limited capacities as a teacher of Psychology for about 40 years and finally retired from the University in 1959.

Let me mention here that it had been my privilege to be in personal contact with all the leading psychologists of India. They had not only been my colleagues helping me always with their ideas and discussions, but they have proved to be my sincere friends and have expressed their feelings and sentiments towards me in no uncertain terms. It pleases me to find that some of the Professors of Psychology in the different Universities of India had been at one time students of mine. They had always kept contact with me. I am proud of the notable achievements of some of the students of mine in different fields of Psychology. Some of them have been able to create very good impressions about Indians and of the status of Psychology in India amongst the authorities of the subject in England and America. Above all the best reward of my life had been the love and esteem, which my students—*generations of them*—have always showered on me. For a psychologist it is not difficult to understand that pride and prejudice, feelings of inferiority and frustrated ambitions would keep some of my students away from me, but even they have never failed to extend to me the usual courtesies of life.

I would like to repeat here what I had recently expressed in my felicitation address that I had never been able to consider my teaching work as a money-earning profession but I have always taken it as a mission of my life. There is so much talk of establishing rapport before starting a psychological experiment or beginning a counselling interview; my feeling is that even an academic subject cannot be well taught to a student by anyone who has no personal ties with him. At least that has been my life's experience.

One word more. After I retired from the University service. *I was requested to take up the post of Professorship of Psychology in the Indian Institute of Social Welfare and Business Management, Calcutta,* with which I had been connected since its foundation in 1942. So I am serving now as an Honorary Professor of Psychology and Head of the Department of General Social Welfare at the Institute.

Once more. Let this article of mine convey to all my senior colleagues my heartfelt gratitude, to all my friends my sincere affection and to all young workers in the field of psychology my best wishes.

HOW DO THE POLES SPEND THEIR MONEY?

By ANDRZEJ HODOLY

Research worker of the Home Trade Institute

The structure of the individual needs of an average family or consumer in Poland does not differ in any great degree from that in other countries of Europe. Before an analytical study of the spending habits of Poles is attempted, a brief review of the material improvements in the living conditions of the population is considered necessary, for these factors have an essential place in determining the size and structure of the expenditure of the population.

Predominantly agricultural in pre-war period, industry now plays a decisive role in Polish economy. Taking 1950 output as 100, in 1960 the industrial output was 337.7, in building 332 and in agriculture 135.9. These and other changes have doubled the national income in 1959 and the share of national income earmarked for consumption had gone up to 170 per cent of the 1950 consumption fund.

Food Purchases

The Polish people earmark 46.2 per cent of their income for the purchases of foodstuffs—according to the results of research into the family budgets of industrial workers conducted in 1960. This is somewhat more than in other European countries—in West Germany, the respective percentage was 39.2 per cent in 1959, France 38.6 per cent in 1958, and in Great Britain 31.3 per cent the years 1957-59. The demand for foodstuffs was satisfied as regards the quantities supplied, the nutrition value of food being increased as the consumption of cereals and potatoes dropped. At the same time, the consumption of valuable hydro-carbons—fat and sugar products—increased threefold and that of meat and fish showed a two-and-a-half-fold increase over the inter-war years.

The consumption of animal protein in Poland does not differ very much from that in the prosperous West European countries, and the demand for meat is by no means decreasing. This indicates a further rise in the consumption of meat and meat products in the future.

The economic authorities are endeavouring to stimulate the demand for articles containing the more easily assimilated protein, *e.g.*, poultry, veal and fish and also milk and milk products, particular efforts are being made to increase the consumption of vegetables and fruit which still play a much too insignificant role in our diet.

According to the known rules of consumption development, the percentage of income earmarked for foodstuffs drops as incomes go up, and this is the case now in Poland. If this drop is rather slow, this is mainly due to an improvement in the structure of food consumption, the percentage of better and more expensive foodstuffs having increased.

But in spite of this, the relation between the quantity of foodstuffs purchased by the population and that of other goods is now changing to the advantage of general consumer goods.

Other Expenditures

Apart from food articles, the Poles spend quite a lot on clothing and footwear, the share of these expenditures in the total family budget being 15.2 per cent, as compared with 13.5 per cent in West Germany, 12.4 per cent in France and 9.3 per cent in Britain. During the last decade, purchases of clothes and footwear have increased almost twofold.

Expenditures on health protection and hygiene are rather insignificant—4.3 per cent, comparing with 4.8 per cent in West Germany, 7.4 per cent in France, and 7.5 per cent in the United States—, and also for cultural and educational purposes—6 per cent, as compared with 9 per cent in West Germany, 7.1 per cent in France and 6.1 per cent in the United States. The reason for this is that the basic costs of medical care, recreation and education are paid by the State from the Social consumption fund.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The network of health centres, hospitals and sanatoria guarantee free medical care to working people and their families, and the price of medicines for the working people is only 30 per cent of the actual price. Similiarly, the cost of child care in creches and nursery schools is covered by the local State organs. Schools on all levels, from primary to university schools, are free, the completion of primarly school being compulsory. Parents only have to pay for school aids, which are very inexpensive.

About one million children and young people spent their 1960 holidays in summer camps and holiday centres free of charge. Over 600,000 working people and their families went to workers' holiday homes—run by the trade unions, factories and institutions—situated in the most picturesque localities, only having to pay a small part of the cost of their stay.

Thus, the expenditure figures for health protection and hygiene include payments for medicines, fees paid to doctors with private practice and to the doctors' cooperatives supplementing the State Health Service, and, lastly, expenditures on personal and family hygiene.

Expenditures on culture and education not only comprise the cost of education and recreation but also money spent on books and periodicals, and on concert, theatre and cinema tickets.

Apart from outlays on food and clothing, household expenditures are also increasing. The share of rent in these expenditures is insignificant, as rents in Poland are extremely low and so are payments for municipal services—gas, water, power supply, etc. Thus, the main items in this group of outlays are furniture and other durable articles, cleaners, etc., and also record players, radio and TV sets, tape-recorders, etc.

In this field the demand is ahead of supply. The State is making every effort to increase the supplies of these goods to the market.

And now a few words about expenditure on transport. This is only a small item in the budget for the public transport fares are very cheap and only a small percentage of the population bear expenses connected with keeping a car of their own.

Speaking of transport, the demand for motor cycles and scooters is growing at the same rate as that for other durable goods.

As individual incomes go up, there is much more interest in individual and cooperative building. This indicates stabilization and a tendency to plan ahead, a tendency which is being encouraged by the State. According to the existing possibilities, every effort is being made to supply would be builders with the necessary materials and labour.

Summing up, consumption is on a medium level, with a certain tendency to keep to old traditions as regards food expenditure, though recent changes, namely the growth in outlays on consumer goods, indicate a change for the better in the Polish pattern of consumption and demand.

PADDY CULTIVATION IN THE ANDAMANS

By DEBABRATA GHOSE, M.SC.

THE poutation of the Andaman and Nicobar Islands is increasing rapidly with the implementation of Colonialization Schemes. Naturally the rural population increases with more speed than that of the urban and this is most essential for the safety of a typical community cut off by hundreds of miles of Sea from the motherland. But still the seemingly vast land cannot feed her own people even at the present moment for so many hindrances and most of the necessaries of life including paddy are imported regularly from the mainland. Any shortage is seriously felt by the Islanders. If these Islands are to prosper, a balanced economy is essential.

But to achieve a balanced economy in the future is completely out of point because Paddy and Cocoanuts are the only major crops in these Islands. The population of these Islands at present is 63,433 whereas in the year 1951, it was only 30,971, *i.e.*, it has become more than double during the last decade. The total area of these Islands is 3,215 sq. miles and out of which 78 per cent of land is completely under dense forest and the rest we have explored only a portion and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

our settlements there. With the heavy influx of settlers in these Islands total area under cultivation is increasing very rapidly. During the year 1931, the area under Paddy was 4,100 acres, by the year 1951, it rose up to 5,566 acres, whereas the area became 16,504 acres in 1960-61, *i.e.*, nearly three times that of 1951. The area and production of Paddy are shown below :

Year	Acreage	Production in tons
(1)	(2)	(3)
1950-51	5,566	2,900
1955-56	9,255	4,626
1956-57	10,261	4,620
1957-58	12,081	5,613
1958-59	11,967	6,163
1959-60	14,472	7,802
1960-61	16,504	8,771

Attempts to increase the agricultural production have been made with the help of implementation of Plan Schemes, creation of Community Development Blocks, etc., as attention has been focussed on the seriousness of the low internal production of these Islands. Due to these moves, the agriculturists have shown keen interest in the Paddy yield competition conducted by the South Andaman Community Development Block. During the year 1960-61, altogether 176 entries were made in the crop competition whereas in the year 1959-60, 85 entries were there. This is really a very healthy sign.

Under the Plan Schemes demonstrations in intensive cultivation are organised on cultivators' plots. A number of Demonstration Centres according to Indian Council of Agricultural Research's pattern are set up and Japanese methods of paddy cultivation duly modified to suit local conditions are popularised by laying out demonstration plots.

There are usually two ways by which production can be increased, *i.e.*, by extensive and intensive cultivation. Due to Colonization Schemes we are arriving at more or less a saturation point though it is expected that some more cultivable area would be available and for this a Soil Conservation Party is exploring in the Middle and North Andamans. So main emphasis should be to increase Paddy production by increasing the average yield through intensive cultivation. The increase in yield is to be achieved specially by nourishing the Soil with the help of proper manures and fertilisers. Owing to inadequate manuring the land has become devitalized, suffering generally from Nitrogen deficiencies. Manures and fertilisers can rejuvenate the soil, and soil fertility of the land. An All India Fertiliser Demonstration Trials Scheme under a Joint Indo-American Project was conducted in the year 1954-55, to demonstrate the effectiveness of the commercial fertilisers such as Urea, Ammonium Sulphate, Ammonium Sulphate Nitrate and NP mixtures in increasing crop production and thereby to encourage the extensive use of these fertilizers by the cultivators. Although those experiments were not conducted on the soils of Bay Islands, still some of the observations will be quite applicable for this place. It was observed that "very good response to nitrogen was obtained in all states and on all the soil types, and application of phosphate in addition to nitrogen gave good extra response in all States".

There are other measures too for the increase in the paddy production, *viz.*, supply of improved seeds, as we know that good crops will require quality seeds, measures for plant protection, irrigation facilities, propagation of improved agricultural practices, Land Development and Soil Conservation measures and popularising of improved agricultural implements. If all goes well, it is definite that these Islands will be self-sufficient at least so far as the requirements of paddy are concerned.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

***Reviews and notices of books in Gujrati* :**

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review*, should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

ENGLISH

I MEET RAJAJI : *By Monica Felton, published by Macmillan & Co. Ltd. 1962 : price Rs. 15.00.*

Mrs. Felton came to India in 1956 to attend a peace conference in Calcutta. She heard 'many people' say that Rajagopalachari 'was the greatest living Indian and perhaps the greatest man of the whole world'. Such an estimate, by the way, is as baffling to justify, as it is easy to make in a mood of convivial excess. The author, however, has been rather wrestling with an unwearied zeal to draw out worth-while biographic notes from Rajaji, constitutionally reluctant to talk about himself. The result is the book under review and a biography she intends to complete some day.

Ideologically, non-ideological Rajagopalachari is a controversial figure in Indian politics. At strategic points he refused to trim his sails to the wind that blew. His consummate statesmanship and courage of conviction were nowhere more strikingly in evidence as when in 1942, he said with regard to the 'Quit India' resolution : 'In 1919, we (The Congress) refused our co-operation, and though this refusal may have helped to vindicate our national self-respect, it did not help us in any positive way'. Unless public memory accepts itself to be scandalously short, there is, in the pages of history, Surendranath Banerjea urging the country to work the Reforms in the right spirit and never to inflate Pan-Islamism by mixing up the Caliphate with Indian politics. Will the prospective biographer of Rajaji look up What he told the author with regard to Gandhiji **vis-a-vis** the division of India read distressing. "If Gandhiji," he says, "had been against partition the others would not have agreed to it." It places Gandhiji in a very unfortunate position, regard being had to the fact that he had all along, right up to May 1947, emphasised that he considered the division of India a sin and that it was only over his dead body that it could be effected. My conviction is that some light is being withheld. The popular belief, however, is in tune with the view point of Pyarelal, as stated in his **Mahatma Gandhi.** "The impossible old man," says he, "was put on the pedestal, admired for his genius and for his 'unerring hunch,' consulted, listened to with respectful attention and by-passed." We gather that Rajagopalachari claims that his suggestion for the division of India were accepted in time, we would not have witnessed such an orgy of cannibalism. A bold statement like this without his reaction to Jinnah's phased exchange of population and then the most staggering episode of humanity uprooted, the bloody trail of which is not yet in these fifteen years stopped flowing with frightful potentials, leaves a gnawing sense of inadequacy. Would he equally consider that he intended to consign the entire non-Moslems of Punjab and Bengal

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the rule of Pakistan and what it implies. After all, Nehru has this much of honesty to confess at New York in October, 1949, that he would have fought to the end against the establishment of Pakistan if he had foreseen the dire consequences which flowed from it.

It is painful to accept Rajagopalachari's verdict that 'self-government has not yet produced good government.' There is a piquant touch in having had to accept it from one, who was Union Minister in the interim period, and then, under the new auspices, who was in turn Governor of West Bengal, Governor General of India, Chief Minister of Madras, and again Union Minister. He has also to be accepted on his face value that public service has very much deteriorated in efficiency and integrity compared to the British regime and this under pressure from their political masters to do favours'.

The author has beautifully said that 'Rajaji mocked at nobody ; and wisdom was offered lightly as something within the grasp of everyone who chose to understand.' One such quintessence of wisdom is when he said, 'The hardest and most important thing that every human being needs to learn is that he is not the centre of the universe'. The author may, as well, note what Rajagopalachari said of Tilak that 'No great man was less troubled with a memory of himself or the thought of how he figured in anything'—Foreward to Karandikar's biography of Tilak. It applies in all fours on Rajagopalachari himself.

In the intimate, revealing manner of Boswell, Mrs. Felton has given us a lot of things regarding Rajagopalachari that we were hitherto denied. Her style is racy and conversational ; and with freedom from cant, her impact is quite pleasant all along. The book is a valuable addition to literature relating to the rise and functioning of the Republic of India.

Joges C. Bose.

ADULT LITERARY MOVEMENT, PAKISTAN : *By H. C. S. Bivar, I.C.S. (retired), 1961.*

The thoughtful pamphlets remind us of the sudden and melancholy death of (23rd March, 1962), Mr. Bivar, born (28th Nov., 1897), in his father's Tea Garden in Assam. Educated in England, Mr. Bivar joined the I.C.S. (1921) and served India till the Partition, when he opted for Pakistan. With his executive and judiciary experiences (1921-47) in undivided India, Mr. Bivar finally retired in 1955 as Remembrancer of Legal Affairs, East Pakistan.

Then he took up social uplift work as an old colleague of our Bengal Social Service League founded by Dr. D. N. Maitra (1915). So in 1955, Mr. Bivar began visiting us in the Bustee House of the League (1|6 Raja Dinendra Street), where he shared our simple meals and small rooms to co-operate with our workers in the "liquidation of Illiteracy". He planned and wrote some books on the subject with the co-operation of Dr. Laubach and his Literary Fund financing partly the Adult Literary Movement in Pakistan and West Bengal through the Bengal Social Service League.

The almost half a century of social service was pioneered by our National Poet Rabindranath and his doctor-friend Nilratan Sarkar. Their centuries (1861-1961) reminded us of the social and educational reforms supplying the very foundation of Indian Democracy. Above colour and creed here co-operated with us Rev. C. F. Andrews and Mahatma Gandhi. Dr. Karve and our friend Mr. Bivar, the "Reformer": He notified us from Dacca (before falling ill) that he would not go to any Hotel but enjoy the simple hospitality of the League ! We remember him with gratitude and send our condolences to his family. May his writings unpublished or published be collected in a volume and translated into Bengali so that the students and teachers of our rural schools may benefit by his wide experiences and deep sympathy. Mr. L. P. Jack, I.C.S., wrote a valuable book on Faridpur and now if we collect and publish Mr. Bivar's writings they may bring into fraternal co-operation, the teachers of East Pakistan and West Bengal dedicated to the uplift of our neglected rural masses.

THE CULTURAL HERITAGE OF INDIA : *Vol. II, 1962. Published by the Ramakrishna Mission Institute of Culture.*

In 1937, the Sri Ramakrishna Birth Centenary Publication Committee, published the First Edition in 3 vols. which have been enlarged to include wider topics of the Cultural Heritage of India. It is to the credit of the Institute to have succeeded, in the face of difficulties of editing and printing, to have published Vol. I : The Early Phases (pages 716) Vol. III, (pages 718) on. The Philosophies and Vol. IV (Pp. 796) on. The Religions enlarged by a fairly exhaustive Bibliography and a full Index.

The Vol. II under review is welcomed for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

filling up the gap by covering admirably our vast literatures on *Itihasa-Purana* (History and Ancient Chronicles) together with law and allied texts grouped under *Dharma-Artha-Kama* and social sciences. Dr. U. N. Ghoshal (learned President, Asiatic Society), Prof. S. K. De, (Jt. Editor of the *Mahabharata*), Dr. A. D. Pusalker, (of the Bhandarkar Institute, Poona) and Prof. R. C. Hazra, (Sanskrit College, Calcutta) worked hard to make their surveys as exhaustive and up-to-date as possible. While the *Vedic* studies were *Indo-European*, the Epic period is dominantly covered by our Indian scholars handling, now for the first-time, the *Mahabharata*, the *Ramayana* and the *Puranas*, not only in classical Sanskrit, but also in their significant *variants* in the various *living* languages of this vast subcontinent. Dr. S. K. Belvalkar, completing the edition of the *Mahabharata*, appears here with his epoch-making review of the *Bhagavad-Gita*—its History and Character. A former President, Swami Suddhananda, and General Secretary, Ramakrishna Mission, Swami Vireswarananda discussed the teachings and the synthetic character of the *Gita*. Dr. Pusalkar ably surveyed the History of the *Ramayana* (since the early studies of Prof. Jacobi). So, our friend Dr. Bijan Raj Chatterjee of the Greater India Society, discussed happily the *Ramayana* and the *Mahabharata* in South-East Asia which should open our eyes to the need of publishing our Indian Cyclopedia of Asian Religions and Cultures, so often distorted by the Western Christian zeal.

The *Puranas* and *Upa-Puranas*, for the first time, were ably presented by Prof. Rajendra Chandra Hazra, a pioneer in the field.

On the "Hindu Judicial System" and its six stages—the Hon'ble Mr. Justice P. B. Mukherji contributed a valuable monograph. So our erudite researcher, Prof. Dinesh Chandra Bhattacharya wrote on *Puranas* as also on the important Nibandhas of Hindu Law—studied by Judge-Orientalists like Sir William Jones (1746-1794) and Sir Henry T. Maine.

The last part (v) is devoted to Artha-Sastra, Niti-Sastra and other sources of Hindu Political and Social Organisation. This section is very ably edited by Dr. U. N. Ghoshal, an authority on the subject, who writes also on the Monarchical States and on the ancient Indian Republics. So Dr. C. P. Ramaswami Aiyar (who introduces this volume) writes on the Socio-Political Evolution in India. The Index is very helpful but the Bibliography might have been improved. We wish all success to the Ramakrishna Institute of Culture now directed by Swami Ranganathananda of vast experiences in Mysore and Karachi, New Delhi and Belur. This majestic volume of 738 pages is offered at a modest price of Rs. 35|- only; and we recommend it to all learned institutions of East and West.

KALIDAS NAG

A CRITICAL STUDY OF GANDHIAN ECONOMIC THOUGHT: *By Dr. Shiva Nath Jha. Published by Educational Publishers, Delhi. Pp. 276, Price Rs. 12/-.*

Gandhiji did not write a book postulating his economic ideas. He did not propound any theory of economics although he spoke and wrote on various economic questions on different occasions covering a long-range of his life-time. Gandhian Economic Thought is essentially spiritual and as such it is opposed to the materialistic economics of today. In the absence of a historical example of a non-violent society it is very difficult to understand the Gandhian Economic Thought although theoretically Gandhian thought is so perfect in itself that it is precisely critical of present-day economics.

The book has been divided into seven chapters: Historical background of Gandhian Economics, Fundamentals of Gandhian Economic Philosophy, Modern Economic Frame—some basic facts, Gandhi on Production System, Distribution, Justice, Gandhian approach to Exchange Economy, Planned Economy on Gandhian principles. In the Appendix, the author compares and discusses Gandhi's ideas with classical and modern economists such as Sismandi, Freidrich List, Adam Smith, Karl Marx, Malthus, Ricardo, Saint-Simon, J. S. Mill, Marshall and Keynes.

Gandhi was for small and cottage industries and for decentralization; he was against big machinaries and large-scale production as we understand it but not against machinery as such. He was for economic co-operation between rural and urban economy none exploiting the other. Rural and ultimately national self-sufficiency was the cone of Gandhian Economics and international trade was to be very limited. According to him present-day economic trends lead to competition, conflict and class war and international quarrels and world war and his method based on co-operation, rural self-sufficiency and non-violence would lead to peace and prosperity to individuals, families, nations and to the world as a whole. This is idealism but Gandhiji believes it to be possible and practical and in no way utopian. According to Gandhi economic theories and laws as laid down by modern writers cannot be universally applicable and every country has its own economics.

The book presents Gandhian thought in clear language which any student of economics will find interesting and illuminating.

THE MURDER OF MAHATMA GANDHI : *By Dr. J. C. Jain. Published by Chetana Ltd., Bombay. Pp. 175. Price Rs. 5/-.*

The greatest tragedy in the history of India after the attainment of Independence on 15th August, 1947, was the murder of Mahatma Gandhi the Father of the Nation on the 30th January, 1948. It is unfortunate that no historical record has been maintained of this national tragedy. Therefore, a book throwing light on the factual reasons, as well as the ideological background that led to the disaster, is welcome. However, the present book which covers a wider-ground is written with a historical perspective. It deals with genesis of communalism in India, leading to the country's partition and depicts the thorny problem of disintegration with which the nation is faced today.

The book is divided into three parts and two appendices (Judgments) are added to it.

The author being the Chief Prosecution witness of the Gandhi Murder trial, his presentation is not only deserving of attention but lively. The greatest son of India died a martyr for the cause of communal unity which India is still to attain. The book deserves wide circulation.

A. B. DUTTA

SANSKRIT

BRAHMANA-SARVASVA : *By Halayudha, Edited by Durgamohan Bhattacharyya, Sanskrit Sahitya Parishat, Series No. 29, Published by Sanskrit Sahitya Parishat, 168/1, Raja Dinendra Street, Calcutta-4, 1960, Pages, i-xlv + 335, Price Rs. 25/-.*

Prof. Durga Mohan Bhattacharyya deserves the highest congratulation from the academic world for this scholarly edition of Halayudha's Brahmana-Sarvasva, a pre-Sayana commentary on Select *Vedic mantras*. Halayudha adorned the Court of Lakshmana Sena of Bengal in the 12th Century A.D., and his works have for decades enjoyed much popularity to the lovers of *Vedic* lore. The Brahmana-Sarvasva contains expositions of *Vedic-mantras* which are generally used in our Kriya rites and thus it has been treated not only as a *Vedic* commentary but also a ritualistic digest. Being entrusted with the office of *Dharmadhikara* (Directorate of Religion) Halayudha had a first-hand knowledge of the condition of Religion in mediaeval Bengal and the work under review bears ample testimony to the fact. The introductory portion of the work contains a faithful account of the condition of *Vedic* study in mediaeval Bengal which would certainly interest a serious student of social history. However, that Halayudha's *magnum opus* enjoyed unalloyed admiration in later periods may be substantiated from the fact that it has been utilised and cited as an authority by such noted *nibandhakaras* of later period as Sulapani, Raghunandana, Vacaspati Misra, Mitra Misra, etc.

In view of such wide popularity and importance of the work a critical edition of it was a long-felt desideratum. It is most gratifying to find that the Sanskrit Sahitya Parishat, Calcutta, has completed its publication. The earlier publication of the Sanskrit Sahitya Parishat series have already won appreciation from scholars in India and abroad and we are sure that the present publication will add to the glory of the commendable research series initiated by the Parishat.

In preparing the present edition, Professor Bhattacharyya has utilised about twelve manuscripts in different scripts procured from different parts of the country. In fact, the learned editor has left no stone unturned to make it a really useful one. The introduction is highly informative and inspiring and has the stamp of genuine scholarship. We should express a deep sense of gratitude to this veteran scholar who has already to his credit a good number of noted publications. We believe that the present work will certainly lend lusture to his old record and will win admiration from the lovers of *Vedic* learning.

GOPIKAMOHAN BHATTACHARYA

BENGALI

MANASMIKSHAN : (*Bengali*) *and other papers (English) of the late Dr. Suhrit Mitra of the Science College, Calcutta University.*

A worthy colleague of Dr. Girindra Sekhar Bose, Prof. Dr. Suhrit Mitra (1895-1962) prepared himself for the rare distinction of a Pioneer, like Dr. Bose in the realm of psycho-analytical research in India. He graduated from the Scottish Church College as First class first in Psychology which he studied with Sri Subhas Bose (later I.C.S. and Netaji) his very close friend and relation. He stood first also in M.A., and joined the Calcutta University (1920) as a Lecturer. Joining the University of Leipzig (1924), he won the Ph.D. (Leipzig) title in the land of Freud famous all over the world. Dr. Freud not only appreciated Dr. Mitra but urged him to apply Psycho-analysis to improve the social conditions of India once famous for her psychic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(Yogic) researches. Dr. Mitra served till his 'last day as a member of the Indian Psychological Association which should write on Dr. Mitra's contributions. He was invited to preside over the Psychology section of the Indian Philosophical Congress (1932-33). Behind that signal honour was his continuous study research and publications: His German thesis was published in 1926 (Psychological Archive in original German not translated yet.) He wrote on the "Indirect perception of Forms (1927) and on the Concept of Instincts (1928). His Presidential address was on a New Theory of Emotion (1933). On the Jubilee of the Indian Science Congress (1938), he wrote on the "Contribution of Abnormal Psychology to Normal Psychology". In 1945, he wrote on "Freud and his Discoveries"—(East-West Philosophy, Ed. by Dr. Radhakrishnan). He was Editor of the *Indian Journal of Psychology* (1942-47) and President, Indian Psychological Association (1948-57), Dr. Mitra was member of the Board of Ediotrs, *Science and Culture*, Calcutta, and of the *International Journal of Psycho-analysis* (London). We are also grateful to him for his [illegible] exposition in Bengali of the Mental Sciences, [illegible] made his own. His essays like *Anichakrita* and *Manasamikshan*, etc., enriched our literature [illegible] philosophy and psycho-analysis, the subject nearest to his heart which he devoted to relieve the sufferings of so many of our men, women and children who would bless him. I was invited by him to visit his Bodi-Pith a model of Economy in Social Service based on scientific guidance! ভালবাসা ও [illegible] পারিবারিক অশান্তি and such of his papers entitle him to our permanent gratitude and remembrance. He reviewed technical books on mental sciences in *Modern Review*, *Prabasi* and other leading periodicals of Bengal. So, we hope that his [illegible] and friends will bring out soon a complete Bibliography and also perpetuate his lovable memory by founding, in Calcutta, the Suhrit Mitra, Clinic of Mental Sciences neglected so far, yet challenging the attention of all men and women interested in that Science and in Social service in our Welfare State.

Patent Pitfalls In Planning—The Indian Experiment

Writing in the *Indian Libertarian* in its issue dated April 15 last, Prof. S. Kesava Iyengar, Director, Indian Academy of Economics, says:

"Time and again, even to the point of nausea, it is claimed that at 1960-61 prices, the national income of India rose by 42 per cent during 10 years ending 1960-61 (page 1389, R.B.I. Bulletin of Statistics, September, 1961). All over the world, it is usual to compare national income, in any one year, with a base of 5-10 years earlier. For example in the U.S.A. and U.K. national income for 1960 has been calculated at 1954 prices as also at current prices. The calculation in India is with 1948-49 national income, both at current and constant prices. Obviously, a calculation at current prices inflates the national income figure artificially although the national income in *real terms* is much less at 1948-49 prices. The indices of wholesale prices (at 1952-53 prices) and cost of living (with 1949 as base) went upto 124.4 on September 30, 1961 and 128 in August, 1961, respectively.

"The only explanation possible for unduly publicising comparison at current prices is the anxiety of the authorities for window-dressing. At 1948-49 prices, national income increased at 3.03 per cent per annum (simple) during the first 4 years of the Second Plan.....The simple annual average increase during 1951-52 to 1960-61 at 1948-49 prices works at about 3 per cent but the annual average at current prices has been particularly publicised.

"In view of the population 'explosin' in this country as revealed by the 1961 population figures, and the steep ascent of the runaway prices during the last 5 years, national income at current prices is of little significance. *Per capita* income rose in India between 1951-52 and 1959-60 with yearly step at the annual average rate of 1.28 per cent.....Colin Clarke estimated that the corresponding figures in the U.K. has been about 1.3 in recent years, but 1.3 per cent of Rs. 3.890 ($ 778) is quite different from 1.28 per cent of Rs. 250.3. This fact should be recognized all round and Third Plan *per capita* income targets should be re-adjusted in the light of net population increase at more than 2 per cent per annum accompanied by a radical reversal of price policy.

"Of late there has been a lot of discussion on 'holding the price line at the present level.' The Government benches appear not to worry about the spurt in consumer prices. They seem to think they have already taken adequate steps to arrest prices and stabilise them more or less at present levels: the Third Plan has not taken into account probable further soaring of prices. On the other hand, the authorities are inclined towards maintaining floor prices for agricultural crops! There are others who prognosticate that during 1961-66, the indices of wholesale prices and cost of living may be raised by at least another 50 per cent, indicating even now the beginning of galloping inflation, in view of the fact that the authorities failed miserably in controlling prices between 1955-56 and 1960-61.....

"Wholesale prices increased on the average annually at 1.75 per cent in the U.S.A. during eleven years, consumer index by 2.42 per cent during the same period and the national income at current prices by 7.33 per cent per annum during 10 years. In the U.K., the wholesale price index is not available, the retail price index works out at 2.38 per cent per annum during the last five years, and the national income at current prices increased annually on the average by 8.55 per cent during 10 years. In both these

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

countries, wholesale and consumer prices show a slow rise of 2.3 per cent indicating adequate supplies or successful controls or both. But the national income at current prices increased at the much higher rate of 7.9 per cent per annum, signifying that the *per capita real incomes* of the two countries improved substantially after allowing the due margin for slight upward tilts in prices and cost of living. The situation in India is quite the other way, and the authorities cannot deny that they have been trying to hypnotise themselves and the people into a halo of imaginary stability. The price indices have shot up during the past five years annually by 7.29 per cent (wholesale) and 6.25 per cent (consumer), and yet the Proconsuls at New Delhi have been trying to hypnotise themselves that they would be held 'more or less at the present levels!' They have forgotten that the two indices were at 92.5 (1952-53 base) in 1955-56 and 96 (1949 as base) in the same years, and the latest figures are respectively 124.4 and 128! So far as the national income at constant prices is concerned, the Indian Performance has not only been unsatisfactory but positively despondent.....The average annual increase in national income between 1955-56 and 1959-60 works out at 3.03 per cent (at constant prices) while corresponding rises in the price and cost of living indices have been at 7.29 and 6.25, respectively. It should not be surprising if really there was a net decrease in *per capita* income between 1955-56 and 1960-61. A rise of 1 or 2 per cent per annum in price indices is generally passed as congenial to economic activity, but Prof. A. C. Pigou thinks that anything beyond 2 per cent per annum must be considered as a harbinger of galloping inflation which has the same deadening effect as galloping consumption.

"According to official figures, average annual investment was 8.5 per cent of the national income (including capital inflow), between 1950-51 and 1958-59, while the average saving rate during the same period was 7.1 per cent. Even after allowing a broad margin for increase in domestic saving, would it be practicable to raise the percentage of Plan investment to 12.89 per cent per annum between 1961 and 1966..... without a predominant share contributed by deficit finance and capital inflow? What are the measures contemplated for ensuring the required capital inflow? The Third Plan, on the contrary, emphasizes the importance of domestic resources and allots a minor place to the private sector 'and, on its showing during the Second Plan, it should do so quite easily,' and the 'private foreign investor, despite recent encouragements is not counted on to provide more than a marginal fraction of the necessary foreign exchange."

Exports in Doldrums

Writing in the May 1962 issue of the *Asian Economic Review*, K. Anantram, Field Research Officer, Indian Institute of Economics, Hyderabad, says :

World exports, which doubled during the fifties, touched in 1960 the high water mark of $125 billion. An impressive increase in the exports of the Western European countries and the phenomenal rise in the E.E.C. exports contributed, in a large measure, to this peak performance of global exports. India's exports over the same period remained, despite two Five Year Plans, virtually stagnant and her share in world exports declined from 2.1 per cent in 1950 to a mere 1.1 per cent in 1960.

The Planning Commission have set before the country as part of their perspective planning the supreme task of doubling the exports and raising them to Rs. 1,300-1,400 crores per annum by the end of the Fourth Plan. It is a task fraught with immense difficulties and uncertainties.

A decade of planning (1951-1961) has hit Indian exports very severely in the doldrums. The First Plan annual average of Rs. 609 crores might have been much less but for a spurt in exports in 1951-52 on account of the war in Korea and the high export prices of jute goods. The Second Plan annual average of Rs. 614 crores is not significantly higher. It is futile to argue that this would have been much higher but for the recession in the U.S.A. and Europe in 1958. In volume exports, however, were higher in the Second Plan by 9 per cent; but on account of lower unit values, this increase was not reflected in larger export earnings.

The impact of stagnant exports on the balance of payments position has been disastrous. The deficit in the balance of payments over the First Plan as a whole was Rs. 318 crores while the heavy adverse trade balance of Rs. 462.8 crores on an average every year, during the Second Plan period contributed to a grave worsening of the position.

Since foreign exchange, a factor which is vital to the development of an under-developed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

economy, is usually scarce, the balance of payments effects assumes an importance as a criterion for the allocation of investment resources and the determination of priorities. The balance of payments effect has two different aspects,—the effects during the investment phase which are always negative, and the operating effect. The economic development plans of our country were, obviously, not based on a due consideration of these points. Consequently the Plans were not oriented towards creating an ever increasing export surplus as the prime need of economic development of the country. A persistent and ever-widening gap in our balance of trade compelled us to draw heavily on our sizeable sterling balances. Our sterling assets which stood at the impressive level of Rs. 1,650 crores at the end of the Second World War, and which provided all along a cushion against the impact of deficit in the balance of payments of the country, are now a meagre Rs. 130 crores.

Though imports have been severely curtailed, the import bill is still of the order of Rs. 1,000 crores per year, while the value of our exports is much less than Rs. 700 crores. The prospects of further reduction of imports substantially are remote, but the need for earning more foreign exchange will certainly be increasingly felt. The rise in exports in 1961 to Rs. 668 crores, making them the highest in the last decade, barring the exceptional year 1951-52, is no doubt encouraging. Yet it would be prudent to bear in mind that the larger part of the increase of Rs. 34 crores over the previous year was made up of a chance rise in the export price of jute goods. In this uneasy context the target of Rs. 740 to Rs. 760 crores a year envisaged in the Third Plan does seem rather difficult of achievement, while doubling the exports by the end of the Fourth Plan period would be a Herculean task indeed. There is, however, no denying the existence of considerable scope for expansion of exports provided appropriate measures for the purpose are properly devised and efficiently enforced. Over the five years of the Plan (1961-66) the aim is to increase exports to a total of more than Rs. 3,700 crores, an estimated annual average increase of Rs. 150 crores over the Second Plan average. It is a challenge which has to be accepted. Hence it is essential that, by the end of the Fourth Plan, the annual exports would have to rise to about Rs. 1,300 to Rs. 1,400 crores, *i.e.*, at least twice the present level.....

Fundamentally, increase in exports as a corrective to development disequillibrium is a long-run possibility dependent on the dynamism and buoyancy of the home economy. The challenge of exports is global and is an index of the growing dependence of both advanced and under-developed economies on world trade. In the circumstances no national development plan could be realistic unless prepared in international context and, particularly, in its regional setting.

The outstanding feature of the organization of world trade at the present time is the emergence and growing importance of regional arrangements for mutually beneficial economic co-operation. The most significant and successful experiment in this direction has been the European Common Market. This pragmatic development in international economic co-operation is revolutionizing world trade; for it is being increasingly realised that expansion of exports can no longer be secured on competitive lines, but can only be assured on the basis of regionally co-ordinated policies.

The countries of the ECAFE region, to which India belongs, cannot escape the logic of events. The emergence of economic communities and common markets elsewhere lends a measure of urgency to the need for co-ordination, if not integration, of the policies of economic development of the countries of the region. The paper on the "Scope for Regional Economic Co-operation in Asia and the Far East" recently prepared by the ECAFE Secretariat is a scholarly elucidation of the complex issues involved in the difficult task of bringing about a closer partnership of the countries of the region.....

Whatever be the arguments or difficulties, 'economic regionalism' has come to stay. It is, in fact, a major goal of economic policy of our times. It is even said that "regional arrangements are no longer a matter of choice. They are imposed by the requirements of technology, science and economics" of the world today.....

The traditional methods of international financing of economic development are loan, aid and grant, more generally loan than aid and grant. It is loans that initially fill and later necessitate the 'payments gap.' The growing gap between export prospects and import needs of under-developed countries is bridged by external assistance. Interest and repayment servicing of these loans calls for a vigorous and enduring export drive to fill the payments gap in reverse. Such a gap is no doubt a stimulus to economic development, since the planned effort to raise exports to level the gap will necessarily put the home economy on a progressively higher plane of activity. Even so the 'payments gap in reverse' will create certain problems. The universal accent today on exports as a requisite to economic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

growth and stability, augers an era of spiralling global exports. The creditor countries would, as experience shows, find it increasingly difficult to absorb the exports of the developing countries to the extent necessary for servicing their obligations to them without their economies being adevrsely affected. The possibilities of exports as the conventional method of servicing external obligations will not thus be easy or satisfactory. The prospect of 'creditor currency gap' throttling world trade must make us realise that a review of the orthodox methods of international financing of economic development and servicing of foreign loans would become increasingly urgent. Unconventional methods would then be deemed imperative, if only to obviate conventional complications. The need is for perspective planning in a consciousness of economic fraternity of international financing of economic development. Orthodox and traditional techniques belonging to the spirit and times of a by-gone age not only are out of tune with the climate of socialism fast enveloping the world today, but leave a difficult hang-over for all. Moreover the advanced countries must necessarily bear the responsibilities of under-writing planned economic progress of the under-developed regions. Perhaps, a pragmatic approach to international economic relationships might eventually become inevitable. Anyway, the problem of an integrated international economy, allergic to conventional treatment, would pose a severe challenge to economic statesmanship in the coming decade.

Village Industries in Third Plan

Writing in the Annual Number of the *Khadi Gramodyog*, Shri Shriman Narayan says :

As a result of experience gained during the last 10 years of economic planning in India, it is now recognized on all hands that it would be impossible to make any sizable impact on the problem of unemployment or under-employment in the country without planning in a big way for the establishment of village, small and cottage industries in the countryside. The Third Five Year Plan has accepted the basic objective of creating an agro-industrial pattern of society in which, alongside with agriculture, there would be provided the maximum opportunities for developing rural industries, more specially processing Industries which manufacture consumer goods out of the raw materials produced in the villages. Recently it was agreed that rural industrialization should not be confused with the setting up of a few large industries in the rural areas; it should connote an even-spread of industries throughout the countryside in the form of co-operatives. It was aslo agreed that rural industrialization should not be confined to the village industries of the traditional type; this term should include an infinite variety of small industries which could be established in the rural areas for improving the living conditions of the villagers.

During the Third Plan period, a total outlay of Rs. 264 crores has been provided for various programmes of village and small industries, as against the total outlay of about Rs. 180 crores in the Second Plan. In addition, there is a provision of about Rs. 20 crores for the development of rural industries in the Community Development programmes. Some provision has also been made for such industries in the programmes for the rehabilitation of displaced persons, social welfare and the welfare of the Backward Classes. The private sector, including banking institutions, is expected to invest about Rs. 275 crores on village and small industries during the Third Plan period. The Planning Commission has also made it known to the Khadi and Village Industries Commission that if it is found possible to spend these amounts usefully by the 3rd or 4th year of the Third Plan, every effort will be made to provide additional funds for this important programme.

Improvement in Techniques

But the programmes of village, small and cottage industries cannot succeed merely by providing for subsidies, rebates and sheltered markets in an artificial manner for a long period. Although the need for helping such industries in the initial stages is quite obvious, it must be recognized that the ultimate success of this programme can be assured mainly through a continuous improvement of production techniques employed in running rural industries. The Evaluation Committees appointed by the Khadi and Village Industries Commission have themselves pointed out repeatedly the urgent need for the introduction of improved techniques through constant research and vigilance. It is, however, quite evident that the desirability of improving the techniques of production has to be constantly balanced with the equally, if not more, important consideration of providing gainful employment to all those who ask for work. After all, economic planning must constantly keep in view the human factor which naturally overrides all other considerations.

Electrification

The increasing supply of electric power in the rural areas will be helpful in enabling

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rural industries to improve their techniques. By the end of the Third Plan it is envisaged that about 45,000 villages will have been electrified. All villages above a population of 5,000 and 50 per cent of the villages having a population of 2,000 to 5,000 are expected to enjoy the benefits of electric power by the end of 1966. While electricity would, undoubtedly, help in increasing the efficiency of production, it is quite likely to throw a good number of artisans engaged in traditional industries out of employment. This problem is, indeed, quite difficult and complex. But efforts will have to be made to find a satisfactory solution by encouraging the establishment of rural industries either on a co-operative or on a panchayati basis. Orissa has decided to start small-scale and village industries through the agency of the panchayat samitis so that the surplus profits are used for furthering the economic development of the area. In other words, these panchayati industries would be in the nature of an extension of the public sector into the rural areas. If electricity, instead of being supplied to individual business man is regulated by these village bodies, it would be possible to prevent to a large extent the economic exploitation of man by man. If some persons are thrown out of employment, it would be the duty of the panchayats or co-operatives to find some other avenues of gainful work for such people. The problem of unemployment could be solved on a lasting basis only through such decentralised or local planning by democratic institutions of the people.

Medical Care for the Aged

The following excerpts from the *Jewish Frontier*, April, 1962, would be interesting if only because of the rather sorry picture of the practices of the medical profession in the U.S.A. which would seem to bear close resemblance to conditions in this country.

Secretary Ribicoff has described medical care for the aged as the most important domestic issue before the country at the present time. Ironically, the King-Anderson bill which proposes to finance medical care for those over 65 through Social Security, remains bottled up in the House Ways and Means Committee, and there is no assurance that it will be pried loose. Despite the evidence of overwhelming popular support for the measure a combination of regular Republicans and reactionary Democrats on the Committee appears determined to flout the wishes of the electorate and to prevent that bill from reaching the floor of the House. This is as crass an instance as any of the manner in which the will of the people can be impudently ignored through the willfulness of its chosen representatives.

The specter of socialized medicine which has been raised by opponents of the bill is a convenient spook, but it is hard to believe that even the quaking members of the American Medical Association are genuinely frightened. Their substantial fees are safe. The King-Anderson program would provide hospital and nursing-home care without in any way affecting the relationship between patient and doctor. The patient would still choose his own physician and his hospital. It is therefore increasingly difficult to understand the irrational panic of the AMA.

Though some influential physicians have disavowed the unblusing campaign of the AMA against medical care for the aged financed through Social Security, the well-heeled AMA lobby in Congress shows no signs of anemia. In addition to pressuring Congressmen directly, the reourceful organization has enlisted doctors' wives in "Operation Coffee Cup." The ladies gather to write letters to protest against the invasion of "private freedom" through Federal programs. One trusts that these defenders of liberty will, with equal vehemence, protest the use by their husbands of Federal grants for medical research or other benefits to the profession.

The members of the AMA, better than any group, know how catastrophic hospital bills may be in the case of prolonged illness. It has been calculated that the cost of one day in a hospital is now approximately thirty-two dollars. This means that many men and women no longer of working age can be pauperized by a month of illness. The average savings of the ordinary individual (less than $500 for most of those in the over-65 group) are not adequate for the coverage of extended medical care. Is the final act of a working life then to be recourse to the mercies of a charity ward? Is that how "private freedom" and "private initiative" are to be best preserved?

The "American way" which the AMA and its cohorts pretend to cherish suggests another course. Instead of dependence on philanthropy, the King-Anderson bill offers the dignity of independence through insurance. Americans insure themselves for every contingency under the sun. Those over 63 have found private medical insurance companies understandably reluctant to insure them except at self-defeating prohibitive rates. Incorporating medical care for the aged in the Social Security program would enable every individual throughout his working life to collect the funds required to assist him at the time when he can no longer earn and when his medical needs are most acute. An increase of one-fourth of one per cent in the Social Security tax would finance the plan—that is to say, an annual payment of about $1 for every worker and for his employer or less than four cents a day. These amounts are based on fiscally sound calculations which would keep a balance between income and outlay for benefits—particularly in the early years.

Thanks to increased longevity due to medical progress the proportion of the aged in our population has steadily risen. There are already fourteen million in the over-63 group who are covered by Social Security. Despite this, more than half the aged have incomes of less than one thousand dollars annually. Even if they can eke out a spare existence under normal circumstances they have no backlog of resources for prolonged or serious illness.

The chief hope that the King-Anderson bill will be placed before Congress during this session lies in vigorous action on the part of the Administration and in equally vigorous pressure from the voters. Sustained "grass-roots" agitation expressed in personal letters from the millions of citizens vitally affected may convince some recalcitrant legislators that it would be better politics to let Congress consider the issue.

বাংলায় সম্পূর্ণ অভিনব সাহিত্য প্রচেষ্টা

৮৪৮ পৃষ্ঠায় সম্পূর্ণ বিরাটায়তন

প্রবাসী

ষষ্টি-বার্ষিকী স্মারকগ্রন্থ

এতে আছে আশাপূর্ণা দেবী, শান্তা দেবী, প্রেমেন্দ্র মিত্র, বনফুল, শৈলজানন্দ মুখোপাধ্যায়, শরদিন্দু বন্দ্যোপাধ্যায়, বিমল মিত্র, জরাসন্ধ, সরোজকুমার রায়চৌধুরী, পরিমল গোস্বামী, প্রেমাঙ্কুর আতর্থী, নারায়ণ গঙ্গোপাধ্যায়, রামপদ মুখোপাধ্যায় প্রমুখ খ্যাতিমান কথাসাহিত্যকদের রচিত বিচিত্রমধুর বাইশটি গল্প।

সীতা দেবী ও মণীন্দ্রলাল বসুর দুখানি মনোজ্ঞ উপন্যাস।

প্রবীণ ও আধুনিক সকল শ্রেণীর কবিদের কবিতা।

মনোজ বসুর রোমাঞ্চকর ত্রিঅঙ্ক নাটক।

রবীন্দ্র-প্রসঙ্গে আছে: হিরণ্ময় বন্দ্যোপাধ্যায়, দিলীপকুমার রায়, প্রভাতচন্দ্র গঙ্গোপাধ্যায়, প্রভাতকুমার মুখোপাধ্যায়, পরিমল গোস্বামী এবং আরো অনেকের প্রবন্ধ।

ষাট বছরের বাংলা এই পর্যায়ে সাহিত্য, দর্শন, বিজ্ঞান, ইতিহাস, চিত্রকলা, ভাস্কর্য্য ইত্যাদি বিভিন্ন বিষয়ে বিশেষজ্ঞদের রচিত প্রবন্ধ এই গ্রন্থের সর্বপ্রধান আকর্ষণ। এই বিভাগে লিখেছেন: ডক্টর সুকুমার সেন, ডক্টর কালিদাস নাগ, ডক্টর সরোজকুমার দাস, ডক্টর নীলরতন ধর, ডক্টর দেবেন্দ্রমোহন বসু, ডক্টর আশুতোষ ভট্টাচার্য, ডক্টর নন্দলাল বসু, দেবীপ্রসাদ রায়চৌধুরী, বিষ্ণু দে, অর্ধেন্দ্রকুমার গঙ্গোপাধ্যায় প্রভৃতি।

এই ছাড়া আছে স্মৃতিকথা, মহিলা মজলিস, ছেলেদের পাততাড়ি প্রভৃতি বিভাগ।

এই গ্রন্থের আর এক সম্পদ্ অবনীন্দ্রনাথ, গগনেন্দ্রনাথ, নন্দলাল, যামিনী রায়, দেবীপ্রসাদ প্রমুখ ভারত-বিখ্যাত শিল্পীদের আঁকা তেইশটি রঙীন ও কয়েকটি একবর্ণ চিত্রের মূল্যবান্ আর্ট পেপারে ছাপা প্রতিলিপি।

বহিঃসৌষ্ঠব এবং রচনা সম্পদ উভয় দিক দিয়েই অতুলনীয় এই স্মারক গ্রন্থখানি মাত্র নির্দিষ্ট সংখ্যক ছাপা হয়েছে—প্রথম সংস্করণ প্রায় নিঃশেষ হয়ে এল, কাজেই সংগ্রহের জন্যে অবিলম্বে তৎপর হোন্।

মূল্য—১২.৫০ নয়া পয়সা এবং ডাকব্যয় ৩৲ তিন টাকা

P-26, RAJA BASANTA ROY ROAD, CALCUTTA

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place.....Like Tagore's the late Mr. Chatterjee's genius was essentially constructive....By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country.... No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students." —*Hindusthan Standard*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chatterjee padhyaya.....The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated." —*Amrita Bazar Patrika*

THREE DEITIES

LORD JAGANNATH of Puri is regarded as an incarnation of Sri Krishna of Gita Govinda. The idols of the Puri temple are of Lord Jagannath popularly known as "The Lord of the Universe", his brother Balabhadra and sister Subhadra. All of them were once venerated as jungle deities by the Saoras, a tribal community of Orissa, and through the ages their worship has spread far and wide. The 192 ft. high Puri temple is surrounded by a cluster of smaller shrines and is one of the most impressive ancient monuments in India which has assumed overwhelming holiness since the days of Chaitanya, drawing a large number of people from all over the world.

Puri is one of the greatest pilgrim centres in India. Puri is also known as Srikshetra, and is synonymous with the temple of Jagannath and is famous for its Car Festival. The Temple of Puri is one of the places in India which is a "must" for any tourist in this country.

NOTES

Bidhan Chandra Roy

Last month, on the day the July issue of this Review was put on the news stands and bookstalls of Calcutta, the city was plunged into grief at the news of the passing of that great son of Mother India, who had done more than any four other persons in Post-Independence India to revive and restore a province of the Union that had been ravaged by the exigencies of World War II, which included the Great Famine that followed the "denial" policy of a panic-stricken government, the ruthless conversion of smiling fields of corn into war-camps and the breaking down of the Municipal services and arrangements of the City of Calcutta by the continuous tearing-up of the roadways and shattering of numberless light-posts and water hydrants and pipes by the reckless military Jehus.

In the wake of the War came the communal riots that converted Calcutta into a Calgotha and after that came the Partition with its mainfold problems, not the least being the influx of hundreds of thousands of uprooted humanity into a province that was badly in need of resuscitation and restoration, where its own children and their properties were concerned.

The State of West Bengal was beset with complex problems of appalling intensity and dimensions from the day it was carved out of the Bengal of olden days. There was an acute shortage of all the essentials of life, all over the State, which was further aggravated by the activities of, perhaps, the most rapacious and pernicious set of black-marketeers and profiteers in India. There was a very large number of anti-Social elements already present in the great industrial complexes around Calcutta and Asansol, which was further augmented by the influx in large numbers of social parasites that came with the refugees. There were the unscrupulous political adventurers and disruptionists who exploited the people's wants and the miseries of the refugees to further their own and their party interests, regardless of all that the people or the State might suffer as the consequences. And lastly, there was the acutely frustrated and bewildered state of the people's mind, distracted and strained as it was by want and the vicious spiral of rising prices. Distress was written large on the face of the common citizen and his brother in the fields.

The condition of the State and its people was bad enough to cause alarm in the minds of all who were interested in their welfare. With the influx of the refugees and with the large-scale migration of people from the country-side into the urban areas due to want, the situation became precarious

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

enough to daunt the stoutest heart. The problems seemed too complexly tangled for unravelling and too colossal and menacing to face and overcome. Chaos seemed to hover over the stricken State of West Bengal.

It was at this critical juncture that Bidhan Chandra Roy appeared on the scene, to take charge of this vitally afflicted State of West Bengal, as Chief Minister, Chief Executive, political leader and administrator. It needed a veritable Titan in mental and physical stature to assume charge under such conditions, and it was the great good fortune of the people of Bengal that the Hour produced the Superman, in the person of this Gerat son of Bengal, dauntless in courage, inflexible in determination and tireless in his efforts to pull the State and its people out of the mire of distress and despondence onto the road to prosperity and well-being.

The debt of gratitude that the people of West Bengal—and indeed the people of India in general, for what other city besides Caliutta is so all-India in character and what other State has provided so much for all Indians, in the shape of work and emoluments as West Bengal?—owe to the departed leader is too immense to be described in even the briefest summary in this editorial. We would only lay emphasis on the taking into account of not only what he achieved as positive assets for the State and the Union of India and its people, but also what he prevented from further afflicting the people, in the terms of disruption and degradation.

He bore all criticism and cavil with infinite patience and forbearance and whenever convinced of an error in judgement or mistake in plan or action, he was always ready to arrange for rectification. We were apt to forget that he had only two hands to come to grips with a myriad of problems. Now that we have lost this heroic figure that was a legacy to us of the Indian Revolution, let us remember in sorrow mixed with pride that he, with all his achievements, represented the spirit of resurgent Bengal and India, truly and gloriously.

The World

Tensions have lessened perceptibly in most parts of the world excepting in the Ladakh region of the Kashmir Himalayas. It is eight years since Red China broke all the suave and friendly undertakings given by her on the question of the Kashmir problem and benefiting by the trusting temperament of Pandit Nehru encroached on Indian soil to the extent of nearly 12,000 square miles now in the Ladakh section of Eastern Kashmir.

Pandit Nehru first of all ventured on confidential exchange of protest notes which were not only ineffective but also enboldened the treacherous Chinese into further intrusions in the Eastern Himalayas on the Assam frontier. The whole affair was made public at a very late hour, after some Indian frontier policemen were attacked by Chinese army patrols who had penetrated deep into Indian territory and some killed and some others taken prisoners. In India public indignation flared up and questions were asked as to why the whole affair was kept closely shrouded out of public ken. Pandit Nehru made some lame excuses and published the protest notes sent by him and the mendacious replies sent by Premier Chou En Lai in reply.

There was an attempt to gloss over the whole affair made by the Chinese, who thought that India was too weak to take up arms in defence of her territories and would be only too glad to hand over the entire area encroached upon and more if only a face-saving gesture could be provided by the Red Chinese sending a "Peace-Mission." Chou En Lai did come but was told firmly that no negotiations were possible unless the Chinese retired to their side of the McMahon demarcation line. The Chinese went back much incensed. The ambassador at New Delhi had openly hinted that India could not fight on two fronts viz., against Pakistan and against China at the same time.

India has taken the hint and has stepped up the defence programme to the further extent of her resources. She was badly handicapped by the attitude of the U.S. and Britain, who practically tried to starve her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of warlike supplies until she submitted to their will and gave up non-partisanship. The Soviets proved far more friendly and the necessary armament, mountain climbing tractors and heavy-duty helicopters vitally needed for the defence of an inaccesseble and inhospitable area were supplied by her.

The U.S. further complicated the matter by giving Pakistan as a gift, a number of supersonic jet fighter planes, superior to any possessed by India. The origins of the impulse that led President Kennedy into this act that was grossly unfriendly to a hard-pressed India, and was equally helpful to Red China, is not clearly known to us but it has not been helpful to Indo-American relations, but that is another matter.

In the eight years since the first detection of Chinese intrusion into Ladakh over 400 protest notes have been exchanged between the two governments, without lessening the tension in any-way on either side.

In the month of July the tension mounted following the attempted encirclement by Chinese forces of an outpost in the Galwan valley of Ladakh. Orders were given to Indian troops, who were cut-off from supplies, to shoot if they were shot at. Accusations were not late in coming from the Chinese, whose system is to intrude first and then to accuse India of aggression. This time the Indian reply took a sterner tone. Since then the situation has remained unchanged in that area excepting for the Chinese side, where the aggressive forces have retired to a distance of about 400 yards. On July 24 India sent another Note to China which is summarised in the following news-report:

While the situation on the Sino-Indian border in Ladakh continued tense, India today bluntly told the Communist Chinese authorities that they were "either themselves confused or were deliberately confusing" the question of the international frontier in the Karakoram-Shyok-Kongka pass region of Ladakh to find an excuse to establish an aggressive base there.

In a Note handed to the Chinese Embassy, the Indian Government presented a point by point rebuttal of Chinese allegations of "new aggressive" moves by India in Ladakh.

The Indian Note said that the only frontiers India recognized in Ladakh was the international frontier that had been "clearly established and indicated in the maps that were handed to the Chinese Government by the Indian side at the meetings of the officials of the two Governments in 1960."

Explaining how the Chinese Government was covering up its aggressive activities by "confusing the issue," the Note pointed out that on July 13 the Chinese Government had said that the delineation of the western sector of the Ladakh boundary was in conformity with the 1956 map of China that Mr. Chou En Lai had endorsed, as well as with the map the Chinese had produced at the conference in 1960.

The Note said that such a contention had been clearly rejeceted by the Indian officials at the 1960 conference.

At that time the Indian officials had said: "The Indian side noted that the Chinese side was unable to explain the discrepancies between the alignments shown in the sector in the 1956 map, and authoritatively confirmed by Premier Chou En Lai in 1959, and that shown in the map provided by the Chinese at these meetings. The latter map had shown an alignment which ran due east from the Karakoram pass rather than south-east as in the 1956 map, and then making a sudden turn southward, it cut across the upper Shyok or Chip Chap river, the Galwan river and the Changlung river to reach the Kongka pass. It did not run between the Shyok and the Qara Qash as the 1956 map had done." It was in this context that the Indian Government asserted that the Chinese were "deliberately confusing" the location of the frontier.

The Note once again expressed the hope that Chinese interference in Ladakh would cease.

The other area that is as yet an indirect sphere of Chinese Expansionist moves, is in that land mass formely known as Indo-China. Here, in the two states where tensions are still present namely Laos and South Vietnam, the Western Bloc is trying to contain the Communist forces in Laos, after the blundering U.S. strategy and direction had all but delivered the country

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to the Communist aided Pathet Lao forces and in South Vietnam where the Malayan strategy is being tried in order to isolate the Vietcong guerrilas from their supply routes and from their hide-outs in the isolated villages of the forest lands which gave them shelter and food supplies and provided them with information about the movements of the Government forces of South Vietnam as well.

The South Vietnam Government forces aided by U.S. military planes, helicopters and trainers drawn from highly-skilled jungle-fighting troops of the Western Powers, are slowly building up a barrier against the guerrillas by removing villagers from the jungle into well-barricaded villages equipped with wireless and reinforced with block-houses manned by jungle-fighter troops. The progress of this scheme has been slow and has not been an unmixed successful venture so far, as the Vietcong fighters know the terrain, have the sympathies of the jungle-dwelling villagers and are tough and determined gurrillas who draw arms supplies and reinforcements from North Vietnam.

It was stated that the pro-Communist Pathet-Lao forces, who are in control of a considerable area of Laos territory along the North Vietnam and South Vietnam borders, have been allowing infiltrators from North Vietnam free movement over Laos territory, so that they can go without any opposition, down along a trail inside Laos parallel to the North and South Vietnam borders, until they are behind the South Vietnam forces and in a position to launch a sudden rear-attack and to disperse back into the shelter of the Pathet Lao controlled areas.

This is the reason why the U.S. Government has been pressing for a merger of the three separate groups of armed forces that are present in Laos under control of the pro-Communist, neutralist and Royalist (pro-West) factions that have come to a settlement after long negotiations between the three Princes. **The New York Times** of July 8, summed up the U.S. view of the situation thus :—

A coalition Government, with neutralists in the majortty and an equal balance between ministers of the right and left in political control of Laos. But military control over Laos' terrain is still divided among rival armies of the factions. There are neutralist troops loyal to Premier Souvanna Phouma ; pro-Communist Pathet Lao forces of Deputy Premier Souphanouvong, backed by North Vietnamese troops and technicians, and rightist forces of Deputy Premier Phoumi Nosavan.

What to do about the rival armies is the major problem confronting the fourteen East, West and neutral nations that have agreed to guarantee Laotian neutrality. The nations met at Geneva last week to grapple with the problem, which bears heavily on their last remaining task—agreement on a Laotian declaration of neutrality.

At stake is not only the future of Laos but to some degree the outlook for South Vietnam. The Pathet Lao controls the vital Laotian border areas through which runs the Ho Chi Minh trail, main supply route for Communist Vietcong guerrillas in South Vietnam. The need to eliminate Laotian territory as a supply route—and haven—for the Vietcong was one of the factors influencing President Kennedy's decision to support Premier Souvanna Phouma in forming a neutral coalition regime.

To enable the coalition to assert de facto control over all its territory the U.S. wants the neutrality declaration to include an undertaking by the Government to merge the three forces. The Communists want the future of the armies left open presumably to assure freedom of movement for its infiltrators along the Ho Chi Minh trail.

The situation in Laos is no longer as tense as it was at the beginning of the year but there is still a certain amount of uneasiness amongst the pro-West groups, who are not at all certain that the neutralist Premier Souvanna Phouma will be able to control the Pathet Lao forces, if and when they decide to launch another movement similar to what they did on the last occasion. The U.K. authorities suspect that the neutralist Premier is more in friendly accord with the Communist Pathet Lao than with the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pro-West Royalist group who are in reality led by a general whose recalcitrance had to be brought under control by the U.S. stopping the monthly money-grant that paid for the army and quite a large section of civil admnistration.

In Algeria there are ominous signs of major civil disturbances that might develop into a disastrous civil war. After the the voting for Independence had resulted in the acceptance of the terms for a Free Algeria, the exiled fighters for freedom and the underground forces of Liberation came into the open and there were celebrations. But very soon after came the question as to who was to excercise the powers that were delivered into the lands of the Algerians by the retiring French Government. And it is along this question of Power that a dispute has been developing between two rival parties under two leaders, Benyoussef Ben Khedda 42, and the slightly older Mohammed Ben Bella 43.

The Independence of Algeria was declared at the beginning of July, after 8 years of a bitter struggle that cost over a hundred thousand Moslem lives. There was wild Jubitation all over Algeria excepting in Oran where the die-hard French Secret Army started an orgy of blood-shed in a last attempt to revive the lost cause of **Algerie Francaise**. But immediately after the jubilation came the crisis for leadership that is still hanging over Algeria. The **New York Times** gave the following summary of the dispute and the disputants claims in July 8 issue :

The dramatic events in Algeria last week marked the climax of a long and turbulent struggle for independence.

On Nov. 1, 1954, at a score of points in Algeria, a nationalist "army" of several hundred men launched a rebellion against French rule under the direction of a nine-man committee-in-exile.

Two years later the Algerian nationalists (F. L. N.) convened a secret organizational congress on Algerian soil. The congress, called the National Council of the Algerian Revolution, or unofficially, the Algerian "parliament"—eventually reached a membership of about seventy, including representatives from the six **wilayas** (national military districts) in Algeria, representatives of exile armies in Morocco and Tunisia, and of nationalist organizations in France, Morocco and Tunisia.

The council thus represented an uneasy amalgam of different forces and groups within the nationalist movement. They frequently disagreed on tactics in the struggle against France, and their conflicts have deepened with the approach of independence.

Two of the principal nationalist leaders were Benyoussef Ben Khedda, 42, who in the fall of 1961 became Premier of the Provisional Government, and Mohammed Ben Bella, 43, its Vice Premier who was a prisoner in France during much of the revolution.

Ben Kheda is a "team player," tough when he has had to be tough as an underground organizer in Algeria; resilient when as Premier, he led his team into a compromise peace with France. The compromise included acceptance of such conditions as a three-year period for withdrawal of French troops, the leasing of bases to France for fifteen years, and the protection of French legal and property rights in Algeria.

Ben Bella, one of the nine organizers of the original rebellion and its foremost hero, indicated dissatisfaction, after his release from prison last spring, with the terms of settlement sought by the Ben Khedda group. He spoke of "continuing the revolution." He has had strong support within the army, many of whose members regard the peace accords as an onerous compromise with hated "French colonialism." He also has fervent support from sections of the Algerian masses whose adulation for Ben Bella has led Ben Khedda group to inveigh against the "cult of personality."

The clash between these two points of view apparently deepened at a highly secret meting of the National Council which began last May 27. The purpose of the meeting was to discuss formation of a political bureau to run things after independence. According to reports that leaked out, Ben Bella had a majority of the delegates on his side; but the meeting end-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

ed in discord, with no clear arrangements for the political bureau.

President Ayub Khan's Press Conference

At a Press Conference held on July 21, at Rawalpindi, President Ayub Khan made the statement before newspaper editors, that Pakistan's allies in SEATO and CENTO would come to aid Pakistan only in the case of a World War. But in "local wars" in which Pakistan might get involved, she will have to depend on her own resources. In plain language this means that any aggressive intentions that the rulers of Pakistan might have on the people and territory of India, will have to be carried out under her own arrangements until such time as her patrons might feel it necessary to launch on a major warlike adventure or in an armed intervention. He said that the security of Pakistan lay in her capacity to hit back against foreign aggressors. And that that purpose could not be served if the country's armed forces were divided into equal halves between East and West Pakistan. According to him, East Pakistan had sufficient troops to engage several divisions of an invading force.

Incidentally it might be remarked that the statistics presented before the National Assembly of Pakistan show that the percentages of commissioned officers from East Pakistan were only six p.c. in the Army, nine in the Navy and sixteen in the Air Force.

President Ayub expressed his disappointment at the "ineffective" nature of the SEATO alliance. He said he would favour "bilateral" agreements amongst South-East Asian countries themselves and between different South-East Asian countries and America separately.

Stripped of unnecessary verbiage it means that he would prefer to have an Offensive and Defensive Alliance with the U.S. so that he could launch on military adventures with the assurance of the Big-Fellow backing him up to the fullest extent.

The D.M.K. Demonstrations in Madras

The Dravida Munnetra Kazhagam, is a party formed in the Tamil areas of the South on the basis of a racial isolationism of a peculiarly reactionary type. No one can quarrel over the ambitions of any section of the population in India for the resurgence of its ancient glories as delineated by tradition and historical research or against its attempts for the rectification of any disability—political, social or economic—that affect it, provided the method is adapted to or the actions undertaken for the purpose do not result in damage, loss or injury to any other section of the public. If the party or organization which is formed in accordance with the objectives has any programme for political activities or agitation against the Ministry in power, then such activities or agitation should be carried along the paths sanctioned by legal and peaceful methods, which do not entail any loss or damage to public or private property or injury to the persons of those who are not participants in the action.

In the last elections sufficient members of the D.M.K. party were returned as members of the Madras Assembly to give the party the status of the principal party in Opposition. This has further opened to it a major forum for political agitation in a constitutional way. Indeed, with the tacit support of the Swatantra party, it can function as the spearhead of the Opposition if rectification of grievances be the object.

But despite all that the D.M.K. launched a public demonstration, in the form of a one-day picketing of all Government offices on Thursday the 19th July. The ostensible reason put forward for the demonstration was that of a protest against the rising cost of living. It was undoubtedly a reasonable cause for a protest, but the actual demonstration took an ugly shape as there were riotous outbreaks of violence in Madras and Vellore which left a trail of damage to shops and a large numbers of State Transport vehicles and injuries to about a hundred police officers and men, according to the **Hindu.**

The Hindu (Weekly edition July 26) goes on to to say in its editorial:

"If more serious casualties were avoided, it is due mainly to the restraint, tact and cool courage with which the police handled the rioters. It may be that the D.M.K.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri
6 AUG 1962

leaders intended the picketing to be peaceful and orderly. But neither the general tenor of their propaganda nor the tone of many of the speeches made at their annual conference last week was calculated to induce in their followers a respect for non-violent methods or a concern for law and order. It is unmistakably clear from the conduct of some of the crowds in Madras City, which singled out specific sections of North Madras for their brutal attacks, that the type of propaganda in which the D.M.K. leaders often indulge is such as to stir up hatred against peaceful sections of the community and occasionally, as on Thursday, result in violent and destructive activity. No Government, interested in the maintenance of normal life and the safety of person and property, can possibly look on while unruly mobs take the law into their own hands and indulge in stone-throwing and arson. Mr. Bhaktavatsalam did well to affirm the Government's resolve to give no quarter to elements that may be out to disturb the peace and orderly life of the State."

In certain areas the picketing went off peacefully does seem to indicate that it was not specifically meant to be violent. But the turn the demonstration took in other places clearly shows that the D.M.K. has either the capacity nor the experience to judge the effect of its propaganda and active support and that it has no power to take control of the situation, once the mob violence flares up.

We in Calcutta have had long experience of such incidents, though in the last few years there have been no major outbreaks of violence or hooliganism. The public in Calcutta got sick of those violent demonstrations, as was indicated in the results, that the Leftist groups—who are always the stormy petrels—suffered in the last elections here. The number of job-less leaders and mischief makers is legion in this great city and there is always a large section of the lawless elements in the city, who try to utilize such demonstrations for loot and mischief making.

Madras has had a long and exemplary record since Independence as a State which well-set for progress and advancement and where law and order is normally observed by all sections of the people. It is a pity therefore that a group of men should launch on a course of political adventure through this reckless exploitation of racial fanaticism and prejudiies. This is not likely to result in any solid gain for the party although it might get some publicity and thereby attract some more undesirable adherents.

A curious feature of the D.M.K. demonstrations is the role that the Swatantra party seemed to have assumed—as the Charge d'Affairs of the D.M.K.—in the Madras Assembly. The handful of D.M.K. members present had staged a walk-out previously because of the "one sided character of the statement" made by the Finance Minister on the incidents while the majority had abstained for attendance because the Government "would not countenance a judicial inquiry into the disturbances" and the Minister's statement made no mention of "Police excesses."

The following news report, taken from **The Hindu,** shows that the **Swatantra** party took upon itself the task of "following up" the agitation in the political sphere, after the D.M.K. had broken off diplomatic relations—so to say—with the Government.

Madras, July 21.—An echo was heard in the Legislative Assembly to-day of the incidents in the City following the agitation launched by the D.M.K. on Thursday last.

"Immediately after question-hour, Mr. Sa. Ganesan (Swat.) sought to raise an adjournment motion to discuss the developments arising out of the alleged arrest by the Police of persons not connected with the disturbances.

"The Speaker, Mr. S. Chellapandiyan, wanted to know if the member could make a definite statement and not indulge in 'hearsay of hearsay of hearsay.'

"Mr. Ganesan said he heard last night from reliable sources that a number of persons not connected with the disturbances had been arrested and this agitated the public mind.

"Mr. R. Venkataraman, Industries Minister, said whatever representations were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

made by members in the House the rule was that they took the full responsibility for the statements they made. The House could consider the matter if the hon'ble member could take the responsibility for what he said. On the other hand, if it was a mere hearsay he did not think the House would be justified in discussing it.

"Mr. M. Bhaktavatsalam, Leader of the House and Finance Minister, said there was an agitation and disturbances followed it. In this connection the Police had taken certain measures and arrested some persons. It was for the courts to go into the question of the arrests. Further, this did not seem to him to be a matter for an adjournment motion.

"The Speaker, who withheld his consent for the motion, remarked that the arrests had been made during the ordinary administration of law. Such actions of the Government could not become the subject-matter of adjournment motions. Further, it was a matter for investigation and judicial decision."

This move was all the more curious because the leadership of the Swatantra party—unlike that of the D.M.K.—is in the hands of seasoned politicians, well-equipped with the mental processing gear necessary for the assessment of political possibilities of such a situation. It is strange that they should make such a clumsy attempt to exploit the aftermath of these deplorable incidents. Adversity makes strange bed-fellows, they say, It seems that political frustration has the same effect.

The Editor.

Wasted Man Power

Next to Nature's gifts to mankind the greatest source of human wealth is man power. All values, more or less, generate cut of what Nature provides and what man can produce with or without materials given by Nature. Nature's stores of values however are neither so perishable nor so costly to maintain as man power is. For man power cannot be stored for future use nor maintained without food, housing, medicine, clothes and training. Thus it is that every second a hundred million man seconds can be lost for ever if a hundred million men remain idle for one second. In India man power is wasted in a manner which is fantastic and unbelievable. If we have 200 million workers, it may be safely assumed that we get about 400 million man hours of work out of them instead of 1200 million m.h. as would be normal. We lose 1200 million man hours daily and have been doing so for the last 15 years of National Planning. This loss if valued in terms of wages must be worth at least ten naye paise per man hour; valued in terms of national economic loss it should be at least 20 nP. per man hour assuming that wages constitute about half of what is produced by the worker. So that if we said that India has been steadily allowing 100 million rupees worth of value to go down the drain during the last 15 years, it would be certainly an understatement. That would total up to more than 3000 crores of Rupees per annum and if properly used for production, should have doubled the national income by now quite easily. For, much of the work that men could have done in India unaided by machinery and scientific training would have taken the shape of capital just as a matter of course and the additions to the total national income would inevitably have increased in geometrical progression as roads, houses, trees, fish culture, animal husbandry, poultry, farming, piggeries, dairies etc., etc., increased by a planned use of human labour all over India. Certain basic raw materials for the production of important consumer goods, like cotton, jute and other fibres, sugar cane, pulp making things etc., would have been produced in much larger quantities too and Indians might have had better food, more clothing and adequate housing instead of living on a 500|900 calory diet and without any clothes or housing worth the name. The average Indian now has an annual income of Rs. 290|- out of which he spends more than Rs. 200|- on basic food grains and the rest on "luxuries" like half-a-dozen and a towel per annum, a little oil to rub on his fat-starved body and to keep the primitive establishment going in the style that his ancestors adopted during the hideous persecutions carried out by the British soldiers after the Mutiny of 1857.

The villages of Bihar and U.P. have almost the same appearance to-day as they had in 1862. And why?

Because Man Power has not been utilised by our Planners and because they have driven the people further down into poverty by heavy taxation, interference with their trades and crafts by imposing restrictions everywhere and by creating a general consciousness throughout India that the people had nothing to do but to carry out Governmental directives in every field of work. And the Government being manned by inefficient and often dishonest persons, this "socialism" has failed miserably to achieve its objectives. The people, who have suffered from a "pathetic contentment" during two hundred years of British rule, have taken these fresh series of inroads into their freedoms and rights of self-determination lying down too. Of initiative, they had little in the past and the constant propaganda by the tall-talking politicians of independent India has further denuded them of all powers of thinking or behaving in the manner of rational and self-reliant human beings. The morale of the people has been reduced to almost zero by the all knowing and totally useless talkers of the political parties and we have virtually no workers in India who will work for their own good. Those who work for wages also do the minimum of work and mishandle valuable machinery and plant obtained with borrowed money at four times their true value. In the circumstances India's chances of putting up a sound economic front are remote. The only way lies through mobilisation of Man Power; but that will never be done so long as political parties rule India. Governance and administration of various essential public services are quite different from a total usurpation of all powers, privileges and rights of individual action. Our rulers like to govern and carry on administration loosely. But they like to impose their will upon the people in the manner of totalitarians.

A.C.

Contempt Of The People

Our rulers suffer from a habitual weakness to treat the people with contempt. They may talk glibly of democracy and the ultimate and fundamental sovereign powers that rest with the people; but in their action they appear to have nothing but contempt for the individual's right of self determination in the ordinary affairs of their daily life. The Indian politicians, who rule us, think that as soon as they are enthroned in power by the people, they automatically earn the right to act as total guardians of the people. No member of the public can decide for himself whether he will build a house, enter into a particular line of business, earn some foreign exchange for his own use, travel to other countries, go to foreign sanitaria or hospitals for treatment, buy anything anywhere else in the world and bring it to India, order spare parts for his mechanical possessions or do many other things which might improve his mind, body or finances without interference from the rulers of India. Instead of private persons carrying out any of their own plans in any of these spheres of work or achievement the political **rajahs** of India use up all or most of the supplies of steel and cement to build relatively wasteful and useless structures (from the national well being angle) in Delhi and other cities; to set up unproductive and uneconomical businesses everywhere to pamper particular groups of persons who work only to break up the nation, to send groups of totally worthless persons abroad on missions which are imaginary or which cannot be fulfilled by the persons sent and to import a great number of things which can be easily made in India at half the cost. Our best men and women are prevented from going abroad by the Government, though foreign exchange is regularly wasted in maintaining showy embassies and consulates everywhere, in employing or allowing to be employed all sorts of foreign personnel who are neither technically competent nor of any good to any one in India and in granting foreign exchange to persons who have "influence" and nothing else. It was reported in the press sometime ago that the Reserve Bank of India had been granting foreign exchange, and several lakhs of rupees worth of it, to persons who had not asked for any and for the use of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

persons other than the permit holders. The Government of India however thought about the same time that persons granted scholarships by foreigners should consult them before accepting the same! How scholarships granted to persons selected by foreign agencies could be utilised for purposes for which the State required foreign currency is a very subtle matter which ordinary people would not easily understand. It means that the Government through the Reserve Bank of India has hopes of diverting these scholarships to their own or to State nominees. If this is not interference with the rights of private persons (and with those of the foreign agencies too), we do not know what is! We all know that contempt of court is a heinous and punishable offence. Contempt of the Government established by law is also reprehensible. But the fountain head from which flows all power and sovereignty viz., the PEOPLE can be treated with contempt by every clerk employed by the State, to say nothing of persons higher up, without incurring the disapproval of the law. In our opinion contempt of the People and of their rights should be made punishable too. But the representatives of the people will probably oppose any such attempt to rehabilitate the people in Power.

A.C.

National Integration

When the Indian Nation was a slave nation ruled arbitrarily by the British who exploited the people of India and the natural resources of the country for their own advantage for over a hundred and fifty years, the Indians were not so disunited as they are now. This has happened mainly because the Congress agreed to divide India into Pakistan and India on a communal basis. Some Muslims of undivided India instigated by the British carried on a campaign of a false Two-nation theory boosted by bloody riots and eventually managed to bring the Congress to agree to a division of India. This led to the development of the idea of breaking up India into many semi-independent units known as States, which had a majority of some particular type of population, and which could function almost as separate nations. Thus developed the states of India with their "frontiers", "frontier guards", "check posts", etc., etc. Each State had a policy which was based on a theory of exclusiveness in point of economic development, granting licences, permits, etc., and recruiting government servants. It did not stop there. Each State had certain areas in it in which lived its "minorities" which could be exploited by the majorities deprived of their rights and even of property, jobs and business for the benefit of the majorities. The language of the majority was forced upon the minorities who were subjected to many other indignities too. As a result of this the minorities were like the slaves of the majorities in these States. No wonder the Indian nation began to break up into groups which hated one another, were exploited and persecuted by local majorities whose superiority had no basis in facts of any real political importance, and the worst elements of the Indian people began to dominate Indian politics everywhere to the detriment of all true national ideals. These facts were and are well-known to the Congress leaders, who never believed in facing facts. They continued to pamper the destroyers of national unity and tried to cover up the vices of their regional supporters by eye-wash and tall talk about national integration. It is clear and obvious that if India is to become one State with a single nation in it, then the States must cease to be the semi-independent "kingdoms" that they now are. All question of minority and majority must be answered once and for all by reducing the powers of the States to the mere working of day-to-day administration. It would be better still if the States were abolished and replaced by administrative zones with no zonal or political parties or regional party leaders. It is quite unnecessary to have fourteen sets of Parliaments, Governors, Cabinets, and so forth in a country which can hardly produce enough qualified persons to fill one upper and one lower house with a single cabinet. There is and there should be only one legislature system for the whole of India. The administration should be carried on by paid zonal officials. The economy of the country

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

should be made free as far as possible so that the State could not practise favouritism of any kind. Local Self-Government should be developed and all education, medical arrangements, policing, etc., etc., should be in the hands of local people with some over-all control by the State which will frame basic rules, regulations and set up standards without reference to person, group, community, race, caste or language. All distribution of advantages, privileges and favours of an economic kind should cease immediately. India is falling to pieces because no one is building up India. We are all busy building States, groups, communities, linguistic cliques and so on and so forth.

A. C.

Picking Pockets and Public Finance

George Bernard Shaw described a certain island in which the people lived by taking each other's washing. This was a satirical reference to the absurdity of an economy which produced nothing for its maintenance but still continued to exist. One may similarly think of a large country in which all persons lived by picking each other's pockets. When we come to think of Public Finance we naturally have to think of the sources from which taxes and duties are raised. If the sources dried up, then, naturally, there would be no realisation of revenue. In other words Public Finance too cannot depend for all time on picking pockets only. For pockets have a fatal tendency to become empty after repeated picking and, then, unless some one refilled the pockets with **values produced**, picking would yield nothing more. The Indian system of Public Finance is based on controlling all production and interfering with all productive work as an over-all gesture of policy in the economic sphere. Thereafter the revenue collectors go round getting what they can out of reluctant contributors to public funds. Almost all the revenues are taken out of what has been produced by private effort; but the public policy is to discourage individual enterprise directly or indirectly too by cutting down supplies of funds, material, machinery, etc., and by closing down markets by checks and controls. So that the only source of capital accumulation left with Indian individuals is tax evasion and illicit dealings. Dishonesty of this kind is an answer to the policy adopted by the State which is both economically and ethically unsound. The Fundamental Rights guaranteed by the Indian Constitution have been disposed of more or less by Rules and Regulations imposed upon the people by the One Man Parliamentary Party of India. For, there is only one man whose will determines what the Parliamentary majority will dictate to the people. And this is a sad state of affairs. Honest men in India are becoming paupers and anti-socials are prospering everywhere. Taxes are paid by honest people more or less exclusively and if the Government's policy progressively denudes their economic life of all productive values, the position will soon be reached when revenues will have to be obtained by force only from tax-payers who would not pay anything willingly. The service holders who pay taxes regularly, are, by and large, non-productive, and, as their numbers increase, Indians move further towards their goal of living by rendering non-material service to one another. There is no doubt that, something is fundamentally wrong with India's economy, but we say so in an undertone; for, we fear the Government of India will immediately appoint a few more high power committees to do fact finding; which will produce more non-existing values, and hardly any knowledge worth knowing.

A. C.

Power Shedding in West Bengal

'Scandalous' seems to us to be the mildest epithet which could somewhat inadequately describe the acute power shortage to which widely divergent but industrially and otherwise important extensive territories within the country have been subject from time to time over the past several years. In Western India, for instance, industrial progress has not merely been proved to have been materially arrested on account of the inadequacies of power supply compelling subs-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tantial production-staggering to be resorted to on this account, but quite a number of small industries have had to even completely shut down. West Bengal also has not been immune and the Greater Calcutta area which still remains the most important and developing industrial area in Eastern India, has had to face considerable shortages from this paralysing phenomenon. Some two years ago large areas of this great metropolitan district has had to suffer long and erratic power cuts. Currently, once again, the metropolis has had to be deprived of its essential minimum supplies of power and, although, on this occasion power cuts are being distributed over different sections of the area in turn with a view to spreading the burdens of loss and inconvenience over the entire community, the people certainly have the right to question why it should at all be necessary for them to suffer in this manner ? As we write, the latest press note seems to indicate that generation on the D.V.C.'s 75 mW unit which had to shut down on account of a fire and which compelled the power shedding device in Calcutta, has been partially restored and that the extent of the power shedding that has been going on for the past one week and would be likely to be proportionately restored.

That the Plans have been remiss in respect of assesssment of priorities for development of power to conform to the requirements of development projects in the Plans, would be obvious from the fact that there has been a continuing over-all shortage of power throughout the country. Plan targets have not been fulfilled, so far as power development is concerned and although the Third Plan has projected a substantial stepping up of potentials in this regard, there is no reason to feel optimistic that they would be fulfilled. It is significant that even if it were possible to actually step up power development to a gross output level of 13.4 million kilowatts as projected in the Third Plan, it would still remain short of requirements of Plan progress.

So far as West Bengal is concerned, the State's primary dependence for her power supply has been upon the supplies made available by the D.V.C. Especially so in the Calcutta area where the Calcutta Electric Supply Corporation was, some years ago, induced under official pressure, to agree to buy from the D.V.C. the major portion of their bulk power requirements from the D.V.C. to meet their increasing commitments to their constituents in the metropolis, rather than do so by increasing their own generating potentials by installation of necessary plant and machinery. A review of the transactions relating to the D.V.C's power supplies in the entire area described under the Damodar Valley Corporation Act as the D.V.C. area would demonstrate how under official patronage and pressure the Corporation was able to secure a virtual monopoly over its present market which it is now unable to adequately feed. The initial projects of the Corporation, as would be demonstrated by the literature issued by it during the earlier stages of its development, which consisted mainly of Hydro Power generated at its three dam sites at Tilaya, Maithon and Panchet, was intended to stimulate the growth and feed the power requirements of a variety of medium and small-scale industries in the area which, it was hoped, would spring up as a result of the cheap and abundant power that would thus be made available. It was only later, when it was discovered that Hydro power at these dams would not be able to maintain a constant load of supplies at the projected level of pressure throughout the year, that the installation of thermal power plants at Bokaro was conceived of. Despite the huge capital outlays on these hydro and thermal power undertakings, there did not seem to be any immediate prospects of the growth of those medium and small industries which, it was hoped, would provide the Corporation's community of consumers with the power generated by it. In the meanwhile power development had already begun to be the principal concern of the D.V.C. and its primary purposes of flood control and irrigation were relegated to a comparatively secondary importance. It became necessary, therefore, to find markets for its power and as no new community of consumers had been springing up as initially expected, the obvious remedy seemed to be to prevail upon the existing large industries in the area to buy power from it to cover the requirements of their expanding potentials by the simple expedient of refusing necessary licences for the installation of additional generating capacity within their own respective organizations as they had been doing previously. It was in the same manner that the Calcutta Electric Supply Corporation was also prevailed upon to agree to buy bulk power from the D.V.C.

Unfortunately, it appears, that the D.V.C. is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

no longer able to cover the minimum requirements of all its constituents thus acquired under official patronage over the years. There have been shortages of supplies all over the area. We understand that in the Jamshedpur industrial metropolis there has, for several years now, been a continuing shortage of some 20 kVh compelling a number of industries to stagger production by having a weekly closed day. The collieries in the Raniganj and Jherria fields have also been known to similarly suffer. In Calcutta, the supplies made available to the grid from the Corporation's Durgapur thermal plant has been just sufficient to cover maintenance loads and whenever any breakdown have occured, the metroplis has been compelled to suffer acutely as in the present instance.

It would seem only reasonable to comment that the Corporation should never have acquired commitments for providing supplies to developing areas which it was not fully equipped to meet. But what would seem to be even more difficult to understand is the frequent breakdowns that the Corporation's thermal power units would seem to be subject to. Before the D.V.C. took over the responsibilities of supplying a major portion of the Calcutta Electric Supply Corporation's bulk power requirements, experiences of breakdowns in supplies had been so few and far between as to have been almost entirely negligible. It has been only since the Corporation has been deriving a major portion of its power from the D.V.C. that breakdowns have been occuring frequently and over long and sustained periods of time violently dislocating the city's life in large sectors of its extensive and thickly populated areas. Why such frequent and massive breakdowns should at all occur is a question which would seem to demand a frank and unambiguous answer. In the absence of any frank and official statement, the supposition would not be unreasonable that there must either be something basically wrong with the plants concerned themselves or their operation. Rumour has it that dissatisfied with the working of the Durgapur plant, the D.V.C. had called into consultation an eminent firm of foreign construction experts who opined that the plant, to be able to operate smoothly and to full capacity and efficiently, will have to be completely redesigned and had submitted estimates for the undertaking which would call for a huge new capital outlay on the plant. We do not know how far these remours are actually credible. At least there does not seem to have been any reliable official statement issued in this connection. But if there be any truth in the rumour, the firm who originally supplied and erected the plant sould, obviously, be held responsible for the cost of its necessary reconditioning. In any case, a thorough and public probe would seem to be the least that is called for in this connection. The people, who have been made to pay for these installations, have the right to be taken into the fullest confidence and to be acquainted with the true state of affairs in this connection. They have been the victims of the bunglings and nepotisms of these public sector undertakings long enough and certainly have the right to know how much longer their sufferings would be bound to continue as well as how much more it is going to cost them to get out of their misery !

K. N.

Cleaner Calcutta

One can never sufficiently highly praise the efforts of the boys of the National Volunteer Force in ridding Calcutta of its nauseating filth of accumulated garbage. Although called in rather late in the day, not in fact, until the city and suburbs were actually held in the prip of a raging cholera and, later, of a diptheria epidemic which seemed to have been directly derived from these, the boys of the National Volunteer Force would seem to have heroically risen to the occasion and, unaccustomed as they naturally are with the kind of work that they had thus taken on, seem to have virtually cleared the city in record time of the garbage and filth which had accumulated over months. Indeed, Calcutta wears an unwontedly cleaner and fresher look which would seem to be almost a novel one to the dwellers of the city. Even to a visitor from outside Calcutta would seem now to wear a new look pleasing to the eye, as commented upon by the Prime Minister who during his visit here last week-end was reported to have commended it.

What would seem to be worthy of comment in this regard is that had our city fathers in the Calcutta Corporation been even remotely alive to their responsibilities to the city and its dwellers, such accumulations of garbage and filth all over the metropolis, which has been endemic almost as far back as one can remember, should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

never have been possible. The Corporation has long been notorious as an institution where nothing ever gets done and its Council Chamber a field of unseemly wrangles and battles. Now that the boys of the NVF have not merely temporarily taken over but so ably and efficiently discharged what normally should be one of the very elementary responsibilities of the Corporation, the least that our City Fathers should take upon themselves to do is to go through a period of penance for all their past sins and criminal neglect of elementary duty. The least penance that we can think of is that they should go about in sackloth and ashes and hiding their brazen faces from the gaze of honest and victimized rate-payers until, at least, the City's civic services are restored to a minimum level of adequacy and efficiency. It was never the job of the boys of the National Volunteer Force to undertake this work of removing this filth of the Corporation's indifference and criminal neglect. But now that they have volunteered to do this and, moreover, done it so efficiently, the City Fathers, supposedly men of maturity and intelligence, should learn what their job is from these young teen-agers. But will they ever learn ?

K. N.

Another Stalwart Gone

West Bengal would seem to have fallen upon a continuing period of misfortune. So soon after Dr. Bidhan Chandra Roy had passed away, only twentythree days, in fact, after that sad event, another stalwart of the West Bengal Treasury, Kalipada Mukherjee, suddenly passed away following an attack of apoplexy, at the comparatively young age of only 61. His sudden removal from the scene must, we are sure, have been a severe blow to West Bengal's new Chief Minister, Mr. P. C. Sen, as well as to his Government.

The late Mr. Mukherjee, who became intimately associated with the freedom movement in the country at the comparatively early age of 21, has long been regarded as an important factor in the counsels of the Bengal Congress and proved his organizing abilities while undertaking flood relief work in North Bengal and later, relief to riot victims in Dacca and Noakhali. He has been associated with the West Bengal Government ever since Independence, having been initially drafted into the Treasury as Revenue Minister in Dr. P. C. Ghosh's cabinet. L when Dr. Roy took over the Government 1948, he took over the Labour portfolio subsequently the Home (Police) portfolio.

Throughout his long and intimate associ with the West Bengal Government in the ca of a responsible Cabinet Minister, Mr. Mukh has been known to discharge his respons ties in a courageous and forthright manner as well as the rather explosive circumstances the State would permit. He has been always, reason of the controversial portfolios of Labour and later Police that he held in Gov ment, one of the most popular victims of harshest opposition criticisms and attacks all which he took in his stride with commend lack of emotion and with phlegmatism. There is doubt that he was one of the "strong men" the West Bengal Government during all years since Independence and had thus acqui the position of an almost 'indispensable' mem of the Cabinet. His sudden removal by the cr but immutable hand of death has, no doubt, ma that State Government the poorer for his loss.

K. N.

The Late Purushottamdas Tandon

On the same day that Dr. Bidhan Chan Roy suddenly passed away in Calcutta, and outstanding public figure in the cou Purushottamdas Tandon, passed away in U Pradesh. Associated throughout his long life w the freedom movement in the country in most its phases, Tandonji seemed to have grown a disillusioned man when he found the Con and its current leadership shedding one by most of its long cherished public ideals pledges. He was, despite his long years of mate personal friendship with Nehru, Tan was one of the severest critics of Government and its policies. But he never al himself to descend into the sloughs of anthropy and with a zeal, unusual in one years and position, continued to lead a crus often a pathetically lonesome one, against he considered the misdeeds of the Govern especially in respect of what he considered deviations from the paths of truth and rect

A wizened little man in stature, Tand was, nevertheless a colourful and vigorous compelled attention by sheer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of character even of those who had nothing in common with his faiths and beliefs. A fanatic for the complete replacement of English by Hindi in all official and public transactions, there were very few in the country, even among the apologists of Hindi who would go all the way with him. A deep scholar and a fearless upholder of what he considered to be right and true, Purushottamdas Tandon takes away with himself into eternity a type which seems to be fast disappearing from the modern world.

K. N.

The Finance Minister's Quests Abroad

The rather colourful account given on his recent return from his quests abroad by Union Finance Minister, Morarji Desai would, even to the least discerning, seem to be more wishful than realistic. One of the primary objectives of Mr. Desai's current European visits was, as publicly stated, to canvas India's case for her markets abroad, especially her traditional advantages in the British market in the context of Britain's candidature for entry into the European Common Market Community and the six's rather inflexible demand for Britain's acceptance of the condition of a common external tariff against imports from all countries outside the Six as an essential pre-requisite to her acceptance into the favoured fold. There was some justification for the Union Finance Minister's mood of optimism on the eve of his departure for Europe. The protracted conferences held between him and the British Secretary for Commonwealth Relations, Mr. Duncan Sandys, relating to Indo-British trade *vis-a-vis* Britain's projected entry into the ECM in New Delhi immediately preceding his departure for Europe, undoubtedly raised hopes of some concessions being made available to India in the British Market, at least to the extent similar concessions had been extended by the Community to certain countries in the Middle-east in the French markets. In fact, Mr. Sandys had given definite assurances of a 'declaration of intentions' by the Six being acceptable to the latter which would seek to provide certain reasonable safeguards for Indian trade in the U.K. What authority Mr. Sandys may have had to hold out such assurances to India was, however, a question which was neither asked nor answered.

So far as Mr. Desai's efforts for securing Indian interests *vis-a-vis* the proposal for British entry into the European Common Market was concerned, they would, so far as actual results are concerned, seem to have been completely unavailing. The Six, apparently, were unwilling to consider any concessions to India so far as her traditional advantages in the British markets were concerned, in so far as they related to the proposal for a common external tariff against all countries outside the Seven. Mr. Desai, obviously has pleaded with all the pursuasion at his command for India's cause not merely before British authorities, but also to the Six in Brussels. It may be true, as he claims, that the latter also had given him the most patient and sympathetic hearing, but there has been no indication, either in their discussions with our Finance Minister or, later, in their attitude to the British candidature for entry into the Community of Six, that they had any intentions whatever of resiling from their original and apparently inflexible conditions or of relenting towards India. Mr. Desai's talks with the West German or Italian authorities which were reported to have preceded his pleadings in Brussels might equally have been held in a pleasant and sympathetic climate, but such sympathy may mean just less than nothing in so far as India's export advantages to Britain or other countries of Europe within the Six were concerned.

In fact, the realities of the situation in so far as India's export prospects in Europe are concerned, would seem to be one of unrelieved gloom despite Mr. Desai's assurances to the contrary. In fact, India's export incidences during the first five months of the current year of which figures have been recently announced would seem to support such gloomy prognostications rather than do anything to dispel them. The situation would seem to be extremely nervous. One does not blame Mr. Desai for this. Not all of this situation was within the control of India although it cannot also, at the same time, he repudiated that a certain lack of imagination in handling the problems of Indian exports have not at least in some measure, been responsible for the situation as it has eventuated today. The proposal for British entry into the ECM has been like the proverbial last straw in a long chain of mistakes and defaults which has reduced India to her present position of helplessness in so far

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as her export trade is concerned. Prospects would seem to have even further deteriorated since Mr. Desai's return to India for, according to later news from Brussels, the attitude of the Six would seem to have further hardened on the question of British entry into the Community, on the ground of a common tariff against farm produce and the very fact as to whether Britain would be accepted into the fold would seem to be currently hanging in the balance.

One of the other principal objectives of Mr. Desai's European visit would seem to have been to explore possibilities in respect of the prospects of aid for India's Third Plan. Here, especially in the context of Italy's decision to join the 'Aid India Club', there may have been far greater reason for Mr. Desai to feel optimistic. It is quite possible that the Finance Minister's assessment of the prospects of aid forthcoming in the immediate future may have been more realistic. We would hope that they were so. But we should, at the same time, point out that aid would be a poor substitute for self-sustaining trade as a means of procuring the necessary volumes of foreign exchange for financing our development planning. Export must, therefore, continue to be given the highest priority. Import freezes which, as Mr. Desai has warned, would continue, would not, however, offset the vital need to export. It is a poor way of public finance when the budget has to be balanced by curtailing expenditure, rather than by increasing income. And the burdens of progressively accumulating aid by way of loans and grants may well prove crushing in the end unless earnings can be stimulated to meet their eventual redemption requirements to the fullest extent.

There could be no question that the country's export problems have all along been wrongly handled almost from the inception of Independence. There was no doubt a short-lived spurt in exports during the initial year of the First Five Plan when by reason of stockpiling certain Indian exports abroad, especially in the U.S.A., there was, what was described by the then Finance Minister, considerable windfall export earnings by the country. Since then, however, India's foreign trade has continued to evince a steady downward trend except for a certain measure of recovery during the 1960-61 period which, as results of the first half of the current year demonstrate, appears, again, to have been a very short-lived one. In the meanwhile, India would seem to have been loosing steadily much of her traditional markets abroad. There must be some reason for this trend. The reason itself may be quite a complex one involving a variety of factors. A detailed and immediate probe would seem to be called for and policies re-enunciated in the light of information that such a probe might yield.

A NOTE ON ORGANIZATIONAL CONFLICT AS EVIDENCED IN MANAGEMENT-UNION RELATIONSHIP

By NARENDRA K. SETHI

Introduction

In modern corporate society the equillibrium of the organizational structure is often shaken by conflicting roles and varying objectives of management and unions. In the operation of business, this differentiation of spheres of interests and goals acts as a severe obstacle. In addition to that it disturbs industrial peace by encouraging personal gratification rather than mutual survival. It also hampers the growth of corporate citizenship by emphasizing individual goals and curbs the feeling of belonging in the large corporation. Consequently, both management and unions try to think through radically different approaches rather than act as two similar interest-groups of an integrated organization. This brings in an atmosphere of mutual fear and hatred—a thing which is detrimental to industrial growth and organizational success. Where basic institutions and goals begin to differ so much, how can the boundaries of interests be drawn and held? Not only that, this feeling brings failure both to the business goals of the management and the individual goals of the employees. None draws any benefit from this and only industrial bitterness increases.

Whither Management?

As a recognised economic organ of an industrial society, the duties of management are primarily devoted towards the successful operation of their business enterprise. This pre-supposes a distinct profit-motive in order to guarantee the sustained growth of the enterprise. Therefore, all the acts, decisions, thoughts and goals of management have an economic dimension and in as far as it falls short of this performance, it only loses ground in achieving its economic goals.

Next, modern management acts as a life-giving source to the cult of free enterprise. It tries to build up new vitality in the free economy of the country by emphasizing the need of private enterprise and freedom of effort. It looks at the broad structure of the entire economy and tries to encourage its productive resources. But, at the same time, it keeps in close view the question of immediate organization's benefit. Management makes conscious efforts to develop the structual unity of the company on one hand and the integrated entity of the industry on the other. Therefore, management's objectives in this particular direction are two-fold: first, to encourage the rationale of free enterprise, and second, to develop their own enterprises.

The goals of management, both immediate and distant, direct and indirect, have a sharp focus on organizational growth or profitable operation of the concern. These are corporate goals rather than individual ones and show more concern for enterprise than for the human resources of the same.

And Unions

Unions resist the power of management by shaking the latter's prerogatives, disturbing latter's rights and emphasizing its own force. They represent the workers' attitudes, their desires, moods, longings and frustrations. But they constitute a pressure group. Their sole objective is to change the balance of organizational rights in favor of the workers by usurping management of its powers.

It is through unions that we observe the conflicting goals of workers and management in their true economic and psychological perspective. Workers demand self-preservation and self-assertion at all costs. Their emotional response to the organization crystallizes in the form of bitter opposition towards management's self-rights. They want a degree of individual dignity and social mobility even though it may be detrimental to the organization. Next, their ego needs a pat and that can come only if their psychic needs are fulfilled. Modern theorists have explained that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

workers today no longer place too much of an importance upon the gratification of their physical desires—rather they look forward to the fulfilment of their emotional and psychological needs. Therefore, it is only through their work group and organization that they can hope to achieve satisfaction in that direction. This gives added impetus to unionism.

The goals of the employees are not corporate in character, for a common worker finds no co-relation between his individual effort and the profit return to the company. His immediate 'organization' is his own ego, his personality and his family and (to a lesser degree) his work group. All his objectives are oriented towards this approach. His economic antipathy for the enterprise can also be explained in these terms. He does not have any sense of belonging in the company and shows neither interest nor fellowship for the same.

The Corporate Warfare

In this bitter business climate, there is bound to be the inevitable clash of ideologies and conflict of objectives. On one hand, we have the profit-motive of management; on the other, the individual assertion of the employees. The corporate goals of management are more than rebuffed by the personal needs of workers and what ensues is a strong warfare between these two. One begins to look with savage apprehension at the other and industrial peace is disturbed. While management shows concern for the common-good of the entire enterprise, the workers seem to think through their own individual goals, thus denying the broad contents of management's approach. While one approaches the issue with a strong integrated viewpoint of the complete plant, the other maintains a stiff subjectivity, giving personal goals predominance over those of the entire corporation.

This battle goes on and on, perhaps with increasing severity bringing loss not only to the enterprise but also to the entire national growth and productivity. As a matter of fact, this warfare curbs the initiative of both the sectors: it makes management passive and rigid: unions illogical and dreary. It hampers the dynamics of our economy too, because in constant industrial warfare the forces of industrial development are repulsed. In addition to that, it also imposes restrictions on individual dignity, personal power and success. The vitality of individual effort gives way under the mounting pressure of this conflict. The very basis of corporate citizenship is shaken at times. During critical periods when none of these two sectors recedes, huge losses occur to the enterprise and to the workers in the shape of long, prolonged strikes, work-stoppages and restricted outputs. Millions of man-hours are lost to the society and the productivity of the country suffers a sharp set-back.

As a matter of fact, this disparity of goals between management and the employees is a sad commentary upon the economic traditions of our culture. What is desired is not this clash and separate survival but mutual survival—a sort of co-existence. The organizational goals of management and the individual objectives of the workers need not remain differentiated in these sharp sectors, they can both be integrated in the all-embracing and broad perspective of industrial and national benefit. Workers should be motivated to develop a sense of belonging in the organization. In the same way, the profit-orientation of the management can be replaced by an enlightened social awareness. The conflict can be resolved only if both these sectors come closer by integrating their objective in one pattern of mutual acceptance. One need no longer dread the other. In modern industrial climatology, the very basis of thinking through watertight compartments like 'union' and 'management' is illfounded. One completes the other and they both should convey a homogeneity of outlook, unity of mood and similarity of goals.

If we continue to differentiate them by emphasizing their separate goals and objectives, industrial citizenship will no longer be able to create an atmosphere of understanding and considera-tion. The disparity will act as a deterrent in the path of organizational growth on one hand and an obstacle in the worker's way to satisfaction on the other. A static enterprise and an unhappy worker can bring national disasters too. Corporate equillibrium can be restored by adjusting the forces of both these sectors of economy, by co-ordinating their goals and by joining them in a common venture—the pursuit of national development. In modern state of international tension and foreign competition, it is essential to eradicate the evils of industrial society. Neither the management nor the unions can claim to adhere to their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rights and prerogatives by refusing to combine in national cause. Their separate goals can bring good to none of the parties involved—not to the organization and its stability, not to the workers and their ego and, of course, not to the nation and its productivity.

These varying goals have to be approached through a new dimension of corporate citizenship and industrial peace, so that their integration may open still newer avenues of conomic growth and national development.

THE ALLEGED UNIQUENESS OF INDIA'S FREEDOM MOVEMENT

By UMA MUKHERJEE and HARIDAS MUKHERJEE

1

One of the myths got up in our country during the post-independence period is that India acquired the priceless boon of liberty by an ethical and non-violent struggle into which Mahatma Gandhi is supposed to have first initiated the nation. In the recent official publication of the Government of India—Dr. Tara Chand's **History of the Freedom Movement in India**, Volume One—this myth has been perpetuated for posterity. Notwithstanding an overwhelming mass of evidence to the contrary, Dr. Tara Chand propounds the fundamental thesis by recording that the achievement of freedom by India was "a unique phenomenon," its uniqueness being displayed in the "ethical" character of the national struggle. To quote his own words : "And where similar struggles have been accompanied with bloodshed, the movement in India, though intense and accompanied with much suffering, was non-violent." (Vide **Preface**, p. xii.) The soundness of these observations is evidently questionable.

2

Ahimsa or non-violence has never been the special monopoly of the genius of India. Other peoples also can claim this dsitinction with ample justification. The materialism or animality of Indians has never been less in intensity or extensity than that of the other nations of the world. India is the land not only of Buddha, Ramdas and Ramakrishna, but also of Kautilya, Shivaji and Netaji. As full-blooded human beings, Indians, ancient, medieval and modern, have always responded to the thousand and one stimuli of the objective universe almost in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the self-same manner as have the other historic races of mankind. In the struggle for national liberation from foreign control what has been true of other peoples has not been untrue in the case of Indians. Our country achieved her political independence not by means of non-violent method alone, but also by the orthodox historical method of violence and bloodshed. To attribute the entire success of India's Freedom Movement to the efficacy of Mahatma Gandhi's Non-violent Non-cooperation, a scheme of political action of which he himself was not the originator, is to distort truth. The cult of non-violence and the philosophy of the bomb ran **pari pasu**, in varying degrees no doubt, during the whole course of India's Freedom Movement.

3

Nowhere in world history does the Freedom Movement of a subject people smoothly run its entire course along purely ethical and constitutional channels. All struggle implies by its very nature a challenge to the **status quo** and generates the heat of violence in due course. Generally it commences as a clean moral fight confined to the limits of law, but with the march of the movement the perspective changes and the struggle loses its character of inoffensive legality. Coercion is employed by the status quo for hammering into submission to law. The impulse of retaliation from the people's side then begins to work itself out as an inevitable reaction. Not even a purely moral struggle, not to speak of any political struggle, can long remain confined to the ethical plane.

When the French Revolution first declared itself in 1789, it was purely in the shape of a clean constitutional struggle. But within a couple of months the infuriated Parisian mob applied the first dose of violence by storming the Bastille, the symbol of the accumulated oppression of the Bourbons. From that fateful moment the inoffensive legality of the struggle disappeared and the movement assumed the character of a violent revolution. The history of China in modern times illustrates the same truth. Dr. Sun Yat-sen, the Father of the Chinese Revolution, was original an advocate of peaceful constitutional re forms for the rejuvenation of China. He even presented a scheme of reform to the Chinese Viceroy, Li Hungchang, in 18 The rejection of this reform scheme co vinced him of the utter futility of peace agitation and counselled him to plan the overthrow of the ruling Manchu dynasty The inability of the Manchus to move with the times sealed their political fate. Even the constitutional reform movement initiated by Empress Dowager Tzu Hsi (1905-0 proved a failure, giving the inevitable momentum to the revolutionary movement The Italian national movement and the Irish Home-Rule struggle of the last century supply additional proofs of the contention

4

The Indian Freedom Movement proceeded along the customary line of historical development. As in other countries, so in India also, the struggle for independence began originally as an ethical and legal fight, but it also repeatedly took a violent turn in certain phases of its evolution. To hold the Non-violent Non-cooperation Movement of Mahatma Gandhi as the sole primary condition of India's liberation in 1947 is a gross lie. The role of Netaji Subhas Chandra Bose was no less responsible for the achievement of freedom by India. A fundamental truth about India's Freedom Movement is that neither the Passive Resistance of Aurobindo nor the Non-violent Non-cooperation of Mahatma Gandhi was ever the sole determinant in the development of the struggle, nor was the struggle persistently non-violent and pacific in character. It exhibited a violent revolutionary trend throughout its chequered and complex evolution. The **Anushilan-Yugantar** spirit, breathing the fire of revolution was continued from decade to decade since 1905 till it reached its final consummation in Netaji's battles of the Imphal-Kohima sector (1944). The role of the Indian revolutionaries at home and abroad in the achievement of freedom by India in 1947 was too valuable and formidable to be ignored by any scientific student of modern Indian history.

5

Foreign rule in a subject country is always self-degrading in character. Generally it is fed and sustained in a manner adverse to the national interests of the subject people. This explains why without a hard and difficult struggle the subject people cannot hope to secure the boon of liberty. Our nineteenth century politicians, with all their initiation in modern enlightenment, could hardly grasp the inherent conflict of interests between the ruling race and the ruled. They were men of immense intellectual acumen but their cardinal weakness was their implicit, nay blind, faith in the benevolent mission of England in India. They were, therefore, interested in national development within the fundamental framework of the British rule. The early Congress movement was thus an address to the innate generosity of the Anglo-Saxon race. Lord Curzon awakened the Indian people to a new sense of realism by his rude and humiliating blows, the worst of which was the Partition of Bengal in the name of administrative efficiency. The new generation of politicians, leaping into prominence at the early dawn of the present century, began to clearly feel that, as a subordinate part of the British Empire, India had no future nor could she realise her national self-destiny so long as she remained overshadowed by an alien civilisation. "We claim," wrote Aurobindo in 1909, "the right of every nation to live its own life by its own energies according to its own nature and ideals. We reject the claim of aliens to force upon us a civilisation inferior to our own or to keep us out of our inheritance on the untenable ground of superior fitness." (Vide Sri Aurobindo's **Speeches**, Calcutta, 1948, p. 173.) Elsewhere he wrote in 1907, "The **Statesman** complains that our object is to foster discontent and we do not make any secret of our own intention, that we make a grievance of a removal of a grievance. Yes, we do. All petty grievances sink into insignificance before that one and comprehensive grievance that an ancient and civilised nation is not allowed to have a self-sufficing existence. They are not thought fit to take care of themselves, and are denied all rights on the ground of this fancied unfitness as if there were any other means of acquiring fitness than to be saddled with responsibilities. Liberty only makes a nation fit for liberty" (Vide the editorial article on "The Indignant Statesman : Ignorance or Sycophancy ?" in the Weekly Edition of **Bande Mataram**, dated November 24, 1907).

Recognising the inherent conflict of interests between the ruling race and the subject Indians, the new generation of patriots headed by Bipin Chandra Pal, Brahmabandhab Upadhyay and Aurobindo Ghose, refused to appeal any longer to the fancied generosity of the guardians of the British Empire. They clearly percieved that political struggles are trials of strength and that India must depend on her own strength to wrest whatever rights she could from the unwilling hands of the foreign race. They advocated, therefore, not only the ideal of unqualified **Swaraj** or complete autonomy for India outside the British Empire, but also formulated a new scheme of political action, known as Passive or Defensive Resistance, for the realisation of that ideal. This was the most fruitful contribution of the Bengal school of politics to the whole of India during the strenuous Swadeshi Epoch (1905-1914). The Doctrine of Passive Resistance summed up in the category of Boycott laid the spiritual foundations of the later doctrine of Non-violent Non-cooperation with which Gandhi's name is inseparably connected. The policy of systematic and relentless refusal of cooperation with the Government permeated, no doubt, the Swadeshi Movement, but the technique of Boycott was not the only weapon forged by the Bengalis to strike with. The philosophy of the bomb with its concomitant of violence and blood-shed also made its appearance in due course and created a new stir in Indian politics. The British statesmen were completely taken by surprise by the new turn of Indian politics. The contemporary Intelligence Branch Records of the Government amply corroborate this point. The master mind of Aurobindo Ghose cast a shaping influence over both these lines of political thought and action. Of the two methods of violence and non-violence

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by which Freedom's battle was fought and won in 1947, Aurobindo was the central schemer and controller for years together at the beginning of the present century.

6

The Swadeshi Movement of 1905 was a struggle for complete national liberation from the thraldom of foreign power. Beginning its career as a lawful or constitutional struggle with the limited object of annulling the Bengal Partition, it travelled far before long envisaging radical ideals and introducing the element of violence on the scene. Unnerved by the sweeping onrush of the movement, the alien Government resorted to customary repression, and the governmental repression was the first incentive in the transformation of the peaceful legal agitation into a violent revolutionary movement. Nationalism, or the love for the motherland, became the first passion with the people, and no persecution can ever kill the religious faith of an awakened and insurgent people. As the governmental repression mounted, the revolutionary movement was driven underground, where it silently gathered strength to reappear on the surface with greater intensity and volume. The history of Freedom Movements of different nations has repeatedly verified the efficacy of both violence and non-violence as instruments of political warfare. The simultaneous operation of the two techniques can also strengthen the national movement instead of necessarily damaging its vitality. The formal logic of Freedom's battle may not recognise it, but the material logic of life amply justifies it.

Mahatma Gandhi is generally looked upon as an apostle of ahimsa or non-violence. His Non-cooperation Movement is also stated to be non-violent in conception. It is worth remembering what this great prophet of non-violent political struggle uttered for the benefit of the British race at the Round Table Conference of London held in December, 1931. He observed that he "held no brief for terrorists," but he was prudent enough to point out at the same time that "the historian has not condemned them..... If you will work the Congress (i.e., the non-terrorist organisation) for all it is worth then you will say good bye to terrorism, then you will not need terrorism." He plainly warned the English rulers that if they did not follow what the Congress had asked them to do, the terrorists would get the upper hand in Indian politics and create endless trouble for the Government, itself an organised force of terrorism. Gandhi's own words were as follows: "Will you not see the writing that these terrorists are writing with their blood? Will you not see that we do not want bread made of wheat, but we want bread of liberty; and without that liberty there are thousands today who are sworn not to give themselves peace or to give the country peace." "This," observed Prof. Benoy Sarkar later on, "was Gandhi's ultimatum to England in December, 1931. And no propaganda in favour of **himsa**, violence, terrorism and so forth was more broadcast and effective than this one skillfully engineered by the apostle of **ahimsa** (non-violence). India and the world understood it" (Vide Benoy Sarkar's **Dominion India in World-Perspectives**, Calcutta 1949, pp. 103-104).

7

The Extremists of the Swadeshi Epoch were uncompromising advocates of the cult of thorough-going Boycott or Defensive Resistance, and they carefully sought to keep the national struggle within the limits of legality. **Bande Mataram's** Aurobindo was a fearless champion of this new regenerating doctrine, but the philosophy of Boycott did by no means exhaust the whole of his political thought. As a prophet of New Nationalism he also prescribed a course of violent or armed resistance to foreign tyranny. The impact of revolutionary Aurobindo as distinct from Aurobindo the passive resister, was clearly discernible in the organ of the **Yugantar** weekly, the central organ of the revolutionary thought. **Yugantar's** Aurobindo was an advocate of active resistance, and this Aurobindo was no less a potent reality at that time than **Bande Mataram's** Aurobindo, and between the two Aurobindos there was no conflict of personalities. Decades later he himself

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stated that he was "neither an impotent moralist nor a weak pacifist." He believed in expediency and was ready to seize the first opportunity the circumstances provided only if it was found expedient in a given situation in the interest of Freedom's battle. On the 24th of April, 1908, he openly declared in the leading editorial of **Bande Mataram**, "Even diplomacy must have some compelling force behind it to attain its objects, and peaceful means can succeed only when these imply the ugly alternative of more troublesome and fearful methods, recourse to which the failure of peaceful attempts must inevitably lead to." In the same article he further observed that constitutional agitation as a form of diplomacy depends for its success not on the force of its logic but on the presence of an active force behind it, the show of which alone could convert "prayers into demands" (Vide Aurobindo's article on "The Realism of Indian Nationalistic Policy" in **Bande Mataram** dated April 24, 1908).

This was followed by Aurobindo's classic article on "New Conditions" which he wrote for **Bande Mataram** on April 29, 1908, that is, only three days before his arrest in connection with the Alipur Bomb Case. The article is important in that it registers his frank admission of loss of faith in peaceful evolution of self-government in India and in that it makes a veiled advocacy of the cause of revolution in the country. "The fair hopes of an orderly and peaceful evolution of self-government, which the first energies of the new movement had fostered, are gone for ever. Revolution, bare and storm, is preparing his battle-field, mowing down the centres of order which were evolving a new cosmos and building up the materials of a gigantic downfall and a mighty new creation. We could have wished it otherwise, but God's will be done." These lines clearly suggest that in Aurobindo's political thought the cult of violence or revolution filled a very large place. Contemporary Intelligence Branch Records repeatedly affirm that Aurobindo Ghose, the chief of the **Yuganatar** band, "has exercised a greater influence over the revolutionary movement in India than perhaps any one other man. Beyond laying down its general policy and the lines on which it was to develop, it is probable Aurobindo Ghose had little direct dealings with the Dacca Anusilan, and in any case his connection with it could have been known to only a chosen few, but that he was the head and front of the whole movement need not be doubted." (Vide I.B. Records, West Bengal, F.N. 1022-17, p. 1.)

Thus Aurobindo was not only the prophet of Passive Resistance but also the philosopher of Revolution. While Mahatma Gandhi was the ideological successor of Aurobindo the passive resister, Netaji Subhas Chandra Bose was the very embodiment of Aurobindo's revolutionary spirit. India achieved her freedom in 1947 as the cumulative effect of the double process of violence and non-violence. It is unthinking romanticism to interpret the whole course of India's Freedom Movement solely or mainly in terms of Aurobindo's Boycott or Gandhi's Non-cooperation. Nothing rings more hollow and ludicrous than the historian's scholarly utterance that "under British tutelage which lasted for nearly two centuries it (i.e., India) gained freedom," as if the acquired freedom was a voluntary gift from the foreign rulers.

MIXED AND COMPOSITE ENTERPRISES IN INDIAN INDUSTRIES

By BISHWANATH PRASAD*

I

WITH an ever-increasing emphasis on the industrial growth of India, the possibility of adopting and exploiting new and unfamiliar forms of commercial enterprise ought to be fully explored. Now that government both own and control trading concerns, it should be of advantage to consider how, if at all, and under what conditions, joint ownership and control of undertakings of common interest should be encouraged. Broadly speaking, the purpose of this article is to give instances of mixed and composite enterprises operated in this country, to consider the advantages and disadvantages of such undertakings, to consider the price policy and the question of public participation in the equity capital in these industrial undertakings, to consider their suitability for obtaining foreign collaboration, and to consider the possibilities or prospects of their extension in India.

The term 'mixed enterprise' or 'mixed corporation' was first used in Europe and was subsequently adopted by American writers to mean some kind of "public-private combination." A mixed enterprise may be understood as any domestic combination between public and private sectors for running an enterprise. What is crucial to the concept is that there must be ownership of capital stock in the enterprise of both the sectors.[1] Some writers have, however, emphasized control aspects and others ownership. There are mixed enterprises having a series of gradations depending upon relative ascendancy in ownership and control exercised over them. Experience shows that a truly mixed enterprise can exist only where there is, more or less, equality in stock ownership. An attempt to make the mixture more a partnership of equals is evident in our industrial policy. The industrial policy conceives of the public and private sectors as twin sources of economic effort. True to our tradition of co-existence in the domain of religion, we are extending the same doctrine to the economic sphere. India's mixed enterprises, generally, tend to conform to the world-wide pattern, *i.e.*, either one or the other partner tends to be dominant. One should, therefore, be beware of pushing the element of publicness in private enterprise to the point where there is no privateness left.

Inter-sector combination of two or more components, at least one of which is foreign, is termed 'composite enterprise'. It means international mixtures in which a public authority participates together with foreign private capital with or without domestic private capital. In contrast, the term "joint enterprise" means an intra-sector combination in either public or private sector.

II

Board of Directors occupies a position of very crucial importance, and the success or failure of any enterprise is likely to depend mainly on the quality and composition of the Board of Directors. The provisions relating to the Board

---

*Lecturer in Political Science, University of Bihar, Muzaffarpur ; at present Senior Research Fellow, Indian Institute of Public Administration, New Delhi.

1. "The Simplest . . . . is to make the State a stockholder 'like the others', the holder of shares in a corporation which would thereby become a mixed corporation." —Mario Einaudi, *Nationlization in France and Italy*. Page 91, New York, 1955.

"The Government owned a minority *share* in both enterprises and participated in their *management* along with representatives of private stockholders. These were early instances of a particular form of mixed enterprise that enjoyed considerable vogue in the following decades." Bawn, Warren C., *The French Economy and the State*. Page 172. Princeton, New Jersey. 1957.

"It is defined as 'every economic enterprise of private law in which public and private organisations participate in common in the control and exercise of administrative control."—W. E. Hart, "Mixed Undertakings", in the *Journal of the Institute of Public Administration*, Vol. 1932, p. 138.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of mixed and composite enterprises are not uniform in regard to the number, tenure and the qualification of the members. As for example, State Bank of India has a 21 member Board whereas Industrial Finance Corporation has a 13 member Board. Although the suggestion to appoint non-officials as Directors representing the private shareholders in these enterprises has not been accepted, yet the practice of associating non-officials with the management of such undertakings appears to have been accepted in India. The Chairman of Air India International is Shri J. R. D. Tata, a famous industrialist of India. Again, in the case of State Bank of India, 6 non-officials are elected to the Board under Clause (C) of sub-section (1) of Section 19 of the act. There can be no two opinions that the possibility of associating non-officials is much greater in mixed and composite enterprises.

These offer opportunity for giving representation on the directorate to consumers and work people. Both these interests can usefully be placed in a position to represent their views directly to the directorate. It is not necessary to give full voting powers to the representatives of consumers and work people, more particularly where expenditure is concerned, but in considering questions of policy the views of consumers should always be helpful and a recognition of the real interest the work people take in the administration of the undertaking will, while it has its difficulties, tend materially to assist the management in undertaking the work people's points of view in securing their loyal support.

Suppose, however, that on a question of policy or some other matter of importance there is a difference of opinion in the directorate, the private interest wishing to take one course and the public interest another. How should such a difficulty be solved? No doubt provision to meet this emergency will be embodied in the charter or other form of constitution under which these enterprises are set up. Provision might be made that in any case of difference where financial expenditure to a considerable extent or the necessity of raising new capital might be concerned, no action shall be taken in the absence of agreement on the part of both interests. But this would probably fail to cover all possible causes of differences, and it might unduly hamper the progress of the undertaking. On the whole it would seem that the public interest, represented by the government, should prevail and that the authority should not have less than 51 per cent of the voting power on the directorate. As an alternative a standing arbitrator might be appointed to whom all questions of difference might be referred. Obviously, therefore, the availability of non-officials on the Board has often resulted in large-scale improvements in the undertakings. It is said that the whole system of accounting which meant considerable economy in the Sindri Chemical and Fertilizers Ltd., was devised by a businessman who was on the Board. Such examples can be a common feature with mixed and composite enterprises in India provided the selection of members of the Board is carefully made. It may be worthwhile to note that the Indian Companies Act contains no restriction as to the maximum number of foreign directors. Whatever provisions are applicable to Indian directors apply equally to foreign directors of Indian Companies, and the provisions relating to directors in the Indian Companies Act, do not discriminate in favour of Indian directors.

III

Taking the question of balance between public and private ownership, India's mixed and composite enterprises have a price and production policy and the content of this policy has an impact on income distribution, economic stability, resource allocation, technical innovations and the size of the national income. Price policy of these enterprises is one of the most sensitive aspects of the behaviour of these concerns. Since they are tending to occupy an important place in our economy, their policy regarding price, input and output, are likely to have important repercussions on the various economic quantities and economic flows, *e.g.*, the price structure, the demand pattern, the volume and content of national output, the pattern of income distribution, etc. Reciprocally, any change in the basic economic determinants like the scale of preferences of the people which lies at the back of the demand structure or in the state of technique lying at the back of the cost structure, is likely to influence the price policy of these enterprises. It is in this and similar other ways that the price policy of these enterprises is sensitive to other economic quantities and flows, which are perpetually acting and reacting upon each other. The actual pricing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

policies pursued by these enterprises will depend on the prevailing conditions.

In a situation which tends to approach perfect competition, mixed enterprises will be forced to move in accordance with the forces of the market. The concern will most likely be charging the market price and carrying production to the point where marginal cost is equal to price revenue. Under monopoly, price and production policies of these enterprises will tend to be the same as the pure private monopolist or there may be an entire range of possible price positions between the monopolists price and the price which would prevail under conditions of perfect competition. Under oligopoly, the mixed enterprise is likely to maintain the *status quo*. What is true of mixed enterprises, is also true of composite enterprises. The presence of the State as a partner in the enterprise, however, can and does make effective departures from the normally expected price lines and production policy of these concerns. When the State holds a majority of the stock, it can theoretically follow any policy whatsoever, even one which produces no profits. In other words, the enterprise may have to follow the "Law Price" policy which keeps particular price lower than they would otherwise have been. This policy may result in larger operating deficits for the enterprise, which in turn has to be met by increased subsidies from the government and larger government deficits. The government's deficits in India may feed the inflation by increasing aggregate demand, specially in so far as they are financed by the creation of new money. Again, as far as resource allocation is concerned, this distortion of particular prices makes it more difficult for the price mechanism to assign resources correctly to their different uses. In view of the considerable emphasis laid under the Third Plan on the role of State enterprises in contributing to the general Exchequer for financing further developmnt, "Below-cost-Pricing" policy cannot be adopted by these enterprises. The suggestion that State enterprises should pursue a price and profit policy which will enable them to make a substantial contribution to capital accumulation is endorsed by a number of authorities including Profs. A. H. Hanson and V. K. R. V. Rao. However, with the nature of the public sector as it is today in India, the possibility of using it as an instrument of capital accumulation is bound to be very limited.

IV

The presence of the State in mixed and composite enterprises may be felt in several other ways. Factors like those of wage regulation, compulsory provision for the employment of certain proportion of local people in different categories of employment and expenditure on Social Services for the local employees by these enterprises, may increase the local share of income. The distribution of income generated by foreign investment in composite enterprises is an important factor in determining the extent of the income which can be channelled into savings and capital formulation.

Mixed and Composite enterprises have yet another attraction for under-developed countries like India. The private sector stands to gain inasmuch as these enterprises assure the security of the principal specially to small investors. Profitable contracts such as technical assistance, patent and licensing agreements are some of the special concessions usually made to the private sector which actually participates in the enterprise. The psychological effects of such a combination of interests may be immense and out of proportion to the minimum equity participation in the sense that such a participation may create confidence on both sides.

V

The rapid growth of mixed and composite enterprises in India is a post-independence phenomenon. The former states of Mysore, Baroda and Hyderabad played a pioneering role in starting several mixed enterprises even before independence. The Mysore Sugar Company Limited, established in 1933, the Mysore Paper Mills Ltd., in 1936, the Mysore Spun Silk Mills in 1931, and the Mysore Chrome Training Company Limited (Mychrome) in 1930, are a few examples of mixed enterprises of the pre-independence era. Of the post-independence period, a special mention may be made of the Air India International, National Newsprint and Paper Mills, Nepanagar, Praga Tools Corporation, Hyderabad, Industrial Finance Corporation, Refinance Corporation, Shipping and Shipbuilding enterprises and the State Bank of India. A most important example of a composite enterprise is the India Telephone Industries Limited. In the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

enterprise, the Government of India, the State of Mysore and the Automatic Telephone and Electric Company of England have 70 per cent, 20 per cent and 10 per cent of the total shares respectively. In this project involving British capital, the agreement between the government and the English Company is for a fifteen year period and permits the government full use of all present and future patents of the company as well as access to its technical information. It also provides for training Indians in England and providing consultants and technical personnel where necessary. Again in the Machine Tools Factory, Swiss participation is to be found. The Oerlikon Machine Tool Works at Zurich, Switzerland, invested ten per cent of the capital cost. The cost of the main factory was about 120 million rupees. The Swiss provides the know-how, technical and key personnel, equipment, jigs, tolls, fixtures, duplicate pattern, operation schedules. The Hindustan Housing Factory Limited, the three Steel Plants—Durgapur, Bhilai and Rourkela, I.C.I.C.I. are other examples of foreign participation in Indian Industries.

VI

After independence, the case for the participation of private capital in public enterprises was first raised by the Estimates Committee.[2] The Estimates Committee recommended that in government 'Joint Stock Companies, at least, 25 per cent of the total, capital investment must be available for the public.' They advocated such a participation in order to "ensure active public interest and cooperation in their management." The implementation of this recommendation would evoke the enthusiasm of the public for participation in the national development and would also enable the undertakings to function effectively under the vigil of a body of shareholders, who would, in their own interests, keep a watchful eye on the working of the undertaking. The Committee took care to suggest further that "while inviting private capital, Government should, in order to avoid individual or group monopolies and other abuses of the kind, fix a ceiling for individual holding of shares as also on any dividends that might be declared by such undertakings." The government regretted its inability to accept the recommendations. The Estimates Committee exprssed itself again in favour of the proposal adding that the "Committee felt convinced than ever about the soundness" of its recommendations.[3] The Krishna Menon Committee also reported in its favour under certain circumstances. The Study Group of Senior officers headed by Shri D. L. Mazumdar, I.C.S., has, however, recommended the measure as an experiment only. In fact, there are divergent views regarding "people's shares" in the public enterprises. Recent reports in the newspapers also show that the Government is in two minds, and it appears very unlikely that any tangible steps will be taken to implement the proposal of public participation. The main objection to the scheme seems to be that public participation might disturb the present structure of the capital market—besides, depressing the values of private sector shares, it might also lead to rivalry between the two sectors. Although somewhat farfetched, this fear is not entirely baseless and has, in fact, been taken note of by the Study Group as well. The Group has, however, pointed out how the scheme can be formulated in such a way as to bring about in addition to the total investments in the public and private sectors—without causing a diversion of capital from the one to the other. The Group, for instance, has referred to "dormant pools" of resources which, under the new types of investment opportunity offered by the scheme, could be attracted. It is a truism to say that the investible surplus in India is a common pool from where the public and private sectors both obtain their resources for investment. If the receipts obtained from floatation of equities by the public enterprises represent merely a transfer of funds which would otherwise have been invested by the private sector to the public sector, then such a measure would not attract the overall rate of investment in the country. Therefore, in this case, just from the point of view of capital formation, there is nothing to command the policy of domestic private participation in the share capital of public enterprises. A prediction of the possible effects of equity floatation by the public enterprises on the capital market of India is not only a difficult but a complicated affair. The response of the capital market to such a measure

2. 16th Report (First Lok Sabha), Pp. 2-3, para 6, 1954-55.

3. Estimates Committee, Nineteenth Report (2nd Lok Sabha), Chapter I, Page 1 and 2.

will be a function of a large number of variables, whose behaviour is not capable of correct measurement. Notwithstanding this, one can lay down certain factors on which the viability of the capital market and the size of the investible surplus available at any time depends. The factors are (1) price elasticity of consumption, (2) opportunities for consumption of non-necessaries, (3) interest elasticity of investment, (4) government policy regarding licensing of new investments in the private sector, (5) government policy regarding creation of money or deficit financing.

It may be worthwhile to note here that the equity floatation by public enterprises will not be much different in character from the ordinary long term loan floatation of the government even if the equity shares of the public enterprises are not formally guaranteed by the government. They will, assuredly be able to command sufficient confidence amongst the lending public. Once this is admitted, it would appear that the success of the equities offered by the State enterprises will depend on the same factors as the long-term loan issues of the government. An important factor determining the success of government loan-issues depends upon the government policy regarding creation of money or deficit financing. The availability of investible fund at a time depends on how much money has been injected into the market in the preceeding few months. The quantum of deficit financing during the Third Five-Year Plan is going to be much smaller than during the Second Plan. To the extent that the size of the deficit financing during the Third Plan is going to be small, the government's ability to manipulate the capital market with a view to creating conditions for the success of these equity floatations will be limited. The Second thing on which the size of the investible surplus may depend is the rate of interest offered on the new securities, *i.e.*, the interest—elasticity of investible funds. The question is : will the public enterprises be able to attract new funds by offering a rate of return higher than that offered on the preference shares of first class business houses? Past trends indicate that the interest elasticity of investible funds is rather low in India. In other words, the size of funds available for investments does not depend much on the rate of return. This should be taken as a limited factor to the capacity of public enterprises to attract fresh Capital by means of equity floatation.

Another factor on which the size of investible surplus depends is the existing opportunities for conspicuous consumption. Government policy with regard to taxation of non-essentials comes under this category. Current indications are that during the Third Plan period, government will try to restrict consumption of these goods by means of indirect taxation. But beyond this it is very difficult to make an exact prediction regarding the incidence of such taxation on different sectors of economy. In a mixed economy where the government cannot completely stop the production and consumption of non-essentials commodities, its taxation-policy in this regard assumes an added significance. That in India there is a tendency towards increased demand of non-essentials, specially from the new entrants to upper middle income group, is undeniable; but it is difficult to anticipate to any degree of precision the effects of the taxation policy of government on the savings of these people.

If the success of the equity issues by the public enterprises necessitates imposition of restrictions on equity floatations by the private sector, then private participation in the share capital of public enterprises will only mean a transfer of fund from private to public sector. In this case, therefore, there will be little justification for this measure from the point of view of purely economic considerations.

Considering all these factors, it does not seem very likely that the equity floatation by public enterprises will be able to attract fresh capital—capital that would not have otherwise been invested in other productive channels. It is, therefore, really commendable that the Study Group has adopted a cautions approach in this regard.

It has recommended the measure as an experiment only in respect of three units which have already established their profit-earning capacity—Sindri Fertilisers and Chemicals, Hindustan Machine Tools, and State Road Transport Corporations.

The objection even to a cautious beginning in this direction has been on two grounds. The first is that the shareholders, by virtue of their voting rights, may obstruct the normal functioning of a public undertaking which is already exposed to the full blast of Parliamentary scrutiny and criticism. The Second objection is that any failure of the scheme because of poor

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

response from the investing public may damage the prestige of public undertakings as a whole, although as prospective avenues of investment public undertakings have yet to demonstrate their profitability in a significant way. There may be considerable force in some of these objections; the private sctor, in any case, may not relish the idea of raising share capital in competition with the Government from a market that has only lately shown signs of increased activity. "The opening up 25 per cent of the shares of three enterprises or so would neither lead to any significant capital gain for Government nor would it attract the so-called 'floating' entrepreneurial talent of the country." "There is a real danger of denationalisation from the back door and the entire scheme working against the aims of Indian planning. It is no use shying away from the fact that the matter transcends economics and is coiled up with ideological issues."[4]

From a large angle of a better understanding between the public and private sectors, public participation in equity and through it on the directorate may be desirable. The case for public participation in Government underakings stems from the desire to inject a sense of dynamism into their working as well as to promote a better understanding of the process involved in the industrialisation of the country. Any step that goes to allay apprehensions in the public mind about the growth of State monopoly is welcome and even a limited public participation in State undertaking will certainly lend a greater degree of prestige to the concept of mixed economy. The State Bank is an instance in point, and it cannot be denied that continued private participation in its capital structure even after the nationalisation of the former Imperial Bank and the maintenance of general associations with the business world in its directorate have given the institution certain advantages which other nationalised undertakings do not enjoy. By and large, there appears a case for a careful review of the whole scheme before it is finally shelved.

Mixed enterprises through labour ownership of equity capital has been advocated mainly to (a) to encourage industrial peace by making labour partners in the capital of the business and (b) to prevent the savings of labourers due to wage increases from being wasted away on consumer's goods. This is desirable although, from the economic standpoint, the labour contribution to equity capital may not be substantial.

VII

The economic incentive for the foreign investors to invest their capital in composite enterprises in India, as anywhere else, is the possibility of profits, higher than what exists in their home countries as India provides a sure ground for low costs of manufacture (cheap raw-materials and cheap labour) and an extensive market for the finished goods. To the foreign participants, the principal supplier advantages like market and publicity advantages are by no means insignificant. Even if foreign profits production may lower unit costs to a point where production for the home market is very profitable. Again, to obviate the difficulties of import restrictions, the foreign concerns have found it convenient to manufacture in India itself as partners in composite enterprises. Obtaining credit for its foreign partner has been another recent use to which the mixed and composite enterprises have been put by the Government of India. With the heavy tax schedules of the present day, a large concern may find it advantageous to incur expenses for foreign commitments, laying out funds which would otherwise be taken in taxes. This consideration applies to both foreign and domestic concerns. The Western Countries have a particular gain in encouraging these enterprises as they held in checking rise of communism by investing capital in India where income is low, savings sparse and marginal efficiency of capital higher. Sometimes strategic considerations in the American-Russian cold war are mentioned as a real impetus in establishing enterpeises like the Bombay Oil Refinery Project near Trombay. "The participation of the industrially developed countries in the economic progress of the underdeveloped nations is one of the paramount international problems of our time. Its significance—not only in economic, but in political terms—for the Western World has become even more marked, since the Soviet Union has entered the

4. Dr. P. Prasad, Comments on 'Capital Formation in State Enterprises in India', *The Indian Journal of Public Administration*, Vol. VII, No. 1, p. 90.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

field as an important supplier of cheap capital loans, machinery engineers."[5] The policy of the gradual adoption of mixed enterprise system in India shuns both the peripheral guardian state and the Communist leviathan of total state ownership of productive facilities.

The social utility of the mixed and composite enterprises is the measure of the gains to public "Stockholders". The main advantage is that the "Stockholders" are likely to benefit from the infusion of business efficiency by the well-established private firms. Shri A. D. Gorwala, in his Report on the Efficient Conduct of State Enterprises, 1951, has said, public economic activity is new and experimental while private enterprise is old and established. The public through association with the private may imbibe some of the generalized aptitudes for handling economic matters which go under the term efficiency. However, it is wrong to identify private action uniformly with efficiency, productivity, and progress and government or public sector with waste, corruption and stagnation. It is usually wrong to identify private action uniformly with selfish irresponsibility and government with service to the public interest. It remains a fact that mixed and composite enterprises have an important role to play as a capital mobiliser, as a channel for foreign investment—specially direct investment which is viewed as one of the great engines of economic growth ; as Schumpeterian Innovator or Pioneer ; as a contribution to the relief of tension in human[6] relations, as a device of foreign exchange saver ; and as a vehicle of mutual benefit and controlled change. The problem of determining the exact role played by foreign investments in the economic growth of the borrowing countries has, however, not been settled to the satisfaction of either the layman or the professional economist. "Foreign capital is very shy having too many suitors. She is a fairly hard-headed young woman who prefers suitors with the largest dowry." We must therefore, assess the impact of foreign investments on the Indian economy, taking into account the cost and benefits involved in the investment of foreign capital. An attempt to calculate the extent of advantage or disadvantage to the national economy resulting from the investment of foreign capital, necessarily involves a detailed analysis of the different items that constitute "benefit" and "cost".

It must be borne in mind that in an underdeveloped country like India, people are generally reluctant to lock up their money in bonds and debentures and sometimes respond more readily to an offer of equities in a concern, in which government participation appears to offer some guarantee for its future. The Government of India have noted that in a recent case in which part of the capital for a new venture was called for, the response had been 60 times the amount asked for. The over-subscription has taken place in the case of such companies in which there is technical collaboration by foreign firms. The presence of the foreign firm is often taken by the Indian investing public as assurance of honesty and good management. Foreign direct investment, with or without joint-partnership,[7] involves contact between societies not only economically but also culturally and socially. To the extent economic development depends not only upon the extension of money economy and market oriented production but also upon the diffusion of cultural values and social pattern, involved in an industrial society and essential for the rise of enterpreneurship, foreign direct investment can contribute to such diffusion.

VIII

It is, however, alleged by the critics of these enterprises that composite enterprises are very slow in turning out locally trained people, specially in the higher categories of the technical and managerial jobs. The difficulties encountered are (a) high turn-over of labour, (b) low and inadequate level of trainees even in the lower grades of technical jobs, (c) the inability of the workers to go through a non-earning period involving a financial burden on the family, (d) the unwillingness of the enterprises concerned to provide any maintenance allowance to the trainees during the period of apprenticeship, and (e) the persistent eagerness on the part of the foreign

enterprises to keep the higher managerial and technical posts in the hands of the people from their own country. In other words, the non-availability of entrepreneurial ability, managerial personnel, technical skill and suitable labour force in India, limit the advantages of foreign participation. The very fact that the Government of India are contemplating to start oil operations in public sector demonstrates that mixed and composite enterprises can never be the only solution to problems of industrialisation in India. It may also be noted that the Swiss interest in the Machine Tools was subsequently brought out by the Government. The Government of India decided to dispense with the German investment in one of the composite enterprises. It may be said that the principle of composite investment in these projects was progressively abandoned in favour of the fully owned government plant with large technical assistance and loans from the foreign complex. It may not be very surprising that our desire to take over the investment and operation of these plants in the course of time may turn out to be a direct invitation to investors not to invest. For every enterprise must, particularly if it takes place in a foreign country, have its teething-troubles and only gradually finds its feet. These teething-troubles with their losses are acceptable provided a long series of favourable years lie ahead and by setting limits to this period investing is deprived of its attraction."[8] Foreign investments in India and in most of the under-developed countries have, however, a long history and have been associated with political domi-nance and administrative control by the invest-ing countries. In view of our past experience of colonialism and imperialism, foreign investment is likely to be looked at with suspicion by many of us. This may be one of the reasons why foreign collaboration is not now much encouraged by the Government of India and a pragmatic approach to these enterprises is followed. If the fear of losing independence is accepted as a real-ity then the cautiousness which arises from this, with relation to the admission of foreign enter-prises and investments is also understandable.

The likeliest sphere of mixed and composite enterprises in this country is where the requisites, noted below, are found.

These requisites are as follows :—

(1) The undertaking should serve a public as distinct from a private purpose, that is, gain should not be the only object, but the benefit of the community as a whole should be the most important consideration.

(2) The circumstances should be such that the undertaking cannot be more efficiently or more economically operated by either of the contracting parties singly.

(3) The financial interest of the public authority should be substantial, so that the public should have a large share in the profits of the undertaking.

(4) The representation of the public authority on the directorate should be adequate to secure a large share in the control of the undertaking. As a general rule, it should be at least 50 per cent of the governing body. The private interest is chiefly concerned in the acquisition of profit for shareholders. The public authority, while not disregarding that aspect of the situation, has wider duties. The public interest as affected by the undertaking, its relation to other public services, and the fair treatment of officers and work people are questions of special concern to the public authority, and its representation on the managing body must be at least adequate to secure due attention to these requirements.

IX

Conclusion

The problems posed by mixed and composite enterprises in India are not insoluble if timely precautions are taken. As far as possible, only minimal foreign participation should be encouraged. What counts in these enterprises is not who owns shares but who manages and control the enterprise and so long as the foreigners are not permitted to dominate and run the show, there is not much to be worried about. Even though the Government of India desires that the major interest in ownership and control of a company be in the hands of Indian nationals, this is not a rigid proposition. Foreign ownership in excess of 49 per cent of the capital is given consideration in cases where the development of any industry is required in the national interest and

where foreign participation with capital and skill is desirable, each case being considered by the Government on its merits. The Government of India has been striving by various means, including appropriate company law requirements, financial safeguards, customs and tax exemptions to stimulate foreign investment in India. In the words of the Prime Minister, Mr. Nehru, in a speech to the Constituent Assembly on April 6, 1949, "The Government of India have no desire to injure in any way British or other non-Indian interests in India and would gladly welcome their contribution in a constructive and cooperative role in the development of India's economy." We must take lessons from France where governmental control over the mixed corporations is intensive, even though municipalities are only minority interests. In India there are two schools of thought regarding these enterprises. One holds that the mixed and composite enterprises protect the private sector from leftist criticisms and in a way help its gradual restoration. The other views it as a method of socialization, supplementary to direct governmental ownership—the ultimate destruction of the private enterprise. To us both views appear to be exaggerated. The truth is that the two sectors have to work in close co-operation for the growth of economy. Since there is an intermingling of the public and private interests, the pulls sometimes may be in two opposing directions in the case of mixed and composite enterprises—the former guided by the welfare or service to the community whereas the latter motivated by profit-maximisation. Actual behaviour of the firm may be the result of both motivations. Fixed and Composite enterprises or joint ventures are, of course, like marriages their success depends on the selection of the partner and the attitudes brought by both parties to the partnership.

———:O:———

JODHA BAI—THE RAJPUT CONSORT OF JAHANGIR

By S. N. QANUNGO

In a rainy dusk Fatehpur Sikri comes magically to life as its empty ruins mingle with towering clouds over the green swelling plain. The first building in the third courtyard of this deserted city—once the capital of Akbar—is Jodha Bai's palace which cannot fail to interest and attract. Lovers of splendour appreciate its carved decorations, of pillar shafts and brackets, the completeness of the structure and its grand finish; but the historian and students of history find here food for reflection. Apart from architectural considerations, Jodha Bai's palace has a historical side.

In the nineteenth century and the early twenties the common man as well as the scholars engaged in serious study of history believed that Jodha Bai was the Rajput consort of Akbar and mother of Salim. This fallacious notion gathered strength from the reputation of Tod and Elphinstone as writers. Even Blochmann held the same opinion but later on corrected himself. Tod's "Annals and Antiquities of Rajasthan" had few equals in those days in magnificent sweep of literary style. Elphinstone's works, there is evidence of historical insight. Those were, indeed, laudable attempts but with the emergence of new facts in historical research, these works appear not only out-dated but full of inaccuracies. Those were the days of the beginning of 'Indian History' and nothing much can be expected of them.

According to Tod (Vol. II, p. 965) and Elphinstone (p. 441), Jodha Bai was mother of Salim. Early in 1562 when Akbar under took a pilgrimmage to see Shaikh Muin-uddin Chisti of Ajmer, Raja Biharimal of Amber (Jaipur) offered him his service and daughter. For seven years this marriage was not blessed with a son. Akbar who had lost several infant sons sought and obtained the blessings of Shaikh Salim Chisti of Sikri. In 1569, when the daughter of Biharimal was in an advanced stage of pregnancy, she was removed to Sikri for the blessings of the saint. Prince Salim was born on August 30, 1569.

No contemporary Persian or Rajput source refers to Jodha Bai as mother

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Salim. The very name of Jodha Bai suggests that she was a princess of Jodhpur, whereas all the recorded facts prove that Salim's mother was a princess of Amber. Abul Fazl refers to her as 'the mother of the sun of fortune. ("Akbar Nama", Vol. II, 38). Maryam-uz-Zamani was her official designation (Khulasat-ul-Tawarikh, p. 374). Prince Salim was born not in the Jodha Bai Mahal but in a palace originally known as the Rang Mahal which was situated near the stone-cutters' Masjid and to the south-west of the Jami Masjid. Very few visitors to Fatehpur Sikri know that the birth-chamber of the prince is now within the female quarters of the descendants of Shaikh Salim Chisti and so rarely shown to the visitors (E. W. Smith—"Mughal Architecture of Fatehpur Sikri," Part II, p. 10).

According to Ojha (Vol. I, p. 358) and Kaviraj Shyamaldas, author of **"Vir Vinod"** (p. 818), Jodha Bai was the wife of Jahangir and mother of Shahjahan. Their opinion is corroborated by the evidence of Rajput and Persian sources. Jahangir himself mentions of her in his Memoirs (Vol. I, p. 34). There are references about Jodha Bai in Abul Fazl's "Akbar Nama" (Vol. I, p. 33) and later Persian works as Maasir-ul-Umra (Vol. II, p. 95), Khamgar Husain (Ms f 56b) and Dhakirat-al-Khawamin (Ms f 39a).

In Rajasthan Gazetteer, Jodha Bai has been incorrectly referred to as sister of Mota Raja Udai Singh of Jodhpur (Vol. III, p. 58). In fact, she was his daughter as proved by Jodhpur Khyat (Vol. I, p. 103) and Kaviraj Khyat (Vol. II, p. 85). Her mother was Rani Manirang of Gwalior. Her pet name was Manmati though Manique (Vol. II, p. 201) and Beale (p. 363) called her Balmati. Shyamaldas places the date of her marriage with Salim in 1588 while another writer Dr. Goetz (J. N. Sarkar Commemoration Volume, p. 133) puts it as early as 1584. She was married to Salim in 1586 (Akbar Nama, Vol. III, p. 749 and Tuzuk-i-Jahangiri, Vol. I, p. 19). All these facts conclusively prove that Jodha Bai (Jodhpuri Begam to be more precise) was the Jodhpur princess married to Salim.

The Jodha Bai Mahal in Fatehpur Sikri was constructed as early as 1570 and we know definitely that Akbar removed his court from Fatehpur in 1585. So how could this building come to be known as Jodha Bai Mahal? We have a wrong notion that with the removal of court, Fatehpur Sikri was totally abandoned or deserted. Jahangir himself stayed in Fatehpur Sikri from 7th January to 8th April, 1619. In the Jodha Bai Mahal, Jodha Bai herself resided for a long time and she died here in 1619. Hence it is hardly surprising that this palace should be associated with her name.

Very little is known about Jodha Bai as it is in the case of so many captives of the Royal marriage in the Mughal Harem. Hungry for love of a polygamous husband, they lived in a cosy world in which dance, music, story-telling, domestic brawls and Mina Bazars filled their lives. Jodha Bai came from Jodhpur the land of valiant Rathors who gave a stout resistance to the Afghans led by Sher Shah; the latter is said to have remarked that he had almost lost the empire of Hindustan for a handful of bajra (millet) in Jodhpur. Her grandfather Maldeo was a redoubtable warrior who had struck terror into the hearts of neighbours, carried his depredations into Jaipur and Bikaner and annexed Sojat, Nagaur, Azmer, Merta and Jaitaran. In 1570, Chandra Sen, son of Maldeo carried on war against Akbar for some time and then submitted through the intercession of Bhagawan Das of Amber. But no marriage alliance with the proud Rathors could be made till the accession of Mota Raja Udai Singh. With Jodha Bai's marriage, Akbar's dream of establishing matrimonial alliances with the principal states of Rajasthan was fulfilled with the exception of Mewar. It was with this marriage that the Rathors submitted to Akbar in the real sense and became his allies.

Jodha Bai was a little girl at the time of her marriage with Salim. The Prince himself was hardly fifteen. The little girl grew up as a young lady with other pampered beauties of Mughal Harem and witnessed the last glimmering of the golden days of Akbar's age. No chronicle, not even the Memoirs, provide a true measure of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Jahangir's love for Jodha Bai. His admiration for Man Bai, sister of Man Singh was quite unmixed. He writes, "Excellent, good and intelligent. Her devotion to me was such that she would have sacrificed a thousand sons and brothers for a hair of mine." (Tuzuq-i-Jahangiri, Vol. I, p. 55). In one of the Mughal paintings we find a young prince embracing a Rajput girl. This has been identified by Dr. Goetz with Jahangir and Jodha Bai (Sarkar Commemoration, Volume 2, p. 133). As Dr. Goetz's ground is not quite sure, it is difficult to tread in his footsteps with comfortable conviction.

It appears that Jodha Bai did not leave much impression upon Jahangir's life. The silence of Jahangir shows that she did not have much charm or vivacity and her gifts were not very brilliant or attractive. The six years after marriage, Jodha Bai's life passed uneventfully. She gave birth to Khurram (Shahjahan) in Lahore on the night of Thursday the 5th January, 1592. This was the most important event in her life. The mother was happy because the court astrologers had predicted extraordinary good fortune for her baby (Akbar Nama, Vol. III, p. 921). Rugiah Sultan Begam, wife of Akbar, knew not the joy of motherhood. She expressed her desire to adopt the baby. It was difficult not to comply with her request. Next morning Khurram was handed over to Rugiah Begam. (Tuzuq-i-Jahangiri—Rogers and Beveridge, Vol. I, p. 48; Qazvini f 18). Since his birth Khurram knew more of his grandmother than mother and it is natural that there could be no real interest for him in his mother's religion and culture. Khurram did not accept any Rajput princess as his wife.

Khurram was passionately attached to his grandfather Akbar. In 1597, when he was only five years old he had an attack of small-pox. Immediately after the recovery, he did not like to stay with his mother but accompanied his grandfather to the Deccan. (Qazvini—Padshahnama f 36). Jodha Bai could not keep quiet in the last days of Akbar. Khurram was always on the bedside of his ailing grandfather. When it was reported that Khusrav's partisans were trying to change the mode of succession by planning to apprehend Salim and Khurram, Jodha Bai went to her son and tried to persuade him to accompany her to a safer place. But prompt came the firm reply—"No! so long as there is one breath of life in Shah Baba nothing can induce me to leave him." (Qazvini ff 38-40). Mother's prayer for her son, however, did not go unheeded and everything went all right with the accession of her husband on the throne.

Jodha Bai could rightly be proud of her son. "The signs of rectitude and knowledge of affairs were evident in him." (Tuzuq, Vol. I, p. 329). Her son compelled Rana Amar Singh of Mewar to submit and showed his mettle in the Deccan campaign. Her husband showered all affection on her son. Khurram was promoted to the unprecedented rank of 30,000 Zats and 20,000 Sawars together with the title of Shahjahan. On his return from Deccan, Khurram gave presents worth Rs. 200,000 to his stepmother Nur Jahan; but it is not recorded what he gave to his mother.

In Jodha Bai's life not many afflictions came out of Pandora's Box; but she remained always in the background of her husband's life. She saw the gradual expansion of her husband's harem. Amongst the Rajput princesses who were married subsequently to Jahangir were the daughter of Jagat Singh, daughter of Rai Singh of Bikaner, daughter of Kalyan of Jaisalmer, daughter of Raja Keshu Das Rathor. But none Jahangir loved more than Nur Jahan who was beautiful, intelligent and who appreciated the aesthetic tastes of the Emperor.

Khurram sustained the brilliance of his early promise. Jodha Bai rejoiced in his marriage with Arjumand Banu Begam, daughter of Asaf Khan in 1612. The parents both of the bride and bridegroom were present on the occasion which was celebrated with great splendour the festivities and gaiety lasted for about a month. In the coming years Jodha Bai saw her grandchildren born one by one—Jahanara, Dara Shukoh, Roshan Ara, Shah Shuja and Aurangzeb.

The year before her death, Jodha Bai along with Mayam-uz-Zamani and other

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ladies accompanied Jahangir to Mandu. After the conclusion of peace with Malik Ambar, Jahangir sent them back to Fatehpur Sikri. With Nur Jahan and Shahjahan, he decided to proceed to Ahmedabad for elephant hunting. Father and son fell ill in May, 1618. Jodha Bai was anxious for their recovery and early return; but they could not start before 2nd September, 1618. On the way her another grandson Aurangzeb was born at Dauhad on October 24, 1618. The Royal party arrived in Fatehpur Sikri on 7th January, 1619 and the same day to Jodha Bai's great delight the twenty-eighth solar birthday of Shahjahan was celebrated. The entire city of Sikri was en fete (Tuzuq, Vol. II, p. 14).

Jahangir had to spend four months in Sikri as Agra was affected with plague. He as usual was staying with Nur Jahan in Nur Manzil. Jodha Bai who was in frail health was with her son on her last day. She died on Friday, the 8th April, 1619. Her husband was not at her bedside. Next day after her death, Jahangir went to 'Shahjahan's house' to condole with him. (Tuzuq, Vol. II, p. 84). The day following the Royal party left Sikri and made a state entry into Agra.

It is difficult to say how much her husband and son mourned her death. In the winter of 1619, we find them busy in organising excursions and entertainments on their way to Kashmir. Jahangir enjoying the soul-enchanting spring of Kashmir wrote his warmest appreciation of red-rose, the violet, the narcissus, the sweet-scented herbs and blossoms in hills and plains; but there is not a sentence of delicate expression of love in his memoirs in memory of the departed soul of Jodha Bai.

———:O:———

THE BOYHOOD DAYS OF TAGORE

By (Miss) USHA BISWAS, M.A., B.T.

"There was a time when meadow, grove, and stream,
The earth, and every common sight, to me did seem
Apparelled in celestial light,
The glory and freshness of a dream."

—Wordsworth.

Tagore's reminiscences of his own childhood and boyhood, as embodied in "Chhelebela," savour of "the glory and freshness of a dream." In it the Poet relives the days of his boyhood and tries to recapture the elusive charm of those days, which he did not perhaps outlive even in his matured life. The Kaleidoscopic memories of his boyhood present themselves in a rapid succession of ever-fresh pictures, delightful to the young and old alike. The Poet had a very keen sense of humour, which enabled him to hit upon the comic side of things at once. Apart from the musical cadence and incomparable sweetness of his diction, which characterize the entire narration, it is enlivened by numerous touches of sparkling wit and humour, as will appear from his amusing sketches of the various interesting people that he met, as also in his mirthful anecdotes, abounding with such incidents and situations as stimulated his sense of humour. The Poet and artist in him always hankered after unbridled freedom and revolted against a set routine even in his boyhood days. In "Chhelebela" Tagore recalls and relates various interesting episodes and experiences of his childhood and boyhood, which throw ample light on the gradual unfolding of his budding genius and personality. The book helps us to understand the manifold influences that were at work in promoting the growth and development of his versatile genius as well as in shaping

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

his brilliant future. We are also acquainted with the cultural, intellectual, and religious traditions of the family and the society that he was born into. "Chhelebela" constitutes an important landmark in the history of Bengal too.....Tagore's birth synchronized with a period of history, when the country was on the threshold of a new era of reform and progress in every sphere of life and activity. His venerable father, Maharsi Debendranath Tagore, was an eminent social and religious reformer of the time. The Tagore brothers were the leaders of all the progressive thoughts and movements of the day, and were great lovers and patrons of art and literature, too. English education introduced before the birth of the Poet brought in its wake the renaissance in art and literature, which resulted in producing a galaxy of brilliant literateurs, headed by Bankim Chandra, the great Bengali novelist. All this served to mould the cultural and intellectual tastes of the boy Tagore.

Rabindranath Tagore, who came of an illustrious family, belonging to the landed aristocracy of Bengal, was born on May 6, 1861. The Calcutta that was seen by the Poet in his childhood days was quite unlike the busy modernised city of today. It was still a sort of underdeveloped urban area, verging on the rural. Free from the din and bustle of town life as Calcutta was at the time, neither the incessant rumbling of tramcars nor the constant whirr of motor cars, buses, and trucks, plying along its streets, used to get on the nerves of its citizens. Nor was there any hurly-burly of office-goers rushing to their offices in overcrowded buses and tramcars. Palanquins, and hackney carriages, drawn by lean, ill-fed horses were the only means of transport. Showy private carriages, though occasionally seen on the streets of Calcutta, were few and far between. If respectable ladies had ever to go out, they used to do so in closed palanquins, wrapped round with thick cloth coverings, and accompanied by durwans with brass-bound staffs in their hands. On the occasion of holy festivals the closed palanquins, along with their lady occupants, were dipped into the holy water of the Ganges. Women with unveiled faces were never to be seen by men. Gas or electricity being still unknown, even the kerosene lamps that had been subsequently introduced were looked upon as a novelty.

Even as a tiny child, Tagore took a great dislike to formal lessons. The poet recalls a scene of his childhood, and recounts how he, a little boy, used to be bored to death, evening in, evening out, with his first English lessons. The poor boy drowsed—yawned and dozed at the beginning, out of sheer boredom. Later on, he rubbed his eyes hard to keep himself awake. Still his relentless tutor had no pity on him, and did not spare him until at 9 O'clock at night. Over and above this, the former kept constantly nagging at the present 'worthless' pupil of his, comparing him all the time with another unknown jewel of a boy.

Many ghost stories being current in those days, the minds of the ignorant superstitious people were naturally obsessed by the fear of ghosts and evil spirits, to which the Poet's own mind, too, was not quite immune in his childhood. He humourously calls to mind how the dismal appearance of the dark, damp groundfloor rooms in which the Ganges water had been stored up, and the ghost-like shadows flitting in front of those used to give him the creeps when he had to pass by those every night on his way back from the study to the inner apartments.

The boy Tagore, a lonely child, often amused himself by playing with his own mind. A huge, old palanquin of his grandmother's time was lying useless and uncared for in an odd corner of the veranda of the Khajanchikhana. At noon, eluding the notice of the servants at midday nap, the little boy used to creep into the palanquin. He fancied himself a Robinson Crusoe, stranded on the solitary island of a palanquin for the time being. The boy gave the reins to his imagination, and dreamt of impracticable things, his mind flitting from one country to another, to which he assigned the names that he read of in his geography books. Sometimes he imagined himself to be roaming through a dense forest and meeting a fierce tiger face to face, which had to be subsequently

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shot dead by Bishwanath Shikari. All on a sudden his palanquin seemed to have been transformed into a "Mayur Pankhi," drifting aimlessly on the vast boundless sea, the rythmical paddling of the oars keeping time to the splashing water. His storm-tossed "Mayur Pankhi," rocked by the turbulent waves, was about to capsize. Suddenly the picture of Abdul Majhi with his shaven head and moustaches as well as his pointed beard, sitting near the rudder of the boat, flashed across his mind. Lo! the boat was saved at once through his clever manoeuvring. The little boy took a fancy to this boatman, who used to regale him with interesting stories. It was such a pity that his unfinished stories always ended abruptly, leaving the child listener on the tenterhook of suspense, all agog to know what happened next. But alas! the boy had to be invariably disappointed with the unsatisfactory answers that he received to his queries.

Besides these mental ramblings inside the palanquin, the boy had another favourite game of his own, which he found extremely amusing. He imagined himself to be a teacher mercilessly lashing the railings—his silent and helpless pupils. But all his threats and intimidations were lost upon his inert and incorrigible pupils, who were as irresponsive as ever. Hearing of the sacrificial rites performed at the altar of the deities, the boy took it into his head to sacrifice his toy wooden lion with a stick serving as a dagger. Some nonsensical rhymes of his own composition were at once improvised as mantras to be incanted at the sacrifice.

The poet's childhood was dominated by the servants, who fed and clothed the children of the family just as they liked. He gives a very interesting account of the servant regime, in which Brajeswar, the head servant, figures prominently. Some of the weaknesses and idiosyncrasies of this man excellently lent themselves to a vivid pen-portraiture. He was always conscious of the fact that he was an ex-teacher, and he tried to conduct himself accordingly, as was indicated in his peculiar manner of speaking and his choice of words. Glutonous as he was, Brajeswar had a great weakness for delicacies. The Poet humourously relates how this man used to appropriate the shares of the children, day in and day out, and how he, a meek and submissive child could not but acquiesce silently in his acts of omission and commission. Thanks to the stinginess of Brajeswar, Tagore got used to simple food and dress from his very childhood. Nevertheless he grew up to be quite a healthy boy, who had little or no occasion to be excused from the boring, unpalatable lessons of his tutors, only because of his sound constitution. Every evening before dusk Brajeswar used to recite the verses of Kirtibas' Ramayana, to which the boy Tagore was a regular listener. Kishori Chatterjee came upon the scene, off and on. He had the panchalis of the whole Ramayana by heart. Immediately after he had taken his seat, he used to start singing those at the top of his voice, drowning the recital of Brajeswar. The boy's joy knew no bounds, as he listened to the easy musical flow of the lilting words, rhyming with one another, and accompanied by the different gestures and postures of the singer, suited to the ideas. Kishori Chatterjee was often heard to regret that his dear 'Dada Bhai', meaning his boy listener, with such a musical voice, could not yet get himself enrolled as a member of the Panchali party. Had he done so, what a tremendous fame he would have achieved in the field by then.

In the days of Tagore's boyhood the streets of Calcutta used to present quite a different sight after dusk. There being no electricity in those days, the normal activities of the city almost came to a standstill after the daylight was gone. The nocturnal stillness of the then Calcutta was occasionally broken only by the thudding of the horses' hoofs, as the carriages of rich gentlemen, who were out for evening drives, returned, as also by the hawkers' cries of 'Bel phul' and 'Kulphi baraph' (ice-cream). In those days the children's world was absolutely isolated from the adults', the youngsters having no access, whatever, to the forbidden world of their elders. So the children of the Tagore family, too, were, as a rule, excluded from the occasional entertainments, arranged for by the elder

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

brothers of the Poet in their house. The ladies of the family, sometimes joined by those of neighbouring houses, had to sit behind the screens and listen. The children were usually shut out of the Jatra performances, too, that were got up, from time to time by amateur parties at the Tagores' house. Only once, however, the rule was relaxed in their favour. On that occasion when the boy Tagore was roused from his sleep at 9 o'clock at night, the show was already on. The Poet had only a faint recollection of the scene witnessed by him at the time. The whole courtyard, packed to capacity with a motley crowd, was flooded with bright lights. The performance dragged on throughout the whole night. The boy found it quite impossible to sit out the show, and fell asleep in the midst of it. To the best of the Poet's recollection, the music, dancing, and the story were all borrowed from the rural life of Bengal of the time, and lacked refinement. But none-the-less those crude and vulgar shows never failed to attract spectators in huge numbers, public entertainments being so scarce in those times.

Shyam, Brajeswar's second-in-command, was a simple-minded and good-natured fellow, who was rather fond of children. He had an endless fund of the tales of dacoits, with which he used to entertain the children of the family. In those days those stories, as popular as the ghost stories, were passed from mouth to mouth. There were some noted dacoits, too, at the time, such as, Bishu, Raghu, and the like. Dacoity being a sort of trade or profession with many, some zemindars, also, were connected with those bands. Those dacoits were honourable men, who used to embark on dacoity after performing sacrificial rites at the altar of the Goddess Kali. The bodies of women used to be regarded as sacred, and under no circumstances, whatever, did the dacoits touch them. The owners of the houses were usually forewarned by previous notices. No wonder such stories fired the imagination of the boy Tagore, who was particularly interested in the "runpas" —the long wooden poles, fitted to legs, which enabled the dacoits to cover big distances in a minimum of time. The Poet recalls how a demonstration of the dacoity feats was once staged in the house in his childhood days, and how he compared the details at the time with those that he had gathered from the stories heard.

Hemendra Nath Tagore, the Poet's third elder brother, was entrusted with the supervision of the education of the children of the family, about which he was very keen and enthusiastic. With a view to giving them an all-round education he chalked out a crowded programme. He wanted the youngsters to be taught everything through the medium of Bengali. Although Hindusthani music was the rage of the moment, the first lessons in music that the boy Tagore had from Vishnu, his music teacher, consisted of a sort of Bengali doggerel verses, set to music. In the opinion of the Poet this was one of the main reasons why he, as a young boy, took kindly to music. But a hard and fast routine in the music lessons, too, was repellant to the boy, who discontinued the lessons in no time.

All the same he turned out to be an ardent lover of music, the very atmosphere of the family having been saturated through and through with an intense love of music. So the boy picked up music all by himself. He used to play different melodies on his 'tambura'. Prominent among the persons who helped promote the musical development of the boy Tagore, were Sreekanth Babu, a family friend and a frequent visitor at the house, who unconsciously infected the boy's mind with his own passion for music, and Jadu Bhatta, an eminent musician of the time, who resided at the Tagores' house for sometime and tried to teach him music. Although the Poet was no regular pupil of his, such of his music as appealed to his mind was learnt and made use of subsequently in some of his songs on the rainy season.

Early at day-break began the wrestling lessons, from which the boy Tagore emerged every morning, his bare body smeared with dirt and mud, over which a jacket was hurriedly thrown. His mother was hard put to it to clean his body on the holidays with an ointment of her own preparation. Almost immediately after the wrestling lessons a medical student used

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

come for the purpose of teaching him the names of the different bones of the human body, with the help of a skeleton hung on the wall. As the boy gradually got familiarised with the different names of the bones, he ceased to be scared of the skeleton, too, any more. Punctually at seven every morning the tutor Neel Kamal turned up. He had as sturdy a constitution as his pupil. So there was no evading the lessons on the ground of the sickness of either. Throughout the morning hours the boy was kept occupied with the lessons in different subjects, such as Arithmetic, Algebra, Geometry, Bengali Literature, Bengali Grammar, Science and Nature study. He tried hard to get the lessons by heart. But alas! his memory played him false to the utter disappointment of his tutor. During the lessons the pupil's attention was distracted by this and that every now and again. As soon as the tutor was gone, the boy rushed to see if the custard-apple seeds, sown by him in the heap of dust accumulated in an odd corner of the veranda had since sprouted up. At 10-30 A.M. after his daily bath and usual meal he was taken round to the school in a closed carriage, drawn by one old horse. He remained confined there until 4 O'clock in the afternoon.

Almost immediately on his return home he was made to take his daily gymnastic lessons from a tutor, who called punctually at 4-30 P.M. No sooner did the gymnastic teacher leave then the art teacher came to teach him painting. After dusk, as soon as the oil lamp was lighted, Ghore master, his English tutor appeared, and the grinding in the English lessons went on until bed-time. The poor little boy yawned, dozed, slipped down on the floor, and was startled up time and again. This pathetic scene was enacted, evening in and evening out. As soon as the boy slipped into bed after the lessons, he fell asleep in no time, listening to the stories told.

During the childhood of the Poet, the ancestral house of the Tagores was divided into two separate apartments—inner and outer. The inner apartment, along with its roof properly walled up, was meant for the exclusive use of the women-folk of the house. It was on this roof that the ladies of the family used to assemble every evening so as to indulge in idle talks and gossips. The young Tagore was also a casual visitor at those assemblies attended by his mother as well. Here was an excellent opportunity for the boy to flaunt the knowledge collected from his text-books, as also to impress his feminine audience with the depth and extent of his learning.

A primary school or Pathsala used to be held in the Chandi-mandap of the ancestral house of the Tagores. It was open to the children of the neighbouring families too. Such a school was pre-eminently reminiscent of the rural Bengal of the time. Probably the Poet himself, as a child, was initiated into the mysteries of the Bengali alphabet in this Pathsala.

In the childhood days of the Poet, the roof of the house was the only haven of peace to him also. He recalls how he, as a small boy, used to steal away, very often, to be up on the roof at noon, when everybody else was enjoying his or her midday rest. The roof commanded a wide view of the various different-shaped, undulating roofs of neighbouring houses, with the shaggy tree-tops peeping in between those, as also, of the horizon, where the blue of the azure sky mingled with the green of the verdant earth. The boy got enamoured of the quiet of these hours of the day, disturbed only by the occasional cries of the street hawkers. At noon the roof seemed to be a desert with its only oasis of a bathroom, which had a newly installed water-tap. The boy sometimes put the tap on, and enjoyed a bath. There being very few suitable games for children at that time, whenever he used to feel ill at ease in the evening he went up to the roof, and had a look around.

The Poet's "Jyotidada", one of his elder brothers, had very progressive ideas. The innovations introduced by him served to change the very atmosphere of the house. It was at his instance that the inseparable barriers between the 'sadar' and 'andar' mahals of the house were done away with. His newly married wife was made to shake off the Purdah and attended the evening assemblies that met regularly on the roof.

The barriers of age even meant little to him. The Poet, his youngest brother, was treated as his equal, although the former was twelve years younger than him. The boy Tagore was a regular member of these evening assemblies. He was often asked to sing to the accompaniment of his "Jyotidada's" violin. The Poet had, also, to improvise suitable words to match the new tunes played by his brother on the piano. Akshaya Chowdhuri, too, used to drop in, every now and then. Although he was not much of a musician, he was very keen on music. He went on singing, beating time with whatever he could lay hands on.

Tagore's sister-in-law, who had a great taste for gardening, converted the roof into a veritable garden. Satyendra Nath Tagore, the Poet's second elder brother, was equally progressive. On his return from England as the first Indian member of the I.C.S., when he joined his first post in Bombay he took his young wife along with him. In those conservative times, it was a very bold act on his part. There being no suitable dress for the Bengali ladies, who seldom went out at the time, it is the Tagores who took the initiative in introducing a new style of wearing saris and in setting the fashion for ladies' dresses. As the frocks were not still in vogue, small girls used to be dressed in Peshwaj. When the Poet's eldest sister was sent to the newly started Bethune School, the example was followed by others.

Tagore found a true 'friend, philosopher and guide' in his 'Jyotidada', who exerted a tremendous influence on his earlier life and career. Once Jyotindra Nath took out the boy Tagore on one of his trips to Sileidaha, which he visited very often to look after the landed estate of the family. He did not fail to recognize the educative value of such a tour, which helped to provide sustenance for the budding, freedom-hungry mind of his young brother. The Poet had to spend a good many years of his later life at Sileidaha, and had to go about a good deal in boats on the Padma. It was this stage of his life that marked the beginning of his great literary career. Here the young Poet came into direct touch with nature, with which he could commune day and night. He had ample leisure to fill in page after page with the poems composed by him in the midst of those calm surroundings. He was first initiated into the secret of rhyming verses by a nephew of his, older than himself. While at school, the young Tagore was once asked by a teacher of his to compose a poem. The poem was highly appreciated, and he was almost unanimously acclaimed as a rising poet of great promise. His sister-in-law, who was very chary of praise, often compared him with Bihari Lal Chakraborty, a renowned poet of the time, and used to harp on saying that he would never make as great a poet as he. This served as a great stimulus all the same, and the young Poet applied himself to his task with an added zest.

The Poet's 'Jyotidada' was very keen on riding and shooting too. He wanted both his young wife and brother to take to riding. He presented a pony to the Poet for the purpose. But after making a daring experiment with a spirited horse on the streets of Calcutta, the latter gave up riding as a bad job. Once Tagore accompanied his 'Jyotidada' on a hunting expedition into the jungles of Sileidaha. But they failed to bag a tiger. The elephant that the brothers had been riding stopped short in front of a thicket, from which a tiger sprang, and ran away across the plain, shining in the bright rays of the midday sun. The Poet was admiring all the while the easy graceful gait of the running animal, which thus gave them the slip.

His 'Jyotidada' always took him quite seriously, and humoured his petty wishes even. Once the Poet wanted to experiment using flower-juice, instead of ink, for writing purposes. But alas! the machine devised by him did not at all work. The Poet describes the incident very humourously and says that he took this failure to heart so much so that he had since despaired of ever achieving any success in the engineering line, and had since stopped handling musical instruments too. Every morning while sitting in the shade of the easy-room on the roof of the house and drinking coffee, Jyotirindra Nath used to read the manuscripts of the dramas composed by himself. The young Poet was often asked

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

to put in a line or two, here and there, by way of addition and alteration.

The novels of Bankim Chandra were then being published serially in "Banga Darsan," the leading Bengali monthly of the time. Everybody being very eager to know the fates of his heroines, the publication of the periodical was eagerly awaited every month. In the middle of the day when his 'Jyotidada' was away at the kutchery downstairs, the Poet used to read out the stories to his sister-in-law, who preferred this reading aloud to her own silent reading. Occasionally the Poet accompanied his brother and sister-in-law to the riverside places too, where they went and lived from time to time in garden houses for rest and change of air. The natural beauty of those places on the Ganges was not yet spoilt by the tall ugly chimneys of the mills springing up here and there. The sights and sounds of nature and the beauty of the natural surroundings, not marred by the depredations of man, enraptured the young Poet, and inspired many of his songs.

The Poet presents his readers with a very enjoyable picture of his saintly eldest brother—Dwijendra Nath Tagore, the great philosopher and author of "Swapna Prayan." The latter used to write on abstruse subjects, too difficult to be understood and appreciated by the average listener. So he found it hard to get hold of people to listen to him. At last a person was induced to do so for the sake of the mutton-chops that he used to get. Although Dwijendra Nath could not sing, he could play the flute. He had also a hobby of making up arithmetic problems. He was a very fastidious writer. What he wrote was seldom to his own liking. So, when writing "Swapna Prayan," he used to tear up what he had written, time and again, so as to rewrite it over again. Subsequently he took up writing verses. As soon as he composed a poem, he read it aloud to those around him. In the midst of reading he used to burst into laughter, and in a fit of enthusiasm he clapped whomsoever he found at hand. The loud peals of his laughter could be heard from afar. A corner of the southern veranda of the house was selected by him for the purpose of writing. The very fountain of life seemed to have dried up after his removal to Santiniketan in later years. Swimming was another favorite pastime of Dwijendra Nath. It was from him that the Poet learnt swimming in his childhood.

At sixteen the Poet took over the editorship of "Bharati," a magazine run by his family. Dwijendra Nath as well as the Poet himself was a regular contributor to it. At seventeen, the latter had to resign from the editorship of "Bharati," as it was decided that he would be sent abroad to London to go in for Barristership.

Before going abroad he was sent to Ahmedabad, where Satyendra Nath was a judge. The family of the latter was away in London at the time. The judge's house at Shahibag was located in a very old palace of the Badshahs. When Satyendra Nath was away at work by day, the young Poet, left to himself, used to ramble through the big lonely rooms like one possessed. There was a huge terrace in front of the house, from which he used to have a glimpse of the river Sabarmati, meandering through its sandy bed. The ruins of the big cisterns of stone masonry bore witness to the luxurious baths of the Begums of old. To the Poet, born and brought up in Calcutta, these ancient relics of the past were quite a novel source of romantic curiosity. He let his imagination run away with the whole set up, conjuring up one picture after another, and piecing together the story of those bygone days. His fantasies and the yarns, spun by his imagination, formed the nucleus of a subsequent famous short story of his, known as "Kshudita Pashan."

After a short stay at Ahmedabad, the Poet's "Mejdada" thought fit to let him put up with an Anglicised family at Bombay so as to enable him to pick up English manners and customs, as also, to enjoy the comforts of a home. Although the Poet's family never wanted to thrust collegiate education on him, still his guardians desired him to have a good command of spoken English, so that he might not be considered unfit to move about in the educated and aristocratic circles. With this end in view, once before this, he was admitted to Bengal Academy, run by Mr. De Cruz. In education, as in everything else, the Poet's mind

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

refused to follow the beaten track. So here, too, his progress in studies was quite disappointing to his teachers. Nevertheless, the Poet himself admits that he owed a deep debt of gratitude to Jnan Chandra Bhattacharyya, a teacher of his, who used to let him have his own way in his intellectual pursuits. He was asked to render "Macbeth" into Bengali, as also, to commit the whole of Kalidas' 'Kumar Sambhav' to memory. His Sanskrit teacher, too, made him read 'Sakuntala' from cover to cover. Such independent studies provided ample food for his growing mind and intellect.

In London the Poet lived with his brother's family for some time. At the beginning attempts were made to give him formal education, and tutors, too, were appointed for the purpose. Although his mind failed to respond to those formal lessons, still the Poet profitted a good deal by learning things direct from men and the environment that he was placed in. Subsequently he had to put up with an English family in London. The memory of the motherly care and affection that his landlady, Mrs. Scott, had lavished upon him at the time left an indelible mark on his young mind. The Poet attended the lectures of Henry Morley, a reputed scholar and an eminent Professor, at the University of London for three months only. But the literary tastes created by his Professor lasted him throughout his life. Morley infused life into the very literature that he taught. The Poet thus learnt to love literature, because he did not read it from the books only, but direct from a man thoroughly imbued with its spirit. Besides, every day from evening till eleven at night Tagore had to read out selected books on literature and history to the Scotts. Such independent studies, other than formal lessons, served to effect a permanent union of the human mind with literature. The friendship that the Poet struck up with the English family in three months' time enabled him to enter into the inmost recesses of the English heart. Even after his return from England, the foundations of his former life remained unchanged. Although he failed to be a barrister, he derived a great and lasting benefit from his short stay in England by realizing the need of bringing about a perfect mutual understading between the East and the West.

This seems to be the eternal message of the great lover of humanity to posterity for all time to come.

LIFE WITH AN ARTIST

By Mrs. DEVI PRASAD ROY CHOWDHURY

I

It was a gloomy day. The sky was overcast with clouds which hung over our head like a thick canopy. I came home from my work to spend the week end with my people. I found my mother busy making sweets to entertain some guests and I lent a hand to help her. Towards the afternoon rain began to fall in torrents and within a short span of time the road in front of our house was flooded with water. It was a sight to watch people struggling in the stream with bare feet, trying to keep their balance with the umbrella in one hand and their garments raised upto their knees in the other. None ventured to come out of their hearth and home in such foul weather unless necessity compelled them to do so. We gave up all hope about our guests and were getting impatient to consume the delicious sweets prepared by my mother, but had to wait till the scheduled time had passed. To our surprise punctually at 5 O'clock we heard the splashing noise of the water made by a heavy vehicle and then came the sound of a horn. A taxi was at our gate. The rain had stopped by that time, though the water did not subside. Out came three gentlemen with their sandals in their hands to protect them from the water. They seemed to be in right good mood in spite of the weather and greeted us with broad smiles. "We knew you would expect us," said one, and added, "We did not want to disappoint you."

Those were all new faces to me and I began to scrutinize them assiduously. I was told two of them were artists. I could believe that of one, but as for the other—no, he looked far from an artist except for his immaculate dress which he wore very artistically. His broad, unusually well built frame for an Indian, with strong massive muscles, gave one the impression of a pugilist rather more than that of an artist. Later, I came to know he learnt wrestling systematically from a professional wrestler. His head was crowned with soft silky hair. His eyes were small and twinkling and when he looked at you they seemed to penetrate and read your innermost thoughts. He had a frank, winning smile which gave relief to his otherwise hard structure. This man, I was told, was Deviprasad Roy Chowdhury, the well-known young painter and sculptor.

I was always fond of art but artists never interested me. My idea of an artist was that he was a lean, clumsy person with a vague imaginative expression. But this particular one did not correspond to my hitherto established opinion. Naturally my curiosity was roused and I wanted to know him more intimately. This was not difficult to achieve, since the person in question seemed to have taken a fancy to our family and visited our home more often than was expected. I did not suspect any motive behind this and, therefore, mixed with him quite unreservedly. This encouraged him to such an extent that one evening he was sufficiently brave to propose to me to be his life's companion, in other words, his wife. Though his way of approaching the subject was rather primitive, if I may be allowed to say so with due deference to my husband, I did accede to his request after discussing certain points which concerned two of us alone and, therefore, need not form a part of this narration.

After our engagement was no more a secret, congratulatory messages began to pour in on the artist. But towards me people looked with a sort of pity as if I was a victim to be sacrificed at the altar of some supernatural being. This attitude on their part puzzled me not a little. I never had occasion to mix with people possessing an artistic temperament as it is called, and, therefore, I could not imagine that artists could be different from other individuals. This truth was to be revealed to me after it was too late to beat a retreat.

Upto a certain time after our marriage Sri Deviprasad managed to keep up the show. But the moment he realized that the gordian knot was well secured, not by force of law, but by the tie of affection, he came out in his true colours. His artistic dress vanished from the field—it was not convenient for his work, and a loose *paijama*,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which one of his friends named a "safety lungi" and an equally loose upper garment took its place. The result was that when people came to visit Mr. D. P. Roy Chowdhury, the celebrated artist of the Madras School of Arts and Crafts, and found this awkwardly dressed man, anointed with mud and plaster, declaring himself to be the wanted person, they threatened to report against him to the Principal for false impersonation! I admit he is in harness the greater part of the day either painting, modelling or writing, but even when he is free from work there is seldom any change in his attire.

He was a teetotaller when we married and now he "drinks to be sober" to quote the artist's own words. It is not a luxury for him but a necessity to keep him in good spirits and give him the impetus to produce more works of art. Besides, his doctors are of the opinion that if he abstains from drinks altogether his health will be irreparably damaged.

His attitude towards life is like that of a spoilt child. What he wants he must have, no matter how much or in what way he has to pay for it.

At one time he is at the highest heaven of happiness, the next moment he is sad and depressed. He flares up when anything is done against his will but cools down if left alone.

In spite of his many peculiarities he has been able to make some very good friends. Usually the friendship started with a misunderstanding and if his opponents could withstand the strain of his idiosyncrasies and found out his soft corners, the man was in their clutches.

As a child he was most unruly and was the cause of an immense lot of anxiety to his parents. This I learnt from the artist's good father. Any kind of novelty or adventure had a great charm for this fearless son of his. He joined some circus company to show cycle tricks, risked his life to save people from drowning, rode on uncontrollable horses to prove his ability as an equestrian where others failed, and to crown all, sat under the shade of a tree with a towel spread in front of him and played on the flute to collect money for his cigarettes! All these were done without the knowledge of the parents. His father, therefore, enjoyed no peace of mind till his son returned from his daily excursions. There are many such episodes connected with my husband. If I start narrating them all I may tax the patience of my readers. The few incidents I have mentioned are just to show of what mettle the man is made of.

Next to art, my husband loves music and shikar, two most unallied subjects. The moment he gets an opportunity he runs to the jungle. Apart from the excitement of a shooting expedition, the forest itself has a great attraction for him.

He is a fighter in the field of words and the topics which take the most important place in his conversation are art and sex psychology. I have noticed he becomes more argumentative and philosophical when under the influence of spirits. He is very assertive and cannot stand contradictions to his convictions from any quarter, be it his wife, son or an absolute stranger.

Though he is a great admirer of Hindu philosophy, he is not a "religionist" as such. He detests fanaticism or puritanism of any kind.

Sri Deviprasad is a jealous husband though he does not carry this quality to the extreme. He has a soft heart and an affectionate nature but he is awfully sensitive. If you leave him alone he will not interfere in your affairs but if you prick him he will pounce on you like an unleashed lion. In short, his is a most dominating personality.

These I write from my own experience of life with an artist for more than two decades. In the meanwhile, another offshoot of the same stock has sprouted in the family. It is my son who has chosen dancing as his career.

You may envy me for my good fortune or pity me for my ill-luck. My attempt here has been to depict the man Deviprasad as I know him.

II

One who has not lived with an artist for a considerable period of time will not be able to realise the difference between the life of an average man's wife and that of the wife of an artist. She is left alone and yet she has hardly any time to call her own. She has not only to play the part of the mistress of the house but the master as well. The artist who is the creator lives in his own world of thoughts and imagination has no time to devote to worldly trifles. He is the father of his children—yes, he loves them and earns bread for them and there ends his duty. To check them, to bring them up as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and women of the world is the duty of the mother.

The artist is forgetful by nature, you cannot blame him for that. His brain is ever-struggling for new creations to give something to the world which will live even when he ceases to exist. How can anybody expect him to remember insignificant details of every day life? He invites guests in the house and forgets all about it and when the guests arrive? Ah! well, the hostess must provide for them as best as she can! He has an appointment somewhere, he does not know when. It is the wife's duty to keep the list of his engagements and to remind him in due time. But if he is inspired he must not be disturbed!

The artist's dress is besmeared with different shades of colour. He looks like a circus clown. Well, whose fault is it? Why did not somebody remind him that he had to change?

He is hungry, he does not know it is time for his meals. He feels uneasy and grumbles but is unaware of the cause. When food is served and his hunger is satisfied, he smiles and says, "I see, I was hungry."

The artist is in immediate need of a piece of silk for his picture, but he has none at hand. Could the wife spare an old piece or a new?

The wife is ready for a party draped in a sari brought by the husband. The colour does not suit her. She must change it at once. What happens to the costly sari—ah! it can be turned into a curtain.

The artist's room has the appearance of a workshop. Papers, paints, palettes and brushes are scattered everywhere. One has to step with caution for fear of treading on something important. The wife offers to clean the place and his thanks are profuse. But when the room is put in order several things are missing. Did anybody meddle with them? He does not understand. And the missing articles? They were just in front of his nose, only his eyes were not trained to such orderliness.

The visitors come to meet the distinguished person. He is busy putting the finishing touches to his work of art and it is impossible for him to receive them. Would the wife do him the favour of entertaining his guests till he was able to come? The wife is busy too, but that does not matter. Her work can wait, it is not important. But if things in the house are not as they should be due to her absence, she is an unworthy housewife.

Such and many such others are the problems that an artist's wife has to tackle within her daily life. To solve them is in no way less puzzling than the solution of a high standard mathematical equation. The difference between the two is in the treatment that the simplifier of the solution receives. When a scientist unravels the problem of his subject, he is recognized and appreciated whereas the poor woman is allowed to die on her elevated pedestal unheard of and unsung in spite of her abnormal capacity to manage the problems of an artist's household.

SAND DUNES

By KUNJA BIHARI DAS

Is this your dwelling? Your treasury?
Have you cached here a lifetime's riches?
The lands you bought? The buildings you raised?
Crueller is the history of your home,
Than the history of your acquisitions,
The history of your land, the history,
Of all your famous warrior kings.
Is a stucco of bone and blood,
Decorated with painted frescos,
Meant to house the image of an idle woman?

Imprisoned for your offences (they are many)
In a gaol of your own making,
You have forgotten the world outside—
The white effulgence of a lotus,
In autumn, the waterfall of dawn,
Evening's lake, moonlight in a forest,
Darkness stirring in the sky.
Sweet as death is the blue stupor,
Prisoner, of a corner at home.

This is your dwelling. A jungle,
Infested with tigers, respectable,
The haunt of robbers, their hideout.
Time ploughs the barren earth.
Green and virgin, at last it yields,
The grain of dreams, mines of gold,
On the horizon. Like Ahalya,
Land accursed is brought to life,
By labour. From the womb of this house
Wake villages, known and unknown,
Farmers, miners, merchants, traders,
Altruists and misers, the beautiful,
Ugly, afflicted, true-spoken. All,
Fashioned for a day or two.

Earth has no caste, no colour.
In the creed of continuous creation,
Joyous, a golden flower, it finds,
Its faith. From minute to minute,
Mountains break, crumble, disperse,
Sand in domed and shifting dunes,
The delight of making and breaking.

Dunes, loose mounds and ridges of sand,
Nothing but sand, dune on dune,
Pallid, soiled, a cremation ground.
Pyres flare up, die down, ashes,
Blow away. With the bones of the living,
Houses are built. Roofs are of tile,
Of earth, of tin. Cottages are thatched.
Roofs for sages, roofs for abbots,
Palace for princes, mansions for aristocrats,
Villas are luxurious and alien is,
The architecture of bungalows.
Dream dwellings, propped up by the sky.
Civilisations come. Civilisations go.
Housing the history of your forefathers,
The earth alone remains, a single home.

(Translated from the Oriya by Dr. Narendra Misra and Lila Ray)

VIVEKANANDA ON BUDDHA AND BUDDHISM

By DIPAK KUMAR BARUA, M.A.

Introduction

It is curious enough to find out the process by which Swami Vivekananda, a product of late nineteenth century India, is deeply indebted to the Buddha, the Perfectly Enlightened One, of circa 566 B.C. And it is even more strange to note how a modern Indian has greatly remodelled his life and activities according to the gospels of this most illustrious Sage of ancient India. One preaches the doctrines of love, compassion, and spiritual upliftment, while the other proclaims the message of fraternity, unity and allround prosperity of the degraded classes. One dedicates the life for the liberation of the beings from the bondage of mundane thirst, misery, affliction and trifling allurements and shows a new vista of human emancipation, while the other practically sacrifices himself at the altar of humanity and revives the prestige and honour of India once again.

His Admiration of Buddha

It would not be imprudent to say that Vivekananda is an ardent admirer of Lord Buddha. From the writings and activities of Swamiji it can be definitely shown that he is well conversant in as well as a follower of the Buddhist ethics. From the very inception Vivekananda, besides his routine studies, has gone through the sacred scriptures of the Buddhists—both Hinayanic and Mahayanic, and became much interested in Buddhism. Bodhi implies 'Supreme knowledge,' so the term Buddha is not concentrated, to him, to a single individuality, but means 'a realisation' and that is why he entreats all to enter into it and to 'receive the key.'

Swamiji takes up the arduous task of penetrating through the original texts of Buddhism and sucks up the cream from them. He is not satisfied with the secondhand knowledge of such a mighty religion of old and so studies thoroughly an original 'Lalitavistara' and the 'Prajna Paramita,' the two outstanding Mahayanic works. Moreover he has also gone through Rajendra Lal Mitra's writings on Buddhism and Arnold's 'Light of Asia.' He mentions occasionally to his disciples the teachings from the Vinaya Pitaka, the stories of poor Kisa Gotami who loses her only child and becomes almost insane out of unbearable grief, of the barbar Upali, and sacred stanzas from the Dhammapada, Suttanipata, the texts of the orthodox school of Buddhism. Thus having gone through all such texts of both the sects of Buddhism the ground is already prepared for the renunciation and later activities of Swami Vivekananda who being a staunch and a devout follower of Brahmanical religion does not show any fanaticism or bigotry. His heart is broad enough to adopt the noble preachings of Lord Buddha and to realise them in his life and culture. His heart is saturated with humanism and commends the religion of the Buddha in high phrases. He declares: "I am the servant of the servants of the servants of Buddha." This is not merely a laudatory statement, but a bold declaration proclaiming his deep respect for the Buddha. Sister Nivedita writes: "Buddha was to him not only the greatest of Aryans, but also 'the one absolutely sane man' that the world had ever seen." But Swamiji's mind is not satisfied with merely studying the Buddhist Scriptures or showing vocal respect to the Exalted One, but his reverence to Him is so great that he cannot but visit once again, at the fag end of his life, the sacred spots of Bodh-Gaya with Okakura, a renowned Japanese, in 1902 and also feels himself proud enough when he touches the Buddha's relics during one of his Indian wanderings. Whenever he speaks about the Buddha, he becomes overwhelmed with a passion of reverence to Him. In a public lecture at Detroit in America, Swamiji says that he would feel himself much elevated, if he could have possessed one-millionth part of the peerless largeness of heart of Gautama the Buddha.

Hinduism & Buddhism Contrasted

Being well-conversant in the doctrines of both Buddhism and Hinduism Swamiji endeavours to draw a contrast between the two. According to him "Hinduism never presumed to enunciate any rigid law," but "the Buddhist could only be carried out through

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

monasticism, the Hindu might be fulfilled through any state of life." "Buddhism," to him, "became the religion of a monastic order, but Hinduism, in spite of its exaltation of monasticism, remains ever the religion of faithfulness to daily duty, whatever it be, as the path by which man may attain to God." Thus Vivekananda has seen the strict monasticism of Buddhism and thus drawn a clear-cut demarcation between the Buddhist monastic life and the Hindu household life. One is enticed to go out of home to the state of homelessness, while the other through faith, charity and rightful path shown the means of moksa or liberation. Swamiji is quite aware that both the Buddhists and the Jains do not rest on God, the Almighty One, but their chief aim is to deify humanity. Thus ultimately Vivekananda discovers the deification in Buddhism too, and so tries to bring a compromise between the two religions, Buddhism and Hinduism.

Buddhism, not a New Faith

Buddhism, to him, is not a new religion, but is allied to Hinduism. He says: "You must not imagine, that there was ever a religion in India called Buddhism, with temples and priests of its own order. Nothing of the sort! The idea was always within Hinduism. Only the influence of Buddha was paramount at one time, and made the nation monastic." So he finds no objection when he is addressed by others as the Buddhist. To him, Buddhism is a special phase of Hinduism and both of them are so closely linked up as Christanity and Judaism are. Though the Sakyan Sage stands up against the traditional Vedas, yet He does not preach anything new. He appears to fulfil and not to destory and His religion is the natural fulfilment of Hinduism. But the chief merit of the Buddha lies in the fact that He is the first one to promulgate the religion to convert a large number of people into His doctrine, to send out missionaries to preach His noble sayings for the good of the many, for the pleasure of the many and lastly to form a well-organised Order of monks in the World. Yet Swamiji thinks that Buddhism is a part of the Sanatana religion of India.

Buddha and Swamiji

Vivekananda himself admits his differences with the Buddha in certain matters. Yet like the Blessed One he does not advocate intricate philosophical dogmas, complex rituals, casteism, allurements for the heaven in the next birth and animal sacrifices for spiritual prosperity. He, like the Buddha, dedicates his whole life for suffering humanity, specially for those who are ignorant, poor and helpless.

A Compromise

In the famous Chicago lecture Swamiji boldly declares that the rivalry between the Buddhists and the Brahmins is solely responsible for the decline of the glory of India. He is simply charmed by the moral ascendancy that India had attained during the Buddhist period and feels proud himself of being a partner in such a glory. He requests all of us re-unite and to set up a wonderful example by blending the rare intellect of the Brahmin with the liberality and unprecedented services to humanity of the Teacher of the World, the Perfectly Enlightened One.

Conclusion

Through these delineations we come to the conclusion that Swamiji is greatly influenced by the doctrines of the Buddha, that he followed those till his death, that he does not think of Buddhism as a heretical creed and lastly that he tries to bring a happy conciliation between the two, Buddhism and Hinduism. There are numerous occasions like the soul-theory, the doctrines of non-existence of the God, when Vivekananda strongly opposes Buddhism, but at other times he rather bows down to pay his deep love and veneration to the Buddha. Indeed it can be said that his magnanimity, enthusiasm for strenuous effort, compassion for the suffering millions, his boldness of spirit to stand against social evils and courage in adverse circumstances, are due to his reliance on Buddhism. In a sense he may be called the modern disciple of Lord Buddha, who in the Parliament of Religions in Chicago indirectly heightens the prestige of Buddhism and of India. No other religion has charmed him as much as Buddhism does. Being embolden ened by the noble truths of the Buddha and having made himself a torch (attadipo) Swami Vivekananda plods on the weary paths of this sterile earth.

POLITICAL THOUGHT IN RAGHUVAMSAM

By SASANKA SEKHAR PARUI

The treatment of political thought in Raghuvamsam by Kalidasa "is of an accidental character while others like Bharavi . . . . . deal with them in a systematic fashion".[1] The object of Kalidasa is more a matter of feeling than cold reasoning and as such, it is indeed, very difficult to have a systematic and logical representation of ancient Indian political thought out of Raghuvamsam. In spite of this drawback it is not absolutely impossible to find out the political philosophy of Kalidasa.

In ancient India *Rashtra, i.e.,* the state is not defined in the same way as we do it to-day. According to the modern definition, a state has four parts—population, territory, government and sovereignty (external, as well as internal), and as such, it may be called the *Chaturanga* theory of state. But in ancient Indian thought we find the *Saptanga* theory.[2] These seven parts which are not specifically mentioned in Raghuvamsam are:

(a) *Svamin, i.e.,* head of the government, no matter whether it is monarchical or non-monarchical.

(b) *Amatya*—This is not what Kalidasa has called by the words like *Sachiva*[3] or *Mantri.*[4] The number of *Sachiva* or *Mantri* must be in a government very few. If their number be large it is hardly possible for the officers of Agnivarna to conceal the illness[5] and death[6] of the King from the subjects. *Amatyas* as a part of the state quite reasonably refer to the whole body of government officials.[7]

(c) *Rashtra, i.e.,* a particular territory having a number of population.

(d) *Durga, i.e.,* fortress.

(e) *Kosha, i.e.,* treasury.

(f) *Danda, i.e.,* army.

(g) *Suhrit, i.e.,* ally.

Of these two theories of the definition of the state, the ancient definition is much more specific and concrete. While modern thought includes sovereignty as a part of the state, ancient thought recognizes the means of protecting sovereignty as parts of the state, *viz., durga, danda* and *suhrit.* The sovereign power is cultivated by the *Svamin,* which is the supreme part of the body of the government. What we mean by government as a part of the state is covered by the two aspects of the *Saptanga* theory, *viz., Svami, amatya,* and apart from these two, *Kosha* is specifically mentioned.

Kalidasa is an admirer of the monarchical form of government; the *Svami* to him is the king. He feels pride to praise the royal line of Manu and says in the beginning of his work—*Kva surya-prabhavo vamsah*[8]—where is the great solar family? The source of this monarchical power is God or Brahma, therefore, it is divine. This divine right theory is the logical conclusion of the traditional theory of divine origin of the *varna* system.[9]

The monarchy in Kalidasa's thought is hereditary; thus, none but one belonging to the solar line is placed on the throne. This hereditary right of kingship must be sanctioned through the ceremony of *Abhisheka* which may be performed by the existing king as it is in the case of Raghu,[9a] or by the ministers due to the absence of the king as it seems to be done in the case of the successor of Agnivarna.[9b]

There is some sort of contract between the king on the one hand, and God as the protector of all on the other. The king is bound to discharge his duties and in return he gets taxes from the subjects. If the subjects disrespect their duty they are punished by the worldly authority, *i.e.,* the king, but the breakdown of the contract by the king is subject to punishment by God. The sense of contract is expressed by Kalidasa when he says—*Prajanameva bhutyartham sa tabhyo valimagrahit*[10]—the kings collect taxes only with the object of doing welfare to the subjects.

The position of the worldly authority is subordinate to the spiritual authority. The philosophy of caste reveals the conception that Brahmanas are superior to the Kshatriyas. King Dilipa himself says to Vasistha that his (Vasishtha's) supernatural power (*mantra*) is the cause which protects his subjects from the supernatural calamities and man-made sufferings,[11] makes enemies armless and being the cause of rainfall makes the earth fruitful.[12] Elsewhere, it is said that the members of the Ikshvaku family come out

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

successful in the very difficult tasks by dint of the grace of the sage—*Ikshvakunam duraperthe tvadadhina hi siddhayah.*[13]

Monarchy may be of two types—good monarchy and bad monarchy. The kings like Dilipa, Raghu, Aja, Dasaratha, Rama, etc., illustrate good monarchy, while king Agnivarna is the typical example of bad monarchy.

A good monarchy has a twofold role—one is constructive, and the other is destructive. The constructive measures deal mostly with the internal administration, while the destructive measure (war) is related with the foreign transactions.

The constructive course is concerned with the benevolent activity,—protection to the subjects, charity and good personal character, *e.g.*, "purity, perseverance, self-restraint, vigilance, pity, charity and love of truth."[14] A good king should perform sacrifices according to the Sastras, fulfil the necessity of all, and dispense punishment according to the depth of crime.[15] The good king Dilipa looks after the education, protection and maintenance of his subjects, as it were, he is their real father.[16] He who can protect one from danger is the real Kshatriyas. In spite of his Kshatriya lineage, if anybody fails to save the endangered one, his Kingdom and life is useless, and he is not fit at all, to be addressed as a Kshatriya.[17]

The justification of these constructive activities is, in the first place, the sense of responsibility and duty, and secondly, the fear from unpopularity and from the displeasure of Brahmanas and gods who may punish him and cause his destruction. The kings would do these benevolent works by the application of the twofold standard of government—merger of king's interest in those of his subjects, and the treatment of them in the spirit of a relative, e.g., son.[18]

The heroes of Kalidasa are greedy conquerors, as for example, Raghu who overthrows almost all the princes of India and mercilessly kills some of them.[19] Yet, it is the philosophy of Kalidasa that as a righteous conqueror (*Dharamavijayi*) the king should adopt the middle course policy—a policy, neither too severe, nor too liberal. His heroes defeat the neighbouring princes, but in most cases instead of killing them they follow the *Mitrata niti* and return the dominion to the princes[20] on the condition that they will pay tribute and render allegiance. The justification of such a policy are various, *viz.*, fame,[21] to fill the treasury with the tributes of the defeated, and to observe sacrifices with it,[22] and safety.

The hereditory right of kingship is not enough of security of the king, for these four things are essential; these are, strong military force, efficient and reliable espionage, efficient advisory body, and popularity. The military force should include the foot, the horse, the elephant[23], and the Chariot.[24] The members of the advisory body of the king are ministers. Even when the king is absent from the Capital it is the body of ministers that carry on the administration.[25] The importance of popularity is not in anyway negligible. Popularity depends on personal character and the sense of responsibility. The king should be personally good and dutiful. He should remember that his wealth is to donate to the rightful candidate, that he should have control over his tongue, that he conquers only for fame and not for enjoyment, and that he marries only for the sake of heir.[26] The king can win over the sentiment of his subjects by discharging punishment according to the depth of their crime and awarding them according to their ability.[27]

But kings are not all good, and as such, the state occasionally has to face troubles. Bad monarchy is dangerous, both internally and externally, internally for mal-administration and externally, for providing opportunities of foreign invasion King Agnivarna is the typical example of a bad monarch. But Kalidasa does not say anyhting about the control of monarchy by the subjects in such a state. The position of the king by virtue of his hereditary right is beyond the control of his subjects. But there is one element of protection of the rights of the subjects, that is the ministerial control. The ministers discharge the royal functions according to their joint discretion, of course, not overthrowing the king. The role of the monarchy in such cases becomes insignificant.

RECONSTRUCTION OF SOCIETY THROUGH HINDU SOCIAL INSTITUTIONS

By HARISH CHANDRA, M.A.

The Hindus have, almost abandoned the institutions which have accumulated multidimensional experience and an age-long profound social thinking. Some regard them to be the 'deadening mass of traditions and formalities' causing social stagnation. The chief social institutions are dharma, family, marriage, varna and ashrama etc. A life lived according to these institutions, is a dead thing at present. These institutions, nicely carved and adapted to an agro-feudal back ground, became a misfit for the industrial social set-up. In fact, industrial social intercourse is no society. Whatever societal in it, is ancient. The industrial social set up is only a productive process. It has not yet, evolved a consistent social organisation anywhere in the world. It is the ancient and the traditional which has sustained the social fabric. The doctrine of laissez-fair has proved to be a curse to the industrialized societies. Society, definitely, implies the we—feeling and a pursuive behaviour pattern by individuals. These two essentials are the very care of Hindu social organisation. If the wisdom, of our social heritage is, somehow, mingled with the ideology and practice of scientific democratic socialism, then we have a social synthesis, needed for the reconstruction of the present day social order and its future course. The old order, which collapsed, has not been replaced by a-new-value-pattern social order. We have to study our past, as stressed by P. N. Prabhu, to grasp the fundamental psychology behind the present problems ! What has been able to stand the test of time for ages past and is yet alive and has been regulating the social order till this day have at least some merit in it which is worthy of examination (Hindu Social Organisation). At the present stage of socio-political evolution of the human race, besides the world-wars, we have the experience and achievements of laissez-fair economy, dictatorial regimentation, liberal democracy and socialistic construction. The contemporary age has witnessed the application and experiments of so many isms, dogmas and doctines over the human field. Our times do not lack the wisdom or experience to evaluate the past in the light of the present. The social institutions of the Hindus have been the outcome of the necessities of life and have had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the advantage of deep social thinking behind them. The Hindu view of the individual and his relation to society can be best brought out by a reference to the synthesis and gradation of (i) the four-fold object of life (ii) the four-fold order of society (iii) the four-fold succession of the stages of life or the as'ramas. The whole of the life of an individual is, for the Hindus, a kind of shooting and self-discipline.

वाचनालय, गुरुकुल कांगड़ी

The Dharma

The word dharma is derived from sanskrit root 'dhri' meaning to hold together or that principle which is capable of preserving the universe. The social implication and meaning of dharma is a principle maintaining the stability of society. Dharma is designed to keep all creation free from any harm. Dharma is defined by Dr. Radhakrishnan as right conduct ; it stands for both the satya or the truth of things as well as the dharma or the law of evolution. Moral evil is disharmony with the truth which encompasses and controls the world. Our dharma-shastras do not establish dogmas by searching analysis of moral standards, happiness or perfection, but they were concerned with truth or dharma which excelled above everything else. The principle of dharma also includes the cardinal virtues, self-restraints, daya—compassion or love for all sentient life, and daya-gift or charity. In the 3rd century B.C., the emperor Asoka inscribed on stone in all parts, a list of virtues—compassion, liberty, truth, purity, peace, self-control, which resemble Gautam's list and the teachings of Mahabharat. Our dharma-sastras attached the highest importance to moral qualities. They are related to the duties common to all. P. V. Kane rightly suggested their main purpose to be a preactical one to guide people to right acts in every day life that each person had to do with reference to his station in society.

Another reason, for cultivating high moral qualities, is found in the doctrine of the goals or ends of human existance. From ancient times, there are four purusharthas,—dharma (right conduct), artha (economic interest), Kama (satisfaction of desires), moksa (liberation). There is a gradation of values. Kama is the lowest and dharma is the highest. Kautilya proclaims that artha is the most important principle of the three, as dharma and kama both spring from artha. Dr. Radhakrishnan says that the dictates of desires is not the law of human existence but dharma is complete rule of life which establishes the harmony of his whole being. The four ends of life point to the different sides of human nature, the instinctive and emotional, the economic and the spiritual. Man becomes complete human when his sensibility to spiritual capacity is awakened.

The entire doctrine of dharma is based upon the philosophic doctrine of 'One-Self' being immanent in every individual as stated in the words tat-tvam-asi. All existence is viewed from an unitary principle. This is the highest point reached in Indian social thinking, based on its metaphysics.' 'The eternal is manifested in the temporal and the latter is the pathway of the former. The Upanishads say, 'In darkness are they who worship the infinite alone. He who accepts both saves himself from death by the knowledge of the former and attains immortality by knowledge of the latter.' So the principle of dharma interlinks the individual with society. The Hindus do not attach great importance to the world for itself, but for its connection with the eternal.

What appeals to the social genius of the contemporary person is not the detail or the metaphysical content of the concept of Dharma, but the pattern of social thinking and spirit generating this dynamic principle. Dharma provides meaning and purpose to human existence in harmony with society. The four purushartas are interrelated and mutually balancing. Development of one or onesided stress, so evident in our day, is not feasible in a life led according to the principle of dharma. Of course, renunciation and dedication is there. We cannot have an integrated human society without an unitary principle. Fragmentary developments of societies create chaos and imbalance in the world order. The spiritual crisis and socio-politico-economic antagonisms of our times can be minimized by evolving a universal principle of respect for the fundamentals of human life.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have not yet succeeded in finding methods of sharing controls and to evolve an adequate technique of social co-ordination to the demands of Great Society. A principle like the dharma of Hindu social organisation, should become the essence of human civilization for the construction of human society on a planned level.

The Varnas

The Hindu sastra-karas have taken man into account as a social being with reference to four broad factors that influence his life and conduct. He is considered in relation to desha (region), Kala (time). Srama (effort) and Gunas (natural trends) which refer to the natural, inheritance, psychological equipment of man. The fundamental principle of division of labour assumed the form of the varna scheme; the Brahman, the Kshtriya, the Vaisya and the Sudras are organically related to the Body-Social. They serve the Divine purpose. In order to protect this whole universe, different duties and occupations have been assigned to the different varnas. During the vedic period, the varnas seem to have been open-classes,' more based on individual trends and less upon descent. Gradually they were distinguished and marked off and separated one from the other with different rights and privileges.

The tendency to create social classes is present in every society. In social affairs and social communications, individual differences are apt to give rise to privation of social classes. In modern industrial societies, we find social classes based on concentration of power, authority, prestige, and economic and material rewards. These aspects were alive to the original scheme of the varnas. They were based on co-operation and equality in accordance with social utility. Dr. Radhakrishnan regards the four fold scheme as democratic for the following reasons:

(1) It insists on the spiritual unity of all men.
(2) It makes individuality positive through the willing acceptance of obligations.
(3) It points out that all work is socially useful and from an economic standpoint equally important.
(4) It takes into account consideration for others.
(5) It makes the individual lead a life of simplicity and self-denial by accepting his place and work in society.

Though idealistic in origin, Dr. Radhakrishnan believes that it can still be helpful in some ways. The time has come when we should give up certain sentiments and attitudes regarding division of labour. Opportunities are so enormous in this era that striving for power, based on class-dignity, becomes nothing but 'Megalomaniac passion, terror, and extermination, a drama no one of us can watch any longer dispassionately'. (Karl Mannheim: Freedom Power and Democratic Planning). Without creating social distance, the Varna scheme accepts the principle of social utility as the basis of social classification. Are we indulging in utopian thinking? We can change, create, transform everything else except the human nature. This is the paradox of our age. The Sceptical attitude about human nature is so deeply rooted that it has become a dignified intellectual snobbery to dismiss ideals as utopian. The process of developing attitude is an educational task. Karl Mannheim aptly remarks, 'Every thing in society is an educational factor.' Education supplemented by objective situations, do change human nature. So a de-classed society as propounded by the Varna scheme, retaining the degree of importance of division of labour, is realizable.

The Ashramas

The Ashrama scheme deals with the problem of existence of man. During the course of schooling, he has to pass through four stages, called ashramas. The psycho-moral basis of ashrama are the four purusharthas viz., dharma, artha, kama and moksa. These purusharthas are concerned with the individual as well as the group. They define the activities of the individual and those of the group, and also

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

their inter-relation. Each of the ashramas is a stage of life in which the individual has to train himself for a certain period in order to qualify himself for the next.

The ashramas are four in number; the brahmacharya, that of a student; the grihasta, that of a married man, the house holder; the Vanaprastha, that of retired life in the forest, after abandoning the home; the Sanyasa, the life of complete renunciation of worldly relations and attachments. Of all the ashramas, however, the grihasthashrama is given a very high place of honour. It lends supports to the other three ashramas. It affords opportunities for the practice and cultivation of dharma, artha and kama. It makes direct contributions to society. The last two ashramas are largely neutral phases. Prof. Kapadia rejects the view that Hindus are generally unworldly. On the contrary Hindu thinkers, he believes, recognised and asserted categorically the reality of the universe and the immortability of the life of action. A long life on earth is wished for the pursuit of virtues. Hindu sages do not conceive of antithesis between the enjoyment of life and spiritual freedom. Together these constitute the fulfilment and enrichment of life.

The ashrama scheme provides full meaning to human existence and puts forth the best social pursuits before the individual. Rigidly demarcated ashramas cannot be accepted at present. The ashramas have, also, a psycho-physical basis. The nature of asramas differ alongwith the stages of growth and decay of human body and senses. The uncertainty of life made Vatsayana to say that one should follow dharma, Kama and moksha as they come to him at any period of life. Manu, also, advised that the real good of man consists of the harmony of the three purusharthas. His views, regarding the nature and function of the ashramas, may be valued by any one who wishes to lead such a life at present. In the last ashramas, we should put the substitute of social-abode in place of forest-abode. With the panorama of their experiences, an old man can be useful to society. If society takes care of its old folk and avails their services, it solves the problem of social isolation of aging people. Going through the obligations of ashramas, one may transform his life into a grand finale.

Family and Marriage

In spite of their harmful effect, family and marriage, are the two institutions which have sustained whatever is of perennial value in Hindu social traditions. The advent of industrial culture has destroyed some of the noblest social fabrics of many other countries, but Hindu society still preserves the ingredients of social integration. The basis of Hindu family is spiritual continuity. It has a joint nature. The real family life of the individual begins with marriage when he starts the activities connected with the home. The life in grihasthashrama is directed according to dharma. The individual has to perform his due dharma and Karma here without manifesting any sign of ownership. The ideal of the grihastha is not acquisitiveness, but charity. The family through its various Samskaras, becomes the nucleus of socialization of man, as writes P. N. Prabhu: 'The individual is, as it were, carried over from one experience to another in the course of his life, in order that he may feel himself more and more at one with the community of which he is a part.' Commenting over the importance of Samskaras, P. V. Kane observes: 'The Samskaras have been treated from very ancient times as necessary for unfolding the latent capacities of man for development and as being the outward symbols or signs of the inner change which would fit human beings for corporate life and they also tended to confer a certain status on those who underwent them.' (History of Dharma Sastras).

The Vivah-samskara implies complete socialization of the individual and his entry into the grihasthashrama. The Hindu marriage is conjoint with the family duties. Marriage, having a sacramental character, is obligatory for everybody. Those that have wives can lead a full happy life and fulfil the pitri-rina by having a son. Mating is regarded a serious social and personal duty to secure the best progeny for the family and to serve the needs of regulated social

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

behaviour. The pledge of consummation of social values taken jointly at the wedding is faithfully held by the couple throughout their worldly existence. If marriage is the highest expression of human love, the institution of Hindu marriage embodies it.

Conclusion

It will be a mistake to understand that the reactionary measure of the revival of Hindu social institutions is needed. Many factors in their structure and functions have gone out of harmony with changing situations. The minimum that we should absorb are their formal pattern and spirit. Having in view the needs and characteristics of the modern times, we should strive for the invention of social techniques to reconstruct and reorganise a big part of human society. We are confident that there is something of perennial human value in the foundations of the Hindu social organisation.

———:O:———

AUDIO-VISUAL AIDS IN MUSEUM

By SABITA RANJAN SARKAR

Introduction :

With the advancement of science and technology, people are no longer satisfied with conventional ideas and techniques. They want modification and variety in accordance with the scientific, cultural and technological advancement in all applicable fields. During the last few decades, tremendus progress has been achieved in different branches of science, the results of which are being utilised in different spheres of human activities. In this respect, museum display has also been subjected to modification. The motif of display of specimens in the gallery which in the past served mainly as sight seeing has now undergone a great change with the main objective of imparting visual education. For its successful implementation modern scientific and technological devices have been utilized in museum service in the name of audio-visual aids.

Definition of Audio-Visual Aids

In a technical sense, the display and explanation through audio-visual aids, is a term which designates the extensive use of devices such as motion picture, slides, transcriptions, recordings, dioramas, slide films etc., by museum personnels to transmit ideas and experiences through the eye and ear. In addition to the above materials listed, audio-visual items in museum service, includes also the use of charts, diagrams, models, exhibits, stereographs, photographs, etc. The display and explanation through audio-visual materials emphasizes the value of concrete or non-verbal experience in the impartition of general scientific importance of museum exhibits.

Types of audio-visual aids

The materials of audio-visual aids may be arranged under two large headings.

Audio-visual materials

Real

Reproduction of objects as found in their natural surroundings)

Examples :
1. Habitat group.
2. Dioramas.
3. Motion picture.
4. Museum exhibits.
5. Stereographs.
6. Recorded music.
7. Paintings.
8. Still photogrphs.

Abstract and intangible made real

(a) Graphic presentation of abstract ideas.

Examples :
1. Charts.
2. Graphs.
3. Photographs.
4. Motion pictures.
5. Stereographs.
6. Paintings.
7. Models.

(b) Pictorial concepts of abstract or intangible.

Examples :
1. Paintings.
2. Drawing.
3. Sketches.
4. Motion picture.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This classification of types is based on the function of the various materials in their important task of giving reality to museum exhibits. It may be noted that several types appear under more than one heading. For example, the stereoptical slide and the motion picture, as this is due to the adaptability of these media for recording and reproducing.

Audio-visual Display Method

A comprehensive display method with audio-visual aids has two major phases:

First, the planning phase in which the subject matter and materials to be used are selected and arranged in systematic order after the materials and equipments are made ready; and second, the gallery phase in which the museum personnels observe its effectiveness in faithful representation of the planned subject and its appeal to the visitors.

The planning phase of a method of display involves many important decisions. The aim or goal of display must be determined. The unit of display must be organised. Techniques and devices are also to be derived. In the display with audio-visual aids, the words technique and device are to be taken into account seriously. Webster defines the two words as follows: Technique, "The form commonly used for method of execution in art," device, "That which is devised or formed by a design; a contrivance; an invention; a scheme."

Modern Trend Of Museum Display

In comparison to the mode of display that has been adopted at present, the specimens in museums conforming to the early mode of display are exhibited with little reference to each other and the explanation to the exhibits are confined to written labels often couched in tecchnical jargon which results in a lifeless arrangement instead of satisfying portrayal of the living world. These conditions have given way to the growing emphasis on the educational function of museums.

The basis of museum technique is the employment of authentic three dimensional objects. In the present context between the different media for imparting visual education, these three dimensional objects are rather happily placed with interpretation by guides or by means of labels, models, charts, diagrams, etc., and further with their having been arranged round themes or problems to provoke visitors to think or to stimulate them to look for answers to problems which they would have otherwise ignored.

For example, the specimens of Natural History Museum may be displayed to make people understand nature and its relation with animals and with plants. For successful representation, the specimens are now displayed in the light of their ecology, biogeography, genetics and ethology. The use of habitat group to illustrate the kind of environmental setting amidst which animals live and the employment of dioromas made to scale, add to the realistic effect of museum exhibitions.

Wild life and natural vegetation are regarded as national assets. To protect them from steady deterioration, various schemes and campaigns have been launched in India. To make them successful, the importance of nature and natural resources are to be made clear to common people whose role is of supreme importance in this respect. Here is the opportunity for museums planned along modern lines to support the movement on behalf of the defence of nature and natural resources. Discussion has been made here to show how the modern audio-visual display can effectively be utilized in museum to make people understand the particulars about the Indian lion which is on the verge of extinction so that they may appreciate the argument in favour of preserving them.

The museum display may be said to be a more or less permanent exhibition. Among so many exhibits in Natural History Gallery to attract the attention of visitors more specially to a particular exhibit (Indian Lion here) poster, one of the audio-visual items of museum service plays a dominant part. It may be designed round it to convey its significance of display through the most effective combination of picture, colour and lettering also with an appropriate title.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In the old conventional display, the stuffed lions were exhibited in the show-cases and their explanations were only confined to written labels. But at present in the gallery, the stuffed lion is displayed against the natural background which is created with the help of habitat group. In absence of specimens, models are exhibited. The model is a replica—a representation in miniature of an object to be displayed in the gallery. Natural environment is also created in the gallery with the diaromas. The diaroma is a model of scenic representation in which a painting partly transparent is seen from a distance through an opening to give a three dimensional effect. Besides diaromas, natural environment may also be represented by photographs (still) and stereograph displaying side by side in proper places of the showcases. The photographs are lifelike representations of world about us on celluloid sheet and their reproduction on papers. The stereograph is a picture made by a two-lens camera which conveys to the beholder the impression of reality. Stereographic visual aid is the artificial creation of a third dimensional by which perspective and soliderity are secured.

For wider publicity to a particular item, picture post card may be used. It is a post card having the printed picture of museum exhibits of special importance. The treasures of great museums have been given wide publicity through their use. Remote people and places have become familiar through their instrumentality.

To make people aware, how rapidly the lions are vanishing, census figures of lion that have been taken from time to time may be furnished. This data may be exhibited in the form of graph which is usually a line or bar or a series of these arranged so as to convey certain spatial or numerical relationships.

To satisfy the curiosity of visitors to know places where the lions are found in India, map may be displayed in the gallery with the appropriate places marked distinctly.

Besides these, the other important points on lions viz., their habit, habitat, diet etc., may be shown by slide, slide film, motion picture etc. The motion picture is a series of photographs taken on a strip of film which when introduced into a motion picture projector give the impression of life and motion. Also by oral explanation, it is to be made clear to the visiting public the integral relation between plants and animals, the necessity of preserving wild life and how effectively they can be perserved.

Thus from the habitat group and dioramas reproducing biotopes and main animal and vegetable species in the gallery, people may learn about their characteristic habits and the environmental setting in which they live. From the stuffed specimens, models, maps, still and motion pictures they may know about their physical features, distribution, habit, diet, etc. Oral explanation will convince them of the reasons of their protection and how effectively they can be protected. Being aware of these facts they will be able to realise their value and importance, and only in that case, they will be able to appreciate the arguments in favour of protecting them.

Scope of Audio-Visual Display

The problem of interpreting exhibits to the non-literate is a difficult one. For such interpretations, labels are generally used and sometimes guide-lecturers guide the visitors round the galleries explaining the exhibits. These labels and oral explanations are not always sufficient for helping illiterate person to understand the real significance of the exhibits. Sometimes explanations are overcrowded with scientific terms and they can not even form the faintest idea about the ecology, habitat, and biogeography of the specimens from the oral explanations given. Because most of the people cannot see in person, the seals for example, in their natural environment or marine life on the ocean floor, no explanation, however lucid, can help them in the least. Again

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

there are some objects or types of phenomena where a scientifically simplified replica is even better for instructional purposes as the original may be too complex, too big or too small. To overcome this difficulty, audio-visual aids have great value, as it has the capacity to captivate interest in several ways for several reasons some of which are mentioned below :

1. Sensory aids are generally found to be attractive as they have the capacity to represent faithfully by various methods and processes, the thing represented, simultaneously to more than one human sense.
2. Because of the more faithful and comparatively fuller representation than through other media, the visitors can understand easily.
3. Whenever a representation is ideal and is easy to understand, visitors focus their entire attention on the subject, and thereby their curiosity is immediately satisfied.

The adoption of audio-visual technique is most suitable in India where there are so many languages. The guide-lecturers engaged in guiding visitors do not generally know many languages. But the museums are being visited by innumerable people who belong to different language groups. In that case many visitors may not follow the lecture of the guide. But if slides and motion pictures concerning the specimens are shown to the visitors, they may at least guess with a reasonable degree of correctness, displaying the specimens in the galleries, whether they may follow the lecture of the guide or the commentary on the film or not. It has another utility also. The non-literate visitors generally do not like to join in meetings and discussion, if they are prevailed upon to join at all, they may not even follow the topic. Even if they follow some questions may crop up in their mind but in most cases, they do not have sufficient boldness to put it up in the presence of a gathering. As a result his curiosity dies an unnatural death then and there for want of sympathetic attention. In his case also audio-visual aids have the advantage of satisfying the non-literate as the audio-visual programme is chalked out in such a way that the preliminery questions that may crop up in the mind of common visitors may be answered in the programme itself without asking.

But while it is an undisputable fact that visual education is more effective even without its verbal counterpart than only the latter without the former, yet, it should be borne in mind that visual instruction is an integral part of general instructional activity. Visualizing cannot be separated from verbalizing. A picture of an unknown animal does not tell the whole story. Many questions regarding its habits, diets, extent of beneficial and harmful effect to human beings, etc., remain to be answered which can be done by oral explanations only. Besides, pictures, maps, charts, graphs, etc., are more or less abstract representations. For thorough understanding they require explanation, particularly when the visitors are non-literate. In short, the relationship of verbalizing and visualizing are reciprocal, each supplements and reinforces the other.

All these facts go to show that the museums can serve as important centres for imparting visual education provided the exhibits are arranged in the light of modern methods as opposed to the conventional ways, and as such audio-visual aids play a major role in this connection.

ONGE OF LITTLE ANDAMAN

Sixty-five miles from Port Blair lies little Andaman, the home of the Onge tribe, who are still living in prehistoric age and, in many respects, behave as paleolithic men of centuries ago.

These people are some of the remnants of the most ancient human race still surviving in any part of the world. They have been little affected by contact with other people. Until recently, they were completely ignorant of any use of metal tools and even today use stone chips for shaving.

The Onge as a human group are on the verge of extinction, and but for the fact that the Anthropological Survey of India undertook a study a few years ago the Onge tribe perhaps would have vanished, unheard of and unknown to modern man.

The Onge tribe has not yet been exhaustively studied, but several years' work has now yielded a first glimpse into the characteristics and different aspects of their life.

When a survey was undertaken a few years ago, the interior of little Andaman was little known and it was considered dangerous to violate it owing to the hostile attitude of some of the Onges. Apart from the Onge, other tribes in the Andamans are Jarawa and Sentinelese, who are hostile and at times ferocious. In fact, due to their hostile attitude, Jarawa and Sentinelese have not yet been contacted.

It was only in 1952 that a party of anthropologists and other technical personnel succeeded in what proved to be a difficult trip through virgin forests from the east to the west coast of little Andaman and established contact with the tribe.

Of Negritoid stock, the Onge is stoutly built, short-statured with a thick crop of black hair. Agriculture is unknown to them. Hunting, fishing, wild fruits, edible roots and honey supply them with food. They drink from nautilus shells and the only garment worn by little Andaman women is a scanty grasslike apron.

Nomadic in habit, the Onge move about the island, spending short periods at a particular spot. For shelter during their stay they construct communal huts, mainly situated along the coast. These huts are permanent in nature and, in batches, the tribe move from one hut to another. Inside each communal hut are a number of beds generally equal to the number of families. Small fires are kept burning day and night near the beds. The Onge require nothing more against the cold.

A yongman of the Onge tribe is see hunting fish with bow and arrow

For the Onge, the communal huts have a different use also. The Onge custom requires that the dead should be buried under their beds in the hut. This, they believe, would compel the spirit of the deceased person to remain close to the living as a protection, the idea being that the spirit

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cannot wander far from the bones of its former body.

Food Habits

The most remarkable thing about the Onge's food habits is that they refuse to take salt. Although living on an island surrounded by salty water the tribe consider salt as unhealthy and disgusting.

At times sardines are plentiful inside the coral reefs round little Andaman, and both men and women of the tribe go on fishing. While the men literally hunt the fish with bow and arrow, women do this with two small nets used together. With outrigger canoe the men sail out in the open sea and hunt dugong and turtle with wooden harpoons.

Food considered healthy by the Onge include honey, several succulent roots and fat of turtle. Pork, which is available in plenty, forms a delicious dish for the tribe. Intoxicating drink is completely unknown in little Andaman and the tribe is still ignorant of distilling alcohol.

Lost Pottery

Evidence was gathered by the survey that the tribe, until a few years ago, had indigenous pottery for cooking, but it is no longer in use today. During the last war, quantities of empty petrol drums were washed up the Andaman shores. They were found in such numbers that the Onge have not yet used them all up.

They sawed each container in two cylindrical halves, and used them as cooking pots. The result was that within a few years the fragile ancestral pottery of the Onge disappeared altogether and probably will never again reappear.

Body Painting

Like many other primitive tribes, the Onge like to embellish their bodies with an endless variety of geometrical designs. After a full meal, their only activity is body painting, performed by the women on the skin of their peacefully sleeping husbands.

Designs change from time to time, according to the women's inventiveness. Refined clay and ochre of various shades, mainly reddish, are used for body painting. These paintings however have deeper significance than merely satisfying asthetic sense. They are believed to be a protection against all kinds of sickness.

Fond of Dogs

The Onge, by the way, are exceedingly fond of their dogs. These animals are believed to have been brought first to little Andaman by Burmese smugglers. During the thirty years or so since their arrival on this island, they have multiplied in alarming numbers. There are now on the island more dogs than men.

No accurate census of this tribe has ever been taken but estimates put it down as about 200.

One of the purposes of the survey, however, was to have a census of the tribe, a job which was not easy by any standard. A special hurdle in counting was posed by the Onge's habit of changing their names from time to time.

Another difficulty was posed by the Onge custom of adopting children. This shifts many of them from one family to another and adoptive parents invariably claim them as their own offspring. The parents themselves who are ignorant of numbers, not infrequently forget how many children they have, who these children are and where they are located. An Onge cannot count beyond three.

Short Span of Life

The Onge die young, especially the men. The survey established that the majority of them succumb before reaching the age of 20 and most of the survivors die between 20 and 40.

The short Onge span of life is threatening the extinction of this tribe. The need among them is not so much the spread of education and social uplift, as the arrest of the decline in population which has been most alarming.

To ensure steady supply of food and stabilise their economic life, coconut plantations have been started in little Andaman a few years ago. Other fruit-bearing plants are also being supplied to the tribe.

The survey found that the tribe still retain enough vitality to be rescued before they finally vanish and the success of the measures now being undertaken will ensure the continued existence of one of the oldest specimens of the human race.

FROM ARCHAIC TRADE TO MODERN INDUSTRY
FISHING COMES OF AGE

ove and off the 3,000 mile coastline of India e oceans abound in fish. Yet this inexhaustible ource of food and wealth long remains largely xploited, and the one million fishermen, ving off the sea, remained poor and backward, heir traditional skill and dogged determination ever bringing them the rich reward the sea herwise promised.

Much ahead of dawn every day they launched heir ancient craft on the murky waters. All day, hey battled casting and hauling, and casting again, and when they turned back with weary ims, and an indifferent catch, there was still ork to do: the catch had to be marketed and uickly.

With little organisation and no scientific ethods, the fishermen communities along the oast had eked out a precarious living and the ountry remained deprived of a rich source of ood—and a richer source of earning foreign exchange.

In 1944, the first efforts were made to organise the industry on scientific lines and increase roduction of fish by mechanisation of fishing oats, modernisation of fishing gear and introduction of better methods of handling, processing nd preserving the catch.

Symbolic of this was the setting up of the entral Institute of Fisheries Technology in 957, with its headquarters at Cochin.

With the help of F.A.O. experts, the Institute started investigations into designs of suitable oats and gears; net preservation; and development of improved design of fishing boats. For ptimum efficiency, investigations on suitability of specific types of marine engines for different kinds of fishing boats and design of mechanical appliances for fishing were also undertaken.

To this Craft and Gear Wing was soon added the Processing Wing in 1958. The Chief of the Technology Branch of the Fisheries Division of F.A.O. drew up plans with the main objectives of investigating problems related to handling, processing, storage and transport of fish and fishery products. The Processing Wing also set itself to find out ways and means of economic utilisation of all available surplus fish and fish waste and to work out commodity standards and grades for various fishery products.

Canned fish food is tested for vacuum pressure at the Central Fisheries Technological Research Station, Ernakulam

EXTENSION SECTIONS

No research is worth the effort if the results of research in the laboratory or workshop do not reach the industry. An Extension Section was, therefore, organised in 1961 to transmit important findings to the industry and, where necessary, give guidance and advice. Demonstration of improved methods of processing of fish and fishery products, fishing methods and construction of fishing boats were given both for State Fisheries Departments and private parties connected with the trade. The Institute also provided facilities for advanced training in the various fields.

Outstanding achievements of the Institute, wihch have benefited the trade, include designs of otter trawl for shrimp fisheries, six designs of fishing boats ranging from 25 feet to 50 feet in length, improved methods of production of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

semi-dried prawn, improvement in the quality of frozen products for export and finding of preservatives which extended the life of the product by several months.

At present the Institute is devoting itself to such important studies as Canning, freezing and cold storage of fish, dehydration of fish and shell fish and improvement of existing equipment for fish processing. The success of the venture can be gauged from the fact that at the end of the Second Five-Year Plan the value of fishery products exported from India amounted to over Rs. 6 crores. It is expected to go up to Rs. 10 crores, at the end of the Third Plan.

The Institute with growing functions has naturally to expand. Apart from one unit set up in Bombay in 1958, with a pilot plant for the manufacture of fishmeal, two sub-stations have been set up recently, one at Kakinada (Andhra State) on the East Coast and the other at Veraval (Gujarat State) on the West Coast.

A processing Unit has been established at Calicut. Another sub-station is to be set up on the East Coast to tackle problems relating to inland fishing gear.

From the archaic trade it was, fishing in India is steadily developing into a modern industry, and the sea has already started yielding the 'live' wealth that remained unexploited for so long.

———:O:———

GAMBLING AND RECREATION IN THE UNITED STATES OF AMERICA

By SHAMSUDDIN

No one who sets foot in the United States need do so as a stranger, for the United States is a nation made up of people of many nations, colours and creeds. Recently, the United States has become a tourist attraction. In fact, it is a vacation wonderland. Cities in the U.S.A. differ to such an extent as to offer visitors from abroad inducements to visit as many of them as possible. Each city has its special character. Certain cities are famous for industrial production or agricultural product while others have grown in name for having recreation or tourist attraction. But no city can be compared with Las Vegas, the gfarish gambling capital, which has open gambling luxury hotels and lavish night club entertainment.

Glittering Lights

As the State of Nevada legalizes all sorts of gambling, Las Vegas has become the world's biggest centre of gambling. Glittering lights are the trade mark of Las Vegas. There the Fremont hotel has the world's largest gaming rooms. The Golden Nugget is another centre of gamblers.

Statistics

According to the latest statistics available, 9.5 million people visited this place last year. The total expenditure incurred by them came to $138 million. Besides this expenditure, they lost $115 million at the tables and wheels and in slot machines. Thus, it is evident that Las Vegas provides the greatest concentration in the United States.

Going down one of the long runs in the ski Bowl

Digitized by Arya Samaj Foundation Chennai and eGangotri

Recreation

Besides gambling, boating, swimming and fishing at scenic lakes—Tahoe, Mead and others, exploring and sight seeing, state parks, camping spots, many fine hunting, skiing and winter and water sports are some of the famous recreations in the U.S.A.

Dazzling Casinos

In Las Vegas, the whir of roulette wheels, and shiny army of slot machines, luxurious hotels, chorus lines and top entertainment stars make up the tourists eye of gambling. There gambling is a business open and legalized and rigidly controlled by the State. It operates on sound business principles and it owes its tradition of liberal attitudes by the people.

Reasons For Existence Of Gambling

There gambling has existed because it has been an economic success, both from the point-point of its effect on general business and from tax revenue.

Nevada is a state which has the smallest population in the U.S.A. and due to its small population, Nevada is perhaps the only State where gambling would be relatively easy to control And last of all the liberal attitude of the people still prevails.

Attitude of Liberality

The attitude of liberality is not difficult to understand. From territorial days gambling had flourished in this frontier state with few problems. No town was complete without its casinos.

Gambling a Big Business

When tourism became popular, it was inevitable that the attraction of open gambling would make Las Vegas a "must stop" place. Casinos began to enlarge and multiply. Luxury hotels with elaborate theatre restaurants and swimming pools sprang up almost overnight in Las Vegas.

How Gambling is Controlled

The State of Nevada has a definite policy to control Gambling. In 1945 the legislature delegated licensing power to the Nevada Tax Commission. In 1955, the legislature created a three man Gambling Control under the Tax Commission, empowering it to sereen all applicants for licences, investigate their back-grounds, appoint police casinos for infractions of gambling rules and to recommend denial or revocation of any license for any cause deemed reasonable by the board. In this way there is three-way supervision of gambling. City and country boards have entirely independent licensing and control over gaming within their jurisdiction.

It is a lot of fun to relax and fish in rivers and streams

Tax on Gambling

The States first direct tax on gambling was passed into law by the 1945 legislature, which imposed a levy of 1 per cent of gross earnings. In 1947 tax was doubled to 2 per cent, and a sliding scale table fee added. All gambling tax revenue is deposited into the general fund, from where it is channelled into various appropriations. Thus gambling is most popular in the states.

Fishing

Fishing has been a great source of recreation in the states. United States' rivers, streams and lakes abound with catfish and it is famous worldwide for its gigantic Lahontan Cutthroat generally found in Walker, Pyramid and Summit Lakes.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There is year round fishing on major lakes. River and stream fishing seasons range generally from May through October. Fishing enthusiasts can find ample facilities in virtually every part of the country. Salt water fishing generally is unrestricted, fresh water fishing is limited as a conservation measure. The revenue from the sale of some 20,000,000 fishing licences, nearly $40 million annually, is used to restock streams and lakes and for other conservation purposes.

Boat racing in Lake Mead being the world's tallest Dam—Hoover (Boulder)

Water Sports

The United States has nearly 50,000 square miles of water area and a coastline of about 12,000 miles. Thus, there are plenty of opportunities for swimming and boating. Even in the winter it is warm enough in many parts of the country to go for swimming. The State of Florida, which is warmed by the Gulf Stream, is a popular winter resort. Vacationing Americans spend about $1 billion there annually.

Boating

Boating is a popular sport. Boating enthusiasts from all parts of the world are finding that boating is very popular. Speed boat racing has focused international attention on Lake Tahoe and Lake Mead. At least four regattas are held in the Lake Mead Recreational area each year, virtually in the shadow of Hoover dam, the world's tallest at 726.4 feet!

Water Skiing

Water skiing, which was invented by the French, is now considered one of the fastest growing sports in the United States. There are fine beaches just off paved highways around the entire 74-mile circumference of Lake Tahoe, whose sandy shores in Douglas, Ormsby and Washoe counties are among the nation's finest. The sport is a 12-month one on the waters of Lake Mead where skiers find the warm water enticing. One of the features of water skiing is the 75-mile race held each September on Lake Mead. But if you want something more relaxing, there is always the quiet pleasure of sail boating too.

Thus, the United States of America offers great contrast in recreation, none can deny.

There are two extremes followed by the Americans in their means of recreation where at one end they can go to the extent of gambling at the tune of millions of dollars, they have nobler and more useful means of recreation such as swimming, fishing, skiing, etc. Thus Americans know how to make the best use of their time, money and leisure and at the same time have lot of recreation, so essential for the life of man!

DEMOCRATIC FAITH OF THOMAS JEFFERSON

By R. C. GUPTA

Jefferson is the central figure in American history and, if freedom and democracy survive in our generation, he may yet prove to be the central figure in modern history. He was not only one of the Founding Fathers, the source and inspiration of much of American democracy and of American nationalism; he was, too, a world figure. Certainly, no other public man contributed so richly to so many chapters in modern history.

He was, of all the Founding Fathers, indeed of all the men of the eighteenth century, the most outstanding. Both in his public and his private life he addressed himself continuously to problems of permanent and universal interest. What he wrote and what he did—about the nature of society and of government, the relations of man to government, the meaning of republicanism and democracy, the significance of education and of toleration and of experimentation to democracy—is as relevant today as it was in the eighteenth century. It is notwithstanding profound changes in politics and economy, as relevant for France, Germany and Italy in Europe and for India in Asia as it was for the young United States.

Nor has any other American revealed himself or illuminated the history of American people more fully in his writings. Even his public writings constitute a record of incomparable importance: imagine American history without the Declaration of Independence, the Virginia Statute of Religious Freedom, the Ordinance of 1784, the Bill for the Diffusion of Knowledge, the Kentucky Resolutions, the First Inaugural Address, the Louisiana Treaty. Jefferson furnished both the soil and the seed from which many of the American national institutions grew. His versatility is by now a familiar, almost a hackneyed, subject. He was a scientist and an inventor; he was the greatest American architect of his day; he was a farmer, experimenting endlessly with crops and stock; he was a man of letters; he was a bibliophile, collecting not one but one of the greatest private libraries in the country; he was something of a philologist; he was a student of the classics—as who was not in that age—and of the Bible, compiling his own for good measure; he was a lawyer and a collector of law reports.

Whatever he learned, whatever he knew, fitted into and enriched his philosophy. For of all American statesmen, Jefferson was the most philosophical. One abiding purpose runs through his whole life, one pervasive philosophy dominates it. He insisted that man should be free and he was persuaded that, once free, mankind would progress towards happiness and virtue. He was enraptured with the vision of mankind free from political tyranny, from the bondage of superstition and of ignorance, from the sins of the past, from poverty, from war. He had an eighteenth-century faith in the perfectibility of man, but it was not merely a visionary faith; it was faith rooted in the reality of New world experience.

Jefferson's republican convictions were formed early in his life, upon what was then the Western frontier; when he was only twenty-two years old they seem to have been crystallized by a speech of Patrick Henry in opposition to the British Stamp Act. From that time on he was leader in every movement for freedom and independence, usually somewhat in advance of other "rebels," finding what he said or wrote disapproved of at the time, only to win later assent. He developed with the experiences which enlarged responsibilities gave him, but it was uninterruptedly in one direction. Political expediency may have caused him to deviate on special points, but there are few men in public life whose course has been so straight. Natural sympathies, actual experiences, and intellectual principles united in him to produce a character of singular consistency and charm. He was that rare person in politics, an idealist whose native faith was developed, checked and confirmed by extremely extensive and varied practical experiences.

Although Jefferson's political ideas were greatly influenced by many political thinkers, he gave his own orientation to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

their concepts, and there was something distinctive, something original, in his political principles. What was new and significant was that all his ideas were set forth in the context of American circumstances which the American mind was prepared to work upon. He was as profoundly convinced of the novelty of the **action** as a practical "experiment"—a favourite word of his in connection with the institutions of self-government—as he was of the orthodox character of the ideas as mere theory.

Jefferson, as a radical democrat, used the language of the time in his assertion of "natural rights" upon which governments are based and which they must observe if they are to have legitimate authority. What is not clear is that whether the word **moral** can be substituted for the word **natural** whenever Jefferson used the latter in connection with law and rights, not only without changing his meaning but making it clearer to a modern reader. Not only does he say : "I am convinced man has no natural right in opposition to his social duties," and that "man was destined for society," but also that "questions of natural right are triable by their conformity with the moral sense and reason of man."[1] In a letter to de Nemours, Jefferson developed his moral and political philosophy at some length by making a distinction "between the structure of the government and the moral principles" on which its administration is based. It was here that he said, "we of the United States are constitutionally and conscientiously democrats," and then went on to give the statement a moral interpretation. Man is created with a want for society and with the powers to satisfy that want in concurrence with others. When he has procured that satisfaction by instituting a society, the latter is a product which man has a right to regulate "jointly with all those who have concurred in its procurement." "There exists a right independent of force" and "justice is the fundamental law of society." It means that man is social by nature and that his sociable and co-operative nature has given birth to society ; at the same time it signifies that his role in the regulation of society remains significant and equal with his other fellow beings with whom he co-operates in forming a society.

The will of the people as the moral basis of government and the happiness of the people as its controlling aim were so firmly established with Jefferson that it was axiomatic that the only alternative to the republican position was fear, in lieu of trust of the people. Given fear of them, it followed, as by mathematical necessity, not only that they must not be given a large share in the conduct of government, but that they must themselves be controlled by force, moral or physical or both, and by appeal to some special interest served by government—an appeal which, according to Jefferson, inevitably meant the use of means to corrupt people. Jefferson's trust in the people was a faith in what he sometimes called "their common sense and sometimes their reason. They must be fooled and misled for a time, but give them light and in the long run their oscillations this way and that will describe what in effect is a straight course."[2]

It is not to underestimate Jefferson's abilities as a practical politician when we say that this deep-rooted faith in the people and their responsiveness to enlightenment properly presented was a most important factor in enabling him to effect, against great odd, "the revolution of 1800." It is the cardinal element bequeathed by Jefferson to the American tradition.

On general principles, Jefferson knew that possession of unusual and irresponsible power corrupts those who wield it; the officials are, after all, human beings affected by ordinary weaknesses of human nature, "wares from the same workshop, made of the same materials." Hence they were to be continually watched, tested and checked as well as constitutionally limited in the original grant of powers. He firmly stated the principle that "The excellence of every government is its adaptation to the state of those to be governed by it." It was on

ism in his mind that liberty could not be safe but "in the hands of the people themselves, and that, too, of the people with a certain degree of instruction."[3] If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be. The functionaries of every government have propensities to command at will the liberty and property of their constituents. There is no safe deposit for these but with the people themselves,, nor can they be safe with them without information. Where the press is free and every man able to read, all is safe.

In fact, he was no friend of what he called "sanctimonious reverence" for the constitution. He adhered to the view, expressed in the Declaration of Indendence, the people are more disposed to suffer evils than to right them by abolishing forms to which they are accustomed. It was the more important, accordingly, to recognize that "laws and institutions must go hand in hand with the progress of the human mind" and that institutions must change with change of circumstances brought about by discoveries, new truths, change of opinions and manners." Were he alive, he would note and scourge that lack of democratic faith which in the professed name of democracy, asserts that "ark of the covenant is too sacred to be touched" Jefferson saw that periodical overhauling of the fundamental law was the alternative to change effected only by violence and the repetition of the historic round "of oppressions, rebellions, reformations, oppressions...." There was one thing and that was unchangeable, and that was the "inherent and inalienable rights of man."

The point on which Jefferson's ideas have not been adequately represented is related to his belief that state governments are "the true barriers of our liberty," and his fear of centralized government at Washington—not that he did not have and hold with strong conviction the belief and the fear, but that the ideas with which he supplemented them have not received due attention. He attached much importance to self-governing communities of much smaller size than the state or even the country. He was impressed, practically as well as theoretically, with the effectiveness of the New England town meeting, and wishes to see something of the sort made an organic part of the governing process of the whole country. Division of every county into wards was first suggested by him in connection with the organization of an elementary school system. But even from his early service in the legislature of Virginia to latest years of his life he urged the adoption of his plan. In a letter written after he was seventy, he wrote, "As Cato concluded every speech with the words **'Carthago delenda est'** so do I with the injunction 'Divide the counties into ward."

While the first purpose of the division into small local units was the establishment and care of popular elementary schools, the full aim was to make the wards "little republics, with a warden at the head of each, for all those concerns, which being under their eyes, they would better manage than the larger republics of the county or states." They were to have the "care of the poor, roads, police, elections, nomination of jurors, administration of justice in small cases, elementary exrcises of militia." In short, they were to exercise directly with respect to their own affairs all the functions of government, civil and military. In addition, when any important wider matter came up for decision, all wards would be called into meetings on the same day, so that the collective sense of the whole people would be produced. Although the plan was not adopted, it formed an essential part of Jefferson's political philosophy. The significance of the doctrine of "states' rights" as he held it is incomplete both theoretically and practically until this plan is taken into consideration. "The elementary republics of the Republic of the Union would form a gradation of authorities." Every man would then share in the administration of affairs not merely on election day but every day. In fact, the heart of his philosophy of politics is found in his effort to institute the small administrative and legislative unit as the keystone of the arch.

Although Jefferson's plan, as said ear-

lier, was not adopted either fully or in part, he firmly believed, and it is true also, that democracy could not function successfully without providing a fair chance to the people to govern their own affairs. It is a tendency of every government, whether it is democratic or autocratic, or whether it rules crudely or politely, to be authoritative in due course of time. It dictates its rules, whether they are good or bad and the people are but to acquiesce in them. Government is another name for force and hence it must be displayed either against its own people or against others. And where there is force, there cannot be any justice. It is not only logically true, but history also proves it. Hence Jefferson, who had a thorough knowledge of the past history of mankind and of all types of government, became sceptical of every form of government as was Mahatma Gandhi. He had no sympathy with the ideas of moderate reformers, such as those of Voltaire and physiocrats, who favoured an enlightened monarchy, or of Montesquieu, who desired the adoption of constitutional checks and balances. He was even more radical than Locke. Like the latter, he was not only contented with the theoretical assertion that "governments derive their just powers from the consent of the governed" or that it is the right of the people to alter or abolish a government when it becomes destructive of the inherent moral or natural rights of the governed. Unlike Locke, he put forth a definite plan for the creation of "little republics" with a view to checking the restrictive character of government and providing an opportunity for the people to participate actually in day-to-day affairs of the government.

Jefferson was a firm believer in the rights of man, which he regarded as inalienable and unchangeable, because they express the will of the righteous Creator of man embodied in the very structure of society and conscience. He was not an individualist in the sense of the British laissez-faire liberal school. He believed that individual human beings receive the right of self-government "with their being from the hand of nature." As an eighteenth century deist and believer in natural religion, Jefferson connected nature and nature's God inseparably in his thought. He expressed that he had "no fear but that the result of our experiment will be that men may be trusted to govern themselves without a master. Could the contrary of this be proved, I should conclude either that there is no God, or that he is a malevolent being." We have to interpret these words literally and not rhetorically, if we wish to understand Jefferson's democratic faith. The connection of justice or equity with equality of rights and duties was a commonplace of the moral tradition of Christendom. He took the tradition very seriously. His statements about he origin of the Declaration of Independence are confined in what he wrote shortly before his death: "We had no occasion to search into musty records, to hunt up royal parchments, or to investigate the laws and institutions of a semi-barbarous ancestry. We appealed to those of nature, and found them engraved on our hearts."

Although Jefferson did not originate the Bill of Rights, he had much to do with its amplification and in securing that it be embedded in the constitution. His flaming insistence in the Declaration that men "are endowed by their Creator with certain inalienable rights" had much to do with implanting them in the fibre of American life. He knew well the centuries of struggle in which men had died fighting bitterly for these rights. Step by step they had been secured through the Magna Carta, the growth of common law, the "Petition of Rights," and the Declaration of Rights, until they reached full flower in the new republic.

In the hurricane of revolutions which have swept the world since the Great War men, struggling with the wreckage and poverty of the great catastrophe and the complications of the machine age, have in despair surrendered their freedom for false promises of security and glory. Whether it be Fascism, Nazism, Communism, or their followers, the result is the same. Every one they repudiate every principle of the Bill of Rights. And where they have triumphed the first security of men has been lost. The state is a form of servitude, of slavery—a slipping back towards the Middle Ages. Whatever these ideologies are, they have one common

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

denominator—the citizen has no inalienable rights. He is submerged into the state. Here is the most fundamental clash known to mankind—that is, free men and women, cooperating under orderly liberty, as contrasted with human beings made pawn of government, men who are slaves of despotism, as against free men who are the masters of the state. Hence Jefferson was eternally right when he held that liberty comes only and lives only where the hard-won rights of men are held inalienable, where governments themselves may not infringe, where governments are indeed but the mechanisms to protect and sustain these principles. Even for him, there was no religion apart from the service of humanity. Like Gandhi, he did not identify God with any deistic or theistic conception. His approach to religion was mostly humanitarian and scientific and he made it to subordinate to social utility. He called his religion a natural religion on the basis of which he advocated the "rights of men" and called them as inalienable and unchangeable. At times, he substituted the word moral for natural and called his criterion as the moral criterion for judging the validity of political institutions.

Though the terms in which Jefferson expressed his belief in the moral criterion for judging all political arrangements and his belief that republican institutions are the only ones that are morally legitimate are not now current, yet their implication still holds a firm ground. It is doubtful, however, whether defence of democracy against the attacks to which it is subjected does not depend upon taking once more the position Jefferson took about its moral basis and purpose, even though we have to find another set of words in which to formulate the moral ideal served by democracy. A renewal of faith in common human nature, in its potentialities in general and in its power in particular to respond to reason and truth, is a surer bulwark against totalitarianism than is demonstration of material success or devout worship of special legal and political forms.

———:O:———

INDUSTRIAL RELATIONS AND PRODUCTIVITY

By R. K. SWAMY

In a developing economy, launching on rapid industrialization, productivity commands a very predominant place. To make a conventional start in examining the relation between productivity and industrial relations, a definition of 'productivity of labour' would be justified. Productivity of labour is hard of definition or measurement in precise statistical terms, and an attempt in this direction would only be an approximation and average of what it really is. Productivity refers to the ratio between the total input of various investment factors and the end product, investment on labour being one of the investment factors. Productivity of labour is then the ratio between production and employment hours, that is to say, the contribution of labour to production. But productivity in general is the result of cumulative influence of the operation of a large number of interrelated factors such as technological improvement, type of productive process, training of the workers, managerial efficiency, etc. All these aspects do share in and contribute to productivity, but more than any other, it is intimately connected with and affected by the worker and his morale. Productive efficiency of an industrial unit is not synonimous with productivity of labour, even though the latter may immensely influence the former. Labour productivity is a very vital element in industry as the worker is the only link between 'machinery' and end-product.

Increased productivity and increased opportunity are now considered to be the main objectives of our planned development. On the subject of industrial relations, the Second Five-Year Plan observed that:

> "For the successful implementation of the Plan, increased association of labour with management is necessary. Such a measure would help in promoting

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

increased productivity for the general benefit of the enterprise, the employees and the community . . . ."[1]

The planners, needless to say, have rightly related 'increased association of labour with management' and 'promoting increased productivity.' 'Increased association of labour with management' clearly explains the whole concept of current industrial relations technique. Before going further, some explanation as to what is 'industrial relations' would be useful.

The term industrial relations includes both labour relations and human relations. Labour relations covers all group relations between the management and organised labour, and human relations refers to the direct intercourse between the individual workers and the management. It is very comprehensive, sprawling over all types of activities designed to secure efficient co-operation of manpower resources. Prof. Henry Richardson of the University of Leeds observes:

> "Unlike those (associations) of State, these (associations of men and women) are mostly voluntary in the sense that people usually chose their own job and place of work, though workpeople have little opportunity to select their workmates and necessity compels them to work. This is the field of industrial relations. How people get on together at their work, what difficulties arise between them, how their relations, including wages and working conditions, are regulated, and what organisations are set up for the protection of different interests, these are some of the main problems of industrial relations and indicate the wide scope of the subject. It is concerned with relations between the parties in industry, particularly with the determination of working condition."[2]

Industrial relations covers thus a very humane problem of the relations between the worker and his work place. It is wide in its scope as everything connected with the worker, his welfare and his manager is brought under its purview, making it one of the most important areas of concern in a rapidly industrializing world since the "establishment and maintenance of satisfactory relations in industry is one of the main social and political tasks in a modern community."[3]

After an analysis of the concepts, we shall try to evaluate the causes affecting to high and low productivity with reference to workers in India, and whether the productivity of Indian workers could be 'influenced' by the observance and employment of better industrial relations technique. Productivity of Indian workers are affected by several inter-related factors, broadly divisible into two groups: Labour-centred and Management-centred. Poor education, lack of skill and training, ill or indifferent health, constant labour mobility and poor trade unionism are the major subheads under the group of labour-centred causes. On the management side, the causes are poor appreciation of the human relations aspect, unimaginative and rigid managerial attitude, lack of management training and distrust of labour leaders. These causes are so obvious to the students of Indian economics that it obviates the need for any elaboration. We shall take some of the important areas and relate them to the low productivity of Indian working class.

The morale of the Indian workers in spite of the numerous seminars and legislation for improvement still remains shattered due to the non-recognition of the human side of the workers' life. It is not yet fully realised that the worker in an industry is not merely an industrial factor contributing to the processes of production, but also a social unit often moved by psychological political influences. It was an unfortunate day when labour was classified as one of the factors of production; technically, there is no objection to this usage, but taken to its logical conclusion, the workers came to be treated as merely manual power used to switch on and control the mechanical objects in the factories. At the hands of unimagina-

...re management, workers are only 'hands' with no 'mind,' one among the myriads of moving parts of the gigantic machines put in precision controlled productive processes. In reality, the worker is not just a factor or hand in the productive process, working for his wages. There are certain emotional and social urges in him to be satisfied which are often ignored in the processes of production. The spread of representative Democracy has also made the workers to look beyond the machines. The workers, as any other human beings, are conditioned not merely by the economics of sheer existence, but also by the sociology of right living. His fitness for work and morale is directly dependent on his aptitude for the work he is called upon to perform, but this aptitude is a product of the emotional and social urges operating within him. His morale and productivity are inter-active, influencing each other. 'Morale' itself is not purely an economic concept, but an economic concept on psychological foundations, and is 'relative.' To quote,

"When an employee has few frustrations, he has high morale ; when he has comparatively many frustrations or intense frustrations, he has low morale."[4]

Morale is understood to be a group phenomenon, which is generally true but not in its entirety. Morale is also personal and individual in the elementary, primary stage, culminating as it develops into a group phenomenon. Every individual worker has 'morale' that is primary and the group in which he works also possesses morale which is secondary. Individual morale, as much as group morale, are influenced by the satisfaction and participation of the worker in the aims pursued. The individual worker as observed earlier, is conditioned by social and emotional influences, the recognition of which is the principle of human relations. Good human relations in an industry mean the appreciation of the human needs of the worker, the absence of which would cause frustration and despondency resulting in low productivity. To bring out the best in the worker needs encouragement of the worker in his performance. The craving for self-expression and perfection and the longing for recognition are very essential, if frustration is to be stopped at the gates of industrial morale. Once it creeps in, it would play havoc inside the industry and the worker. When the management fails to take notice of the individual needs of the workers in the factory, treating them with scant regard, the workers resent the attitude as it humiliates and hurts their personal pride in themselves as human beings. The disinterestedness of the workers in the finished product would make them careless for the efficiency and quality of the final output. The lack of interest and despondency owing to neglect and non-recognition of the skill, contribution of the workers individually and collectively, and the complete dependence of the workers on the management for their welfare would affect morale and productivity of the workers. Enlightened self-interest should certainly induce the management to adopt good human relations techniques with a view to put life into the workers. The management may invite suggestions from the workers about improvement in work-procedure, product-improvement, and other such things and also offer suitable incentives to the best and workable suggestions. The management should make the individual workers realise that all their reasonable grievances would be sincerely looked into by the management and any special skill possessed by the workers would be recognized and rewarded.

Rewards and recognitions of the special skill of the worker is a part of good human relations technique. Such rewards and recognitions are known as 'incentives', which are now extensively used in promoting higher productivity. The incentives need not necessarily be money-based, and the experience in western countries is in favour of non-monetary incentives. A judicious combination of both material and non-material incentives as rewards and recognitions of special skills or contribution would be better suited to Indian conditions than purely material incentives and there are considerable grounds for favouring non-

4. Yoder, D., etc., *Handbook of Personnel Management and Industrial Relations*, MacGraw Hill, New York, etc., 1958, Section 114.

Digitized by Arya Samaj Foundation Chennai and eGangotri

material incentives in India. The point is how rewards and recognitions could be utilised to meet the emotional and social urge in the workers longing for recognition with a view to avoid frustration and low morale. On this ground, non-material incentives which would appeal to the emotional and social, rather than economic, sides of the workers are better suited. Especially in our country, with the social stratifications deeply based on non-economic grounds, material incentives may not make any notable contribution towards emotional and social satisfaction of the workers, and consequently to their productivity.[5] The purpose of the labour incentive is to make the workers give their best, and they will not be in a position to give their best unless they are aware what they are expected to give and for what. In large industrial units where functional classifications are common, the workers are seldom aware of what their particular work means to the totality of the industrial unit. The connection between the parts (of the work) to the whole (of completed production) is not always made known to the workers. It is, indeed, good human relations to let the workers know the significance of their individual contribution to the finished product. This is the duty of the management. The worker should know where he stands and what he contributes to the industry of which he is a part and the satisfaction of knowing the significance of one's work and contribution will, by itself, act as an incentive to higher productivity.

Coming to collective relations between the workers as a group and management, the problem that catches attention is the part played by industrial peace in productivity. The Second Plan has recognised that for the promotion of increased productivity, association of labour with management is necessary, and observed:

"The creation of industrial democracy is a pre-requisite for the establishment of a socialist society."[6]

Having accepted the philosophy of industrial democracy, the planners suggested councils of management, technicians and workers, the constitution of such councils being the responsibility of the management. Matters which fall in within the purview of collective bargaining were to be excluded from the purview of the joint councils. The principle of industrial democracy is based on the concept of self-expression and personality development of the individual; it is the recognition of the fact that productivity and industrial peace are dependent on the extent to which the human desire to take part in decisions concerning what one is doing. As long as the labour force is kept out of the management of the industry, the labour force will not develop any sense of participation in the productive process or in the results of the work. The feeling of identification with the work, and the pride over the quality of the finished product will be hard of achievement. Workers' participation with the management would certainly help to achieve these ends, which are not really ends but means to an end, the end being higher productivity.

The case for industrial democracy has been well advocated by Prof. G. D. H. Cole:

"I feel sure that most people who have to spend most of their time obeying orders they have had no part in framing will necessarily imbibe a habit of obedience which will enter into their attitudes not only as employed workers but also as citizens. Either that, or they will acquire an attitude of resentment that will both make them unhappy in their work and render them discontented and ill adjusted in their personal and social relations."[7]

The aim of industrial democracy is to ensure maximum co-operation between workers and management, to make the

5. For an illuminating discussion on this topic, please see Sri M. Mangaldas's radio talk over A.I.R., reproduced in *Commerce*, August 30, 1958, p. 362.

6. Second Five-Year Plan, p. 577.

workers participate and share in the responsibilities of management, and make them partners in industrial management, so that production and productivity could be maximised. The industrial partnership would minimise and eliminate the traditional polarisation of labour and management by generating harmony and understanding. A spirit of compromise and accommodation in place of conflict and distrust would result as industrial partnership provides facilities to labour and management to exchange their difficulties with a view to find out better solutions than the ones known hitherto. The opportunity given to workers in joint consultation would not merely make them responsible and responsive to the needs of the industry and appreciate the difficulties of management, but would also induce them to be co-operative. In such an atmosphere of understanding, harmony and co-operation, the productivity of workers would rise considerably. Matters like safety, welfare, discipline, personal problems, efficiency of production methods, new suggestions, working hours and distribution, etc., which directly or indirectly affect productivity, could be discussed and settled in industrial democracy, more amicably than under industrial autocracy, however, benevolent it might be, industrial autocracy here meaning management of industry by management alone.

There is no doubt that industrial partnership would influence productivity by eliminating distrust, disharmony and industrial conflict. Workers under industrial democracy, would become active participants and contribute their best instead of simply remaining in the aloofness of passive subordination. But the policy of industrial partnership may cause anxiety in the minds of tradition-ridden industrialists, unwilling to face the rapid and drastic change that has taken place in industrial relations. By whom and at what level this partnership is to be implemented has been a controversial issue on which Prof. Richardson observes :

"The initiative for successful joint consultation rests primarily on the management. Unless management is convinced of its value no scheme can succeed, and this conviction must permeate the whole of the management from top to bottom. It is not enough for the managing director to be keen if there is scepticism at lower levels."[8]

Prof. Richardson rightly places the burden of convening joint committees on the management and adds that the spirit of partnership should pervade all the levels of management. But it is very doubtful whether these assertions would be appreciated in this country where the industrial management is very apprehensive about the role of trade unions in joint consultation. Our ill-educated and uneducated workers are, of course, swayed by trade union leadership who might at the slightest provocation try to cause breach of industrial peace. Yet, industrial partnership could itself be an instrument of protection or shield against undue interference from the trade unions. The fear that trade union leaders might try to obstruct smooth management of industry by getting into and sabotaging joint committees is to an extent justified, but that would neither be widespread nor persistent. The workers would be quick enough to grasp the significance of industrial partnership and turn down spurious leadership. To quote Prof. Cole :

"The case for workers' participation in control is not a case for turning representative trade union leaders into either directors or managers of businesses, whether the businesses are privately or publicly owned. It is a case for giving every worker, at any rate after a short probationary period, the status of a partner in the enterprise for which he works."[9]

The complexity and scope of the employee participation in management was felt by the Government of India and a study team consisting of officials, employers and employees was sent by the Government to study the working of the scheme in Western countries. The Study Team made a detailed examination of the workers participation scheme in Britain, France, Germany, Yugo-

slavia, etc., and submitted a comprehensive report on their return.[10] The report recommended permissive legislation in this direction and made some suggestion for making this scheme a success which included (1) a sustained educational campaign, (2) close association of technicians, (3) reorientation of attitudes, etc.

The Indian Labour Conference[11] accepted the principle of workers' participation in management, but recommended its introduction in selected industrial units. A subcommittee appointed by the Conference has drawn up a scheme for Councils of Management. A seminar was also held on Labour Management Co-operation, in New Delhi in January, 1958, which made recommendations on the constitution and functions of joint councils.

The following are some instances of the Joint Councils of management set up already: in the transport engineering work-shops of the Madras Government, in Simpsons Group of companies in Madras; in all State-owned industrial concerns in Kerala State; and in the Hindustan Machine Tool Factory, Jalahali.[12]

The Third Plan observes that during the short period of its existence, the scheme of workers' participation in management has shown satisfactory and heartening results.[13] As an instrument for promoting a sense of belonging in the workers and stimulating their interest in higher productivity, the scheme will no doubt show far greater success when it takes deep roots in our industrial set up. At present, the Joint Management Councils have direct administrative responsibility in matters concerning workers' welfare, training and allied matter; its main functions being in the field of promoting mutual consultation between management and workers in matters affecting industrial relations.

The Third Five-Year Plan suggests that whenever a representative existing a Joint Management Council should come into being as a matter of course. In essence this means that workers' participation in management is to be organized in industrial units where there is a representative union. A representative union, therefore, is a condition precedent for the establishment of joint councils. It is now recognised that trade unions can play a usefully significant role in the industrial field. Where management has created a favourable environment for increase in productivity, trade unions may contribute to higher productivity by co-operating with, and co-ordinating the efforts of, the management. For improved industrial relations, it is necessary that every industrial unit should have a union and that every group of industries should have a joint union. The presence of more than one union at the unit level only weakens the position of the workers. In India, the workers' union movement is at a very deplorable state. Only a small percentage of workers is organised, which is not conducive to the proper development of industrial partnership or democracy.

A strong, representative union in an industrial unit is a valuable asset to the management. But trade union movement in this country is not only weak, owing to rivalry and political leanings, but also very far behind the progress achieved in the field of industrial relations techniques. The trade union leaders at lower levels have not grasped the fact that the lot of Indian labour could be improved only when it shows higher productivity, since higher wages and higher productivity are closely inter-connected. The Indian trade union movement suffers from lack of good leadership, poor finance and inter-union rivalry. The Third Plan observed:

"There is need for a considerable adaptation in the outlook, functions and practices of trade unions to suit the conditions which have arisen and are emerging."[14]

The responsibility for developing healthy unionism should necessarily be that of the management. It has to set good examples not only by the recognition of really representative unions but also by encouraging such unions to freely participate in the joint councils. It is the management that should first exhibit the spirit of industrial democracy. A responsible union will make the joint councils meant for increasing productivity and betterment of labour function efficiently and guide the workers in the right direction so that the productivity is nourished and developed.

A weak labour union will not help the cause of industrial partnership. In our country, the weakness of trade unions movement lies in inefficient and unscrupulous leadership and in the general social backwardness of the labour. Insufficient finance of unions is caused by the lack of the workers response to union movement. Outside leadership of the unions are due to the lack of proper persons among the workers to take over the union leadership. Yet, all these are consequences of greater shortcomings of our workers, namely, their illiteracy and socio-economic backwardness. As long as these evils go unattended, the productivity of the workers will be low, and it may worsen in due course. To quote the Royal Commission on Labour :

"In India mostly the whole mass of industrial labour is illiterate, a state of affairs which is unknown in any other country of industrial importance. It is almost impossible to overestimate the consequences of this disability, which are obvious in wages, health, in productivity, in organisation and in several other directions."[15]

Even though two decades have rolled since the publication of this report, no improvement has taken place in the condition of the workers. The Government, being aware of this importance of workers' education and its productivity drive, constituted in 1957 an expert team with the co-operation of Ford Foundation to study and report on the problem of workers' education in India.[16] The Indian Labour Conference in its 15th Session held in July, 1957, considered the recommendations of the Team of Experts and evolved an organization for the purpose of promoting workers' education. An autonomous Central Board for Workers' Education has been inaugurated with a Managing Board consisting of the representatives of labour, employers, Government and educational institutions. The Central Board will formulate the policy on workers' education, lay down standards and supervise all programmes. There are now 12 Regional Boards apart from the Central Board at Nagpur to propagate workers' education, which includes in its scope, education about trade unions and organization, training for union leadership and other general aspects of workers' education. Presently the workers' education programme is divided into three phases of training teacher—administrators, training worker-teachers through teacher administrators, and training workers through worker-teachers. It is too early to evaluate the contribution of workers' education scheme to Indian industrial democracy, but in a decade the scheme would certainly bear fruits, improving industrial relations and productivity.

A brief note on the settlement of industrial disputes and grievances may be given here, even though the close relationship between labour productivity and industrial peace has been well discussed above. As far as possible, industrial disputes should be settled by negotiations and voluntary conciliation and arbitration procedure. Compulsory arbitration may settle the issues, but it is not certain that the awards given by arbitrators would satisfy the labour and management equally. A spirit of give and take should pervade the whole field of industrial relations as embitterment of either partners in industrial democracy is harmful to the industry and its betterment.

The procedure for settlement of industrial disputes is contained in the Industrial Disputes Act of 1947. Coming to the point of productivity and industrial disputes, it should be made clear that it is prevention rather than settlement of disputes that would conduce higher productivity. The aim should be to keep the industry free from breakdowns or punctures, so that consistent smoothness would create a stable atmosphere inside the factory. The availability of a cure and its application do not ensure a healthy system; so are the provisions of the Industrial Disputes Act. As no man who has made it a habit to look to a doctor to stand on his feet can do effective work, an industry periodically seeking the help of conciliators cannot show higher productivity.

In addition to the provisions of the Industrial Disputes Act for the settlement of disputes, the Indian Labour Conference in its 16th Session held in May, 1958, approved of a 'grievance procedures' to settle expeditiously the grievances of industrial workers. The establishment of grievance procedure would be of great help in improving industrial relations by assisting quick and easy settlement of workers' grievances, which would go a long way in promoting their morale. To be aggrieved and then left in despondency is a possible danger, and the availability of redress would consolidate the hopes of the workers for judicious, expeditious disposal of their grievances. The Grievance Committee, under this procedure, would consist of representatives of workers of their unions and nominees of the management for this purpose in the department and the head of the department.

In the early stages of this paper, we referred to management centred causes influencing productivity. Labour and management are two sides of the same coin. The web of industrial partnership and industrial relations are woven around these two. The procurement and effective deployment of labour force so as to achieve the ends of the industrial unit with minimum of waste is the main function of management. The development of a stable labour force, devoted to the industry in which they work lies in the hands of the management. The preservation of industrial peace to attain highest productivity possible is an important task of the managerial staff. If the management desires to bring out the best in the workers and utilise the talents constructively, as it should, the management should take particular interest in preserving and constantly improving good human relations in the industry, because the human side of the workers, as pointed out earlier, plays a vital role in increasing or affecting productivity. As rightly observed by Sri S. S. Jaggia, Managing Director of Hindustan Insecticides,

> "As far as possible their (workers') legitimate demands should be anticipated and a human view taken of matters relating to them.....Many a good and otherwise well-behaved employee is made to suffer for want of human element on the part of management in their dealings with them."[17]

It is the business of the management to promote group and individual morale in the unit under their custodianship by the adoption of good human relations technique. The workers will not be able to show good results in their work, if the management has not succeeded in 'motivating' them to put in better performance. A healthy and friendly atmosphere inside the industry between management and workers is an asset to the industry. But, good human relations will not flourish where the management has caused a gulf to separate them from the workers. The management should, if it wants to improve human relations, pursue these aims:

1. "to discover any friction that exists within the undertaking;
2. to take necessary measures to reduce it;
3. to strengthen the common bond constituted by the undertaking by encouraging the workers to take an interest in it."[18]

17. S. S. Jaggia, *Personnel Management*, Discussion Paper No. 13, *Seminar on Management of Public Industrial Enterprises*, (Govt. of India and U.N. Sponsored), New Delhi, December 1959, pp. 2-3.

Digitized by Arya Samaj Foundation Chennai and eGangotri

The complex part of the management desiring to achieve higher productivity lies in influencing the workers to devote his best to the industry. In a progressive industry, the management may periodically find the need to introduce new methods and instruments, which may dislocate the existing distribution of work and relationship. In such cases, the management should try to make the workers realise the importance of accepting new skills or acquiring new methods. This is a difficult task, but the management should face the task with understanding and caution. To quote,

"Any attempt to raise productivity implies a change in the existing methods of doing things, and change—as had been constantly reiterated by the social psychologists—represents a most jarring challenge to the existing order of personal relationships. It is very important for economic progress that this challenge be met successfully. In this case success would mean that the changes required in order to improve productivity are accepted as improvements by the workers involved . . ."[19]

In earlier parts of this paper we referred to workers' participation in management, Grievance Committee, etc., as means for improving industrial relations and, consequently, productivity. These tools would be successful if only they could command the adherence and respect of the management, as no tool is stronger or more useful than the spirit with which they are utilised or handled. The management should not only accept these new tools suggested to them, but also make use of them sincerely and willingly. The creation of a spirit of comradeship and the longing for solidarity in the industry is entirely a management responsibility. The essential condition of success in a scheme of productivity improvement through better industrial relations is the compromising and positive attitude of the management. The tools for better industrial relations placed at their disposal should only be used to promote the legitimate purpose for which it was designed. For example,

> ". . . . . that whatever the management does to associate the workers with the undertaking it should never try to split them from their union or endeavour to persuade them that their interests are more effectively protected by the company."[20]

In concluding, it should be pointed out that an increase in productivity is not an improvement of production per-man hour, even though productivity is generally measured by production per-man hours. Productivity is a product of the cumulative influence of various factors, labour being one of them. The contribution of labour to the total investment on it is to be taken as an approximate index, but not as "precise measurement" of labour productivity, other factors of production being the same throughout the productivity comparisons. Higher productivity of industry can be effected by improved utilization of :

"1. manpower resources ;
2. equipment resources ;
3. raw materials ; or
4. any or all of the above."[21]

Throughout this paper, reference has been made only to the first aspect, of improved utilization of manpower resources, as specifically confined to industrial relations. Workers' education and training for particular activities, proper job evaluation and distribution, training for supervisory and management staff have been left out so as to confine the discussion exclusively to the field of individual and collective relations of workers with the Management.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

Reviews and notices of books in Gujrati :

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review*, should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

ENGLISH

SHUJA-UD-DAULAH. Vol. I (1754-1765) : *By A. L. Srivastava. Second revised edition. Shiva Lal Agarwala & Co. Private Ltd., Agra 1961. Pp. 283. Rs. 12.50.*

We had the pleasure of noticing the merits of this scholarly work in its first edition many years back in the pages of *The Modern Review*. The second edition is now presented before us with a few improvements. The author has utilised fresh material in the shape of a Persian manuscript from the Central Record Office, Allahabad, which was written in 1833-34 A.D. He has also made use of the newly-published 15 volumes of Selections from the Peshwas' Daftar edited by G. S. Sardesai. The work retains its place as a first-rate and indispensable authority for the period of modern Indian history with which it deals, *viz.*, the first eleven years of the reign of Shuja-ud-Daulah as the Wazir of Awadh and Allahabad.

U. N. GHOSHAL

GANDHI FACES THE STORM : *By Gene Sharp, Navajivan Publishing House, Ahmedabad-14, Pp. 71, Price Re. 1.00.*

This small book is written by 25-year old Shri Gene Sharp an American Pacifist and conscientious objector. This is an attempt to show the inner Gandhi during his last two years, his evaluations of what had gone wrong, where he had failed, what was needed if India and the world were to go forward to a society of peace and Justice.

Shri Sharp is an active worker of the Peace-maker Research Committee of America. The work is a reverential study of Gandhi, and as such is bound to be welcome to all who care to understand Gandhiji.

AMERICA'S CONTRIBUTIONS TO INDIA'S FREEDOM : *By Dr. Haridas T. Mazumdar, Central Book Depot, Allahadad, pages 51. Price Rs. 1.25 nP.*

The author who is now a naturalized American had his early education in the State of Baroda. He went to America in 1920, for further studies with only 350 dollars in his pocket.

In these few pages he has given a short account of the Indians who worked for Indian Freedom Movement in USA with the assistance and co-operation of Sympathetic Americans—the period covered is 1914 to 1947. He narrates the activities of the Ghadar Revolutionary Party of California, (1913), the Friends of Freedom for India (Dr. Tarak Nath Das, Mr. Sailendra Nath Ghose and Mr. B. K. Roy and others) and also works of Lala Lajpat Rai in America. The activities of Dr. Syed Hussain, Dr. Anub Singh, Dr. Krishnalal Shridharani and of the author himself are given in some detail. Beside political associations some cultural and religious societies also worked for better understanding between Americans and Indians and for interpretation of the East to the West.

As an introduction to the subject this brochure deserves wide circulation.

COMMON MARKET—What it is : *Published by N. M. Joshi, School of Trade Unions, New Delhi, pages 104. Price Rs. 3/-.*

When Great Britain is negotiating to join the European Common Market (ECM), the publication of this book is welcome, particularly in India, who being a member of the Commonwealth has considerable trade with England. The other members of the Commonwealth are no less interested and anxiety has been expressed also by Canada, Australia, New Zealand and African

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

members. Trade facilities and benefits now enjoyed by the Commonwealth countries in relation to England and mutual advantages are likely to be curtailed and possibly abolished if Britain joins ECM.

The book is divided into three parts: Part I contains an article *Historical Background of the ECM*: by M. K. Pandhe, Part II contains three articles, *India and the Common Market*: by S. A. Dange, *Britain and the Common Market*: by R. Palme Dutt and *West Germany and the Common Market*: by L. R. D. Part III contains *Reaction: India and Abroad*, Africa, Britain, USA, Canada, Australia, France, Soviet Union, Hungary—Community of the E.E.C. Part IV contains four Appendices: (i) Communique of Commonwealth Economic Consultative Council; (ii) Direction of India's Foreign Trade; (iii) Questions and Answers on the Common Market and (iv) ECM Council Agreement on Farm Policy. Mr. S. A. Dange has written a foreward of fourteen pages presenting his views on the subject with a version "India must not fall a prey to this power-politics and become its associates in any form though a section of vested interests are trying to pull us in that direction."

The articles have been written from the workers' point of view but the presentation and treatment of the subject is clear. Even a layman will be able to understand the implications of Britain's entry into ECM without bothering about theories of international trade, tariff and customs. Part III and Appendices will help the reader to know the views of writers and authorities other than those expressed in Parts I, II and III.

A. B. DUTTA

BRITISH STATESMEN IN INDIA: *By V. Kulkarni, Published by Orient Longmans Ltd., Gol Road, Ballard Estate, Bombay-1. Price Rs. 20/-.*

A very comprehensive, critical and careful survey of British rule in India. The author has covered the regimes of fifteen out of the thirty-three Governors-General and Viceroys of India of the British period. The regimes of Warren Hastings, Wellesley, Moira, Bentinck, Dalhousie, Canning, Ripon, Curzon, Minto, Chelmsford, Irwin, Willington, Linlithgow, Wavell and Mountbatten have been very carefully visualised through a study of the personalities and administration of the respective periods.

The author deals more with events than with the personalities and the reader will get an authentically vivid picture of what happened in India during the British rule, within the compass of a little over 500 pages.

The last chapter, "India since Independence" records in short India's achievements since independence. The book is a valuable contribution and should be interesting even to the general class of readers and will enable them to have some idea as to the blessings of British rule in India. None should be blind to the facts that the British gave the country a rule of law, introduced the Western institutions and the Parliamentary systems of government. This legacy of the British to India is precious and enduring.

C. K. H.

IMPOSTER AT THE BAR: *By George Campbell. Published by Hodder and Stoughton, London. Price 25s net.*

The book under review presents a fascinating study of the period beginning from the late 17th and ending in early 18th century. The deposition of James II and Mary of Modena preceded by their endeavour to impose a suppositious Prince of Wales on the English nation and events that followed provided a dired background to the activities of notorious scoundrals and libellers who thrived during the period. The imposter at the bar, William Fuller by name, headed this band of unscrupulous men and women who resorted to all sorts of mean tactics to achieve their personal ends. Fuller served as a double spy for William III and the exiled James II, then living at St. Germain. He was paid at both ends and for some time he enjoyed the confidence of both the courts. He became notorious as soon as he was unmasked and people started taking interest in what he said and did. He claimed to be the confidant of kings and queens and the intimate friend of the 'greatest men of the nation.' As a spy and double agent Fuller had hardly any equal. He was a brazen-faced liar and his lies often went beyond all bounds of probability. Yet people heeded what he said and both Houses of Parliament, though often deceived, heard him many times and his tales against the then leading statesmen of the English court were carefully heard and scrutinised. Ultimately he was found to be an incorrigible liar and gaoled. His repeated appearance in the pillory made him a laughing stock in the latter part of his life. His accusations were no longer heard and he was taken to be a confirmed criminal. His end was tragic and sad.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The age in question had its spies and double agents of great notoriety and Fuller occupied a special place amongst them. The history of the United Kingdom of this period was plagued by confidence tricksters and cunning plotmakers and the author George Campbell has taken immense pains to give a faithful account of the then England. Mr. Campbell toiled laboriously in the Public Record Office and the British Museum and gave us a socio-political history of the period while presenting the life of this notorious imposter. He deserves commendation for the historical research and a word of praise for the lucid style in which he wrote.

The publishers must be thanked for the good get-up.

SADGURU SREE RANA DEVI: Golden Jubilee Souvenir: *Published by the Golden Jubilee Celebration Committee, Car Street, Mangalore-1. Price Rs. 12.50 nP. only.*

The assurance of Lord Krishna to Arjuna rings into the ears of eternity and we come across men and women in human history who attained divinity. The affiliated progeny of Adam look for peace and that is why they look for a Sadguru who could guide them in their spiritual quest. We come across such Sadgurus here in India who by their practice and profession have shown us the way to truth and peace. We adore them, go to them for practical guidance. They readily help us in our distress. They give us knowledge and bless us while we struggle to know the Truth. We surrender our reason and intellect and wait patiently for the grace to come. All our efforts would go in vain if in our spiritual quest we fail to have the blessings of a Sadguru. For, inscrutable are the ways of God to men. If we judge the divine dispensations by the ordinary criteria of moral evolution or material consideration, we will be mistaken. When we are concerned with the Ultimate, we must not apply the ordinary yardstick. The Vyavaharika order cannot supplant the Paramarthika order. From the lower to the higher one must ascend. And this process of ascension must be guided by one who knows the Truth. He or she must be one who has direct communication with the God-head. Mere knowledge of the scriptural texts will not take us very far. Discursive reason was not considered a sufficient guide in this quest. That is why people flock to god-intoxicated men and women and listen to their wise counsels in matters of self-realisation and god-realisation. Their messages have a special significance for the world intoxicated with brute force and morbid fear. So, the book under review carrying the message of the advent and activities of Sadguru Sri Rama Devi is a welcome addition to the already existing volume of literature on Sadgurus of the world. These world teachers must be listened to and their messages respected. We should adore them and let the world know that we adore them. This will bring men and women of similar spiritual affiliation together and help to build a society better than the one we live in.

Sudhir Kumar Nandi

THE INDOMITABLE SARDAR: *By K. L. Punjabi. Published in 1962, by Bharatiya Vidya Bhavan, Bombay-7. Price Rs. 15/-.*

In two years' time the author has given us monographs on Dr. Rajendra Prasad and Sardar Patel. It is, I should consider, a very laudable use of his retirement from the Indian Civil Service. He has brought to bear upon his endeavour a painstaking study and devotion coupled with a shrewd sense of discernment, and it makes his book a pleasant reading.

In the preface the author speaks of 'a conspiracy of silence aimed at obliterating his (Patel's) memory'. If he is aware of such facts and circumstances as to justify him thinking like this, it was certainly incumbent upon him, the biographer, to state them for what they are worth and let the reading public judge. To omit to do so, after such a broad hint is categorically given, is to cast reflections on those in authority, who happened to cross swords with him. It is, however, absolutely certain that there is not the faintest breath of murmur to the full, unstinted praise for Patel's consummate statesmanship in making much over five hundred princes dissolve their states to make one United India. In fact Patel has done what Asoke and Akbar dreamed. Patel, again, nobody tires saying with oblique glance at Nehru, did not support referring Kashmir to the U.N., and had warned him with regard to the *bona fides* of Shaikh Abdulla. However, the author's grievance is that there is not in the country basketfuls of Patel's biography, he has to rest content with the reason that after all, Patel had to play the role of a second in-command. In the first stage of his public

he was thoroughly under the thumb of ...hiji with no individual contributions in ...ht or action; and in the later stage, he ...just the Deputy to the Prime Minister. He ...given and given ungrudgingly the Field Mar...'s baton, but was never the Supreme Comman... It is, however, really true that with the ...ticap of having had to drive the car from the ...k seat, he acquitted himself so creditably that ...many a crucial matter he was held high over ...head of Nehru; and today there is, possibly, ...unanimous endorsement of the author's cita... of the nation's verdict: 'Had Sardar been ... today, India would not have seen such ...us days'.

The author has to the best of his light and ...ledge disposed of Azad's mean, cowardly ...k—criticism it is not—on Patel after he was ... I cannot help saying in this connection ...t Rajagopalachary, so guarded in the expres... of his opinions about his fellow-workers, ...s about Azad's *India Wins Freedom*. He says, ...s a hard book to read'—really a hard book ... any decent man to read—and that Azad's 'ego ...rwhelmed his perception'—Read Mounica Fel...'s *I Meet Rajaji*.

A political biography can ill-afford to be a ...ral oration. Just as a hero-worshipper pre...ts his subject of memoir highlighting his fea...es of elegance, he would have his impact felt ... the more tellingly were he to mention at least ...e well-publicized scars. In the light of this, it is a ...or omission on the part of the author to have ...ked out the fact that Vallabhbhai stretched ...self to the full length of his ingenuity and re...ces to thwart the Will of his elder brother ...lbhai directing that his 'assets', after making ...minor gifts, were to be made over to Subhas ...for political purpose. What, by the way, is ...point in portraying Vithalbhai, the Swarajist ...r and the one-time President of the Indian ...slative Assembly, as a 'thriftless' hanger-on, ... throughout his life'—even when the Presi...—was 'supplied with funds' by Vallabh... The point of his impecuniosity being thrice ...ed—at pages 17, 82 and 231—one might feel ...ed to scan if Vithalbhai had the right for ...rodigal disposal of what he called his 'assets.' The author needed to explain—in the ...ence of any there is only one conclusion that ...has none to offer—why Patel entered into a ...spiracy with Nehru to keep Gandhiji com...ly in the dark with regard to their agreeing ...ept the division of India. Even, if Gandhiji's ...ion could well be anticipated, they owed ... least the courtesy of a consultation. Dr. ... who attended the meeting of the Congress ...ing Committee accepting Partition, speaks of 'the exceedingly rough behaviour of these two chosen disciples toward their master'; 'they barked violently' whenever Gandhiji tried to oppose them—read his *Guilty Men of India's* Partition. The irony of history is that Patel and Nehru fell out after they had settled down into their respective jobs; and their bickerings disturbed Gandhiji so mightly to the last moments before he was shot dead. In the context of the above the author's analysis of the points of difference between Patel and Nehru is well worth a perusal.

All told, the author has given us a fine portrait of Patel—the very very poor boy, who rose to an eminence the pampered child of opportunities would do well to envy; and who, to the last, employed himself to the betterment of his motherland.

JOGES C. BOSE

SANSKRIT

SAMAVEDIYA SANDHYAMANTRA: *By Sri Indramohan Chakravorti. Translated in English and Bengali with critical notes. Published by Sri Bimalendu Chakravorti, Gita Chakra, 12, Hara Chandra Mallick Street, Calcutta-5, pp. 80. Price Re 1.25 nP.*

In these days of growing scepticism we think very little of religion or religious practices. "Social reconstruction," as Dr. Radhakrishnan opines, "in the light of religious ideals seems to be of great importance in these difficult days." But a few of us care for revaluation of our ancient culture or ever try to understand the real significance of our most ancient religious rites. The Vedic hymns considered to be the treasure-house of our cultural heritage are really difficult to understand. The book under review stands as a challenge to this modern sceptic mind. The author discusses in detail in the Introduction to the book, the inner significance and purpose of our daily rite **sandhya**. The book contains the original Vedic hymns connected with the **Samaveda Sandhya** and English and Bengali renderings of the same. The translations are in verse written in lucid and beautiful style. The book evinces the author's mastery over Vedic language, and his critical and poetic acumen. In the translation, the true spirit of the original has been well-preserved. Sri Chakravorti deserves our hearty congratulations for having produced this very useful and nice monograph.

INDIAN PERIODICALS

Exports of Iron Ore

The Economic Weekly of Bombay, has the following editorial in its June 23rd issue :

While efforts to promote new exports are most welcome it will not do to forget those traditional items where exports can be boosted to a very considerable extent. This is particularly applicable to iron ore in which India has nearly 25 per cent of the world's total supply, her percentage of the world trade is barely 4 per cent.

There is no fundamental reason why India should not export very large quantities of iron ore. Orissa iron ore, for instance, is considered to be among the finest produced. Besides, India's proximity to Japan, which is one of the largest importing countries (importing nearly 20 per cent of world iron ore imports), should put her in a very competitive position against other sources of supply like South America ; the main defect that bedevils India's iron ore trade is the transport system which is not developed sufficiently to deliver the goods in time.

The importance of transport in the manufacture of steel was presented by Mr. Cartwright, Managing Director of the Steel Company of Wales, in a recent paper on transport of steel. He pointed out that the cost of ore from certain overseas deposits to European steel works was as follows : Cost of mining—25 per cent; Rail transport to port—11 per cent; Loading into ship—2 per cent; Sea freight and cost of discharge—65 per cent. It can, therefore, be seen that the most important factor determining the c.i.f cost of iron ore is sea transport. If freight-rates are high, then naturally the f.o.b. price paid for iron ore from that source of supply is very much lower than from other sources of supply.

Sea freight-rates are affected mainly by the time that is taken in loading and discharging the cargo and by the sort of the vessel that is utilised. Although distance plays some part in it, normally it is so small that it does not make much difference.

In this lies a certain moral for India; for, although the countries that import India's iron ore (60 per cent of it goes to Japan) are able to accommodate large 45,000 tonners and are able to discharge these ships at the rate of 10,000 tons a day, we are still faced with very high freight-rates from India to Japan because Indian ports are neither sufficiently deep nor fast. The State Trading Corporation, which handles India's iron ore exports, does not seem to realise the vital importance of building up ports for export; they go on using small ports like Masulipatam which load at the rate of 400 tons a day, causing long delays to ships and thus pushing up the price for service of transport. If ports were built nearer to the sources of supply and adequate facilities were given, it would be possible to reduce freight-rates and thus help to put India's iron ore on a much more competitive position.

Vizag as Ore Port

Some efforts in this direction are being made; in 1964, the Visakhapatnam port scheme is likely to be completed which will make this port a major iron ore exporting port for this country. However, it is not clear that this is the ideal location for a major ore port. Visakhapatnam is over 450 miles from the Kiriburu mines in Orissa which will be the source of supply in the next three years. In fact, there is so much iron ore in Orissa that there are serious grounds for giving the highest priority to developing a port in this area. The Chief Minister of Orissa has put forward, as a possibility, the development of Paradip into a major port. There are certain many advantages in doing so in view of the fact that the distance from the mines of Tomka Kiriburu, to Paradip is only about 80-90 miles. However the Railways have not favoured to provide rail facilities and the present scheme is to transport ore in trucks. Two schemes therefore will lead to a substantial waste as transporting iron ore in trucks is not a sensible proposition. The key to successful development of such a port is the assurance that regular supply of ore will move from the mines to the port. It is, therefore, desirable that all the Ministries concerned should co-operate and co-ordinate in such a scheme, and, indeed, it is the kind of scheme that could ideally be decided by the new Minister for Co-ordination; for it is most wasteful to develop port handling capacities if there are insufficient transport facilities with the hinterland as we should have realised after Kandla. It is absolutely essential to have a regular supply of wagons continually bringing enough iron ore to be loaded as fast as the ship can take it. Another port that could be carefully considered for supplying to western countries is Mangalore. Once again, this port would be very close to the Bellary-Hospet mines and could, provided sufficiently developed, become one of the most important exporting ports that the country will have.

The Board of Trade should seriously consider these problems rather than the problem of developing the port of Bombay. After all there is not much that can be exported from Bombay and, so far at least, it has proved itself sufficiently large to handle all the traffic that comes to it. If we are serious about exporting, there is no reason why we should not concentrate on those exports which are bound to give us a sure

Can Democracy Work ?

We reprint in part an article by Reinhold Niebuhr, published in the *New Leader* of New York of May 20th. The portion in italics has been italicized by us to show how casual American authors of repute can be when dealing with Asia-ian affairs. Reza was a Brigadier General of the Persian Cossack and the British did their best to trip him up at every step, as is known to every honest historian.

Perhaps the moment has come for an "agonizing reappraisal" of the position of our battle-lines in Asia and Africa. The question is whether we have not too simply regarded Western-style democracy as the alternative to Communism in non-European cultures.

These cultures may or may not possess two prerequisites for democracy : One is a degree of ethnic and linguistic uniformity sufficient to serve as a community base for a free society. The other is a degree of literacy and of technical development sufficient to provide the intellectual maturity and social flexibility necessary for a system of self-rule. Democracy may be the ideal instrument of justice in any culture : irresponsible power is always dangerous. But the question remains whether democracy is not also a luxury which only advanced nations can afford.

Consider the hazards of democratic life in the "client" nations the United States supports, as revealed in the current news. In accordance with the Geneva peace treaty of a decade ago, which in effect emancipated it from French domination, the old territory of Indo-China is now three very competent new nations. Laos and Cambodia are neutralist in terms of the agreement ; Vietnam is divided, in the fashion of Korea, and South Vietnam has become the U.S.' responsibility. We took it over from the French and have since poured billions of dollars in military assistance and foreign aid into it.

In Laos, after the Eisenhower effort to support a pro-Western government failed, Washington decided to back a neutralist regime. Three royal princes control the three factions, pro-Western Boun Oum, neutralist Prince Souvanna Phouma and Communist Prince Souphanouvong. As this is being written, long negotiations aimed at establishing peace in Laos on the basis of a genuinely neutralist government have not yet produced results.

In fact, the neutral control commission under British and Russian auspices has been unable to bring stable internal peace to Laos. Two factors, perhaps, are operative here : The Chinese Communists are not the most cooperative partners in the "Socialist camp" ; and Nikita Khrushchev's promise to President Kennedy last June at Vienna, pledging help in establishing an independent coalition government in Laos, does not appear to amount to much in substance. Whatever the reasons, the Communist-led Pathet Lao forces recently violated the cease-fire and routed the Royal Army in the north.

In South Vietnam the situation is even more serious. The U.S. military assistance group there has more and more become involved in the actual fighting between North and South, which continues unabated. We have been training the Southern forces in guerrilla warfare, and perhaps participating in it, though such warfare requires a friendly peasantry to be successful. Recently, several American soldiers were wounded and two sergeants were captured. On being freed, they declined under orders to reveal the nature of their experience.

The political situation is as grave as the military, if not more so. It is so serious, indeed, that the question must be raised whether it has not been a mistake to commit our prestige unqualifiedly to the defense of this nation. President Ngo Dinh Diem of South Vietnam had some early success in consolidating the economic life of his half of the nation and in settling refugees from the North. But his Government has become increasingly corrupt and repressive.

Diem's brother and sister are infamous for their relation to corrupt Government contractors. His jails are full not only of Communists but also of anti-Communists who criticize his rule. In 1960, his regime survived an Army revolt ; not long ago, two Air Force officers bombed the Presidential palace. After escaping to Cambodia, the pilot declared the bombing was the Army's gesture of protest against the Presidential clique.

Recently, too, the distinguished journalist Homer Bigart of the New York *Times* was nearly expelled by the Saigon Government for ventilating some of the unsavory facts about the regime. Pressure from Washington prevented Bigart's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pulsion. But no amount of pressure, including a visit from Vice President Lyndon Johnson, has been able to prompt the Diem government to carry through the reforms which are the litmus test of minimal justice in moribund feudal economies.

We face the question, in short, of whether South Vietnam has sufficient political and moral health to invest its struggle against Communism with the necessary moral capital? Or, to put the question another way, have we been mistaken in investing our moral prestige in Asia in this kind of struggle?

Even the severest critics of the present policy know that strategic considerations enter into any political equation. There are times when we find it inescapable to support questionable leaders who, in the words of FDR, "may be bastards but are at least our bastards." The loss of South Vietnam to the Communists would mean a considerable strategic loss in South-east Asia. But as it is now, the loss of moral prestige through the support of an unpopular and unviable regime is also a great hazard.

The problem is, of course, wider than Indo-China. In South Korea the United States once supported the corrupt regime of Syngman Rhee. It was overthrown by a military coup, but the succeeding regime did not eliminate corruption either. It was, in turn, ended by another military revolt led by the tough, U.S.-trained General Chung Hee Park, who learned honesty but not democracy from his American tutors. He has suppressed all political life and freedom in Korea.

The instances of non-Communist nations not conforming to minimal standards of justice are too numerous to mention. But one other instructive case is worth citing here—Iran, whose Shah recently visited this country.

Iran protects the northern border of the non-Communist world. Economically, it is still feudalistic; politically, it is under the sovereignty of a feeble Monarchy which boasts 2,000 years of dynastic rule. The present Pahlevi dynasty, however, is very young: *It was instituted by the Shah's father, an army sergeant until the British gave him a leg up on the royal ladder.*

Mohamed Reza Shah Pahlevi, the current ruler, is well-meaning but ineffectual. He has encouraged land reform, both on his own Royal estates and among the nobility. Yet Iran's poor peasants are neither encouraged nor helped by a law which requires them to pay for their land in 25 annual instalments. They do not have enough money to pay one instalment.

In addition, Iran's bureaucracy and intellectuals are disaffected, and the nation is ripe for rebellion. Most of the country's oil wealth is used to pay the Army. For many years, the U.S. has engaged in a creative agricultural assistance program. Village by village, we have been teaching the peasants to farm with more modern implements than those used at the time of Cyrus. We have also vainly tried to persuade the Parliament of landlords to institute tax reform. But the landlords are, of course, reluctant to tax themselves at least, as long as strategic considerations prompt Washington to assist Iran with about a billion dollars a year.

Clearly, one of the most pressing issues in United States foreign affairs is to determine when we must and can support the less than ideal democracies scattered throughout the world. And where the U.S. does decide to support such nations, it has to determine how much it can interfere in their internal life in order to create economic and social conditions which will make democracy viable.

Shri Aurobindo, who adorns the cover-page of this issue, was born on the 15th August, 1872, and died on the 5th December, 1950. The following from his paper **The Bande Mataram**, dated May 3, 1908, reflects to a great extent his political creed: "A band of men is needed who can give everything for their country, whose sole thought and occupation shall be the stimulation of the Cause by whatever means the moment suggests or opportunity allows."

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place.....Like Tagore's the late Mr. Chatterjee's genius was essentially constructive....By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country.... No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students." —*Hindusthan Standard*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya.....The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated." —*Amrita Bazar Patrika*

Krishnan works in a small hotel in Bombay. "My wife and two children live in Kerala", he said. "We have a little land there, and I send home a little money every month." Last year floods ravaged his property. His bullocks were washed away. His house was damaged. He *had* to go home to set things right and to save his only possessions from ruin. Money was needed urgently.

"I got the money from the L.I.C.", said Krishnan brightly. He had taken a policy* for Rs. 1,000 in 1941, when he was earning just Rs. 25 a month. The policy matured and he got the money in a lump sum. "Thank God I had the wisdom to take a policy at that time," he said. "If I hadn't, I do not know what I would have done."

NOTES

The World

While World tensions have lessened in certain areas like Laos, where an arrangement for the establishment of a neutralist Government with elements taken from the warring Royalist and Pathet Lao factions is under trial, and South Viet Nam where the U.S. military mission is actively participating in manoeuvres on the Malayan model against the Viet-Cong jungle guerrillas, the two main fronts remain with the tensions unabated.

At Berlin there was the possibility of a flare-up following violent public reaction against the shooting and killing of an East German refugee who was trying to escape over the Wall. Soviet vehicles were stoned while proceeding to a war memorial in West Berlin and an ugly situation developed which has not altered to any significant extent since then. The anniversary of the building of the East-West Wall, which was erected on August 13, 1961, was marked by noisy demonstrations on the Western side, including stone-throwing at the Communist guards, but passed off without any major incident occurring. The shooting of the refugee took place four days later.

The nuclear tests have been resumed by both the U.S. and the Soviets. Last year, just about this time, the Soviets ended the moratorium on nuclear tests that had been observed for nearly three years by the Big Three: The U.S., the Soviet and Britain. There seems to be little prospect for any agreement to be arrived at for the ending of the tests. Indeed there is hardly any lowering of tensions, where the bombs and the Berlin Wall are concerned, although a year has passed since the critical phase developed. The latest source of uneasiness, where the West is concerned lies in the prospect of a Russian peace treaty with East Germany, which might put new pressures on the life lines of West Berlin that lie through East German territories. The only relieving factor in the whole situation is the apparent willingness of both sides to carry on with the negotiations for a truce and the disinclination of either side to press the crisis on to the brink of war.

The other area where tensions are still unabated and the possibilities of War still remain, is in the Ladakh region of Kashmir. Here in the Galwan Valley and beyond the Chinese confront our frontier guards. The talks that were proposed by the latest Chinese notes have not as yet been decided upon. The mendacious and shifty nature of the Chinese notes have posed a problem before the External Affairs Ministry. Pandit Nehru is still in the same undecided, though exasperated mood as before, though the Defence Ministry seems to be steadily going along with its preparation for conflict.

The Chinese are thoroughly irresponsible in their expansionist moves, exhibiting neither care nor concern about the possibility of disastrous consequences to their ventures. If they are really in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar.

Digitized by Arya Samaj Foundation Chennai and eGangotri

possession of nuclear secrets and are in preparation for atom bomb explosion tests, then a world holocaust may occur far sooner than the European and American War lords imagine.

Linked to the Chinese designs on the Kashmir region of the Himalayas are the equally insatiable desires of the Pakistanis to annex, by hook or by crook, the territories of India adjacent to the areas illegally occupied by her ever since her aggression in the Kashmir region was brought to a halt by Indian armed forces. Pakistan has been trying to expand and consolidate her illicit gains in the Kashmir region through the agency of her allies in the anti-Soviet Organisations of the S. E. A. T. O. and C.E.N.T.O. The most active amongst these allies has been the U.S., whose moves to enlist the support of the representatives of the smaller nations in the Security Council of the U.N. have been recently exposed by an inadvertent leakage of a diplomatic communique issued by Professor G. P. Malalasekera, Chief Delegate of Ceylon, and a candidate for the Assembly presidency at the U.N. This document which was in the nature of a confidential report to his Chiefs at Colombo, created a diplomatic storm. The significant part of the report is given below :

An authenticated copy of the report showed that he said it had been "for a long time a cardinal U.S. policy that India could be the deciding factor in the eventual outcome of the cold war," and that "India held the balance and the U.S.A. had up to now done a good job to keep her that way."

Unfortunately, he said the U.S. policy was "so firmly geared to strategic considerations that Pakistan was at last able to exert pressure, especially with the military overlords of the Pentagon, and contrary to higher political considerations of the Administration, by the threat of withdrawing herself from SEATO and CENTO."

"The acquisition of Kashmir by Pakistan would materially change the whole strategic situation at a time when the cold war is shifting from Berlin to Asia," Dr. Malalasekera wrote. This was evidently the bait that was dangled before the U.S. militarists and they succumbed to it.

"In order to escape the responsibility in the eyes of India, the U.S. delegation tried hard to get the smaller nations of the council to present a resolution. But they were not willing at all and we watched with amusement how the pressure grew stronger with each day that passed. Meetings of the council were fixed and put off on various pretexts, and it looked as if the U.S.A. would have had to admit defeat.

"Mr. Stevenson, who had been away in the West Coast, himself took charge. But even so only Ireland was found willing to sponsor a resolution.

"When the resolution was introduced, the Russians realized immediately its implications and the high stakes involved and announced at once that the Soviet Union recognized Kashmir as being irrevocably Indian and that she would use her veto to maintain that position.

"The result was that the Pakistani cause collapsed, with a vote of seven in favour, two abstentions (UAR and Ghana) and two against (Russia and Rumania), when the Soviet veto was cast. Mr. Stevenson made a tirade against Russia which impressed no one and merely intensified the cold war."

Meanwhile, Prof. Malalasekera said that his views were similar to those of 75 per cent of the U.N. delegates.

The other candidate for the presidency of the U.N. Assembly is Pakistan's Muhammad Zafrulla Khan.

Meanwhile, having been foiled in her nefarious attempt to prejudice the U.N. against India and thus to expand and consolidate her illicit gains in Kashmir, Pakistan is openly negotiating with Red China for a common demarcation of boundaries in the Kashmir Himalayas. Not much agreement has been reached as yet, according to stray reports, in this attempt at the division of loot by the two parties whose only common ground for meeting is their rapacious greed for other people's possessions. Public opinion in India is hardening, however, since the clumsy attempt by the "friends of Pakistan" in the U.N. to put India in a disadvantageous position. The wiseacres of the "Pentagon" have opened the eyes of the Indian people

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by the single-track and megalomaniac planning and reasoning of their minds and their polarized view of World Affairs.

Beyond these two areas of world tension there are localised areas of unrest in Africa and South America.

In Africa, the uneasy truce between the parties contending for political power in Algeria has broken up through the action of a junta of guerrilla colonels who forced Mr. Ahmed Ben Bella's Political Bureau out of power on August 25. It is barely two months since a free and renaissant nation came into being through the liberation of Algeria. Now there is a major crisis that might plunge the new-born State into an internecine war, similar to what was going on in the Congo. Mr. Ben Bella wrested power from the provisional Premier Mr. Ben Youssef Ben Khedda only at the beginning of August. And before the month was over Mr. Ben Bella and his four friends on the Political Bureau have had to flee from Algiers to escape capture by the guerrillas of the "Willoya Four." The situation is still obscure at the time of writing these notes.

In the Congo the position has altered very slightly since the U.N. forces took action against the interests that were trying to disrupt the new-born State into pieces—for the benefit of foreign financiers who control the production and export of minerals from the province of Katanga. Mr. Tshombe, the separationist head of the "Katanga State" has all along been aided in his intransigent actions by the very large sums placed at his disposal by the Anglo-Belgian and French controlled Union Miniere, whose headquarters were utilized, uptill they were cleared by the U.N. forces, by the mercenaries directing and leading armed action. Mr. Tshombe has had to dismiss his mercenaries but many of them are in Rhodesia under the wings of the Welensky Government. The Rhodesian Government, which is run by the reactionary European settlers under the guidance of Sir Roy Welensky, is now providing a two-way channel for the export of Katanga minerals and for the import of essential and warlike supplies for Mr. Tshombe's Government.

Recently a move has been set on foot by the U. N. Secretariat to stop this underground channel for the aid of those who are disrupting the Congo State. There is a proposal for the issue of a directive on the Union Miniere authorities for the deposition of all royalties—or at least the major portion—with the U.N.O. authorities who would divide the sums deposited amongst the various sections of the Congo Administration, etc., and the provincial government of Katanga, in accordance with an agreed budget, for the Centre and for the provinces.

Mr. Tshombe is said to have agreed in principle with the proposals. But as he makes and breaks promises with equal facility, a system for the enforcement of the arrangement has to be set up.

Twenty-eight new nations have come into existence in Africa, during the post-war years, up to date. Of these the two with the greatest economic potentials, namely, Algeria with its rich Sahara petroleum and other mineral reserves and the Congo with its copper, diamond and other minerals in the Katanga area, are both passing through a critical stage.

In the New Hemisphere, a new nation was born last month in the Caribbean island of Jamaica. Jamaica's 1,600,000 inhabitants celebrated their independence in the first week of August. This island has had 307 years of British colonial rule and is the first new nation to be born in the Americas since the State of Panama came into being at the turn of the present century, in November, 1903.

Argentina, a major South American republic, came under the control of a military junta in last March. A crisis developed within the military, due to group rivalry, during the first week of August. This major State has had only four years of civilian democratic rule during the last eighteen years, which came to an end when the military junta overthrew President Arturo Frondizi last March, the charge against whom was that he had allowed the supporters of ex-dictator Peron to run in the Congress Elections.

There is military dictatorship in Peru also. It is said that the military group that is running the interim government "has taken important steps on the road back to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

constitutional government in Peru. On the assurance that these steps would not come to a dead end, the U.S. Government renewed diplomatic relations and restored economic aid, to the extent of 83 million dollars for this year, during August last.

Controls, Real and Farcical

The Lok Sabha became rather agitated, following some sharp criticism by some members over the failure by the authorities to check the manufacture and sale of spurious and sub-standard drugs, and severe condemnation of the supine indifference of the Government regarding the protection and welfare of the helpless public. A Congress member, one of the old guards, even went so far as to say that the most grieveous failure of the Congress lay on this count, that is, the checking of spurious and sub-standard drugs, adulterated and deteriorated foodstuffs and essential consumer goods.

About a week after these sharp criticisms—from all quarters inclusive of Congress benches—the Health Minister, Dr. Shrimati Sushila Nayyar announced, at a Press Conference held in New Delhi on August 29, that the Central Government had decided on "several measures" to tighten control on drug manufacture. These contemplated measures include price control of drugs, which were priced at abnormally high rates at present as admitted by the Health Minister, and control of quality and strength.

During the Lok Sabha breeze, where asked as to what the Government intended doing about the protection of the helpless user and punishment of the criminals, who manufacture and sell spurious or sub-standard drugs, she made the singularly inane remark that "public opinion would stop these illicit and criminal practices." This remark—so characteristic of "spurious and sub-standard" Gandhism of our inept and inefficient powers that be—drew the ire of even old Congress members, who know the realities of the Executive set-up at the Centre. The realities are, of course, that led by the Prime Minister himself, the entire administration has been flouting public opinion in an outrageously callous fashion all these years. Indeed the degeneration of the services can be directly traced to the attitude and action of those who are at the head of departments at the Cabinet level. These gentlemen—ladies being above criticism they are excepted—become very contrite and susceptible to public opinion once in every five years just before elections. But once they have managed to fool the electorate into letting them through, the mask is taken off and the trend towards the degeneration of the services is merrily resumed, through patronage of sycophants and by the practice of parochialism and nepotism, which turn-"isms" have put more inefficient and/or corrupt persons in power—even at the highest levels—than any other power or political factor.

The measures announced by the Health Minister at the Press Conference amount to little more than pious resolutions, that would certainly provide some jobs for the relations of some persons with "influence", and do little else. *The Statesman* gives the gist of Dr. Sushila Nayyar's statement as follows:

But for the moment, Dr. Nayyar said, the Government was more concerned with maintaining the quality of drugs to ensure that consumers get their money's worth.

For this purpose, it had been decided, that the country would be divided into four zones, each of which would have about half a dozen Central inspectors to help State inspectors enforce the provisions of the Drugs Act. The Central inspectors would be appointed by November.

Under the scheme, Dr. Nayyar added, States would continue to have powers to grant and cancel licences to manufacturing plants. But, all manufacturing premises would be visited jointly by Central and State inspectors and no licence would be issued or renewed unless a unanimous report to that effect was issued by both.

She said State and Central Government inspectors would undergo training so that they would be better acquainted with the working of factories. They would also be given short-term but intensive, training in law to enable them to present prosecution cases better.

Laboratory facilities for testing drugs would be increased by establishing a laboratory in Delhi and, possibly, another in the South.

Dr. Nayyar said it was also proposed to amend the Drugs Act to delete the provision under which a magistrate could impose a lighter punishment if a person prosecuted for manufacturing spurious drugs gave reasons in writing.

Under the Drugs Act, she said, State Governments were responsible for the standards of drugs manufactured and distributed in the country.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

while the Centre controlled only drugs that were imported.

Dr. Nayyar was asked a number of pointed questions at the conference on the quality and price of drugs. She stated that of the Rs. 95 crores worth of drugs marketed in the country. Rs. 85 crores worth were reliable. Only in the case of 15 per cent of the drugs, manufactured mainly by small concerns, was there any cause of concern.

But if Dr. Sushila Nayyar's scheme for the control of quality and the (problematic?) control of prices of drugs seems to be somewhat unsubstantial and illusory, in the form it was presented at the press interview, the statements made by the Minister of Planning, Mr. Gulzarilal Nanda during the course and at the end of the two-day debate on the progress of the Third Five-Year Plan in the Rajya Sabha regarding price control may be dismissed as being mere back-heroics.

All the information regarding the "Government's determination to hold the price line, regardless of *enormous difficulties*, as contained in newspaper reports is that—

"Steps for control of prices of essential commodities are understood to have been discussed at a meeting of the Planning Commission on June 30."

"The meeting follows the statement by Mr. Gulzarilal Nanda, Union Minister of Planning in both Houses of Parliament that Government was determined to hold the price line and that measures were under contemplation to give concrete shape to Government's policy in this matter."

"During today's meeting, the view seems to have been expressed that steps to be taken in the direction of regulation of prices should be in two phases."

"The first phase, it appears to have been expressed, should include decisions which can have an immediate impact on the prices of the essential items required for consumption by the lower income groups."

"The second phase, it was suggested, should include measures which will take longer time to show results but which are necessary to hold prices in check."

"The need for the opening of fair price shops and consumer co-operatives in larger numbers is also believed to have been reiterated at the meeting."

"Measures to regulate retail prices of essential commodities, like insistence on prominent dispay of prices by retailers, are also understood to have been suggested."

"The Planning Commission, meanwhile, is having discussions with other Central Ministries like the Food and Agriculture Ministry, the Commerce and Industry Ministry and the Finance Ministry with regard to steps for controlling rising prices.—"

We confess that we are unable to find even a vestige of anything concrete in shape or substance in all this. The Plans have succeeded in lowering standards in all directions; they have imposed terrible hardships on those who form the intellectual core of the Nation,—on whose sacrifices and extreme dedication was based the struggle for independence, and on whose existence depends the progress of all Nation building efforts—to the point of complete annihilation. It has opened the way for wholesale corruption and black-market practices to such an extent that we are inclined to agree with Shri Mahavir Tyagi's statement that there is a hundred times more corruption in the administration than there was in the British period.

What has the Nation gained? Even the bogus statistics compiled by the "tame" statisticians in Government pay cannot point to more than a three per cent increase in national income!

Real laws are needed, with teeth and claws, for the punishment of the corrupt and their pets, the dishonest and unprincipled traders, industrialists and financiers who are battening like vultures and carrion-eating predatory animals on the prone flesh of the helpless common citizen, ground down by the soaring prices of all essentials of life.

The controls imposed by an *effete* and inefficient supreme executive have fettered the poor and honest citizen, burdened to the breaking-point by the exactions of direct and indirect taxes. They mean nothing to the corrupt official or dishonest merchant or industrial princes. The Constitution by its peculiar legalistic framing by persons who were more intent on legalistic procedure for the defence of the law-breaker than on the protection of the law-abiding, has left open a thousand escape routes for the anti-social and dishonest elements. If the guilty ones have the wherewithal to engage alert lawyers and to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bribe corrupt officials, then their chances of escaping punishment are a hundred to one, in their favour.

The only ray of hope, we see in all these talks about controls is that some of the Lok Sabha and Rajya Sabha Congressmen seem to have realized that their allegiance is primarily pledged to the nationals of India and not to the "spurious and sub-standard" Gandhites who are the dictators of the Party in Power.

THE EDITOR

National Integration

The Government of India and its parent body the Indian National Congress, are run on make believes and on committees and conferences which are packed with carefully selected persons who can be depended upon to think nothing, feel nothing and do nothing. India's national disintegration has been slowly and steadily stimulated by her national leaders and is now well advanced. The causes of this break up are clearly known to all who have cared to look into the origin and nature of the problem. The creation of a number of politically self-contained States with their own ministries, parliaments, police, judiciary, economic program and plans has been the basic cause of our national disintegration. The attempt to establish a Hindi raj over India by pushing an undeveloped language upon the peoples of India and by granting advantages and privileges to undeserving persons for reasons connected with "India's politics" have further aggravated the situation. The Indian National Congress has not put right the territorial claims of some of the States upon other States and linguistic minorities have been created in the latter States who are denied their fundamental rights by the imposition of Rules and Regulations of a transparent kind which help the majorities of these States to exploit and even to expropriate the minorities.

All these are well-known to the Government of India and the leaders of India. So they have now set up a National Integration Committee with Mrs. Indira Gandhi as its Chairman. A clear case of one of the accused, viz., a Congress leader, being made the judge. A five point Integration Plan has been adopted according to which (1) Inter-State music, dance and drama festivals should be organised, (2) Tamil Classes should be started in North India, (3) Short Stories for children at cheap price should be published, (4) a special Secretariat with its branches in States will be set up and (5) a pledge campaign of national integration should be carried out on mass scale. This Committee and its five point plan are typical of Congress methods of solving an urgent national problem. For the Plan will achieve nothing and will merely cause a waste of funds which will enable certain selected persons to earn some money or carry out some secret scheme or other to advance the party policy of the Congress. We have repeatedly said that India can only become a single nation by abolishing the States and by administration of the country zonally without reference to language or culture groups. Most of the local parliaments and the ministries can be done away with and the judiciary and police centralised. These steps will prevent persons or cliques from attempting exploitation of the people for their advantage and the formation of caste or language groups. The fraternisation of the police with the local criminals will also stop. But the adoption of such a plan of Government will put a large number of politicians out of business. Will the Congress be able to stand the strain ?

A. C

Technical Education for Indians

Pandit Nehru rightly emphasized the importance of technical education in a developing country, while inaugurating the Sarder Patel College of Engineering at Bombay. He said that given enough trained men, India would soon "build up a scientific and technological civilization on the basis of a spiritual foundation." We have not quite clearly understood what Pandit Nehru meant by the spiritual foundation of a scientific and technological civilization. Was it just a phrase for accommodating non-scientific and non-technical personnel on the pay rolls of the nation? For most of the people who dominate India today are completely devoid of all knowledge of science and technology

s a matter of fact India is the one country in the world where there is such an amaz- g absence of proper training and educa- n among Ministers, members of Parlia- ent and job holders. All important tional work is carried on in India on the sis of the personal feelings of a few top who who feel and express opinion elabo- ely and at length quite frequently thout knowing much about the subject tter of their feelings. This ignorance scientific, technological and factual. And, suppose, the glory of this very elaborate extensive ignorance provides the spiri- l foundation to the non-existent scienti- and technological civilization that ndit Nehru is building for the poor orant masses of India. Pandit Nehru has de a complete break with Mahatma ndhi's policy of national regeneration. e Mahatma thought of building up the ion by individual effort in every little lage throughout India. Industry was only ant for providing such necessities as ld not be produced by the people with- the aid of giant machinery. The hatma's civilization was spiritual and only that much of science and techno- gy in it as was unavoidable. There was glorification of industry in his scheme things. He rather thought industry was mful in many ways. And he was quite ht too. Pandit Nehru thinks that science technology are the first requirements the nation. He is willing to interfere th the life of the people at numerous ts in order to establish his thesis. All ons of the West have developed their culture, animal husbandry, forests, erals, communications and commerce to fullest before expanding their indus- es. They have not depended on borrow- for progress; nor sacrificed the peoples' ll being for the purchase of foreign chinery. Russia's amazing progress was ieved without any foreign loans. Ger- ny twice recovered from utter penury ing the last half a century without reign aid. If the people work, the nation kes progress. Pandit Nehru's plans pre- nt the people from working. He prefers outward symptoms of a civilization to civilization itself. India is slowly becoming a C3 nation in point of individual well being, and she is making very little progress in science and technology.

A. C.

Railway Accidents

Accidents on the railways can only occur for certain reasons. These are (1) accidents caused by the ignorance, lack of intelligence, negligence or deliberate misconduct of human beings; (2) accidents due to reasons or faults connected with the mechanical and material factors present in railways; and (3) those caused by acts of God, such as, storms, floods, earthquakes, etc., etc. It is quite common with our railways to ascribe all accidents to sabotage, or at least all excepting some which could never have been caused by sabotage. And even sabotage can be carried out by disgruntled railway employees. Generally speaking, therefore, one should begin enquiries about railway accidents by looking very closely into the human element associated with the particular railway or the place where the accident occurred, as well as the personnel of the railway train or trains. Then there are mechanical defects. These may be there due to the negligence of the makers of the machinery, appliances, rails, structures, etc., or may be brought about by lack of maintenance, faulty repairs or unskilled operation. Latterly Indian railways have been employing, posting, promoting and managing personnel in a lax, corrupt and unwise manner. Persons in high position have been practising favouritism and enforcement of discipline has become impossible due to interference by persons in power. In one case a signalman who used to go away from his box and leave his work to a boy, could not be punished on account of having a patron who always gave him protection. This signalman later caused a terrible accident in which many died. We all know the defects of our railway organisation and the defects are becoming more and more serious. Trains seldom arrive on time anywhere and the reasons are traceable to the persons who take things easy on account of having influential connections. This disgraceful practice of pushing undesirable relations or proteges into positions of great responsibi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lity has caused the death of many on our railways. And the disease is not restricted to railways only. India's Very Important Persons are a great menace to society, for they have no sense of decorum in pushing their favourites into employment. Our national services are going from bad to worse every day due to this evil.

A. C.

Diwan-i-Aam of W. Bengal

Mr. P. C. Sen is a bold, energetic and intelligent person. Soon after becoming the Chief Minister of West Bengal, he has begun to attempt a "clean up" of the administrative junk heap that is present in every State as an inheritance from the British imperial era. Life goes on in India in spite of the apathy, corruption, exploitative greed and primitive mechanism that one finds in the governmental organisation in every State. It is highly amusing, in fact, to see the great national leaders of India proceeding along the ruts left by the Moghuls and the British, seated in their multiwheeled governmental chariots of vast proportions and talking glibly and often in the best tradition and diction of Tub Thumpers without achieving any actual progress worth talking about. In our youth we were forced to read a text book named "England's Work in India" which gave an exaggerated and fictitious account of the boons that India had secured through British imperial governance. What we get in our newspapers and over the radio now is akin to that concocted history and utterly impossible valuation of British rulership of India. That Mr. P. C. Sen has left the beaten track of Congress guardianship of the Indian nation and is trying to do something factual and real is a good sign and may actually lead to something. His Diwan-i-Aam or public hearing of complaints is a very good move in a right direction. Things will be done much sooner if the departments know that the Chief is taking a personal interest in matters. But what is more necessary is the abolition of the numerous Diwan-i-Khas discussions which are held between ministers and the patrons of persons and or business houses in order to get things done against the public interest. If Mr. P. C. Sen makes a rule that all decisions taken must be discussed openly and in an above board manner and not by "influence" or by listening to behind the screen talks, he will achieve a great national good. For corruption has become a sort of fourth dimension of the governmental organisation, and, unless this is uprooted, the condition of the people will not improve noticeably. It is also high time that the so called political sufferers were told to put in their claims of an economic nature by such and such date, after which they will have to line up with all others. The old civil servants who carried out the orders of the British so faithfully upto 1947, should also be retired **en bloc** now so that a new atmosphere can prevail in administration.

A. C.

Mobilising Gold

Shri Morarji Desai has had yet another brain wave. Someone has told him that India has 4,000 crores worth of gold in many small and large hoards, in the shape of jewellary and, may be, in gold coins. He has, therefore, thought of making use of this gold for the stop gap purpose of importing foreign goods for the Plans. If we have 4000 crores in gold, i.e., Rs. 100|- in gold per capita of our population; then the distribution of that gold must be very wide, scattered. About 75% Indans have no gold being too poor to posses any. The other 10 crores of our population may have about 3 tolas each; but then Shri Desai has knowledge of large and small hoards. So in order to satisfy his contention we should leave about 1 tola from each owner of gold for the hoards which may be worth 100 crores more or less. The other 3000 crores will not be worth mobilising, being 9, 12, 14, 18, 22 or 24 carat in quality and in the shape of light ornaments of $\frac{1}{8}$ to 1 tola in weight of a total number running into perhaps 1000 million pieces. Buttons, ear rings, thin bangles, rings, nose studs, hair pins, pendants, chains, etc., weighing less than $\frac{1}{4}$ tola in most cases. Even the soul of a Congress leader will quail at the thought of mobilising 100 million buttons, 100 million pieces of ear rings, 100 million **Churis** 50 million nose studs, 250 mill

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rings and all the rest of the stuff. Detaching **Chumkis** from **saris** and gold thread from pieces of **Kinkhab** will be a hopeless task. Then the gold covered ornaments with lac filling will also defy all efforts at mobilisation of the precious metal. Coming to the hoards, if they do exist, how is Shri Morarji going to borrow the gold or to buy or confiscate it? If he issues gold bonds repayable **in gold** at a future date, he may get some gold. But the usual practice of our public Finance experts is to borrow money when its purchasing power is x and to repay the loan when the purchasing power has gone down to $\frac{1}{2}$ x or less. If gold is borrowed and the repayment is in gold too the time honoured secret levy on capital will not be there and our spendthrift Government may find that inconvenient. For, so far, we have always repaid our National Debt only partially and a large share of it has been just wiped out by the aforementioned secret levy on Capital. Gold bonds purchaseable and repayable in gold only will make real values too conspicuous. The Government of India will stand exposed in the matter of public debts if this happened. So that gold bonds will not be popular. Shri Morarji may however beg for one tola of gold from a selected group of 2 crore Indians. This will yield 50 crore worth of foreign exchange. In exchange the donors of gold may be given permits to buy cement, steel, clean sugar, guaranteed medicines, pure ghee or seats in railway trains.

A. C.

Gold Racket in Calcutta

One of the signs of a Socialist system of economic organisation is the prevention of exploitation of the members of the community by those who are in a strong position in point of control of finances, material or other economic resources. Preventive legislation has been introduced from time to time in many countries in the various sectors of the economic field for the purpose of controlling exploitation and these are known as Labour Laws, Social Security legislation, Acts controlling the formation of trusts and Kartels and their operation, and preventing cornering of essential commodities and so on and so forth. No one has, of course, so far discussed the problem of exploitation of the people by political parties or by Mlitary Dictators and that leaves a fruitful field for research by scholars of economics and history. That such exploitation is possible is well-known to all people who have and are suffering from the effects of this sort of exploitation. There can be various other forms of exploitation of persons in a weak economic position by those in a stronger position, which are too numerous to mention here. Such exploitation by political groups are carried out by what is known as nepotism or corrupt favouritism; while private individuals achieve the same objectives by bribery, winning the favour of persons in power by any means, buying results of "impartial" tests, trials and examinations and obtaining, by similar means, contracts, permits, licences and what not?

A new racket and corrupt system of buying and selling land has now grown in the big cities of India. In Calcutta powerful financial groups are now buying up all building sites in advantageous and popular spots in the name of their proxies and they are, thereafter, making enormous profits by selling the same at exhorbitant prices to the persons who badly need land to build houses. Thus lands purchased a few month ago at Rs. 5,000/10,000 per katta (720 sq. ft.) are now selling at Rs. 20,000/- Rs. 30,000/- p. k. There have been cases of sales at Rs. 50,000/ and even Rs. 90,000/ p. k. The city Improvement Trust which buys out the poor residents of Calcutta living in congested areas at low prices, now-a-days auctions the same after improvement. These are bought up by the rich financial groups which later release the same at very high prices to those who build houses. Thus many Calcutta people have been forced to sell their ancestral homes to the Calcutta Improvement Trust at prices which were quite low and the sellers have seldom been able to buy back anything. Now if anyone goes to the agents of the racketeers in land to buy any particular plot, the would-be buyer is asked to make a written offer. If that is done, the offer is merely shown round to be bettered by others. No one gets the plot until a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

very rich builder of mansions or flats turns up and offers a very high price; probably half in "black" and half in white money. The "black" money is off the record and that saves taxes and in stamps. Also the buyer can use his illicit earnings by paying off the record cash. These transactions are anti-Social and are causing great inconvenience and loss to ordinary buyers of land. The State is also lossing. What about some immediate preventive action by Government?

A. C.

L. I. C.

By making a state monopoly of life insurance in India the Government of India had successfully managed to control all savings of Indians in the shape of premia paid on the policies. They have also by this means, set-up newer standards of inefficiency in every little thing connected with this very essential socio-economic institution. There are just thousands of complaints all over India now of receipts not being issued, notices not being sent, sitting over first premiums without granting cover, delay over settlement of claims and so on and so forth. If half of these alleged acts of gross negligence and mismanagement are reported correctly, it gives a grim picture of state "management" of the affairs of this essential public utility organisation. The Government of India are very proud of the achievements of their public sector. But when we look round the public hospitals, check up on the police force and its failures in the field of prevention and detection of crime, wait for long hours on railway platforms for trains running late, never receive our letters, telegrams and money orders, watch the houses of millionnaires and governmental palaces go up by the dozen while we wait for our mites of cement or steel, get no transport for our raw materials or finished goods, run around the market to get some genuine medicine and live through our years of independence in anxiety, want and frustration; then we slowly develop our doubts about the sincereity, honesty and ability of our national managers of the destiny of the nation. We begin to feel that a nation cannot live entirely on newspaper headlines. Nor on the promises and statements made by the leaders of the nation. Fomerly, we could, at least die happily, knowing that we were leaving behind our Life Insurance Policies to safeguard the well-being of our family members. Today with the amazing mismanagement that prevails in the bureaux of the L. I. C. We feel shakey even to die.

A.C.

Everybody's Grazing Ground

And nobody's responsibiity. That is Calcutta. We often hear how clean, modern and well-developed Bombay, Delhi, Madras and Kanpur are, and we feel sorry for ourselves; but when we look round the streets of Calcutta we find a great change has come over it since the days of our youth. It appears to us that the entire surplus population of eastren India has come to live in Calcutta. And their way of life determines the life of Calcutta. Very few of them pay any rates or taxes and many live more or less on the pavements and in rickshaws or upon push carts. They carry out their ablutions and look after their ultimate personal needs in full public view all over the city. They also lead a simple life and do not believe in sending their clothes to the wash. When they have a shave, once every six months, or shave their heads, twice a month, the debris left at the site of the two-brick hair dressing saloon is mountainous. And if four hundred thousand persons discard one tooth brush (branch) every day, the volume of the chewed up timber would lie, at the rate of 200 pieces p.c. ft., about 2,000 c. ft. p. day. That is roughly 20 lorry loads! No wonder the City Fathers feel helpless when they see the size of the job they have to do. Moreover, they find that their conservancy staff create more filth than they can remove.

A.C.

How Dogs Live and Die

There are roughly a couple of lakh of stray dogs in Calcutta. There are also a similar number of cats. There are two well-known organisations in the city which look after the well-being of the animals. This means that all dogs and cats which have well-to-do owners are properly looked after in the city. The stray animals live and die uncared for. Most of the dogs are mangy and suffer from all known and unknown forms of canine malady. They die untreated and occasionally in a very painful manner, e.g., by being run over by motor vehicles or rabies. Recently a dog developed rabies in a fairly modern part of the city. The organisations referred to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

above refused to do anything about it; for they thought that suffering from rabies was not the same as being subjected to cruelty. This subtle philosophical distinction between acts of humans and of God eventually caused the police to be brought into the picture. The dog, thereafter, beaten under repeated *lathi* blows and was left dead in a nearby drain. The Calcutta Corporation, by the way, informed the rate payers concerned that they had no arrangements for destroying stray or diseased dogs, as such arrangements were objected to by dog lovers !

A. C.

India in Asian Games

In spite of all restrictive impositions made by the Government of India, who love to see the Nation shine in International meets without giving up any part of their absurd and nationally injurious foreign exchange policy; the Indian team has been doing well in the competitions. Japan, which was almost totally destroyed by the war can, it seems, earn and spend any amount of foreign exchange for the atheletes of the nation. India, being ruled by men and women who have no constructive nation building ideas, excepting such as are connected with buying foreign machinery; is in an unfortunate position. She has 400 million people of whom more than three-fourths cannot find any ready market to sell their labour at a good price. The Government of India cannot read the economic lesson provided by Russia, Germany and Japan and they go after borrowing the products of foreign labour while they keep their own man-powers idle. This way of looking at the economy of the nation is setting back the nation by 50 years. When we emerge out of these dark ages of Indian economy it may be too late to pick up the lost opportunities. To go back to the Asian Games, we have to say that very many top-class sportsmen never got a chance to join the competitions. This prevented India from earning greater distinction. It also created a sense of frustration among sportsman which was no good for the cause of atheletics in India.

A. C.

Who are Indians

Mr. Phizo, who became famous with foreign assistance in his campaign for an independent Nagaland recently said that his people were not Indians but were a separate race of humans who did not want Indians to come into their country and swamp them by force of numbers. Now, we think, Mr. Phizo's source of inspiration is the same as that of the makers of Pakistan who also thought they were a separate nation by virtue of their acceptance of Islam as their religion. As a matter of fact, the Nagas are no more or no less Indians than all other Indians. The same is true of the people of Pakistan. For really Indian is a name given to the dwellers of the subcontinent of India without reference to the socio-anthropological differences that may exist between the various groups and communities that inhabit India. So that one might assert that the majority of the Indian people have a right to demand a common state for all Indians. The right of local self-government should also belong to the people of all Indian zones and sub-zones. But not the right to break away. The British violated this fundamental principle once by creating a Pakistan. This cannot be permitted to be done a second time.

A. C.

To Whose Credit ?

Truth and the necessity for keeping a correct record of all that has happened in the process of the development of human civilisation, demand that no incorrect version of any significant historical incident should be permitted to be propagated without contradiction. In India political parties and their followers are the most outstanding distorters of the facts of history as related to what they consider to be their moral territory of work and achievement. This evil has spread from political parties to individuals and to other groups of persons too. So that the true facts of social or political history are becoming obscure and refabricated day by day. Some of these attempts at false presentation of facts are deliberately made by organised bodies, while others just happen due to the overflowing *bhakti* of loose thinking persons who cannot always keep separate their wishful thoughts from the realities of life. Thus a Communist may say that the Law of Gravitation was discovered by Karl Marx or an ardent Congressman ascribe the authorship of the *Bhagabat Gita* to Mahatma Gandhi. In a small way, perhaps, Pandit Jawaharlal Nehru may be given credit for inaugurating the League of Nations and the U.N.O. or Shri

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Atulya Ghosh honoured for starting the Swadeshi Movement. We should make a list of all incidents of National Importance right now and give each one its true historical weightage and mention truthfully who did what.

A. C.

The ECM, Britain and India

Understanding about the real significance of Britain's application for being allowed to join the European Common Market and its implications to India appears to be informed by a vagueness of which good advantage, it would seem, is being sought to be derived by the Union Finance Minister, by the rather extravagantly optimistic forecastes made by the later since his recent return from abroad, and which would seem to be further confounding the prevalent confusion on the matter. At the time of the conclusion of the now famous Rome Treaty organizing an European Economic Community, binding them together into a common customs union some years ago, Britain spurned the offer to join the favoured Six and sought to neutralize the possible impact upon her trade of this new kind of international coustoms union by devising the European Free Trade Association. At the time of the Rome Treaty Britain did not, understandably, apprehend any very serious repercussion on her trade from this new customs union, as she was well set in her developing trade abroad and most of the countries of the Six were only just emerging into econmic self-sufficiency after the devastations of the Second World War. What little threat, she felt, there might eventually develop from this new Union to her trade, would be more than fully neutralized by her new creation, the EFTA.

Unfortunately for Britain and most countries of the EFTA, things did not pan out in the manner they were expected to, and the new Economic Community created by the Rome Treaty not merely emerged into daily developing virility with a corresponding hold upon Europe's trade to an extent never before envisaged as even remotely possible, it also developed into much more than merely a loose customs union between the countries concerned, and has fast been acquiring also a most significant strategic importance at the same time. Britain had, of course, certain inherent difficulties in joining such a community as this. For one thing, she had her obligations under the old Imperial Preferences, now the Commonwealth preferences, and these she could not lightly repudiate not merely because of their international political implications, but presumably, because of their visibly beneficent effects upon her own home economy, derived from Commonwealth trade. Most of the undeveloped and underdeveloped (and most of the Commonwealth countries are such) members of the Commonwealth not merely did and continue to provide a lucrative market for surplus British exportable merchandise, especially in the shape of heavy capital-exports, they have also been providing a happy and profitable dumping ground for a sizeably large proportion of British unemployables, masquerading as so-called technologists and experts, at highly remunerative rates. Britain obviously could not lightly repudiate these profitable ties which it might be necessary to at least considerably loosen, if not completely sever, if she had agreed to join the newly conceived European Economic Community at the time of the formulation of the Rome Treaty.

Things, however, panned out quite differently from what was anticipated and the Six developed an economic and industrial potential within the very short while it has been operating which was not merely not previously apprehended as being possible, but which has been the cause of Britain's being steadily but surely pushed out of her traditional markets not merely on the continent of Europe, but even elsewhere in the world. Even some of the developing Commonwealth countries preferred to make their purchases of heavy capital goods from the Six at more economical terms and the inevitable result has been a serious threat to the British economy which has to sustain itself very largely by its exports abroad. Dwindling British exports and the corresponding effect of the situation upon the growth of the British national product compelled the Government of the U.K. last year to seriously reconsider the earlier decision to keep away from the E.E.C. Reconsideration was, obviously, neither easy nor facile. Britain had to consider in this context her obligations under Commonwealth Relations. There was also the matter of the EFTA to be considered. These are one, a traditional obligation and the other one which was created primarily at her own instances and initiative, which could not be lightly dismissed or repudiated. On the other hand, her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...lling trade which she could not conceive of ...r other alternative means to save from, were ...ing a real threat to the maintenance of the ...ish national standard of living at their present ...l. One can sympathise with Britain in her ...ate decision to apply for admission into the ..., proposing certain safeguards in respect of ...h her Commonwealth and EFTA obligations as ...condition of her admittance.

The community of the Six, understandably, ...e been in no mood for accepting any condi-...n, however. Negotiations have been going on ...r more than a year now, Britain being almost ...inuously and progressively compelled to re-...e and restate her demands in respect of Com-...wealth concessions so far as the application ...the Common External Tariffs of the ECM are ...cerned, but the Six as steadily proving in-...table in respect of almost every new propo-...l put forth by Britain in this regard. One of ...e latest proposals put forth by Britain, and ...ch intimately concerned India, was that a ...atorium should be extended in respect of ...ish imports from the Commonwealth, espe-...lly from India and Pakistan duty free and ...respective of quota restrictions, for a period ...ually agreed before the Common External ...iff were to be clamped down on them. There ...s initial expectation that such a proposal ...ld be acceptable, especially in view of simi-... concessions having already been granted to ...ain African countries, former possessions of ...e French Empire and which, perhaps, was one ...e visible reasons for Mr. Morarji Desai's ...d of optimism. Nothing, however, has so far ...ntuated to encourage the hope that the Six ...ld be likely to accept even such temporary ...essions. Latest indications available, on the ...rary, evince a considerable hardening of the ...ude of the Six in respect of British proposals ...rding agriculture, and it does seem likely ...t the British application for admittance into ...e Community may even be indefinitely post-...ned, if not altogether rejected. The French ...ident's rather devastatingly cryptic comment ...t Britain has been endeavouring to eat the ...e and have it too at the same time, would ...ms to summarise, in concrete terms, the con-...ion Britain has been seeking to make as part ...her terms for admittance into the E.E.C. Tem-...rarily, at least, there would seem to have been ...certain accession of strength in the British atti-tude in respect of her conditions for joining the Community qualified, perhaps, by the recently reported upward lift in the quantum of British exports to West Germany and other countries of the European Economic Community in spite of the deterrant common tariff. But how long this, what may be only a fortuitious and very temporary accession of strength is likely to last is a matter of quite uncertain speculation and it is not impossible that in a very short while again, she may find herself reduced to her original position of a somewhat abject suppliant.

What would seem to have been considerably accentuating British difficulties in the way of joining the Community apart from the Community's intransigence in respect of her proposals for Commonwealth concessions, is the fact that the Six, apparently, are no more in a relenting mood in respect of the European neutrals whom Britain had roped in into her former EFTA escapade, and about whom both the governing party and the opposition in the Community's counsels seem to be completely indifferent. It may, on the face of it, seem rather strange that any European country could afford to be quite indifferent to these West European democracies. But the Common Market Community being not just an ordinary customs union, but something far more potent both in respect of political and military implications, it may be difficult for the Six to tie in, or provide concession to countries which are unable to accept the political implications or the joint military responsibilities of the Rome Treaty. The penchant for maintaining the "neatness around the edges" of the Community even after enlargement as being currently discussed, may be considered of such paramount importance that it may conceivably be difficult to envisage that the boundaries of the Community may be allowed to loose its present sharpness of outline as between those who are in and those that are out, and merge into vague and indeterminate lines as, it may be apprehended, would be bound to be the case if the countries of the EFTA were to be included within the favoured perimeter of the Six or the Seven, as the case may be, without a complete reversal of their political or military neutrality.

Whether one agrees with the political and military contents of the policies of the European Economic Community or otherwise, the fact seems to be unambiguously clear that so far as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India is concerned, there is no real cause for the Union Finance Minister's unseasonable optimism, and in the event of Britain's being eventually allowed to join the Community, India may be faced with a further serious threat to her already very precarious export balances. As present indications shew, there is quite a possibility that Britain's application for admittance, if not on the grounds of her conditions for Commonwealth or other conditions, but at least on account of her demands in respect of British agriculture, a position from which she cannot obviously resile on account of the dire threat its ultimate repudiation would be bound to pose on her own basic economic structure, may be rejected or, at least, indefinitely postponed. It is in India's own interest to hope that it may be so, and instead of spreading confusion by way of wishful optimism of the manner in which our Finance Minister seems to have been indulging, the country should make ready to meet the challenge of leastwise the breathing space that is thus bound to be available, and make the most of her advantages in the British markets.

K. N.

Development Planning in Underdeveloped Economy

One of the fundamental bases of development planning for an underdeveloped economy like the one in this country, it should be recognized, must be progress in agricultural production. In fact, looked at from the point of view of the requisite conditions of industrial development, growth of an agricultural surplus would seem to be one of the essential conditions-precedent to industrial growth. The history of the U.S. economy, undoubtedly the most highly developed industrial economy of the modern world, would demonstrate that the rapid pace of industrial development in this country followed, not preceded, the growth of very substantial agricultural surpluses. Even today, despite America's overwhelming industrial potential not merely from the point of view of installed capacity but also from that of a correspondingly rapidly rising incidences of productivity, U.S. agriculture is blessed with large surpluses to an extent where the price levels of agricultural produce have to be sustained by a cleverly devised system of organized price-support. Examples in the U.K. and other European countries especially belonging to the favoured group of the Economic Community, would demonstrate a similar trend of agricultural growth preceding rapid industrialization.

Development planning in India would not, however, seem to demonstrate a clear understanding of such a postulate to industrial growth. The very substantial deficits in the country's food production potentials requiring the diversion of very substantial amounts of precious foreign exchange for the importation of food cereals from abroad no doubt caused a certain emphasis to be laid upon creation of necessary irrigation facilities and the production of requisite quantities of fertilizers in the First and the following Plan programmes, but results up-to-date do not appear to have been sufficiently encouraging to agricultural growth at the rate at which it would be considered an ample incentive to industrial development at the pace programmed for. Estimates of agricultural production during the first year of the Third Plan in 1961-62, provided for only marginal increase over the previous year, although it would seem obvious that the achievements of the Third Plan would have to depend, more than on anything else, upon the steady improvement in production incidences that would be likely to be evinced in the agricultural sector of the national economy.

In fact, there would seem to be a concentration of attention and concern upon a rapid rise in the industrial potential of the economy to the comparative neglect of the need for agricultural growth as an essential economic base without which ordered industrial growth may, despite the creation of necessary capacity therefor, be altogether jeopardised. In all that is being sought to be done currently in respect of development planning one would look almost in vain for a practical and purposive approach to this most vital requisite of development planning.

Although attention has, from time to time, been drawn to the fact that the levels of output envisaged for agriculture in the Plan will have to depend on the progress of irrigation and availability of chemical fertilizers—and it must be recognized that the output envisaged is, in itself, far short of the level at which an agricultural surplus would be expected to be in sight—the outlook, to judge by experience, would not seem to be very much encouraging. Although irri

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gation facilities have, in their potentials been programmed for a considerable improvement from about 48 per cent in the first year of the Second Plan to about 70 per cent in its last year, it is still bound to be a very long time before sufficient irrigation facilities are created and utilized to the full requisite extent. Against the Third Plan target of 12.80 million acres to be covered by minor irrigation potentials, achievements of the first year of the Third Plan in 1961-62, is estimated to have been only 1.67 million acres, while in respect of major and medium irrigation works, utilization during the year is estimated at 1.84 million acres against the Third Plan target of 13.64 million acres. In respect of fertilizers production, the Third Plan had to get off with the heavy backlog of the Second Plan. In accordance with an estimate provided in the Rajya Sabha by the Union Food and Agriculture Minister, the total requirements of fertilizers in 1962-63, in terms of nitrogenous contents are estimated at 5,89,000 tonnes, indigenous production at 2,02,000 tonnes, imports at 2,15,000 tonnes, leaving an uncovered shortfall of 1,72,000 tonnes.

Unfortunately, however, authority seems to be strangely complacent about this rather dismal picture of immediate agricultural prospects in the country, although on the very face of it it would seem that the bare outlines of success even in respect of merely achieving the physical targets of the Third Plan would have to depend on very substantial food imports at what may only be described as suicidal expenditure of foreign exchange. Looked at either way, lack of sufficiently purposive programme for agricultural growth at the minimum requisite rate, the fundamental postulate that industrial development has to follow agricultural growth at a sufficiently rapid pace to make the eventual emergence of an agricultural surplus is accepted as correct, might jeopardise the very purpose of development planning currently being undertaken at such huge expenditure both in terms of material resources and immense human sacrifice.

Another very pertinent question in this connection would seem to be the type of industrial growth that would be likely to suit the present conditions and stage of development of the Indian economy. One of the fundamental determinants of economic growth universally accepted all over the world, is the corresponding growth of the employment potential that such economic growth would sustain indicating, thereby, the growth, in turn, of both the area and content of *effective demand*. The economic advisers of the Planning Commission and of the Government of India alike appear to us to have been over-emphasizing the need for consumption-restriction as both a generative factor in capital-formation as well as a necessary restraining element against inflationary pressures. This emphasis on consumption-restraint would, however, seem to disregard a fundamental economic fact that consumption-restraints would apply only to the existence of a corresponding consumers' surplus. Where such a surplus is non-existent or, as very well may be the case in most instances in this country, it is a negative quantity, consumption-restraint would be a foolhardy thing to look for. Be that as it may, there is nothing in the results of the First two Plans so far emerged, nor in the prospects of the Third Plan currently under implementation, that would indicate the prospects of any substantial improvement in the employment potential in the country. It is not merely a question of having to provide for the growth of new employment seekers estimated at approximately 2.1 per cent of the population annually but even of the backlog of the huge army of the unemployed or only very partially employed, that has to be considered in this context. The question would seem to be pertinent in this context that planning for huge capital intensive industries of the modern type alone, which seems to be the current pastime of our development-economists at the Centre and in the States, would be likely to achieve anywhere near this purpose. The employment potentials of capital-intensive industries, it is pertinent to remind oneself at this stage, is comparatively low. In fact, the growth of capital-intensive industries in U.S.A. and, later in Europe of the modern type have been the direct outcome, on the one hand, of the need for profitable employment of surplus idle capital and, on the other, to obviate the difficulties of labour shortages, conditions which would not seem to apply to the case of India even remotely. The glamour of a highly mechanized, even automatized industrial system may be very fascinating to an outside onlooker but where necessary conditions for their adoption do not apply, their importation into the system of an underdeveloped (for all

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

practically purposes really a completely undeveloped) economy like that in this country, may be completely suicidal. Conditions here, it would seem patent, do not even remotely encourage the establishment of large-scale capital intensive industries in this country yet. Our problem is certainly neither unemployed surplus capital languishing for profitable investment, nor a lack of human labour. It has been complained that considering the very low productivity of Indian labour, the production-process is inordinately expensive in this country despite our low economic potentials and the need for developing competitive efficiency makes the establishment of capital intensive industries a dire necessity. If the purpose of economic growth is to provide for a corresponding rise in the incidence of the national product in the benefits of which the people in the country are intended to participate, this would certainly not seem to be the way to go about the matter. On the contrary, considering that the capital base of a modern mechanized capital intensive industry is in the proportion of 10,000 to 200 against cottage industries per capita of employment in the industry concerned, going in for capital intensive industrialization in India at the present moment would distinctly seem to be contra-indicated.

In fact, a careful scrutiny of the programmes and processes of Development Planning viewed in the context of the results achieved during the last eleven years, would seem to indicate the vital need for a great deal of rethinking on the matter and, perhaps, a complete reversal of the policies and programmes that we seem to have been fruitlessly pursuing in this country during the last decade at considerable sacrifice to the people. One of the elementary contents of progress is, obviously, the ability to own up mistakes and the courage to start afresh if need be.

K. N.

THIS MONTH'S COVER

As we remember the late Ananda Mohan Bose on the front page of this issue we cannot do better than recall what Dr. Rashbehari Ghose said as Chairman of the Reception Committee to the 1906 Calcutta Congress :

"In the death of Ananda Mohan Bose, everyone felt as if he had lost a personal friend ; for he was of an eminently winning disposition, distinguished not less by his amiability than by the purity of his life. To deep spiritual fervour, he joined a lofty patriotism, working 'as ever in the great Task Master's eye'. Indeed, in Ananda Mohan Bose patriotism grew to the height of a religion. And it was this happy union of the religious and civic elements in his character that sustained him when, with life fast ebbing away and with the valley of the shadow of death almost in sight, he poured out his soul in that memorable swan song of the 16th of October, 1905, when a whole people plunged in gloom assembled together in solemn protest against the ruthless dismemberment of their country".

ARE VILLAGE INDUSTRIES UNNECESSARY?

By VAIKUNTH L. MEHTA

Despite the fact that the programme for the development of cottage industries has been an organic part of our national planning since the first of the series of five year plans was launched in 1951-52, it is curious that some of the students or critics of our planning refuse to understand, much less to appreciate, the place of these industries in the Indian economy. The latest among such critics is Mr. Paul Johnson who decries the value of this sector of our plans in an article which is prominently featured in the **New Statesman.*** He considers that cottage industries constitute "perhaps the biggest artificial burden the economy has to bear" since they are "heavily subsidized and protected." The fact that these industries have been allocated Rs. 264 crores in the Third Plan shows, he avers, the immensity of the burden, for does this not, he asserts, represent 25 per cent of the total allotted to agriculture?

This kind of criticism can come only from a superficial—if not jaundiced—student of Indian planning, particularly one who has made no attempt to study the stark realities of our economy. That the number of persons engaged in small establishments is at least three times that of those employed by factory industries should denote the importance of this sector of our economy and the imperative need in any programme of planned development to ensure that the large numbers engaged in these occupations are enabled to increase their levels of earnings and hence to raise their standards of living which are much below those of the smaller numbers employed in factory industries. Moreover, the aggregate contribution that these small establishments, through their productive efforts, made to the national output was, until some five years back, of the same magnitude as that of factory industries; notwithstanding the intensification of the process of centralized industrialisation even today it is only slightly lower in proportion. It should have been obvious to any discerning student of the Indian economy that no planning authority could ignore the claims of this important section of our industrial workers.

It is arithmetically true that the sum of Rs. 264 crores constitutes roughly a little under a quarter of Rs. 1,068 crores alloted to agriculture under the Third Five-Year Plan. But while the allocation for agriculture has gone up from Rs. 530 crores in the Second Plan to Rs. 1,068 crores in the Third Plan and the percentage from 11 to 14, for the village and small industries sector the percentage of allocation remains the same, just 4. The percentage allocation for organized industries and minerals remains the same, that is 20, but the quantum has gone up from Rs. 900 crores to Rs. 1,520 crores, which figure is nearly six times the provision for the small industries sector. This provision, besides, is exclusive of the allocation for power which has gone up from Rs. 445 crores to Rs. 1,012 crores, the percentage rising from 10 to 13.

A student of our Plans should also have noted that out of the increased allocation for the cottage and small industries sector, handlooms and Khadi, which are mainly the target of Mr. Paul Johnson's attack, account partly for just 15 crores out of a total increase of some 85 crores. It is mainly the mechanized section in this group that has secured the bulk of the additional provision. The allocation for small-scale industries, principally other than the traditional ones, is Rs. 84.6 crores as against Rs. 64.6 crores under the Second Plan and for industrial estates, chiefly intended for small and medium industries Rs. 30.2 crores as

* "The Tortoise and the Hare" By Paul Johnson, *New Statesman*, 1st June, 1962.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

compared with Rs. 11.6 crores in the Second Plan. If this increase of Rs. 40 crores is deemed a burden it has been accepted by the planning authorities not out of any desire to subsidize or protect the traditional cottage industries but by reason, presumably, of a desire to diversify the industrial pattern by the encouragement of new industries producing miscellaneous articles with the use of power, providing an outlet for petty entrepreneurial talent and diffusing employment among skilled workmen or young persons with a modicum of training in the handling of machines. Both the economic and sociological value of this cannot be denied by any student of economics.

In the columns of a weekly devoted to the cause of socialism it is amazing, however, to see a statement such as made by Mr. Paul Johnson that if rural employment is to be reduced "it would be preferable to keep the workers alive by paying a dole." In the first place, no person making such an assertion could possibly have any conception of the magnitude of the problem of rural unemployment in India, or even of Indian demographic conditions with its preponderant rural population four times as large as the urban population and with agriculture being the source of livelihood for nearly seven out of every ten persons. In an unplanned society, the surplus rural population may be left to die of slow starvation or have their standard of living lowered with the growth in numbers without any corresponding increase in the income from agriculture. But any scheme of unemployment doles for the huge numbers concerned would present a most stupendous task for a planning authority even with the amplest of resources as its command. Again, the pattern of our agricultural operations is such and varies so greatly that it is not only for those who are wholly unemployed that provision has to be made. Those who are unemployed in off-seasons or those who have just a little work to do every day or the rural artisans who have lost their occupations or who can finish their daily job in a few hours' time—the chronically under-employed—will also claim attention. The grant of doles to the wholly unemployed, even if practicable and desirable, can by no stretch of imagination alleviate the misery that rural under-employment spells.

But apart from the financial aspect, what is astounding is the casual, if not callous, manner in which this problem of unemployment is approached. How a system of doles can meet a situation such as confronts planning in India passes one's understanding! It is not the planning authorities in India but a delegation from the United Nations who after a survey of our economy arrived at the conclusion recently that "unemployment and under-employment are major causes of poverty and the objective of providing more and more productive employment is a major element in the broader objective of promoting higher levels of living." The problem is as acute today, if not worse, as it was when these words were penned or when prior to the formulation of the Second Five-Year Plan, the statistical and economic experts associated with the formulation of that Plan put forward their recommendations. The expansion of "household or hand production," observed Prof. P. C. Mahalanobis, "would quickly generate a large volume of work all over the country," a view echoed by the Panel of Economists which called for a positive policy for the stimulation of additional employment opportunities for self-employed persons as a major plank in the programme for relief of unemployment. Supplementary occupations, it was noted in The Tentative Framework of the Second Five-Year Plan, would have to be found for considerable numbers.

It is after a sustained and serious study of the problem of unemployment as it exists in our country today that this programme for the development of cottage industries finds place in our Third Five-Year Plan. Allowing the large numbers involved to remain without work and keeping them alive—to reproduce Mr. Paul Johnson's elegant phrase—with the aid of doles is a proposition which would be repugnant to any social scientist, economist and administrator because of sociological and moral considerations, apart from financial ones. One should have thought that the days had gone when it could be seriously

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

suggested, particularly by any one subscribing to a socialist school of thought that it would be in the interest of a national economy as a whole to keep a portion of the people—and in India the portion is pretty large—idle rather than help them to get engaged in useful productive effort. That these persons would thereby be enabled to have the satisfaction of contributing to the national pool upholds their dignity and is in itself no small national gain.

For the provision of expanding opportunities for does employment and work in cottage industries not constitute the most suitable medium? The statisticians and economists associated with the formulation of the Second Five-Year Plan thought so, very definitely. Accepting this view, the Planning Commission appointed, as far back as in 1955, a Committee containing two eminent economists to formulate the lines on which such expansion could be planned for. The traditional industries producing consumers' goods in common demand provide, especially in rural areas, a field of effort where considerable expansion is possible—without the necessity of setting up costly plants or investing large sums of money. As it is, their impact on relieving under-employment either in agriculture or in artisan industries has not been inconsiderable; and large numbers have had fuller employment or work from which the families can supplement their meagre incomes. Over the entire period of the Plans, the increase in employment provided through large-scale factory industries is hardly ten lakhs. With the very much smaller outlay incurred, the cottage industries sector has provided additional employment for far larger numbers. All this has been achieved—and is capable of being extended in growing magnitude—on a basis which should be welcomed by social scientists. As the U.N. survey referred to earlier, has observed, "an opportunity for productive work is not merely a means to a higher income. It is a means to self-respect, to the development of the human personality and to a sense of participation in the common purposes of society." There may be alternative paths of economic development, but in the context of our present-day economy we have to select paths that provide work, forthwith, for large numbers. Then alone can many share in the benefits of progress.

Another of the points of criticism is that the encouragement of production through cottage industries has led to the raising of the price level for consumers' goods and that the limitation placed on the production of large-scale industries in the interests of the corresponding cottage industries or the imposition of differential duties has clogged progress. The classic illustration of this imaginary phenomenon that might be cited would be the cotton textile industry. But no one who has studied the varying fortunes of that industry during the entire period of planning will take the view that its progress has been checked because of either differential duties or by reason of the ceiling fixed for production. The small cess originally imposed in the interest of the cottage handloom industry is but a negligible fraction of the duties now levied by way of indirect taxation for general purposes. When the textile industry spokesmen protested in 1950 against a nominal ceiling placed on production, cloth production actually went above the ceiling and caused a slump, the blame for which could scarcely be laid at the doors of cottage industry. The anticipated increase in the per capita consumption of cloth to meet which the industry clamoured for a higher ceiling has not materialized till this day, because of the absence of any increase in the purchasing power of the people, the large bulk of whom are agriculturists and dwell in villages. That increase can take place only with the diversification of the rural economy, deriving strength from a policy of protection for cottage production.

This is an aspect on which Prof. Mahalanobis, Prof. D. R. Gadgil and other economists laid considerable stress when the Second Five-Year Plan was formulated. Until unemployment was liquidated or brought under control, observed Prof. Mahalanobis, it was necessary to prevent competition between factories and household industries by not permitting investments to be made in such consumers' goods

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

factories as would prevent the expansion of or lead to a shrinkage of employment in the home industries. Expansion of the productive capacity of factory based consumption goods industries was disfavoured by the Panel of Economists on similar grounds. "We want to provide employment opportunities," the Panel of Economists emphasised, "for those who are already engaged in the small-scale industries and find employment for the new additions that are being made to the labour force every year." The grant of protection (to) and encouragement of small-scale (cottage) industries assumed importance, to quote the words of The Tentative Framework for the Second Five-Year Plan, as a means of preserving a balance between the supply and demand for consumer goods, quite apart from their employment potential." In his recent work entitled **The Transformation of Man,** Mr. Lewis Mumford enunciates a similar thesis. According to him "we may favour certain types of products and certain systems of production and reject others with reference to the effect that work has upon the human personality; we shall weigh its influence upon love of fellowship, family life, citizenship, not upon merely mechanical efficiency.

One last point. It is only someone who is indifferent to cultural traditions or is unacquainted with India's heritage who would hazard the view that there was nothing worth preserving in Indian village handicrafts that could not be better or more economically made under modern economic conditions. It would be enough for Mr. Paul Johnson to pay a visit to the British Museum to find for himself the exquisite workmanship which India developed and which made a number of its handicraft products, including textiles, famed all over the world. Our contact with the west, the domination of our economy by a predatory regime and the impact of the machine age have all had an adverse influence on the creative instincts of the people. Notwithstanding all these factors, the traditions have not gone into the limbo of oblivion and the aptitudes and skills handed down from generation to generation still form a part of the culture that India cherishes.

The application of modern machine based technology is not the **summum bonum** of a sound and stable economy. As Prof. J. K. Galbraith has more than once emphasised, apostle of an affluent society as he is, the use of advanced technology in productive processes is, after all, a concession to labour shortage. Conditions in India being quite otherwise, small industries with their larger employment potentials may, conceivably, play a crucial role even in a developing economy. Besides, as Mr. Aldous Huxley said during his recent visit to India, "Europe has behaved as though man was made for the machine and not the machine for the man". Pure efficiency should not override, he urged, the human imperative. If countries seeking to develop industries acted otherwise, an appalling danger confronted them, for man might verily be in danger of being sacrificed to the moloch of the machine.

BRITAIN IN ECM—IS INDIA AFFECTED ?

By Prof. N. SEN

The E.E.C., as the E.C.M. is officially called was formed after signing the Rome Treaty with France, West Germany, Italy, Belgium, Holland and Luxembourg with the main objectives of building up a strong economic and political unity among these nations by adopting the principles of common external tariff which is very very high, quota restrictions of import of goods from non-member countries, free trade among the member-countries, a certain measure of common economic and industrial policy and abolition of bounty and subsidy to agricultural farms. Britain did not then join this custom's union as she failed to obtain terms favourable to herself. Having failed to secure her entry into this market, she not only believed that the common market would inevitably collapse in no time, but that she formed a counter custom's union with the outer-seven, officially called EFTA (European Free Trade Association) with Austria, Portugal, Norway, Sweden, Denmark and Switzerland.

Crises in U.K.

Now Britain is in the face of trade deficits and a run on sterling and growing economic difficulties. Her exports are falling sharply, her industries are outmoded, the prices of goods are not competitive and the productivity is low as compared to many other advanced countries of the West, particularly West Germany, France, U.S.A. and U.S.S.R. Moreover, the EFTA, which is not a viable economic block with such backward countries as Portugal and with a dispersed and scattered market of only 86 million people, cannot provide a good market for U.K. In fact, in 1955, Britain accounted for 20 per cent of the world's export of manufactured goods, which fell sharply to 16 per cent in the year 1960. In the Commonwealth countries, like Australia and New Zealand, U.K. is steadily losing her market which she monopolised so far as she is being gradually ousted from these markets by Japan, U.S.A. and Common Market countries. Her export to Australia fell from 72 per cent to 51 per cent in the last 6 years and in New Zealand from 85 per cent to 72 per cent during that period. Her export to E.C.M. has risen only by 6 per cent since 1958 as compared to Italy's 44 per cent, West Germany's 30 per cent, France's 25 per cent, Holland's 25 per cent and Belgium's and Luxembourg's 23 per cent each. It is on the background of these hard economic crises in Britain that she ultimately decided to negotiate with the ECM with a view to an entry into that body to boost up her exports and to improve her trade position, for, she has now come to realise that she cannot sacrifice a developed market with 170 million people. This was announced by the British Prime Minister Mr. Macmillan on 31st July, 1961 and negotiations have since started under the leadership of Mr. Edward Heath ; Lord Privy Seal. It is still in the negotiation stage and stiff bargaining from both sides is going on. No final decision has been reached yet.

Problems to Join

Her decision to join the ECM, however, has now posed a serious problem—problem with her own agriculture, with EFTA and with the Commonwealth countries. If she joins the ECM, she has to abide by all the rigorous rules and regulations of the Rome Treaty under which the EEC was formed and has to subscribe to its basic principles.

Regarding British farmers, the situation would be grim. Subsidies paid by the British Government to the farmers have to be stopped as per the spirit of the principles of Rome Treaty. Farm products from the continent, which are comparatively much cheaper, would enter U.K. duty-free. At the same time the proportion of external

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tariffs for agricultural products in the continent is very high. This is the protective measure which the E.C.M. adopted to safeguard the agriculture of the continent, which it would not in any case be willing to give up as the President of France has made it quite clear. So Britain, if she joins the ECM, would have to apply the same external tariffs for wheat, butter, meat and other foodstuffs which are now imported from Australia, New Zealand, Canada and other countries absolutely free from any duty. They are at the same time much cheaper too. So, her entry would bring a complete annihilation to her own agriculture. Her entry has also been strongly opposed by the National Farmers' Union of Britain at its Annual General Meeting held in the recent past, which resolved:

> "If we enter the Common Market it will be the end of British Agriculture and the end of the British Empire. The Government should make an all-out effort for trade promotion with the Commonwealth and with the rest of the world."

Regarding EFTA, there may not be any serious problem at all if they are also allowed to join the ECM along with U.K. If, however, for some reason or the other, it is considered not feasible to grant full membership to them, they may be granted associate membership and thus will enjoy the advantages and preferences as are enjoyed by the 14 African countries (associate members) mostly former French Colonies.

Regarding the Commonwealth, real problems would arise here. It is feared in some quarters that the British Commonwealth might dissolve if Britain enters the Common Market under the conditions of the Rome Treaty. At present, between U.K. and the Commonwealth, there is free trade and no quota restrictions and tariff walls, i.e., the Commonwealth goods enter U.K. duty-free. As soon as she joins the ECM, she will have to impose restrictive and prohibitive duty on the Commonwealth goods, which most of the Commonwealth countries particularly India would be unable to bear and virtually there would be a collapse of trade and commerce between U.K. and other Commonwealth countries.

But Britain believes that by joining a rapidly expanding economic block of about 20 crores of people, it would not only strengthen her own economy and contribute to the growth of this large market, but would serve best the interests of the Commonwealth as a whole. She maintains that only an economically strong Britain will be able to provide an expanding market for the products of a developing country and what is more important is that she will be able, in co-operation with others, to be a source of investment funds for the execution of its economic plans. She also maintains at the same time that she would make a stiff bargain with ECM for a substantial tariff cut and safeguards to the Commonwealth. But ECM is reluctant to grant any concession. The French President says:

> "She (Britain) cannot eat the cake and have it too. She cannot have the best of both the worlds. If she joins the six-nation custom's union, she cannot maintain the Imperial Preference. She cannot enjoy the benefits of free trade in ECM and at the same time keep the Commonwealth market for herself."

Impact on India's Trade

In view of this decision of U.K. to join the ECM, India is likely to be the worst sufferer of all the Commonwealth countries. Her export trade would get a rude set back at the time she needs boosting up her export to earn more foreign exchange resources to meet the requirements of the Third Five-Year Plan. So long, India received Imperial Preference along with other Commonwealth countries in the matter of export to U.K. As it has been made clear, the six would not grant any concession in respect of external tariffs. It can, therefore, be clearly imagined as to what would happen to India's 27.3 per cent export to Britain. The trade between India and Britain now stood at about 300 million dollars each way, while India imported some 400 million dollars worth of goods from the Common Market and exported only 100 million dollars worth af goods to U.K. Indian exports to the E.C.M.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were practically duty-free, while exports to the Common Market were subject to high tariffs and quota restrictions, on account of which her imports from them were always in excess of her exports. India's export trade particularly Sewing machines, Kirloskar Diesel Engines and other light engineering and electrical goods, textiles, jute goods, hides and skins, tea and vegetable oils, would suffer greatly. This is no doubt a disturbing prospect, particularly when India has been doing all within her power to step up her exports.

Tea and Jute

Our tea enters the British and other Commonwealth markets with nothing to be said except the price. Almost half of our export earnings are derived from tea and jute and nearly all of it goes to U.K. West Germany and other E.C.M. countries charge 52 per cent duty on our tea. The danger, therefore, is that when Britain joins the E.C.M. she will also have to impose a duty of not less than 52 per cent on tea which is now duty-free.

Textiles

The duty levied by ECM on textile goods is very high. It imposed still higher duty on Indian, Pakistani and Hongkong textiles from January, 1962, on the grounds that they are from low-priced countries. In 1960, British import of cloth from the Commonwealth were 394 million sq. yards in addition to 9.2 million pounds of Indian cotton yarn. The present position is that we enjoy a levy of 17½ per cent on cloth and 7½ per cent on yarn which is charged by Britain to the non-Commonwealth countries. The ECM charges on an average 15 per cent duty on textile goods. So, Britain also will have to charge a levy of at least 15 per cent. India's loss will, therefore, be great when we consider that cotton textile, jute and tea earn nearly Rs. 150 crores in foreign exchange from Britain. After all, we cannot be treated on the same footing as Japan and China, especially in regard to cotton textiles.

Machines

The ECM duty on machines and machine tools and light engineering and electrical goods from Commonwealth countries is exceptionally high. Moreover, further restrictions and more duty on the Commonwealth goods were imposed from January, 1962. To illustrate this, West Germany, Italy and France imposed restrictive and exceptionally prohibitive duty of as much as between 55 and 60 per cent in addition to the present duty on Indian Sewing Machines and Kirloskar Diesel Machines and other electrical goods from India. The former are in great demand in the continent and last year India exported as many as 14,000 of these machines to U.K. Britain would also have to impose this duty on her joining the ECM.

Hides and Skins and Vegetable Oils

More or less similar is the position with these items also, for, on an average Common Market's tariff range between 25 per cent and 45 per cent on different commodities which India is unable to bear at least at this infant stage of her economic development. Thus, Indian exports to U.K. and ECM. would be virtually put a stop to, disrupting her economy very badly.

Associate Members

It has been suggested from some quarters that India should be linked up with the E.C.M. as associates like the 14 dependent African territories associated with France. But it is absolutely out of the question for an independent country like India to be an associate member so that she may be treated on a par with the dependent African countries. Again, association with the E.C.M. means acceptance of the political and military implication of the Treaty of Rome, to which India cannot agree on account of her non-alignment and neutral foreign policy. On the other hand, E.C.M. also cannot agree to the proposal.

Solution

The only way out, therefore, is that (1) there should be a substantial liberalisation of tariff and commercial policies in the Common Market as a whole, (2) suitable transitional arrangements should be made so that the benefit of preferential treatment

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

at present enjoyed by Indian exports to U.K. disappears only in slow and gradual stages, and (3) there should be a complete abolition of quota restrictions on import of goods from Commonwealth countries.

Our all-out efforts to increase our export to the E.C.M. and U.K. to cope with the requirements of the Third Five-Year Plan, cannot succeed without these concessions, for, otherwise, we would be forced to run a heavy adverse balance in our trade with the E.C.M. Any way, what most we can get now is only some reduction in the common external tariff in respect of some of our manufactured goods and that also only for the transitional period. We should, therefore, make every endeavour to produce quality goods at the cheapest possible competitive cost so that eventually we may be able to have a bigger market in what is going to be the largest trade block in the world. It is best to plan on that basis without pleading for an advantage by way of reduction of the common tariff and other concessions.

Afro-Asian Common Market

Concurrently, there should also be a move for the formation of an Afro-Asian Common Market with all the Asian and African countries. While Asia and Africa need enormous quantities of Europe's manufactures, particularly capital goods, Europe needs the raw materials and some of the manufactures from the East. On the other hand, America and the entire East European countries are absolutely beyond the influence and control of the E.C.M. U.S. is also affected by the policy of high external tariffs of the E.C.M. and she is facing problems of sending goods to the Common Market. She has, therefore, recently proposed to adopt a reciprocal reduction in tariff between E.C.M. and U.S. If, however, this does not materialise, she has decided to establish her commercial connection with the Commonwealth on the basis of tariff-free agreement. We hail this idea. Let there be a bigger Common Market in the world to counter the E.C.M.

———:O:———

COMMON ADMINISTRATIVE TERMS : FILLIP TO NATIONAL INTEGRATION

By Shri G. L. RAVAL*

Now that the general elections are over and governments, both at the Centre and in the States, have begun to function as before, it would be worthwhile knowing "who is what ?" in the administrative set-up and "what is called what ?" in the official language (or languages) of India.

As laid down in India's Constitution, the President is at the apex of the huge structure of the administrative pyramid ; and as we descend, every brick, from the apex to the basement, is referred to by a definite single unequivocal term in English, *e.g.*, the President, Vice-President, Prime Minister, Cabinet Minister, Minister of State, Deputy Minister, Chief Justice, Auditor-General, Commander-in-Chief, Governor of State, Chief Minister, Chief Secretary, down to the office of the Cashier, Clerk and a Chaprasi.

But there is no such uniform use of administrative terminology in Indian regional languages. For example, the Prime Minister is called 'Pradhan Mantri' in Hindi and 'Wada Pradhan' in Gujerati. He is referred to as 'Pant Pradhan' in Marathi and 'Maha Amatya' in some other Indian languages. Even in one and the same language and in one and the same language press too, the Prime Minister is mentioned by different words. The Gujerati language alone uses 'Wada Pradhan', 'Mukhya Sachiva', 'Maha Mantri', 'Pradhan Mantri', 'Maha Amatya', etc., etc., for the Prime Minister. This heterogenous terminology in different languages and in one and the same language for one and the same office causes a lot of confusion in the minds of the people. The student would get confused and feel perplexed when different text-books in one and the same

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

language uses different terminology for one and the same administrative post.

A citizen in India, from Kashmir to Kanya Kumari and Calcutta to Cutch, is closely knit with the administrative structure laid down by India's Constitution. He, very frequently, comes into contact, with one or the other administrative unit of the Government, in one way or the other, directly or indirectly. If, therefore, all citizens in all four corners of India were to use a common terminology for all administrative units of the Union and the State Governments, the spirit of national cohesion would be fortified. It would give a great impetus to national integration.

The English language, which was the official language of the British Government in India, became unwittingly an instrument for forging a sense of Indian nationality. Hindi, the official language of India, will very soon replace English in India. So, it would be very much preferable if the officially recognised administrative terminology, as approved and accepted by the Union Government in Hindi, were to be the official administrative terminology in all the other Indian languages. This terminology has been formulated by the combined wisdom of experts drawn from all the regional languages of India.

The terminology used in this chart could be used by all languages, in educational and government institutions, and more particularly by all the newspapers and periodicals in India. It is desirable that the President is called Rashtrapati, and the Prime Minister the Pradhan Mantri in all the languages of India.

The following chart gives an idea of the contemplated structure of uniformity.

UNIFORM TERMINOLOGY

India—*Bharat*

President—*Rashtrapati*
Vice-President—*Upa-Rashtrapati*

Parliament—*Samsad*

The House of the People—*Lok Sabha*
Legislative Assembly—*Vidhan Sabha*
Speaker—*Adhyakha*
Deputy Speaker—*Upa-Adhyakha*

The Council of State—*Rajya Sabha*
Legislative Council—*Vidhan Parishad*
Chairman—*Sabhapati*
Deputy Chairman—*Upa-Sabhapati*

(U in Upa is pronounced as in Urmila)

Member—*Sabhya*

Member of Parliament—*Samsad Sabhya*

Member of Legislative Assembly—*Vidhan Sabhya*
Central Government—*Kendra Sarkar*
Cabinet—*Mantri Mandal*
Prime Minister—*Pradhan Mantri*
Minister of State—*Rajya Mantri*
Deputy Minister—*Upa-Mantri*

Member of Legislative Council—*Vidhan Parishad Sabhya*
State Government—*Rajya Sarkar*
Governor—*Rajya Pal*
Chief Minister—*Mukhya Mantri*
Minister—*Mantri*

Secretary—*Sachiva*

Chief Secretary—*Mukhya Sachiva*
Deputy Secretary—*Upa-Sachiva*

Joint Secretary—*Samyukta Sachiva*
Under Secretary—*Avar Sachiva*
(Avar rhymes with cover)

Secretariat—*Sachivalaya*

President's House—*Rashtrapati Bhavan*

Governor's House—*Raj Bhavan*

Shri Giridhar Lal Raval is a C.I.S. (Central Information Service) officer in I & B Ministry, Government of India.

PROHIBITION IN MEDIEVAL INDIA

By S. N. QANUNGO

Very few poets of satisfying creative achievements in the Middle Ages did not compose a couple of couplets about woman and wine—'the daughter of the vine.' Wine warmed their hearts and poetry. A tired soldier used to find in it the stimulant for further exertions; the Caliphs and the Ulemas enjoyed wine like rich and warm friendship in their secret chambers or in their own social world. Is it not paradoxical that Harun-al-Rashid—the beau ideal of the Islamic State—would regale himself with wine and relish the poem of his boon companion Abu Nuwas in praise of 'khamriyat' (wine)? Wine is a drink forbidden to Muslims by their religion and to the Hindus by custom. Religion to many is a matter of convenience when it interferes with pleasure or does not suit our climate of thought. Though forbidden by Islam, wine was religiously sanctioned by at least one school of Muslim jurisprudence—the Hanafites. They believed that prophet Muhammad used to drink 'nabidh' which was prepared by soaking grapes, raisins or dates in water and allowing the juice to ferment slightly. Wine approved or unapproved became indispensable in the social life of the Muslims in the Middle Ages. The Christians and the Jews were no better. In fact, they were the most notorious boot-leggers and in their monasteries all the superior kinds of wine were available to the delight of the laity. In India, wine was not unknown in our glorious ancient days; the country-made 'tadi' now humorously called as 'Indiana' is as old as the Indian villages. However, before the advent of the Muslims, we did not have anything like 'majlis-al-sharab'. In 'majlis-al-sharab', the aristocrat host and his guests used to perfume their beards with civiets; the rooms were made fragrant by ambergris or aloes wood burning in a censer; the dainty songstresses would entertain the guests as they would gently slip the 'shirazi' from gold cups. In the Middle Ages, the people were intoxicated by power and passion, wine and women, ideas and religions.

In medieval India, the soldier's indispensable companions were his bottle and wine-cup. The tutors of children and women who were otherwise pious, were known to indulge in little drinks in secret. In Amir Khusran's Mata-ul-Anwar, we find the love of wine of the Ulemas so passionate as their love of God. In those days there were superior and expensive kinds of wine as those of Portugal and Persia—and the strongest of all was Bokhara wine (Babar-Nama, p. 83). The cheapest but pleasant in taste and flavour was 'tari' or juice of cocoanut, palm or date trees (Pedro Teixeria, p. 198; Thevenot Pt. III, Chap. VIII, p. 17). There were Jaggery extracted from black sugar (Arington p. 238), Kherra and Bhadawar (Peter Mundy, II, p. 98) and Mahwa (Ain-i-Akbari, p. 70). The Goaenese were very fond of cocoa-juice which was strong after the third distillation. (Linschoten, II, p. 47). The Kashmiris prepared a kind of wine called buza.

There was a faint beginning of the consciousness of the evils of drink in the early days of the Sultanate of Delhi. The Mamluk Sultans felt that wine should not be permissible to those who were weak-brained; they, however, did not introduce any prohibition measures. With the fall in standards of morality, the consumption of wine and other intoxicants gradually increased, wine-parties came to be regarded as an index of one's riches. The wine parties of Ahmad Chap during the Khaljis regime were notorious for their little concealed debauchery. Alauddin Khaljis ascended the throne after drowning all opposition with the generous flow of gold and wine. After his accession, Alauddin found wine to be one of the root causes of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

formation of dangerous conspiracies. Wine parties promoted fellowship and under the influence of liquor, people started speaking of treason. With such a political motive, he prohibited public manufacture or sale of wine and declared use of wine in feasts and festive gatherings a penal offence. Alauddin broke his wine vessels and threw away his stock of wine near the Budayun Gate in Delhi. Wine flowed freely on the streets. The jostling group or crowds suspended their idleness or business, ran to the spot, kneeled down, made scoops of their two joined hands and drank the wine, while being badly beaten by the officials. Qutubuddin Mubarak, son of Alauddin Khalji frittered away his marriage: his only motive was the pursuit of pleasure. Wine, once again, began to lighten the social gatherings and add to the joy of the passing hour. Firuz Tughluq, the restorer of the waning fortunes of Islam in the Sultanate period, used to regale himself with wine in his secret chamber. Once he felt very embarassed when he was caught by a noble in the act of enjoying the forbiden drink.

The Mughals cultivated the softer graces of life along with the virtues in the manly game of war. Unfortunately, the curse of drunkenness lay heavy on the house of Babar. Babar writes in his charming Memoirs, "The new year, the spring, the wine and the beloved are pleasing. Enjoy them Babar, for the world is not to be had a second time." (Babar-Nama, 365). Though the tide of his animal passions was strong, Babar never allowed his private pleasures to interfere with public business. Humayun was interested in wine, opium and almost all kinds of intoxicants. A typical wine party of Humayun may be seen in the Mughal Painting, No. 630, I.A.E. at Jannatabad in Bengal. He was so much engrossed in pleasure that his courtiers waited to get a glimpse of him as of a new moon and even then their desire was not fulfilled.' (Jauhar—Tazkirat-ul-Stagiat, 18).

Akbar's life is a magnificent masterpiece. He made of monarchy a serious profession and he knew the art to be sober in the cups. Jahangir refers to his father as very occasionally in cups (Tuzuk, Vol. I, p. 2) without 'the destruction of understanding.' But once in a wine-party Akbar displayed bravado due to the effects of liquor. In 1573, when Akbar was encamped near the fortress of Surat, European wine brought by the Portuguese of Daman was served in one of his pleasure parties. (Akbar-Nama, III, p. 31). His two boon companions—Khan-i-Azam and Lashkar Khan—almost became senseless. At the party the conversation turned on the feats of bravery and the defiance of death. It was related that some Rajputs would hold a double-headed spear and two desperadoes would run from opposite sides against the points so the latter would transfix them and come out at their backs. Akbar in his wine-flushed head wanted to repeat the performance by fixing the hilt of his sword into a wall and dashing his chest against it. Man Singh struck down he sword to save the life of the Emperor and the latter knocked him down and tried to throttle him to death. Meanwhile Muzaffar Khan intervened and Akbar too came to his senses. Akbar was conscious of the ends of drink as his brother Hakim and his two sons—Murad and Daniyal—died of intemperence. In 1604 as the Royal Physician stopped the supply of alcohol, Prince Daniyal fell to weeping, bribed his attendants to get him wine in phials concealed in their turbans and pursuaded one Murshid Quli Khan to bring doble-distilled spirits in the barrels of an old musket. It only hastened his inevitable end. Before his death, Daniyal inscribed the following verse on the musket. (Tuzuk-i-Jahangiri pp. 34-36).

"From the joy of the chase with thee,
life is fresh and new,
To everyone whom thy dart strikes,
it is the same as his bier."

Akbar realised the importance of controlling the evil effects of drink in his scheme of social reforms. He fixed all liquor prices himsel, compelled shopkeepers to buy licenses for sale and allowed use of wine in moderation for medical purposes.

In 1585 Prince Salim was induced by a servant to take a cup of wine to drive away the fatigues of a hunting expedition and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

after that 'a little wine' remained his life-long companion. Jahangir writes in his memoirs. "Wise men do not consider it right to drink to such an extent as to destroy the understanding and it is necessary that from drinking only profit should be derived" (Tuzuk, Vol. I, p. 306). By 1594, Jahangir's little wine consisted of twenty cups of doubly distilled liquor, 14 of which he drank during the day and the rest at night. It is surprising to note that this wine-bibber monarch reversed Akbar's practice of allowing the sale of wine for medicinal purposes and prohibited public sale of wine. He forbade the nobles from entering the Ghusalkhana (Diwan-i-Khas) when drunk (Rol, Vol. II, p. 304).

Shahjahan had not soiled his lips with wine till he was twenty-four. His father, on the occasion of his solar birthday on 1st February, 1616, offered him a cup of wine to drink. The embarassed prince obliged his father but took a vow never to touch it again. Though this oath was taken only to be broken, Shahjahan in the sixth year of his reign prohibited the sale, public or private of wine. During Deccan campaign he threw the entire stock of wine into the Chambal and broke cups of gold and silver (Qazvini, pp. 90-91).

The recorded facts contradict Tavernier's assertion that he saw Aurangzeb drunk on three occasions. On the early days of his romance, Aurangzeb's beloved Hira Bai once offered him a cup of wine and disregarded all his professions of reluctance. The ardent lover was about to drink when she snatched away the cup and said, "My purpose was to test your love and not to embitter your mouth with this wicked and unlucky liquor." In 1668, Aurangzeb issued orders strictly prohibiting the use of all intoxicants (Muntakhal-ul-Lubab, p. 283). A special department was created for that purpose. The pots in which liquors were prepared were daily broken by the Muhtasils (Storia do Mogar, II, pp. 5-7). The wine-sellers were flogged and thrown into prison. In 1693, a Rajput Mansabdar was transferred and in 1702, Raja Man Singh Rathor was degraded as penalties for drinking. The prohibition measures failed in spite of the best efforts of Aurangzeb. We find Daud Khan, sent in command of an expedition to the Carnatic in 1701 drinking openly to the health of the King of England (A Pepys of Mughal India, p. 299). In February, 1703, wine was selling freely in the Bazar-i-Mansabdaran.

In Medieval India, there was really no responsive atmosphere for the success of prohibition. There was no intensified campaign of prohibition and there was no temperance educative propaganda. The Sultans did not realise the importance of prohibition as a socio-economic reform of national importance. They wanted prohibition because wine was forbidden by their religion. There is no evidence of deep seriousness except in Aurangzeb who even proscribed the Diwan-i-Hafiz! (Mirat-ul-Khayyal, p. 298). Prohibition was not in tune with the tenor of the medieval society. Even the philosopher Ibn Sina wrote:

"Mai dushman-i-mast wa dost-i-hushiyar ast
Andak tiryaq wa besh zahr-i-mar ast."
(Wine is a raging enemy, a prudent friend; a little is an antidote, but much a snake's poison).

Wine was, indeed, a prudent friend of Jafar Khan, who was for seven years the Wazir of Aurangzeb (1663-1670). He told the Emperor that by drinking wine he got sight for seeing, power for weilding the pen in the service of His Majesty, and felt strength in his feet to run to court when His Majesty called (Manucci, Vol. II, p. 157). A very important cause of the failure of prohibition was the permission granted to Europeans—mostly gunners in imperial service—to distil wine and use it. Tavernier emptied two bottles of Shiraz wine in the open street at Patna. Moreover, it was very difficult to check smuggling. In the days of Ibn Battuta (14th century) the villagers used to smuggle wine concealed in loads of fuel in carts. It is futile to expect prohibition measures during the days of the Later Mughals when corruption and inefficiency disgraced all branches of the public services and rottenness showed itself at the core of Indian society. Wine stimulated only the baser appetites of the Emperors and the Nawabs. In Oudh

Sadat-Ali, successor of Nawab Asaf-ud-Daula turned out to be such a drunkard that he had to be carried to his bed almost every night. (Sarkar: Fall of the Mughal Empire, Vol. IV, p. 349).

Drinking has increased in India after Independence in spite of temperance propaganda. The consumption of country and foreign liquor during 1961-62 was 90,924 and 3,35,810 gallons respectively as against the corresponding figures of 83,478 and 2,65,230 gallons for 1956—1957. The success of prohibition depends much on the moral climate of the nation. The trouble is that in India, where we find the co-existence of past centuries with the present, prohibition follows the path of its Middle Ages.

———:O:———

THIRD FIVE-YEAR PLAN—A CRITIQUE

By KARUNA K. NANDI

In a previous discussion initiated in the last July issue of The Modern Review, we have already seen how extravagant were the claims of Government in respect of the achievements of the First and the Second Plans in so far at least as they related to the rise in national income as well as in per capita income as a direct resultant of planned development economics, when computed not merely in face values alone, as they had been doing, but also in real terms. As these various claims were obviously intended to create a favourable background for the Third Plan structure as well as its physical targets, it might be helpful towards an adequate understanding of both the prospects and potentialities on the one hand, as well as the dangers and pitfalls in the processes of our national development economy, on the other.

Financial Resources

The basic foundation of any process of development planning must be laid upon the financial resources that can be pressed into its service, both by way of what has been described as new investment-outlays, as well as for financing current servicing outlays on projects already laid down in a continuing plan-process as in India at the present moment and for other social welfare, development and other ancillory services. The total resources that, it has been envisaged, would be available for the Third Plan is estimated at a gross of Rs. 11,800 crores for the entire Plan period, including Rs. 7,500 crores for the Public Sector and Rs. 4,300 crores for the Private Sector. The physical targets of the Third Plan in the Public Sector as formulated and finally adopted, however, would call for a gross resource of Rs. 8,000 crores, but the estimate of Rs. 7,500 crores is a measure of the actual resource that would be available, leaving an unbridged and a somewhat unexplained gap of some Rs. 500 crores in the Plan. Of the 7,500 crores estimated to be available, Rs. 6,100 crores would be required to cover Central projects of the Plan, leaving a gross balance of Rs. 1,400 crores for financing the State projects included therein. The breakdown of the sources as envisaged from which this resource Rs. 7,500 crores would be derived are detailed thus:

(i) Balances Out Of Current Revenues

The balances at the existing levels of taxation estimated to be available for the States and the Centre have been envisaged at Rs. 550 crores. It may be interesting to note in this connection that the estimates in this behalf in the Second Plan amounted to Rs. 350 crores, but actual realizations disclosed a negative balance of Rs. 50 crores despite the downward revision of Plan outlays from Rs. 4,800 crores to Rs. 4,600 crores. The current estimates, it is additionally important to note, have been arrived at on the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

assumption that prices during the Third Plan would remain more or less stable and constant and that Defence expenditure will not evince any substantial upward tilt. Moreover, it has also been assumed that non-Plan expenditure of any description will be kept under rigorous check and will not be allowed to evince any material inflation, an assumption which, patently, is easier to imagine than effecively control. According to most financial journals of repute in the country, non-Plan expenditure during the Second Plan had been rising at a rate much faster than the growth in revenues. On the other hand also, it has been demonstrated that central revenues in general have been comparatively bouyant during this period and the estimate of figures from current revenues have been rather under-pitched. Besides, some of the taxation measures introduced during the latter part of the Second Plan period would be conceivably likely to yield larger revenues during the Third Plan period. Taking all these facts and factors into consideration, and on the assumption, of course, that prices do not evince any substantial upward tilt during the current Plan period, estimates in this behalf of surplus revenue resources may not, altogether, be considered too extravagant. The over-riding consideration, however, would seem to be that prices are maintained at a constant level and that non-Plan expenditure are not subjected to any very large upward pressure.

(ii) Contributions of Railways And Public Sector Enterprises

In the Second Plan, the estimates of contributions from Railways was assumed at Rs. 150 crores inclusive of the additional revenue yeilds expected to be derived from an upward revision of the passenger fare and freight structure. In the estimates for the Third Plan, however, credit has not so far been taken for these increases and the estimates have provided for a net contribution from the Railways of Rs. 100 crores.

At the same time, credit has been taken for a gross contribution of Rs. 450 crores from out of the surpluses of Public enterprises. The Second Plan had not provided for any such contribution mainly because the number of such enterprises capable of yielding a net surplus was comparatively small, but also because many of the Public Sector projects had not then arrived at a level at which surplus revenues would be likely to eventuate. With a number of public sector projects now at full production level, it may not be regarded as unreasonable that a gross revenue surplus from these of Rs. 450 crores would eventuate during the Third Plan period, especially when regard is had to the fact that these estimates also include amounts that would be drawn down from depreciation funds for expansion of central enterprises.

(iii) Loans And National Savings

Under the head loans, a net amount of Rs. 800 crores have been taken into credit, whereas the amount likely to be available from the national savings campaign has been put down at Rs. 600 crores. Second Plan performances in these regard were found to have been Rs. 750 crores and Rs. 400 crores respectively. The loan from the public in the estimates of the Second Plan, however, included investments by the Reserve Bank of India and investments by the State Bank of India from out of PL 480 funds which were held with it until recently. When these amounts have been excluded, the net public contributions to the Government's public debts would be found to have been only Rs. 300 crores. In the Third Plan estimates, moreover, resources of the PL 480 funds have been taken into credit under Foreign Assistance and the Reserve Bank of India's support to Government's loans has been included under deficit financing. When these facts have been taken adequately into consideration, it would seem that the estimate of Rs. 800 crores to be derived from public debts would have to be realised from out of actual public and banks' investments in Government loans which, when regard is had to the requirements of the private sector also at the same time, may be quite a subsantial over-estimate.

Small savings collection during the Second Plan was claimed to have aggregated Rs. 400 crores in view of which the current

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

estimate of Rs. 600 crores would be bound to be considered somewhat optimistic. It is, however, argued that the attractions of the Prize Bonds, if adequately exploited by carrying them beyond the urban areas into the villages with determination, might augment past resources available from this source to the requisite level. The recent survey carried out by the National Council of Applied Economic Research in savings trends in urban and rural sectors would appear to lend some support to this view of the matter. At the same time, having regard to the continuing pressure on the price structure which does not seem to be under any sort of control mechanizm, potentialities in this behalf would also appear to be correspondingly circumscribed. It is difficult in the circumstances to definitely aver that estimates of available resources in this behalf would be likely to approximate to actual realizations.

Contributions from other miscellaneous funds such as Provident Funds, the balances available from the Steel Equalization Fund, other miscellaneous receipts over disbursements, etc., together have been estimated to yield Rs. 540 crores. The actuals for the Second Plan in this regard was Rs. 230 crores. Comment would be supurfluous.

(iv) Additional Taxation

The target for additional taxation for the Third Plan has been put down at a gross figure of Rs. 1,710 crores, Rs. 1,100 crores to be accounted for by additional central taxation measures and Rs. 600 crores by the States. The corresponding estimates of the Second Plan were Rs. 850 crores comprising Rs. 450 crores of additional taxation yields and leaving an uncovered gap of Rs. 400 crores. The actual yield from additional taxation during the Second Plan—I have already observed that original estimates were actually considerably under-pitched in this behalf—was Rs. 1,052 crores against original estimates of Rs. 450 crores. The estimates of an yield of Rs. 1,710 crores by way of additional taxation, therefore, may not be very unrealistic, though account must be taken of the fact that there would still be a gap (between physical targets and financial resources) of some Rs. 500 crores to be made up.

The Content of Foreign Assistance

One of the principal bases of the Third Plan would appear to be its Foreign Exchange contents which is expected to be made up out of foreign assistance. The gross estimates in this behalf have been put down at Rs. 3,200 crores in the Public Sector leaving a total balance of Rs. 4,300 crores to be met out of internal resources. The foreign assistance content of the Plan, therefore, would seem to be patently very large, comprising some 74.4 per cent of the requisite internal resources and as much as 42.66 per cent of the total estimates for the Plan in the Public Sector.

The breakdown of the total contents of foreign assistance as estimated, has been:

For new items in the Third Plan Projects	Rs. 1,900 crores
Maintenance imports	Rs. 200 crores
Payments	Rs. 500 crores
PL 480	Rs. 600 crores

The above estimates, however, are based upon a most vital assumption, that India's exports during the Third Plan will gross Rs. 3,700 crores as against the just over Rs. 3,000 crores during the Second Plan, over the current Plan period. This would mean an export boost of some Rs. 150 crores more per year over the years of the current Plan compared to the actuals of the Second Plan. This would appear to pose a formidable challenge, a challenge, however, which has to be met if at all it is intended, as envisaged, to raise annual exports during the Fourth Plan period to double the size of current estimates, that is, to between Rs. 1,300 crores to Rs. 1,400 crores per annum. The Planning Commission's estimates, however, would seem to be based upon certain facile assumptions, such as, for instance, the achievements of production targets envisaged in the Plan would be actually realised, that effective restraints would be possible to restrict consumption of certain commodities, that the price line would be held at a constant level, and that production costs would be substantially reduced to enable competi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tive advantage to be gained by India's exports abroad. But even if all these assumptions could be proved to have been correctly measured, export targets would still be likely to remain tantalisingly beyond reach. And, yet, there is no doubt exports have a pivotal role to play in the country's development planning and, in fact, the success, even comparatively modestly compared to current estimates, of the current and future Plans would be bound to largely hinge upon the response that exports may provide to the needs and requirements of our developing economy. It might be interesting to note in this context that India's share in global exports which, comparatively insignificant as it even then was, was 2.1 per cent in 1950 and which has now dwindled down to a mere 1.1 per cent in 1960 as estimated by the Planning Commission themselves.

Deficit Financing

The amount that would be needed to be covered by the process of deficit financing after all the items which have been accounted for in the foregoing lines of this discussion have been taken into credit, would then appear to amount to Rs. 550 crores. The amount which it was originally estimated, would have to be met for financing the Second Plan was Rs. 1,200 crores, but the actuals are considerably less, a sum of Rs. 950 crores, in fact. The Union Finance Ministry may, therefore, be claimed to have been praiseworthily circumspect in its resort to this, what in some quarters is regarded, as quite a dangerous financial expedient. Compared to the burdens of the Second Plan, those, as estimated, for the Third Plan would be considered quite modest in fact. The question, however, remains as to the extent that deficit financing, however modestly resorted to, may have been directly responsible for the current inflationary pressures on the country's price structure. There is no doubt that prices have been subject to a steady and gradually rising upward pressure during the Second Plan, a trend which would seem to have been continuing well into the first year of the Third Plan period.

It is true that deficit financing as such may not be regarded as directly generative of inflationary pressures although it may very well be attended with such a phenomenon. In certain quarters inflationary pressures would not seem to occasion much concern and there is also a school of opinion which even regards a certain inflationary pressure on the price structure as conducive to development by enforcing forced withdrawal of consumption. But when the pressure on the price structure relates primarily to the sector of the consumer market consisting of the barest essentials of existence, such a theory would not seem to apply at all. This, largely, has been the trend in the country and the pressure on prices has not merely reduced the potentials of public savings, infintesemal as it always has been here, but has led to profiteering of a most overt kind on the other hand at the same time.

Deficit financing has been very aptly described as a mechanism for drawing advance drafts on future savings under a developing economy. The extent of the measure in which this particular technique of financing development can be safely used must, therefore, be conditioned by the extent the development projects so financed would be likely to generate savings over the specified period of the operation. That is what must determine the safe limits of deficit financing and not what the Planning Commission by their arbitrary rule of thumb may prescribe. It is praiseworthy that Second Plan operations in this behalf were kept at below original estimates, and it is possible that Third Plan measures in this behalf may also not over-step reasonable bounds. But what should be looked for very carefully in this connection is not the amount of resource raised in this way but actually to what extent directly resultant savings thus generated may have approximated to the measure of deficit finance over the specified period of the operation, assuming the price factor at a constant level during the period in question.

Space does not permit a more thorough-going discussion of the financial contents

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and assumptions of the Third Plan in the present instance. The financial picture as envisaged in the Third Plan in respect of resources only has been discussed in somewhat bare outlines in the present discussion which may, however, it is hoped, contribute to a more realistic appraisal of both the implications and prospects of the Plan. This, however, is only one very small aspect of the problems of Planning in this country, the most important being its likely effects on the content of progress in terms of human evolution towards more wholesome living conditions for the people whose sacrifices alone can build and sustain the structure of planned development. A further discussion in respect of those more important aspects of Planning, it is intended, will be attempted in a future contribution to these columns.

LIFE WITH AN ARTIST

II

By Mrs. DEVIPROSAD ROY CHOWDHURY

(Continued from the Previous Issue)

Before I start recounting how I learnt the lesson of living with an artist, I feel it incumbent on me to tell of the making of the man who educated me on this line.

Sri Deviprosad Roy Chowdhury, to whom my thanks are due, spent his childhood in the midst of immense luxury. Both his parents descended from old zamindars of Bengal. His mother was the only daughter of the Late Maharajah of Tajhat (Rangpur) and was for a long time the only child of the Maharajah. Her parents, therefore, doted on her and even after her marriage she spent the greater part of the year at Tajhat. The story runs that a special pool was made for her to swim in and play with gold mohars.

Such was the atmosphere in which the child Deviprosad's character was moulded. It is no wonder, therefore, that he learnt to command from the age when other children were taught to obey. Later this quality developed into a part of his nature.

His inclination towards art showed its signs from a very early age but it received no encouragement from the family.

The Durga Puja used to be celebrated with great pomp at Tajhat. Arrangements were made for all sorts of amusements and crowds of people from different villages flocked in to take part in the festival. The spacious compounds of the Maharaja's huge building used to be studded with tents for circus companies, theatres, dancers, musicians, magicians, etc. Little Deviprosad wandered from tent to tent but the one which attracted his attention most was that of the artisan who gave shape and colour to the goddes Durga. Untiringly he sat and watched. The artisan's vanity was touched by finding such a keen admirer of his skill and he gave the boy some clay to play with. Deviprosad's heart bounced with joy. His fingers were itching for this opportunity. As soon as the workman left the place for his midday rest the boy started on his experiments. He modelled a cobra and left it at the back of the idol. When the artisan came back to his work and found the venemous reptile ready for a bite, he screamed for help. Though he was ashamed when he discovered his mistake, he was pleased with the workmanship of the child artist and profusely congratulated him.

Deviprosad's paternal grandfather was a great Scholar in Sanskrit. He had a fascination for academic degrees and wanted his grandson to have a stamp of the University. With this idea Deviprosad was sent to a School where he became a leader of a gang. The routine work of the school

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Sarayu Foundation Chennai and eGangotri

made no impression on this child of nature. He grunted and sweated under pressure of its weary rounds He found no joy in the books that were prescribed. Some sort of diversion was, therefore, absolutely necessary for him and he found that in mischief of all sorts. He put marbles under the legs of the chair of his class teacher but was at hand to save him from a fall. He tied a grasshopper with the shikha (tuft of hair) of his pundit while he was dozing. He made it a point to occupy a seat on the back bench where he kept some wet clay in careful concealment. According to the fancy of the moment he would select one or other from the class as his model, no matter whether he was a teacher or a student, and make a study of his head accentuating the peculiarities of his features while the lesson was in full swing. None of his classmates dared expose his secret. Who would dare to risk his displeasure and bear the consequences? One day Deviprosad became so absorbed in his work on the clay that he did not notice the approach of his tutor until he stood beside him. The master stared at the clay model of his own image and then looked daggers at the artist. The subdued noise of choked laughter emerged from all parts of the room. This increased the irriation of the teacher and he resolved to teach the culprit a good lesson for his daring misdeed. As a rule, the Headmaster acted as the Chief Justice in this sort of serious cases. But luck favoured our little artist for the time being. The Headmaster was not in his room. The case, therefore, had to be postponed for some future hearing. In the meanwhile the boy realized that it would no more be possible for him to continue with his creative hobby within the four walls of his class-room. Under the circumstances he decided to depend on his instinct for guidance. In other words, he resolved to evade the Institution which failed to evoke any interest in him. He chose the Wellington Square which was just a stone's throw from his school, as his favourite haunt. Here, under the shade of a tree he modelled and remodelled all sorts of birds and beasts to his heart's content. This attracted quite a large crowd. Their number increased every day. The little artist was happy and proud. With so many spectators at his side he felt himself important. But alas, such happiness could not continue for long. The bribe that he gave to the gate-keeper was not sufficient to keep him quiet for an indefinite period of time. The incident was reported to the Headmaster and the delinquent was summoned to appear before the judge. Another case of serious offence was added to the already existing one. After being whipped to the satisfaction of the judge and the jury he was ordered to stand on a bench in the open terrace for one whole week during the tiffin period. The aristocrat in Deviprosad revolted against this humiliation. He was on the look out for an opportunity to make good his escape. He knocked the watchman down during an unguarded moment and before the fellow could recover from the shock he fled from the vicinity of his prison house determined never to return again.

A few days after this incident, Deviprosad's father received a letter from the authorities of the school regretting their inability to take the responsibility of such an unmanageable boy. He called his son, showed him the letter and then followed a policy of non-co-operation. This proved much more effective than any severe punishment. The boy felt so dejected at such treatment from his dearly beloved Babuji, as he called him, that of his own accord he went to his sire with the proposal of joining some other school. Forthwith he was admitted into the South Suburban School in Bhawanipore. For a considerable period of time he remained a changed person. The spirit of competition and the new atmosphere gave him an impetus to study and in spite of his special aversion for certain subjects he managed to secure his promotion from class to class till he reached the Matric standard supposed to be the gateway to the University. But the monotony of school life made him reckless at times. He felt that he needed a change. He discovered a small circus company very near the school, spoke to the manager, pleased him by his cycle tricks and got admitted there to act as a clown with the remuneration of Rs. 30 per month. He

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reputation as a circus-player spread so widely that to save his skin as well as his good name he had to resign the post and revert to his regular student life.

Being upto mischief is, perhaps, a part of the life of every student, specially if he is a boy. One particular day the boys of Deviprosad's group were detained by the teacher of the optional class. This, of course, was not appreciated by the students. They were aware of the teacher's weak point, he could not teach effectively unless the door of the class-room was shut. A proposal came from somewhere to unhinge the door of the class-room and was carried unanimously. But who should do it? The only capable person was Deviprosad. He jumped at the suggestion but on one condition only—that the other boys would be on guard to give the danger signal if there be need for it. This was agreed upon and the work started. But when after neatly finishing his job he proudly looked round towards his colleagues there was not one to be seen. As he was going down he came in close contact with the most ferocious of teachers, the Assistant Headmaster, near the stair case. He realised at once the cause of the sudden disappearance of the guards from their posts.

In spite of no definite proof against him Deviprosad was marked as the culprit. There was none so daring and strong as he. He was summoned to the library to pay the penalty. That was the time when the boys came to select their books. The place was crowded with students and teachers. When Deviprosad entered, all eyes were turned towards him. Hs was ordered to stretch his hand, and swish went the whip, once, twice, thrice. Red welts came up on his hand. He bit his lips but did not withdraw his hand. When blood oozed out from the wound, the teacher took compassion and ordered for the first-aid box. Deviprosad refused to accept the offer of help with a curt "thanks, not necessary." A bitter smile lingered on his lips. He ordered the peon to bring his books down from his room. It was a command meant to be obeyed and the peon did as he was bid. In the presence of an audience struck dumb he made a bonfire of his books and then marched off bidding final adieux to his school life.

He confessed everything to his father when he arrived at home and said he had decided to take up art seriously. His father heaved a sigh but did not like to hamper the career of a grown-up boy by forcing his own convictions on him.

His grandfather on the other hand was unforgiving, when he learned that a member of his family had decided to become a professional artist. This was contrary to the family tradition. His relatives from both sides rose up in arms against the idea. But the boy was firm in his resolution. The father was expected to sever all connection with the son for lowering the prestige of his family.

They miscalculated the ties of affection between the two. The result was that both father and son were treated as untouchables by their people. Undaunted the boy marched forward towards his goal. Like Ekalavya of the epic, Deviprosad chose his guru before he had the opportunity of meeting him. One fine morning he took courage and went straight to the residence of the Late Abanindranath Tagore, who had given a new impetus to art and artists. The impatient boy waited patiently before he could get the chance of a regular interview. Abanindranath was evidently impressed by the specimens of his work, for he allowed Deviprosad to enlist himself as one of his disciples. Getting inspiration from his great guru the young artist began to evince rapid progress. Soon his pictures found a place in the art exhibitions and won the best prizes. But Deviprosad was not content. Something was oppressing his mind. He discovered the gulf that separated the art of the West from that of the East. He had learnt the technique of one, why remain ignorant about the other? He must master the science of Western Art as well. Once more he was in search of a guru and found one in Mr. Boyee, an Italian master, under whom he learnt art for about three years. To please the master and assimilate his technique no work was too mean for this seeker of knowledge—from cleaning the guru's brushes to sweeping his room. After he had completed his course and was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

painting pictures in Western style in his own quarters, one day he felt the desire to present one of his works to his teacher. But when he went to the premises of his master, he found the door locked. It hurt his sensitive mind to learn that the Italian had left India for good without even saying goodbye to his pupil.

Deviprosad's search for learning still remained unsatisfied. He felt there was yet another sphere which he had not touched. The image of the artisan whom he imitated in his childhood came back to his mind's eye. Once more he was in need of a guru and he found one in Sri Hironmoy Roy Chowdhury of Lucknow. This gentleman not only knew how to guide his pupil but was also gifted with the rare quality of appreciating a fellow artist to the extent of admitting his superiority even though the person in question was his own pupil. When Deviprosad felt he had acquired sufficient knowledge in the science of sculpture he ventured to make a study of his father's head. His mother thoroughly disapproved of the work. "Does your father look like that" she asked, and then added, "It looks as if the burden of the whole world is on his shoulders. Could you not portray him in a brighter mood ?". The sensitive temperament of the artist could not bear this ruthless criticism. He threw the head down from its pedestal. A few days after this his guru came and saw the head which was still lying on the floor. Is that your work, my boy ? he asked and added, "In that case you have nothing more to learn from me." The portrait which he executed while still a student was later published in Studio (London) and was acclaimed as a very fine piece of work in sculpture.

As Deviprosad progressed in the study of sculpture, his struggle for existence became hardened. Both his and his father's allowances were stopped by his unsympathetic grand parent. He would not have borne this injustice meekly had it not been for his father. His mother he had lost. It pained him to see his father suffer for his sake. He started selling his pictures like a hawker. But there was very little demand for such works of art at that time. The amount that they fetched was not enough to fill two hungry stomachs. He must secure a permanent job somehow, which would give him a stable income. After a long search he got the job of an assistant (colour grinder) to a scene painter with the meagre remuneration of Rs. 75- per month. But when the scene painter found that his assistant was more skilled in the work than he himself he got nervous and managed to secure his dismissal under some pretext.

The spirit of the young artist was not to be curbed by these adversities. He had faith in his own ability and was determined to succeed in his chosen path.

The late Sri Ashutosh Mukherjee was then Vice Chancellor of the Calcutta University. He went to him and begged for the job of a drill master, or any other post of that type in some school. The great scholar looked at him with surprise. "Don't you belong to the Chowdhury family of Bhawanipore," he asked, and when the artist answered in the affirmative he said "you want the job of school master ? Have you quarrelled with your people ?" Shortly after this a drawing master's post was created in the Mitra Institution of Calcutta where Sri Deviprosad was installed with the small pittance of Rs. 40 per month.

Two of his friends of whom I have often heard my husband speak with tender gratefulness are Sri K. N. Chatterji and Sri Asoke Chatterji, the two sons of Sri Ramananda Chatterji, the late Editor of the **Modern Review**. These two brothers appreciated Deviprosad and his art and helped him during this difficult period by purchasing his pictures, finding buyers for them and giving publicity to his works. With the artist's indomitable will and the help of his friends and admirers, he was soon able to establish himself as one of the leading young artists of Bengal and created a demand for his pictures in the art loving world. Though small, yet with a steady income at his command he was able to buy the necessary equipment for his work. His pictures began to sell and he received orders for painting portraits. His average income soon rose to about Rs. 500 per

month. It was at this period that Sri Deviprosad was introduced into our family. When he came and stood on the threshold of our house, he looked more like a soldier than a struggling artist. I must admit that I was impressed by his manly structure though I did not fail to notice the peculiar traits in his character—over frank, over sensitive and overbearing. It was with this man that fate sealed my destiny. I was married to Sri Deviprosad Roy Chowdhury on the 27th of February, 1929.

CAPITAL PUNISHMENT : AN APPRAISAL

BY PROBAL KUMAR DUTT

JUDGING from reports and trends from all over the world, including those in this country, it seems certain that the subject of capital punishment will be the most burning social problem of this era. In this article we propose to study the various aspects of the problem, rather than advocate either its retention or abolition.

One of the oldest forms of punishment that continues unaltered to this day in its ultimate analysis, this subject may be studied, for our purpose, under five different headings : (I) A brief history of capital punishment itself; (II) The theories of punishment; (III) The efficacy of capital punishment; (IV) Alternatives, if any; (V) Conclusions.

(I) As we have noted already, capital punishment is one of the oldest methods of punishment to be employed even today by almost every country. True, the methods of imposing it have changed for the more humane, but the net result of indiscriminate stoning of the convicted one to crucifixion as practised in the past or of the modern hanging, firing squad, gas chamber and the electric chair is the same. The person dies. In its original sanction, it seems from a study of the Bible and other ancient texts, was the taking of another person's life by the accused—as is borne out by the maxim, 'a tooth for a tooth, an eye for an eye, a life for a life.'

But under the combined influence of despotic rulers, an intolerant age and an uncompromising society, this form of punishment came to be applied for a number of causes, many of them too silly and trivial in our eyes. Upto as recently as the 18th century, for instance, the death sentence could be awarded in England for some 160 different offences, including such harmless ones as the killing of a rabbit or for appearing in a mask in public ![1] Today, however, it is imposed mainly in case of three kinds of crime, culpable homicide amounting to murder, treason and war crimes or 'crimes against humanity.' Of these three, the first, which is practised at all times in almost every country, is the most important. War crimes, such as the ones for which the Nazi and the Japanese war-time leaders, and very recently Eichman, had to pay for with their lives are, naturally, associated with wars and as such occur only periodically. The remaining cause, treason, can be committed at any time, but is normally committed during war-time. Only 18 persons have been hanged in England between 1861 and 1948 on this count and all of them during the two World Wars or for activities conducted during those periods. Thus, the major crime for which capital punishment is awarded is murder. Some countries, however, have other specified crimes which are punishable by death. For example, it may be awarded for committing rape under certain circumstances in some of the southern states of the U.S.A., while in the U.S.S.R. and other communist countries it is awarded for committing 'serious' anti-social activities. But, compared to the world as a whole, these are causes peculiar to the countries concerned and normally to meet certain particular exigencies.

(II) We may now inquire as to the necessity and utility of punishments as such. Jurists normally classify punishments into four groups, viz., Retributive, Deterrent, Preventive and Refor

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mative. We may, however, use a simpler three-fold classification[2] :

(A) Crude utilitarianism was the earliest aim of punishment.[3] (B) In the next stage, this was replaced by semi-refined utilitarianism, when crimes were graded, albeit haphazardly and arbitrarily, each carrying its corresponding punishment. (C) The doctrine of refined utilitarianism, which more or less corresponds with the reformative theory of the four-fold classification, is gradually taking hold of the minds of penologists and social workers. The aim is now to hate the sin but not the sinner.[4] Simultaneously, there is an attempt to group crimes in a more scientific manner. In this connection, however, it must be added that all attempts to classify crimes must naturally be coloured by the prevailing ideas of social and private morality. Thus, the 19th century drafted penal codes of India take a serious view of murder, armed dacoity, etc., while it takes a rather mild attitude, judged by present-day concepts, of adulteration, etc.

Here it may be pointed out that according to the latest ideas of punishment, death sentence is abominable for the obvious reason that the dead can not be reformed. This deduction, however, requires some reservations and we shall come back to it at a later stage.

(III) From a study of the theories of punishment and of the needs of practical living we may conclude that punishment ought to reduce the number of crimes and at the same time wean away the criminal from his anti-social activities. We have already seen that capital punishment can never be a reformative sentence. It remains for us to see whether it is a preventive sentence or not. Let us study some recorded figures in this connection. The homicide rate of the abolitionist U.S. states of Rhode Island and Maine for the period 1920-48 were respectively similar to those of the contiguous states of Massachussets and New Hampshire where capital punishment was in force then. The homicide rate of Sweden since 1910 —the date of her last execution—has normally shown downward trends, minor fluctuations occurring only during periods of tension, such as the War years and the 1929-34 economic depression period. In its report, the Royal Commission on Capital Punishment (1949-53) has clearly stated, "There is no clear evidence in any of the figures we have examined that the abolition of capital punishment has led to an increase in the homicide rate, or that its re introduction has led to a fall."[5]

Before we proceed to the next section, we must make the following points : (a) We have stated previously that murder is the most important crime, judging numerically at least, that warrants a death sentence. But it is not the only one. No studies have yet been made, nor is it feasible, to study its efficacy in the other cases, such as war crimes. (b) Recidivism may not be a great obstacle in the path of abolition[6] and the habitual recidivist may be termed a psychopath.[7] But even a psychopath may be incurable at times and is there any sense in either letting him free to continue his depredations or in keeping him 'in' perpetually?

(IV) Keeping in mind the various reservations we have made earlier, and to which we shall return in the next section, we may assume that capital punishment may be abolished without fear of any marked worsening in our total crime situation. But before we suggest any alternatives to capital punishment we must state that real deterrents to crime are : (a) the would-be criminal's knowledge that the chances of his being detected are many times greater than that of his getting away with his misdeeds;[8] (b) his knowledge that once apprehended, conviction is more or less a certainty; (c) the knowledge that a conviction carries with it an indelible social stigma.

The alternatives to capital punishment will depend on the nature of the criminal himself and may be put as under : (a) For the normal person[9]—a long-term correctional prison sentence of the 'single' or the 'dual' type, where prisoners earn remissions in their sentences as a result of good behaviour and are also eligible to leave on parole. They are, moreover, taught how to adjust themselves as useful members of the community and the means to earn an honest living so that they might not be tempted to re-enter into a life of crime on release. Danger of institutionalisation as a result of a long-term sentence in a goal are now extremely limited thanks to the reforms carried out in prisons and prison life,—such as the system prevailing in the Sampurnanand Prison in Lucknow. In fact, in this country, at least, almost everybody would prefer prison life to the investigation and the police custody stage ! (b) For the recidivist—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a more stringent sentence with greater attention to the correctional aspect. (c) For the habitual recidivist treatment in a psychopathic clinic.[10]

We may now make our final conclusion.[11]

(V) We thus find that as far as homicide is concerned, capital punishment is not of much deterrent or preventive value, except in the case of the habitual recidivist bent on perpetrating murders. In other cases, such as treason and war crimes, its importance is yet to be decided. But here capital sentence has an immensely practical political value which, understandably enough, no country would like to readily give up today.[12]

Similarly, certain short-term results may be efficaciously obtained by the employment of capital punishment, such as the stopping of black-marketing, etc. However, as a long-term measure it is bound to be as useful or useless as it is a deterrent in the case of murders.

Then again, if the more criminal and more extensively anti-social crimes such as adulteration of food stuffs and trafficking in women and girls are not punishable by death sentence, is there much justification to retain it in our statute books for homicides, etc.?

In short, the time has come to seriously reappraise the subject from every angle, social, political, moral, etc., but at the same time it must be remembered that 'go slow is the best go' in such cases.

---

1. This, however, has since been justified as a means to check highway robberies as members of such gangs normally wore masks to prevent identification.

2. This classification is an amplification of the one suggested by Radicnowiz.

3. 'The real and only test, in short, of a good prison system is the diminution of offences by the terror of punishments.' (Rev. Sidney Smith).

4. 'The reforming element has come to predominate and that the others are carried incidentally to the reforming element'. (Lord Templewood).

5. p. 23.

6. Of the 156 reprieved murderers given to the charge of the English Central After-Care Association (1934-48), only 16 were re-convicted, mostly for stealing, house-breaking, etc., only one for murder. Recidivism in the abolitionist European countries and U.S. states is round about, and usually on the lower side, of 3 per cent. The experience of Ceylon when it had abolished the death sentence is similar.

7. Such clinics exist, for instance, in Herstedvester in Denmark and in Avereest in the Netherlands.

8. Even in the U.K. there is only one sentence, not of execution—reprieves bring down the figures further—for every 12 murders known to the police. Sellin holds that only some 25 per cent of the serious crimes in the U.S.A. are detected.

9. The word 'normal' is used here to differentiate him from the recidivist. Every criminal, and specially one who commits such a heinous crime as murder, is abnormal to a greater or lesser extent.

10. We may add here that we have already suggested capital punishment for the incurable recidivist who goes on committing murders.

11. The scope of this limited article prevents us from discussing the subject from a wider angle—that of reducing crimes and criminality itself by changing the social conditions and ideas. We may only note here that changed social outlook and the use of contraceptives in Sweden since 1921, Human points out, has brought down the infanticide rate in that country ever since.

12. Ceylon, for instance, re-introduced the death sentence to award it to the assassin of the late Prime Minister Bandarnaike.

IN DEFENCE OF THE "ASS-LIKE" STUPIDITY OF THE INDIA GOVERNMENT

By SATISH CHANDRA DAS GUPTA

There has been a news item that an ass had been purchased by the Government of India at an unbelievably high price. "Who will purchase an ass for sixty thousand rupees who is not an ass himself?" This has been the verdict of the commentators about this ass in almost all the daily newspapers of Calcutta during that week, and in due course it is expected that the periodicals will also take up the Ass and have a laugh at the conduct of our Government.

I had been to Hissar and had an opportunity of having a look at this prized animal. The keepers were proud of the animal and I also felt equally proud of the wisdom of the Government of India for having secured an ass of this stature. The price must have been reasonable because it was put to auction and the India Government won the bid over other contestants. Therefore it is supposed that there were neck to neck competitors against the Government of India. It is not apparent from the comments as to why the Government was held up for ridicule except for taking the matter just as a joke by a pun on the "Ass". The ass is an ass itself. It is a stupid animal and immediately the ass is in the picture commentators get piquant and dub the purchaser to be as stupid as the ass itself it had bid for.

Despite its stupidity the ass is, however, a very useful animal. It carries massive loads which no other animal will be able to carry for its size and can travel over hills and uneven tracks. The mule is a creature born of an ass as the sire and a female horse as the mother. When an ass covers a mare the child is a mule. The mule combines in it the load carrying capacity of the Ass and its endurance for hard work for long periods with the speed of the horse. It is a composite animal and nothing can equal the mule for carrying loads over long distances across gorges and ravines and over narrow dangerous mountain paths.

The tribals living on the foot hills of the Himalaya keep mare for having foals of mules by impregnating the mare with a male ass. While a horse foal will fetch fifty rupees a mule foal will fetch two hundred rupees.

The ass purchased by the Government of India is intended to be used as a sire for breeding either replica Asses or for breeding mules directly. If this sire Ass covers 50 females in a year and does so for 6 years, which is more likely than not, it will be the father of a progeny of 300 high breed asses or mules of most excellent breed. Certainly such animals will fetch Rs. 300/- more than a horse of the same size and for 300 foals will ensure an extra income of Rs. 90,000/- during its active life period. This Ass may be also used for artificial insemination throwing out ten times more progeny. The bargain is not bad. It would have been unwise of the Government of India to let the animal pass on to Pakistan for a few thousand rupees. The value of high quality breeding sires cannot be measured in terms of money. With the introduction of artificial insemination one animal may throw off 3,000 scions, reducing the cost of insemination to a small figure.

The Mules and Asses are nearly redundant today as transport animals on account of the advent of motor trucks. But this may not be the last chapter. Natural calamity or enemy action may dismantle the Nangal Bandh, or the various Thermal and Hydro-Electric Units over the country and bring disaster to the nation by dislocation of supply of power. Calcutta today is passing through such a disaster. Partial stoppage of electric supply is forcing so many industries to curtail production. And what might not happen to the industries if the entire supply is cut off?

such a disaster people are bound look to so-called primitive methods of using the hand and foot or animal power. en the Railways may remain inoperative enemy boms disturb the railway tracks the supply of coal to the nerve centres of dustrial areas. This is hardly imaginary should weigh with those who adminis- India.

The Ass is an utility animal but mules progeny of a sire Ass is still more an ility animal. The jokes about the stupi- y of the Government of India are, there- re, misplaced.

In the Chinese ridden Ladakh area and deep border interiors where there are no per roads, the Mules and Asses must be rming a substantial part of defence and ploration traction even today. The rmy Department must be utilising such imals today in the Ladakh area and serving with amazement the newspaper ctures thrown at the animals they utilise the country's defence. The Ass's cap does not fit the purchasers of this fabulously priced Ass. The cap should go elsewhere.

It may not be known how well bred sires are prized by animal-husbandry men. India is rich in animal wealth. Ongal (Madras) bulls are prized animals for breeding milch-cows and bullocks. The Chilian Government saw the high quality inherent in the better bulls of Ongal and began to purchase bulls at an exhorbitant price. The cultivators do not like to part with the animals. But they do so when fabulous amounts are dangled before them as was done by the Government of Chili who were purchasing this valuable animal to such an extent that the area became nearly denuded of quality bulls which fetched 10 or 15 or even twenty thousand rupees each. The Government of India stepped in and prohibited the export of Ongal bulls to save the area from steep deterioration of the breed of cows.

The Government of India acted wisely in this instance of the Ongal bull as in the case of the Ass of the current news item.

AN ANALYSIS OF THE GROWTH AND DECLINE OF HINDU MATHEMATICS

By ASHIM CHAUDHURI

TER a period of luxuriant growth between th century B.C., and twelfth century A.D., ian mathematics ceased to grow and almost sed into decadence. This peculiar feature of history of Indian Mathematics strikes the d of even the most superficial student of its ory. No attempts have been made or have en made rather perfunctorily, to investigate the tors that brought about the gradual decline Indian genius. This investigation is necessary order to combat similar forces that may ple the future of Indian Science.

It is said that social, cultural and political tors account for the growth of not only liter- re and philosophy, but also mathematics ch is not a mere abstraction, but at the same e a precise representation of life's experience. In fact, Science, Philosophy and Literature grow under favourable social, cultural and political climate. The renaissance of Indian Mathematics between fourth century B.C., and twelfth century A.D., is the resultant of benign social, cultural and political forces.

Scientific inquiry started in India in the vedic period. The Aryans—the earliest settlers in India—came to this land with a wealth of spiritual energy, if not with anything else. The panorama of Indian landscapes and the surrounding serene and placid atmosphere made them forget their nomadic habits. They tasted the advantages of a settled life. A stable society, an abundance of the basic necessities of life and a spiritual urge goaded them to high thinking. They realised that their life was attuned to the Universe,

with myriads of stars and planets. They realised that the position of the stars and planets had an influence on their lives, even though in an indirect way. They became planet-worshippers. Thus the study of the heavens—the Science of Astronomy as it is called—is the outcome of a religious inquiry, that is, it grew out of life, as life and religion were inseparably bound. Out of religion also arose the Science of Geometry—as geometrical principles were used to construct sacrificial altars. The "Sulva-Sutras," which supplemented the "Kalpa-Sutras" were mainly devoted to such principles. Thus the ball of scientific progress was set in motion.

At the close of the Vedic period, progress in these fields slowed down, as social complexities arose out of the Brahmin cult. Life weighed down under heavy religious canons and dogmas. The freedom of thought—the protoplasm of scientific inquiry—was constrained. The cultural and political life became stagnant. The scientific ardour was lost.

But two thought waves came in succession and cleared the apparent gloom. The light of reason dawned—the dark days of Brahminism became things of the past. Jainism and Buddhism not only brought about religious revival, but also social awakening and political unity. The Jainas in particular were great patrons of mathematical learning. They encouraged not only the study of Jyotisha (astronomy), but also Samkhyana (arithmetic). Thus the Jaina School of Mathematics was founded.*

In India, mathematical learning flourished under the patronage of religious sects. The banner of scientific progress was placed in the hands of the priests. People respected them and with missionary zeal and fervour they carried out their duties. The knowledge of mathematics and astronomy was considered essential for "apara-vidya" (spiritual knowledge). This faith contributed much to the progress of mathematical learning in India.

Buddhism synthesized conflicting political elements and India saw the rise of the Maurya empire, which comprised practically the whole of India. The history of this period is important, because during this period there were cultural inter-course between India and the outside world, Greece, in particular. Megasthenes and other Greek ambassadors helped in the cultural flow between these two ancient lands. Each was enriched by the other specially with regard to scientific know-how. Trade and commerce also brought these two lands still closer and closer. Prof. F. Cajori observed:

"It is well-known that more or less trade was carried on between Greece and India from early times. After Egypt had become a Roman province, a more lively inter-course sprang up between Rome and India, by way of Alexandria. A priori, it does not seem improbable that with the traffic of merchandise there should be an interchange of ideas. That communication of thought from the Hindus to the Alexandrians actually did take place is evident from the fact that certain philosophic and theologic teachings Mani-cheans, Neo-platonists, Gnastics show unmistakable likeness to Indian tenets. Scientific facts also passed from Alexandria to India. This is shown plainly by the Greek origin of some of the technical terms used by the Hindus. A part of the geometrical knowledge which they possessed is traceable to Alexandria, and to the writings of Heron in particular. In Algebra, there was probably a mutual giving and taking." (*A History of Mathematics*—F. Cajori, pp. 83-84).

North-West India served as a window to the Western World. Between third century B.C. and second century A.D., there were racial movements rather than invasions in North-West India. The Greeks, Scythians, Parthians and Yueh-Chins began to pour in and cultural interchanges took place. Art and literature absorbed some of the exotic influences. We can presume that there were interchanges of scientific thought also. During this period the Greek astronomers —Hippar-chus and Ptolemy, were propounding their astronomical theories. Some of these theories must have flowed to India. We do not, however, say that India accepted Greek thoughts in toto. The astronomical treatises—"Surya Siddhanta" and "Romaka Siddhanta"—are said to be standing examples of Greek influence on Indian Astronomy.

Whatever may be the arguments for and against foreign influence on Indian mathematics, the cultural aspect, that is, interchange of scientific ideas must have contributed a good

* Dr. Bibhutibhusan Dutta has elucidated this point in details in his article—"The Jaina School of mathematics"—Bulletin, Calcutta Mathematical Society, 21. 1929, pp. 115-146.

ad to the renaissance of Indian mathematics. conservatism stands in the way of scientific progress. During the period between fourth century B.C., and twelfth century A.D., conservatism was practically absent. This provided a great fillip to scientific progress. During the reigns of the Kushanas, (45 A.D. to 225 A.D.), the Guptas (320 A.D. to 606 A.D.) and Harsha Vardhana (606 A.D. to 648 A.D.), scientific thoughts progressed spectacularly. Politically this was the most stable period apart from occasional racial movements. Socially also this was a most happy and prosperous period. The benevolence of the kings, their love of learning and respect for the truly learned became legendary. During this period India saw the rise of a galaxy of intellectual giants—Aryabhatta, Varahamihira, Brahmagupta, Mahavira, Sridhara and lastly Bhaskaracharya.

Indian Mathematics was sublimated by these great mathematicians and astronomers. They promulgated many original astronomical ideas which were unknown to the Greeks. They laid 'algebra' on a firm basis. They gave solutions to many indeterminate problems which European mathematicians like Format, Wallis, Kroncker, Lagrange and others took years to solve. This is no doubt a remarkable achievement of Indian mathematicians. Between 648 and 1200 A.D., there were cultural interchanges with China also. Prof. Cajori observed in this connection: "There is evidence of intimate connection between Indian and Chinese mathematics. In the 7th and succeeding centuries of our era Indian embassies to China and Chinese visits to India are recorded by Chinese authorities. We see undoubtedly there was influx of Chinese mathematics to India." (F. Cajori—*A History of Mathematics*, p. 84).

Bhaskaracharya was the last great mathematician of the renaissance period. The dark period in the history of Indian mathematics was fast approaching. The Muslim invasion marked the beginning of that period. Throughout ages, India was the centre of racial movements. The Greeks, Scythians, Parthians, Yueh-Chins and Arabs enriched Indian culture through social, political and intellectual interchanges. Their invasion turned into cultural missions at the end. But it appears from historical records that the Muslims came to plunder, destroy and rule India. Their racial and religious arrogance were more dangerous than the mere act of invasion. Mahmud of Gazani and Mahammad Ghori plundered northern India. Many mathematical manuscripts were destroyed. Many were buried underground and thus perished for ever. The Brahmins of northern India who were patrons of scientific learning, fled to the southern part. Thus an insecure political atmosphere and social instability—the result of foreign invasion—marked the doom of scientific ardour in India, which grew up in the most profound way through ages. At this time religious and social complexities arose to counter Muslim fanaticism.

Religious intolerance also became the order of the day. The Muslim rulers of India did not accept any scientific fact which might clash with the injunctions of the holy Koran. Preaching of truth which might be at variance with religion was considered to be a crime. At least at the beginning of Mahammadan rule in India, the learned were never patronized by the rulers. Socially the learned lost much of the former prestige. Thus in every sphere a corrosion set in.

Professor Dirk J. Struik observed—"Oriental Society moves in cycles, and there exist even at present many communities in Asia and Africa, which have persisted for several millennia in the same pattern of life. Progress under such conditions was slow and erratic, and period of cultural growth might be separated by many centuries of stagnation and decay." (*A Concise Histrory of Mathematics*, p. 15).

In India, after the Muslim invasion, Hindu Society became tradition-bound. The social life adhered to a close pattern. The liberal outlook was superseded by a high-brow intolerance. Religion was divorced from life. The scientific outlook was circumscribed by superstition.

In India Scientific knowledge was the monopoly of the Brahmin priests. They constituted a microscopic section and lived on the labours of common men who were mostly peasants. "The knowledge acquired by the Hindu astronomers was similarly guarded with greatest care, as sacred, and was supposed to be so secret that it was not known even to the Gods. It was not to be communicated to common people and being regarded as revelation to inspired saints, was only to be divulged to disciples similarly inspired." (*Hindu Astronomy*, W. Brennand, p. 27). This conservatism must have put a brake on the progress of Indian mathematics and astronomy.

"The Static character of the Social Structure tends to preserve scietific lore throughout centuries or even millennia. Discoveries made within the seclusion of a township many never spread to other localities. Storages of scientific and technical knowledge can be destroyed by domestic changes, wars or floods."*

(* *A Concise History of Mathematics*: Dirk J. Struik, p. 16).

This practically happened in India after the 12th century A.D.

Hindu mathematical treatises were written in obscure verses. A peculiar feature of Indian mathematics is the omission of proofs of propositions. The result was that in later times people accepted them without question as they believed in their divine origin. This resulted in intellectual inertia. This factor was casually connected with the sudden decline of the Hindu genius.

The manuscripts of mathematical treatises were generally written on birchbark—a perishable material. This resulted in the loss of many valuable manuscripts. For example, the Bakshali manuscript which was accidentally discovered in 1881 and deciphered by Rudolf Hoernle was in a badly damaged condition. Who knows but that hundreds of such valuable manuscripts were lost to Indian mathematics.

After the 12th century A.D., India's political life was marked by vicissitudes. She was subjugated by the Muslims and then in parts by the French and the Portuguese. Lastly, she was over-powered for nearly two centuries by the iron-grip of British domination. She gave her everything to the foreign bandits who made inroads upon her, but suffered instead poverty, squalor, disease and consequentially intellectual stupor. But her soul—still pure and undefiled—is resonant with divine aspirations which she felt in the remotest period— the *Vedic* era. Will she not find her place in the comity of nations?

———:O:———

D. H. LAWRENCE AS A POET

By VISVANATH CHATTERJEE
Lecturer, Jadavpur University

D. H. Lawrence is primarily a novelist and it is as the author of 'Sons and Lovers' and 'Women in Love' ('Lady Chatterley's Lover' is medicore as a work of art) that he is most famous. But he is also a poet—the first of his works to appear in print was a group of poems published in 1910—and in the poetry of this century he has a place of his own. His poetry is poetry in a special sense because his mature poetry, as a rule, is written in a purely unconventional manner so far as its formal aspects are concerned. He is a poet with a difference, his most characteristic poetic pattern being a loose, long-lined free verse. As Lawrence himself has pointed out in the preface to the American edition of 'New Poems' (1920), poetry, generally, is 'either the voice of the future, exquisite and ethereal, or it is the voice of the past, rich, magnificent'. The first category of poetry is like the song of the skylark—a fast flight into futurity. The second category is like the melody of the nightingale—a gradual recollection of the past. Lawrence's poetry belongs to neither of these two categories. The treasured gem-like lyrics of Shelley and Keats are, according to Lawrence, nothing but perfected bygone moments, perfected moments in the glimmering futurity. But time past and time future Lawrence never cares to work into a perfect poetic pattern as a Shelley or a Keats does. He does not, like them, look before and after. The living present is his sole concern, as it is the concern of Walt Whitman. To quote Lawrence's own words, 'The seething poetry of the incarnate Now is supreme.'

Lawrence's was essentially a poetic genius and this is revealed as much in his poetry as in the luminous halo of the ex-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the prose of his novels and short stories. His essays and travelogues are shot with a peculiar poetic glow. It is a pity that he could not achieve greater success as a poet. This reminds one of the case of Robert Browning. Browning's genius was essentially dramatic and a dramatic quality marks almost alll his poetry. But as a dramatist proper he could not make his mark.

Most of the writings of Lawrence are autobiographical and this is true of his poetry also. His poems, especially his early poems, are intensely personal. To quote his own words, they 'are so personal that, in their fragmentary fashion, they make up a biography of an emotional and inner life'. In a much more intimate sense than Wordsworth's 'Prelude' the poetry of Lawrence is the record of the growth of a poet's mind. All poetry, says Mill, is of the nature of solliloquy. Even a casual acquaintance with Lawrence's poetry makes one feel that this poetry at least is of the nature of a solliloquy. Highly sensitive and strangely imaginative, Lawrence seems to be thinking aloud in his poetry. The romantic poet is primarily concerned with his own feelings and he is the supreme poet of the lyric. In a sense, he is more interested in man as an individual than in man as a species, and the individual he is most interested in seems to be his own self. The Socratic maxim, 'Know thyself', is his guiding principle and the entire body of his poetry is nothing but self-exploration. The wonder that is his mind, with 'all Africa and her prodigies' inherent in it, eternally fascinates the romantic poet. No poet, however objective, can keep himself entirely aloof from his poetry, and the romantic poet, who is pre-eminently subjective, has generally only one theme for his poetry—himself. That is the reason why a great romantic poet like Shelley, even when writing the elegy 'Adonais', is mourning as much for his own self as for Keats. The romantic strain of self-revelation constitutes one of the important elements of Lawrence's poetry. As Richard Aldington has said—"He adventured into himself in order to write, and by writing discovered himself."

The early poems of Lawrence are more markedly autobiographical than the other poems. Most of them relate to either 'Miriam' who loved him (he was attached to 'Miriam' in his adolescene, the attachment never ripening into complete love in his case, since Lawrence did not think her attractive enough physically) or his mother (with whom he was entangled in a barren emotional relationship, which with his newly-acquired smattering of Freudian theories he thought to be some kind of 'Œdipus complex', his predicament being memorably described in his novel 'Sons and Lovers'). A very beautiful and poignant poem of this first group of Lawrence's early poetry is 'Last Words to Miriam':

Yours is the sullen sorrow,
The disgrace is also mine;
Your love was intense and thorough,
Mine was the love of a growing flower
For the sunshine.
.....
Body to body I could not
Love you, although I would.
We kissed, we kissed though we should not,
You yielded, we threw the last cast,
And it was no good.

Of the poems about his mother, 'Piano' is no less poignantly beautiful:

Softly, in the dusk, a woman is singing to me;
Taking me back down the vista of years, till I see
A child sitting under the piano.....
.....The glamour
Of childish days is upon me, my manhood is cast
Down in the flood of remembrance, I weep like a child for the past.

Most of these early poems demand a knowledge of Lawrence's biography on the part of the reader if he wants to appreciate them fully. They are to be read as poetry, and not as separate poems. They are like so many peep-holes into Lawrence's life. They tell the story of Lawrence's early life—his love for his mother, his love for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Miriam, his love affairs with other girls (Helen, for instance), the death of his mother. All these experiences have brought in frustration and unhappiness and have left an agonising mark on his memory. The process of looking back is a turmoil for him. That is why it has been suggested that we should read these poems of Lawrence's as a long verse-journal, in which we are to expect neither completeness in the parts, nor an Aristotelian plot, but simply the development of an intelligent train of feeling through any number of fragmentary occasions.

'Love on the Farm' is also an early poem, and is a specimen of quite a different class of poems in Lawrence's early work—the dramatic and fictitious poem. Some of these are dialect poems (and the dialect is handled with ease) and show the influence of Burns and Hardy. The speaker in 'Love on the Farm' is a quiet sort of girl, timorous by nature. But her lover is just the opposite type—rough and tough. It is a case of Goethe's 'elective affinity': 'Not like to like, but like to unlike draws'. She is waiting for her lover. After an idyllic beginning, which gives us an intimate glimpse into the nature of the girl, comes the description of the destructive impact of the man on the natural life of the farm. It is like the entrance of a mad elephant into a hermitage. The cosily resting swallow is all a-flutter in terror. And the poor rabbit, she fails to escape from the clutches of the man: he ensnares her and she dies. Not that he does not love the girl tenderly. Her distress troubles him. He is coming nearer and nearer her lover, her fate. Gradually he draws her closer and closer, till he covers her up altogether—'two hearts beating as one'. And then, she, like the rabbit before her, dies in his fatal embrace, and heaven lies abut that death.

.....his lips meet mine, and a flood
Of sweet fire sweeps across me, so I drown
Against him, die, and find death good.

And yet God has not said a word! The opening of the poem, it has been pointed out, is almost Tennysonian. What has not been pointed out, however, is the fact that the ending is almost Browningesque.

The second phase of Lawrence's poetry mainly consists of the series of poems entitled 'Look! We have Come Through!' and this poetry is as much autobiographical as the poetry of the first phase. The poems are concerned with the early experiences of his married life with Frieda Lawrence, five years his senior. She, a German, was the wife Lawrence's French instructor and Lawrence had eloped with her.

You are the call and I am the answer,
You are the wish, and I the fulfilment,
You are the night, and I the day.
('Bei Hennef')

They travelled together in Germany, Italy and England. Though theirs was more or less a happy life, they had to struggle for an oasis of married bliss in the wilderness of life and ultimately they 'came through'. Lawrence's own words regarding the theme of this phase of his poetry are worth quoting in this connexion: 'After much struggling and loss in love and in the world of man, the protagonist throws in his lot with a woman who is already married. Together they go into another country, she perforce leaving her children behind. The conflict of love and hate goes on between the man and the woman, and between these two and the world around them, till it reaches some sort of conclusion'. The flower is not free from the serpent, and love from hatred. The Latin that a lover construes is not merly 'amo', but, after Catullus, 'odi et amo'. The early experiences of their married life are also described, and perhaps more satisfactorily, in the letters of Lawrence and in Frieda Lawrence's book 'Not I but the Wind.' The poems of this group are described as Unrhyming Poems, as opposed to the poems of the first phase which were classified as Rhyming Poems. The Laurentian quality of rhymeless 'free verse' has been developed. The later poems also differ from the earlier ones in so far as the experience behind the later poems is less diffuse and more compact. But, in spite of all this, the ealier poetry, 'qua' poetry,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

seems to read better. For all its novelty, the free verse' has no poetic magic about it. It sometimes reads as flat as prose. Take the following stanza from 'Manifesto', for instance:

I thank mankind with passionate heart
that I just escaped the hunger for these,
that they were given when I needed
them,
because I am the son of man.

Not that rhyming poems and poems showing formal craftsmanship are altogether absent in his group. There is, for example, that much-anthologized poem, 'Giorno dei Morti' (Service of All the Dead). This poem is an objective description of an Italian funeral procession. The rhythmic movement of the poem is in perfect accord with its theme:

And all along the path to the cemetery
The round dark heads of men crowd
silently,
And black-scarved faces of women-folk,
wistfully
Watch at the banner of death, and the
mystery.

With 'Birds, Beasts and Flowers' we come to the next group of Lawrence's poetry. Almost all the poems of this group were written in Italy. The most characteristic quality of Lawrence's life and writing is 'an instant physical awareness of the organic world: men and women, animals, plants.' In Lawrence's work men and women offten reveal something of the blind, instinctive nature of the animals, and his animals have many human qualities about them. In this middle period of Lawrence's literary career, Lawrence is chiefly concerned with an original kind of communion with the natural world. Lawrence's is not the Wordsworthian passive enjoyment of Nature. Lawrence does not use for the sublimation of his moral nature; he is interested in things as they are in the real nature of natural objects. And thus far the nature poetry of Lawrence is a definite break with tradition. Sometimes he would describe man's brief encounter with an animal or man's reaction when he is face to face with the secrets of the vegetable world. Lawrence cannot help being subjective in these poems. After all, when Keats happens to see a sparrow come before his window and takes part in its existence, he becomes a sparrow in a specifically Keatsian way. Had it been Shakespeare instead of Keats, he would have been the sparrow in his own Shakespearean way. It is not given to us to become a sparrow in the way in which a sparrow itself is a sparrow. What is a peach, a pomegranate or a bare almond-tree? What is the real nature of a mosquito or a tortoise or an elephant? A peach or an elephant cannot answer these questions. Lawrence can only answer in a Laurentian way.

One of the most celebrated poems of Lawrence belongs to this group: 'Snake'. Here the animal is an exiled and uncrowned king of the underworld. He is one of the lords of life. He has come to the poet's water-trough, on a hot day, to drink there. The poet likes him immensely (in 'Man and Bat' the bat aroused hostility and repulsive horror in the poet), but at the same time becomes 'afraid....most afraid'. He picks up a clumsy log and throws it at the snake. Immediately the poet regrets this act of wanton cruelty.

I thought how paltry, how vulgar, what
a mean act!
I despised myself and the voices of my
accursed human education.
And I thought of the albatross,
And I wished he would come back,
my snake.
.....
And I have something to expiate;
A pettiness.

The poem may indeed be described as an agonised confession of guilt at having humiliated a noble creature. This aspect of Lawrence is revealed as much in his novels (say, 'Aaron's Rod' or 'Kangaroo') and short stories as in these poems. The wonderful short story 'Adolf' (in 'Phoenix), with a little rabbit as the hero, is in point here. So far as as the rhythmic movement

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

goes, the poems of this group show a marked improvement which continues till the 'Last Poems'.

'Pansies' constitute the penultimate phase of Lawrence's poetic development. Here Lawrence is less careful about the rhythmic pattern, all his interest being concentrated on the thought-element. These poems are perhaps the least poetic of Lawrence's verse and were written when he returned from America. Lawrence explained the title in the original foreword to 'Pansies'—'These poems are called 'Pansies' because they are rather 'Pensees' than anything else. Pascal or La Bruyere wrote their Pensees in prose, but it has always seemed to me that a real thought, a single thought, not an argument, can only exist easily in verse, or in some poetic form. It is a critical kind of poetry; Lawrence's main interest here is in the relationship between individuals themselves and the relation of the individual to society.

Sometimes Lawrence would be keenly sarcastic:

> How beastly the bourgeois is
> especially the male of the species—
> .....
> Nicely groomed, like a mushroom
> standing there so sleek and erect and eyeable—
> and like a fungus, living on the remains of bygone life
> sucking his life out of the dead leaves of greater life than his own.

Lawrence, in these 'Pansies', ruthlessly criticises modern life, which, to him, is nothing but a tale told by an idiot. He cannot help using a Shakespearean phrase. He loves the exquisite language of the master though he cannot appreciate Shakespeare's tragedies and tragic heroes:

> When I read Shakespeare I am struck with wonder
> that such trivial people (Lear, Hamlet, Macbeth) should muse and thunder
> in such lovely language.

Lear is nothing but an 'old buffer' to Lawrence and the 'mean and self-conscious' Hamlet can only bore him to death. Tragedy to him seems a loud noise, louder than is seemly. In order to live truly one must be fully alive and that one cannot so long as one gives the mind such an important place. The meddling, polluting mind spoils everything. Sex is infinitely significant and not at all sin:

> Sex isn't sin, ah no! sex isn't sin,
> nor is it dirty, not until the dirty mind pokes in.

Lawrence is an out and out anti-intellectualist. He wrote in a letter to Ernest Collings in January, 1913: 'My own great religion is a belief in the blood, the flesh, as being wiser than the intellect. We can go wrong in our minds. But what our blood feels and believes and says, is always true. The intellect is only a bit and bridle.' Lawrence's ideas about sex are fully discussed in these poems. His other favourite ideas also are here:

> For God's sake, let us be men
> not monkeys minding machines
> or sitting with our tails curled
> while the machine amuses us, the radio or film or gramophone.

The financial system ('Money is our madness, our vast collective madness'), the industry, the machines, why have them at all? This is the question he asks in 'Why-?' Sometimes in connexion with man and his work he will think of the Hindus:

> Whatever man makes and makes it live
> lives because of the life put into it.
> A yard of India muslin is alive with Hindu life.

And sometimes Lawrence would utter a profound truth with remarkable felicity, as in the poem 'A Living':

> A man should never earn his living,
> if he earns his life he'll be lovely.

Some of the 'Pansies' were written in the last part of Lawrence's life when he was nearing his death. The 'Last Poems' the last group of Lawrence's poetry pub-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shed posthumously, were all written when he was on the verge of his voyage to Death's other kingdom. Darkness was gathering round him, and the shadow of death loomed large in his 'Last Poems'. 'And death is on the air like a smell of ashes'. 'God' oftfen pops up in these poems. This God of Lawrence is a god who has forms of his own, and these forms are infinite. He is God only because He appears in these forms, human and non-human. Lawrence cannot think of any formless being—mere spirit—as God. God, to Lawrence, is immanent everywhere in the world, in Helen as much as in Ninon. Any lovely and generous woman at her best and most beautiful is God made manifest, and so is any clear and fearless man. Not only that. God is to be seen even in the poppies and the flying fish, men singing songs, and women brushing their hair in the sun.

> The lovely things are god that has come
> to pass, like Jesus came.
> ('The Body of God')

The world to Lawrence, as it is to Tagore, is a playhouse of Infinite Forms where even the rainbow has a body.

> All that matters is to be at one with
> the living God
> to be a creature in the house of the
> God of Life.
> ('Pax')

Man should be his individual self and at the same time he must be in tune with the living God. Only then can his life be ful-

Death, in the last poems of Lawrence, is no horror and pain for him. Nevertheless, his is not the challenging and triumphant Pauline cry—'O death, where is thy sting? O grave, where is thy victory?' Lawrence accepts death with a calm resignation which has understanding as its basis. Lawrence understands that death is as much a natural process as childhood, youth and old age (as Sri Krishna wanted Arjuna to understand). Lawrence was not old so far as his age was concerned; he died when he was only forty-five. Still he had been suffering for a long time, and was utterly broken in health. Death was no sudden phenomenon for him.

The last poems are suffused with an autumnal glow, and sometimes he would write lines breathtakingly beautiful, as in 'Bavarian Gentians' or 'The Man of Tyre':

> Oh lovely, lovely, with the dark hair
> piled up, as she went deeper, deeper
> down the channel.

The most famous of the last poems, however, is 'The Ship of Death'. It is this ship that takes the soul to its destination. Now the time is ripe for Lawrence to start on 'the long journey towards oblivion', and Lawrence must build his ship of death. He will need it. After a sprinkling of Shakespearean phrases from 'Hamlet' and 'Antony and Cleopatra', which add a great deal of poignancy to the poem, Lawrence concludes that 'all we can do [now that we are dying] now is to be willing to die.' The fragile ship is a ship of courage, the ark an ark of faith. Where it is going nobody knows. It does not matter. We know that we are going, we have started on the journey. The voyage is all. We will arrive—somewhere, nowhere. It is the end, it is mere oblivion. But is it really the end, total annihilation? No, not so.

> And yet out of eternity a thread
> separates itself on the blackness,
> a horizontal thread
> that fumes a little with pallor upon
> the dark.
>
> . . . . . .
>
> A flush of rose, and the whole thing
> starts again.

Who knows but there may be a new life after death! And, to use the image used by Lawrence himself in 'Shadows', old, withered, wintry flowers may blossom forth into new strange flowers of spring.

That is the final note of Lawrence's poetry—not a note of dark despair but a note of tranquil hope.

THE INDIAN NATIONAL EVOLUTION-CUM-REVOLUTION AT A GLANCE

By JOGES C. BOSE

BABUR says in his *Memoirs* that 'Hindustan is a country that has few pleasures to recommend it'. All the same, he settled down in India in preference to the mountain fastnesses of Kabul, and took enormous pains to induce his people of all ranks and grades to make India their home. The history of India takes a sharp turn since then, inasmuch as a new class of people, flushed with the insolence of the ruling caste, came into being. It is, broadly speaking, the seed-bed of the two-nation theory that has split this country. It is true that the Mughal rule was much more cultured than that of the Turks, and were it also conceded that Akbar's aim was the hegemony of India by a fusion of the various races, the rule, in essence, with Aurangzeb giving it the finishing touch, highlights the fact that it was virtually a military occupation on a religious and racial foundation. Should a Government that treats over some eighty per cent of the people as hateful unbelievers and, therefore, liable to a special tax, be called a national rule? The extent of the foreignness and divisiveness of Islam can be gauged from the claim set-up by the descendants of a body of converts that they are a nation by themselves, separate from the parent stock. And yet it is a pet shibboleth of a section of our people to consider the Mughal regime as a national rule. Anyway, a convention has grown up accepting the efforts to disyoke India from England as our struggle for Freedom.

Sir Syed Ahmed's great regret was that Moslem rule represented Islam in its decadence, but British rule Christianity at its apex. The rub, however, is that Islam was brought into India not by the Arabs but by the Turks.* The difference exactly is in the West being introduced into India by England and not any other rival power. In fact, if it is a miracle of history that a handful of British merchants rowed up the river Hooghly with trading scales to change them overnight into a sceptre, it is no less significant that they brought with them a dynamic civilization. It helped India to discover her transcendental self. It stirred her up to stand head erect amongst the nations of the world. Raja Rammohun Roy, even as the most puissant race of the world was stringently organising its rule, initiated the process how to redeem India, its thrall, so as to liquidate that rule. He envisaged Dominion Status culminating into complete Independence and chalked out a blueprint for it.† His worthy successor Pundit Isvarchandra Vidyasagar laid the foundation of Female Education on lines of sturdy growth. It instilled into the woman a sense of her rights along with her obligations, for, otherwise there was every likelihood of India relapsing into the old mediaevalism.‡

The ball was thus set rolling. But the cent per cent nationalness of the go-ahead move to usher in a renaissance is the challenge of the Swadeshi Movement.‡ It worked out a complete metamorphosis; and that to an extent as to justify recalling the Biblical imagery—The valley was full of bones: bones came together, bone to bone . . . breath came to them and they lived and stood upon their feet an exceeding great army'. With all praise, which it will be sheer meanness ever to grudge, the great leader of the Swadeshi Movement, Surendranath Banerjea, failed to rise equal to the height of the spiritual fervour it evoked. He suffered it to peter out as a political fight, whose be-all and end-all was in the undoing of the Bengal Partition. And here was the opportunity for British statesmanship, entrenched so well in political manoeuvrings, to beat Bengal leadership hollow. India, by the way, has failed signally to cope with it in every clash. If at times it looked like yielding, it was just biding the time for a drastic swoop. For India to have to submit to being broken at each conceivable point by a chain

*The point is stressed by Percival Spear in his *India, A Modern History*.

...ers is the last monumental example.* The ...nner in which the Partition of Bengal was ...ified—annulment in no sense it was—proves ...In order to make the whole of Bengal statu... ...ly Moslem—and to the extent pro-Government ...d anti-Congress—such as Curzon intended his ...ly-created province, East Bengal and Assam ...be, Hardinge denuded her of three cru... ...l districts. This was out and out to ensure that ...ever it might be elsewhere, the ...ious opposition'—as Lady Minto has im... ...ralised the expression as a synonym for the ...ngress—must have no chance in Bengal.†

There was a time when Indians characterised ...e advent of the English as 'a divine dispensa... .... They sang hallelujah to England which ...e, almost as a tradition, asylum to the fighters ...freedom in other lands: to England which ...ent twenty millions sterling to emancipate the ...ves. But the parading of conquest by the sword ...d yet in the next breath the assumption of ...mon trust: the fact that ideals, loudly preached ...the principles of governance, were not lived ...to except under the stress of circumstances: ...cessions wrested from unwilling hands being ...ged in by reserve, residuary powers: and, on ...top of all, the well-settled policy of stirring up ...blood between the Hindus and Moslems were, ...ously, the forces to shatter the faith of adora... ...—some hectoring, bullying imperialists ...ling up the process all too well.

Again, far too worse than dotting the country ...n military and police of aggresive character ...order to stamp out the national upsurge was ...insidious employment of the Black and Tan ...ods. The stories that leaked out in grue... ...e details from Comilla and Jamalpur of the ...du population being in the hands of organised ...lem hooligans, set Hindus all over Bengal ...think furiously as to what was in store for ...There were a number of cases, in which ...the Police snatched away guns, held under ...ce, the miscreants poured in to gather the ...ends of the ruling power's brutal cow... ...ce. Robbed of arms, as the people took to ...s for minimum self-defence, *The Englishman*, ...influential British-owned daily (now defunct) of Calcutta, goaded the Government, nothing abashed, that since rifles were growing on trees, the lathi needed to be brought within the purview of the Arms Act.

Just a few months after the Barisal Conference (April, 1906) two youths saw Surendranath at his residence at Barrackpur. They flung upon him their fateful plan to shoot Bamfylde Fuller for which they had started—Fuller was the Lieutenant Governor of East Bengal and Assam whose febrile, foolish idiosyncracies had done so much to inflame the rowdy elements of the Moslem community in order to make a hell of Hindu life and property and, what is still more galling, the honour of Hindu womanhood. The Government woke up to its responsibility only when a large number of Hindu women at Dacca and Mymensingh openly gathered together to resolve to take to the use of daggers for self-defence. It took a long time for the bewildered Surendranath to dissuade these two young men. It was, however, pretty certain that the chapter of remorseless retribution and reprisal had set in. 'Blood has defiled the land and the land cannot be cleansed of that blood except by the blood of him who shed the first blood', is a text of the Old Testament, upon which Morley has canonised Cromwell. It is the maxim that has lured youth everywhere into perilous plunges. It was no exception in Bengal. They were, in fact, smitten with a blind passion to strike the blow against those who, and the system, which perpetrated the wrong. To their eternal credit, however, they struck not a single blow against the Moslems as Moslems. The murder of Kennedies, the Alipur Conspiracy case, the approver Naren Gossain shot dead within prison walls, the murder of the Public Prosecutor and the investigating Police Inspector of the case, and a host of concomitants flit by over a trail of blood. History would pause to assess their contribution in daring and sacrifice to inculcate the lesson of living dangerously for the Nation. Those who condemned them to say, 'Bengal is suspect' without having had the courage to condemn in full, ample measure the provocative circumstances that led them into it, are like the Scribes and Pharisees, who swallow camels but strain at gnats. It is, again, an incontrovertible historical truth that no British bayonet could ever check its corrosive flow, but for the phenomenal hold of Mahatma Gandhi, who provided another and no less potent an outlet.

It was to make impossible the rule by an organised refusal to do anything which helped British commerce in the exploitation of the country and the Government in its administration, unless and until the conditions were changed in the manner and to the extent the people demanded.

Rabindranath Tagore is, however, the pioneer in the field to suggest a gradual withdrawal of co-operation, on which hinges the Administration, and organise the village in order to provide the Hindus and the Moslems the scope to work in integration of their common economic interests. He has given us two epic characters: one is Dhananjoy Vairagi with his techniques of passive resistance—how to stand up to the Power that be, if it chooses to ride roughshod over the rights of the ruled; and the other is Gora, with his title deed of challenge for the day and prophecy for the future by spurning a life of ease and affluence and facing what sufferings the alien Government might choose to inflict on him. At the age of twentyone, Rabindranath in a lecture at the Chaitanya Library Hall, Calcutta, urged the *elite* to go to the mass and tell them that English rule and Fate were not convertible terms. Subhas Bose says in his *The Indian Struggle* that Rabindranth went to the length of a stout line of action in the manner of the Sin Fein's 'state within a state'. Any way, he influenced the shape of things creating the demand for a new pattern of work.

But before we get on to this alignment, a reference to the dazzling interlude, Shri Aurobindo Ghose, is called for. He was a type by himself. At the age of twentyone, he flared into a sombre prominence by his views, so clinching in outlook and incisive in expression. In an article in the *Indu Prakash* of Bombay, he wrote that whoever succeeded in understanding the proletariat and eliciting the strength that was dormant in them held the real key to the political situation, and was destined to be the master of the future: regarding Tilak, he wrote that he had Indianised Indian politics. R. C. Dutt, then the Dewan of Baroda, counselled moderation, and Ranade the sovereign virtue of patience. But the volcanic soul recked no consequence. He gave up his prize post at Baroda and came to Bengal to serve her in exclusive dedication at the call of the Swadeshi. He pleaded that to stabilize the forces of upheaval the one thing needful was to bring the mass into the consciousness of the Nation, so that the humblest of the humble might feel that in the freedom of the Nation he was free. He canvassed the potentials of Passive Resistance and Non-co-operation. He wrote in the issue of the *Bande Mataram*, dated 29th September, 1907,—'We must remember that alien absolutism in this country depends helplessly on the co-operation of our people. Let that co-operation be withdrawn and bureaucratic absolutism tumbles like a house of cards.' He peeved; he despaired of the feasibleness of a 'bloodless installation of Liberty.' He, therefore, forswore no violence to compass it. And across his path, says Ramsay Macdonald in his *Awakening of India*, the shadow of the hangman fell. His creed can be summed up in his call for men who would give up everything for their country in the attainment of her Freedom by whatever means the moment suggested and opportunity provided. His last political gesture was his desire conveyed to the Congress leadership to accept the Cabinet Mission Plan and thus stave off the division, which stared India in the face.

Aurobindo to Gandhi is a far cry. To Gandhi, however, goes the supreme credit of burning all-India resistance to foreign rule for long twentyeight years. That leadership, again, can well be reckoned as a force in the evolution of mankind, steeling itself to the thought that were brute reciprocity to remain the last say in human affairs, civilization bade fair to be wiped out. The great tragedy, however, is that it has, by accepting the division of India, gone back upon the sworn objective of her revolution, namely, the Freedom of the various peoples of India fused into one Nation. It is idle to speculate if non-violent non-co-operation, left to itself, would have achieved our Freedom. What, however, Sir Stafford Cripps said in Parliament as Chancellor of the Exchequre on 5th March, 1947, bears directly on the question. He pinpointed the absurdity of a considerable reinforcement of British troops to enforce administrative responsibility in India. In other words, it is, thanks to Netaji Subhas Bose, the refusal of India to yield her shoulders for British guns which compelled Britain to quit.

MAN VERSUS THE STATE

By VIPIN CHANDRA MAGO

A historical study of the problem of citizen-state relationship as it has come down to us through the ages.

Some of the most crucial problems which have been taxing the minds of mankind since times immemorial and to which adequate solution has not yet been found are the questions of Freedom vs. Authority, Man vs. the State, Individual vs. the Society and Anarchy vs. Order. A little serious pondering over them would, however, reveal that these problems are only superficially different from each other, by the mere fact of their terminology. In essence all of them centre round one and the same issue—the limits of political obligation and the right of resistance to the authority of the State, which itself is interlinked, if not identical, with the problem of demarcating proper spheres of action for the individual and the state respectively. This issue has become all the more important today in view of the increasing expansion of State activity and State interference in the life of the individual ever since the inception of the idea of welfare-state which seems to be gradually diminishing the antithesis between Socialism and Individualism even though the leaders of the two ideological camps into which the world of today is divided stubbornly refuse to recognise this fact.

The problem as I said above, is not new to us but is a historical one. Political thinkers from the ancient Greeks down to the present day have sincerely engaged themselves in evolving a formula which would ensure harmonious relations between the State and its citizens but the question has always evaded a satisfactory answer. Their attempts, however, led to the birth of many thought-provoking concepts and theories of the nature and purpose of the State which must be critically studied by every true citizen of today if he is to do justice to his dignified status and if he is to rise to the occasion to safeguard his country's integrity against the onslaughts of disruptionist tendencies which are gradually gaining momentum. Some of the most significant of these theories of the nature and purpose of the State are the Organic Theory, the Individualistic Theory, the Idealist theory, and the Socialist theory (the 'word socialist' having a strictly Marxian connotation here). The present discussion would be confined to a brief study of each. My purpose here is not to suggest any solution to the problem under consideration but to invite the attention of all democratic citizens for co-operative endeavour to that end.

The Organic theory traces its origin to the City-States of ancient Greece. The 'Polis'—as the State was then known—was not a mere political organization. It was the church, the school, the theatre and the body-politic woven into one whole. Intellectual studies of various kinds such as psychology, mathematics, ethics, and politics and even astronomy were hardly distinguishable from each other. In fact, Ethics was regarded as the master science embracing within its fold all other sciences —whether physical or social. In such an atmosphere it was not only futile but impossible to find out any contentious problem between the citizen and the State. Both were bound to each other in an eternal unity by an ethical bond which had a personal touch about it. The Greeks, especially their three great philosophical representatives, namely, Aristotle, Socrates and Plato waxed eloquent over the organic nature of the State. To them, the individuals were as inseparable from the body-politic as the cells from a physiological organism. Just as the parts of a human organism could not function in seclusion

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from each other but were mutually interdependent, similarly the individuals could not live a really human life except in relation to each other and under the paternal care of the State. This aspect of Citizen-State relationship was best conveyed by Plato in his oftquoted words "The state is individual with wit large." Aristotle restated the same thng when he said, that Man was a social and political being and the State was 'natural' to him in the same sense in which the tree was 'natural' to the seed. One who could live without the State was, as he said, "either a beast or a god."

This theory hardly allows any margin for citizen-State rivalry. Obedience to the State came as naturally as water from a hill stream. It was unqualified and unquestioned. There were occasional instances of conflict between the individual and the society such as that between Socrates and the Athenians resulting in the forced suicide of the former but they were extremely rare. Life was otherwise smooth and harmonius.

So long as the lives of the people remained confined to the boundary walls of the city-States such questions as the drawing of a proper sphere of state-activity scarcely disturbed their self-contentedness. But then came the twilight and decline of the city-State polity. A long series of wars between the Greeks and the so-called barbarians and among the former themselves destroyed the narrowly circumscribed nature of their lives. A vast empire, historically known as the Holy Roman Empire replaced the city-States which—lame and crippled in its later stages—dragged on until the end of the 15th century. The period from fifth century onward to the emergence of modern nation-States which led to complete disintegration of the Empire in the first quarter of the 16th century is usually described as the Middle-Ages (and on account of its intellectual depravity as the Dark Ages). During this period political questions were largely eclipsed by ecclesiastical ones. There ensued a long warfare—sometimes open sometimes concealed—between the Roman Emperor representing the secular authority and the Pope claiming to represent God on earth. In the process both lost their sway at the hands of bold and valiant princes ruling over various feudal principalities of Europe, who having felt tired of perpetual unrest successfully attempted to put an end to all this fuss about nothing!

This long period of intellectual barrenness precluded the presentation of any sound and rational political literature. Whatever little was achieved in this direction was only incidental to the argumentation on either side in the Church-State rivalry.

The transition from the medieval to the modern era, the chief note of which is the nation-State as the unit of political organisation, saw the beginning of two epoch-making movements. The Reformation and the Renaissance, which set a befitting finale to the Dark Ages, ancient Greek learning was revived and fresh thought was given to citizen-State relationship and allied subjects. Intellectual activity assumed a new and vigorous speed. This was necessiated by the ambitious aspirations of the newly established monarchies, whose leaders sought to justify their revolt against the Empire and the Roman church with the help of philosophical arguments. They tried to buy over great political thinkers in their favour in order to make them induce the people to submit to and rally round their new rulers. The credulous nature of the masses of those times foretold their success. The result was complete subordination of the individual to the State. Absolutist tyranny became the order of the day. Monarchist rule became highly oppressive. Freedom loving and thoughtful people in this era of awakening decried the new developments in most severe terms—some even at the cost of their lives. John Locke of England and Jean Jaques Rousseau of France (a Swiss by birth) advanced a contractual view of the origin of the State thereby trying to establish the primary and the inviolable character of individual freedom over the absolutism of the day. Both of them came to be regarded as the greatest democrats of their times. Throughout the 17th century and right upto the third quarter of the 18th century, the Contract theory remained the philosophical creed of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

political thinkers in almost all the advanced countries of the West. There took place many revolutions on the European political set-up resulting in the replacement of monarchical regimes either by democratic governments or by newer types of dictatorial autocracies. Towards the end of the 18th century a new factor entered into political speculation. It was the force released by the famous Industrial Revolution. Technological and scientific advance changed as if by a flash of lightening, the whole face of Europe. The predominantly agricultural economy gave way in the face of rising power of Industry. Industrial magnates and tycoons clamoured for a share in political power which had hitherto been a monopoly of the land-lord class. Their voice became increasingly insistent and they were soon supported by a new school of thought who attempted to get all State regulation and control of economic and industrial relations reduced to the minimum. The only purpose of the State they held, was to maintain order and protect life and not to 'foster and promote' the happiness of the individual. Their main argument was that the free operation of natural economic laws' would ensure greater prosperity for the people and increased production. The group of thinkers adhering to this view came to be known as the Philosophical Radicals or the Utilitarians—the Chief spokesmen of whom were Jeremy Bentham and John Stuart Mill. The main principle around which they theorised and built their philosophical superstructure was "Utility," which in Bentham's words meant "the greatest good of the greatest number" and which was declared to be the only true touchstone and the basis on which old laws should be rejected and new ones enacted. Even obedience to the State was justified on account merely of the utility that accrued from it, or as Bentham said, "The probable mischiefs of obedience are less than the probable mischiefs of disobedience."

The Utilitarians were ardent individualists (though some times they spoke in such ambiguous terms that socialistic inferences were drawn from them). They defended resistance to the authority of the State if it tried to disrupt the 'free operation of natural economic laws, in other words, it was the legitimate right of the citizen to refuse to obey the commands of the State if he found that the latter was encroaching upon his right of free and unchecked economic occupation. This theory formed the basis of the later too well-known "Laissez Faire."

On the other hand significantly different developments were taking place on the continent especially in Prussia (the modern Germany) where Fichte and Hegel revived the movement for absolutist collectivism. They conceived the State as a superhuman and supernatural divine entity entitled to unqualified and unquestioned obedience of the citizens. The State, they said, was the representative of the 'highest good'—it was the march of God on earth—and therefore what constituted the highest good was no concern of the individuals. The State was the only competent authority to declare its contents. No individual had any right to dispute the validity of its decrees because, in the words of Hegel, "the State was the individual, himself objectified and eternalised with the elimination of his merely accidental and ephemeral features." The idealists, as the Hegelians came to be known, repudiated all faith in individual rights as such and reduced the individual to a mere cog in the machine. The individual to them, was a fiction; only the State was a reality. Hegelian idealism was taken full advantage of by Hitler and Mussolini in the present century for it furnished a plausible argument in defence of their unscrupulously authoritarian regimes. In their regimes any anti-Government voice was liable to be visited by the severest penalities including death.

The Utilitarians were probably honest in their convictions but they miserably failed to foresee the dangers lurking in 'Laissez Faire'. The shirking of economic responsibilities by the State resulted not in greater prosperity but in large-scale exploitation of the labouring-class by the capitalist employers. With the expanding industrialization and gradual spread of education the workers became conscious of their sad plight which they ascribed to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Capitalist system. Soon there began many a strong labour movement on the European political scene and organised trade unions became a force to be reckoned with. Karl Marx, the father of the so-called scientific socialism, gave the labour movement a new impetus by putting before the working people a horrible picture of the State—as the instrument of exploitation in the hands of the capitalists. He envisaged a classless and Stateless society in which the operating ideal would be "from each according to his capacity to each according to his needs." This view of the State was incomplete opposition to the Greek conception of the State as the highest ethical association. True to his belief that economic power precedes political power Marx appealed to the workers all over the world to launch a revolutionary campaign against the State and smash it to pieces. "Workers of the world unite" became the shrieking slogan of the day. As 'offshoots' of the genus' Marxism there grew up newer socialistic schools, differing from each other not so much in their aims as in their methods, namely, Syndicalism, Anarchism, and Fabianism in the latter half of the 19th century and Guild Socialism and Bolshevism in the present century. While the Syndicalists were deadly hostile to the State, the Guild socialists and Fabians struck a via-media, the former in its ideal society retaining an extremely reduced and mild form of the State and the latter attempting to infuse Socialism into Democracy thereby giving birth to Democratic-Socialism which stands as the basis of the modern idea of Welfare State.

The Bolshevists (now known as the Communists) and their stooges in other countries have always professed to be strictly Marxian in their approach to national and international problems but in actual practice Marxism has become greatly diluted and inverted at their hands, because while Marx's ultimate aim was to launch a World-Communist-Revolution, most of the Communist countries of today are ardently nationalistic. They insist upon a extremely rigid compliance with the orders of the State. Their methods bear a striking resemblance to and affinity with the Fascist methods of Hitler and Mussolini, though circumstances made the Communists and the Fascists stand on opposite sides of the barricades in the last War. The Communist States are as totalitarian as the Fascist were.

The subject of citizen-State relationship came in for a more lively discussion at the hands of Thomas Hill Green, the neo-Idealist of Oxford and late Professor Harold J. Laski who later rose to the chair of London School of Economics and Political Sciences, in the last quarter of the 19th century and during the first three decades of the 20th century respectively. Green tried to prune away the objectionable elements from Hegelianism and give it the traditional English liberal colour by justifying resistance to the State in exceptional cases, i.e., when the dissenter was convinced that the course of action he was required by the State to follow would go against the good of the society as a whole. But this rather uneasy alliance between Liberalism and Idealism—for while the former carries one to the individualistic side the latter drags one towards the totalitarian camp—could not last long.

Professor Harold J. Laski who was a liberal in his earlier days held the view that our obedience to the State was due not to the purposes professed by it but to the actual services performed by it. If one was to be true to his conscience one should be left free to judge for oneself whether the actions of the State cohered well with his standards of morality. In case his experience was otherwise he would be justified in putting up resistance to the State. But some bitter experiences in the early 30's of the present century led Laski to turn a Marxist and he became one of the most eloquent spokesmen of the British Labour Party. He ceased to talk in terms of 'individual', 'liberty' and 'human conscience' and appealed more for equality and dignified living for all. He realised, and truly, that the only safeguard against the inhuman exploitation of labour was the strengthening of the punitive powers of the State. When the Labour Party assumed the reins of Government in England after the War, Prof. Laski became all the more pro-equality and anti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

liberty; pro-State and anti-individual. despite all this Laski never became a communist of the Russian type.

Today, as was indicated above, we live a comity of welfare states. "In a century," Sir Josiah Stamp, a British administrator of great repute, "the State has emerged from the State as policeman to the one as doctor, nurse, teacher, philosopher and guide." Welfare schemes, it goes without saying, involve planning and planning, it be agreed, entails a greater curtailment of individual liberty. There are people in India and elsewhere who have started a "pull-down campaign" against the present Government for the sheer reason its being wedded to social amelioration through planning. They argue that planning as it is being practised in India today sure to make her run along totalitarian lines in the years to come.

This is the dilemma then. On the one and there are people who stand for increased planning as the only insurance against penury, misery, disease, illiteracy and unemployment and on the other hand there are those who denounce planning as essentially catastrophic. You can not agree with both points of view at the same time. They are apparently irreconcilable. The problem of establishing a proper relationship between the citizen and the State remains unsolved then. But I believe we can find an answer to the question if we give up certain traditional notions about the individual and the State. If most of us have become habitual lookers at the State with suspicion and dread an increase in its powers, it is because we still stick to the old 'atomistic' view of the individual and the 'police' view of the State transmitted to us by our Utilitarian ancestors; it is because we still view society as an aggregate of individuals rather than as a unity, the constituent parts of which live and grow by a process of reciprocal services; it is because we insist on the 'take' and forget the 'give' of the 'give and take' formula; it is because we see only the 'self regarding' side of the picture and refuse to see the 'other regarding' side thereof.

This attitude has to be changed. Both the individual and the society have to be looked at from an entirely different angle and in a wider and broader context. Only then can we realise that rights are the fruit that the tree of duty bears. Only then can we realise that there is no essential animosity between the citizen and the State. Only then can we appreciate the fact that while an individual represents himself and his egocentric tendencies, the State represents the interests of society as a whole.

CONSERVATION OF AJANTA CAVES

By TILAK RAJ SAREEN

The Caves of Ajanta, famous throughout the world on account of their mural paintings and architectural superbness are situated in the Indhyadari Hills only sixty-miles north west of Aurangabad. The earliest of them being excavated as far back as 2nd Century B.C., these caves are probably the most interesting and finest of all those to be found in India. Almost all the twenty-nine Caves belong exclusively to the Buddhist religion and extend through the whole period during which Buddhism prevailed as a dominant religion in this country.

Buddha and the Elephant

From Mrs. Speir's Life in Ancient India

With the gradual decline of Buddhism from the land of its birth, the shrines and sanctuaries of that religion were either destroyed by the ruthless vandalism of the invaders from without, religious bigots from within or they became places of wilderness due to a lack of votaries. The magnificent Chaityas and Viharas of Ajanta met a similiar fate and they were absolutely lost to the cultured world until 1819, when some officers of the Madras army discovered these Caves. The next account we have of them is from General Sir, J. Alexander, who, says Burgess, "visited them in 1824 and sent a short account of them and their wall-paintings to the Royal Asiatic Society which was published in their transactions in 1829". From his description it appears that the Caves and wall-paintings were "well preserved and highly coloured."

Though these Caves were again visited by Captain Gresley and Mr. Ralph in 1828, it was only in 1843, when Mr. Fergusson, a gentleman of great accomplishment in research and knowledge in architecture, presented the account of the Cave temples of India to the Royal Asiatic Society, that the Society realised the importance of these "most remarkable specimens of the singular structure" and wrote to the Court of Directors of the East Indian Company in 1844 that "the Caves of Ajanta contains unique specimens of paintings of an age interior to the Christian era and it is equally certain that the time and use made of these places by Fakirs and others are gradually destroying their beauty and will soon obliterate every trace of these remains."

The Court of Directors were impressed by the appeal of the Royal Asiatic Society and wrote to the Governor-General in India "to preserve them (Ajanta Caves) from all such causes of injury and decay as may be obviated by means within the authority of our Indian Government. Carefully executed copies of them should be made before it is too late as these drawings are the only authentic records that exist of many of the usages of the people of India."

The same year the British Government entrusted Captain Gill of the Madras Army with the duty of taking drawings of the architectural and pictorial remains of the Caves of Ajanta. Since the Caves were "the hereditary and private property of Sooraj-ul-Mook Bahadur", the Dewan of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Nizam of Hyderabad, he was asked "to defray the expense attending to their repair and future preservation."

Major Gill, on his arrival at the Caves found that they "were all more or less filled with earth and debris. Some of them nearby to within a foot of the ceiling and from the date of their having become so commenced their destruction." These Caves moreover had become the resting places for the wandering mendicants, who used to burn woods in the cold season to warm themselves, never realising that the smoke was destroying the old paintings.

On the recommendations of the British Government in India, Siraj-ul-Moolk directed his Naib at Ajanta to make requisite repairs in the Caves. He also employed one Captain Johnston of the Hill Rangers and other workmen to clear the Cave of all debris. But the precautions as well as the repairs conducted by these people were most unsatisfactory. As Major Gill reported in 1845 that the Bheels now employed for the duty of cleaning the debris in the Caves live in the town of Ajanta and are exceedingly irregular in their attendance. When first arrived at Ajanta they were seldom to be seen and the coolies at work in the Caves were left entirely to themselves and lately during my short absence serious injury has been done to the paintings in one of the Caves, which could not have occured had these men done their duty properly." "To prevent the recurrence of so lamantable an evil" he recommended that "a small house be erected near the Caves where one or more Bheels employed in taking care of the Caves should be always in attendance and should keep a strict watch on the persons visiting the Caves."

As a matter of policy, the British Government in India did not like the idea of interfering in the arrangements made for the repair and preservation of the Caves by the local authorities. Major Gill worked at Ajanta in most wretched conditions until the mutiny (1857) and sent from time to time to England a series of extremely beautifully facsimile copies of the principal subject on the walls and roofs of these Caves. These paintings except in three or four, were unfortunately lent to Crystal Palace Company for exhibition at Sydenham and were destroyed in the disastrous fire in 1866. Fortunately before that tracings of several of them were made by Mr. Geo Scharf and reproduced as wood-cuts in Mrs. Spier's "Life in Ancient India."

King paying homage to Buddha
From Mrs. Speir's Life in Ancient India

From the time that Major Gill had been first appointed to copy them, till the destruction of his work much of the frescoe paintings in the Caves had fallen off or been destroyed. The Secretary of State for India wrote in 1870 to the British Government in India that "not only have some of the remarkable frescoe paintings in the Ajanta Caves been defaced and apparently wilfully

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

so but that from causes which would seem to be beyond control, they are otherwise rapidly disappearing."

As a result of this despatch, Mr. Griffiths, Decorative Artist in the Sir J. J. School of Arts, Bombay, was appointed in 1872, "for the purpose of obtaining copies of the celebrated frescoes at Ajanta" and was given Rs. 5,000 per annum as an expenditure for this project. Mr. Griffiths found on his arrival that "paintings still existed in more than ten Caves, though many of the paintings as far as the hand could reach, have been wantonly defaced, hacked and scratched in every direction, leaving not a square inch perfect. Bats by the thousands had done their work of clinging to the upper portions of the walls and to complete the havoc water was percolating through the rock, converting some of the paintings on the wall and ceilings into a black unintelligible mass."

He reported that "the paintings in the Caves of Ajanta are in a state of rapid decay and unless immediate steps are taken to secure their better preservation not a vestige of them will remain a few years hence." He further proposed that "the Caves which have any painting in them still in a tolerable state of preservation may be supplied with doors and shutters so as to exclude the bats and bees."

The British Government considered "the measures proposed by Mr. Griffiths for their preservation are also on an unnecessarily large scale," and thought "sufficient to have a curator appointed to prevent visitors damaging the paintings and such small expenditure incurred in removing debris from the mouths of the Caves as will prevent water running into them during the monsoons."

Mr. Griffiths carried the work of copying the paintings and was able to finish it with the help of four assistants by 1885. His work on the whole was most successful. He was able for the first time to place within the reach of the art students interesting and valuable information illustrative of ancient Indian art, and secured a faithful and permanent record of paintings and designs on the walls of the Caves. The total expenditure incurred on the copying of these paintings was more than half a lakh of rupees during these thirteen years. It may appear strange, but it is a fact that the Government of the Nizam had agreed after a great deal of correspondence to sanction Rs. 640|- to provide doors and shutters for some of the Caves. The work of cleaning had been going on once a year from the time of Captain Gill.

The British Government "looking to the artistic and antiquarian importance of these paintings and seeing that the object sought is a standard work for use of the savants and art students" agreed to publish these paintings. The book "The Paintings in the Buddhist Caves of Ajanta" by Mr Griffiths was published in 1896 and was well received by the public.

The work of copying the paintings had come to an end, but neither the Cave temples of Ajanta were attended to, nor any attempt made to prevent bats and birds nesting in them, due to which a thick coat of filth had spread over every thing and the smell was nauseating. To the damage thus wrought had been added the ravages of water while parts of the paintings plaster and all, had been cut away to be sold to the curio hunters. In fact, during the whole of the 19th century, the condition of the caves for all practical purposes remained as pathetic as it had been for the last twelve hundred years.

But Lord Curzon's visit to the Ajanta Caves early in this century awakened interest in them and at his request some attempts at conservation was made. Henry Cousins, then Superintendent, Archaeological Survey, Western Circle, visited these Caves and came to the conclusion that much of the damage to these paintings is due to bats, to water and to many sightseers who visit the Caves. The last mentioned have not been content with scribbling their names but in many instances have actually cut out pieces from paintings to carry off as souvenirs."

On his recommendations, certain precautions were taken by the Government of the Nizam. A chaukidar was appointed and screens for the doors and windows were put up in several of the Caves. While some attempts were also made to drain

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

way the water. But these precautions were hardly sufficient, and in 1911, Mr. A. H. Longhurst, Superintendent, Archaeological Survey, Western Circle, was again sent to these Caves and was asked to submit conservation notes to the Government. He reported that "much has been accomplished towards the conservation of these Caves, but much still remains to be done before the work here can be said to have been satisfactorily completed."

With the establishment in 1914 of a separate Archaeological Department in the Dominion of the Nizam began the real work of conservation. Ghulam Yazdani, the first Director-General of Archaeology, Hyderabad, visited these Caves in 1915 and came to a very optimistic conclusion that the present condition of the paintings is such that if they are carefully edged around and strengthened with a suitable cement, they may last for several centuries more." In fact the costliest and most intensive campaign of conservation which the new Department undertook was to preserve the glories of the Buddhist art at Ajanta. It was not so easy to have the paintings cleaned and restored since they had been neglected for several centuries. Before any actual work could be attempted it was necessary to decide upon a process, which while accomplishing the desired results, would not require the use of chemicals which might result in decomposition, past recovery, of the plaster upon which the paintings were executed.

A number of experts from Europe were consulted on the advice of Sir John Marshall, the Director-General of Archaeology in India, and an Italian expert was invited to pay a visit to these Caves and to study the problem on the spot. While these arrangements were being made to bring out the Italian expert, an Indian archaeological chemist was sent to Ajanta, through the courtesy of Sir John Marshall. Specimens taken from the Cave walls were also forwarded to Italy. His analysis was later on confirmed by the Italian experts, Signor Lorenza Cecconi and his assistant, Count Orsini. These people earnestly took up the work of restoration and during the winter of 1920-21, which they spent at Ajanta, they not only bound to the rock walls many of the paintings which were peeling away from it and filled in the gaps which had been made in them, but also cleared away the dirt which had accumulated.

Thus it was nearly after twelve hundred years, that a determined effort was made to save these valuable specimens of Buddhist art. Since then these Caves had been preserved in a most elaborate manner and though the result of neglect and wilful injury is that the existing paintings are only a small fraction of those visible in 1819, when the Caves were first brought to notice. We should hope that the Archaeological Department will now keep intact what has been left as the remnant of the hoary past.

NARAYAN WAMAN TILAK
Poet, Patriot and Preacher

By F. C. DA GAMA

December 6, 1961 marked the beginning of a series of celebrataions meant to honour the memory of Narayan Waman Tilak whose birth centenary fell on that date. This illustrious poet of Maharashtra is not to be confused with his distant relation, the politician Bal Gangadhar Tilak, "the father of Indian unrest." N. W. Tilak's place in the history of Marathi literature can be gauged from the titles he was given in his own lifetime: he was variously called "the Wordsworth of Maharashtra," "the Tagore of Western India," and as was his wish, "a Christian Tukaram."

Early Life

Narayan was born at Karazgaon in the Dapoli taluka of the Ratnagiri District on December 6, 1861, in an orthodox Hindu family. The youth of the poet was spent in a land of extraordinary fertility and natural beauty afforded by rich monsoons.

Two persons in particular moulded the tender and sensitive mind of the young poet: one was his mother and the other was her father. The latter took to the life of a sadhu in his declining years and would spend the day singing bhajans with young Narayan in the jungle. Jankibai, Narayan's mother, was a most lovable woman possessed of a deep religious faith as well as of poetic talent; she used to sing her improvised compositions at the cradle of Narayan. Tilak believed that it was from her that he inherited his poetic faculty.

At the age of seven Narayan was taken to Kalyan where for four years he devoted himself to the study of his mother-tongue Marathi. He became an assiduous reader and felt the first urges towards the composition of poems.

Narayan's father, because of an unfavourable prediction in his horoscope, treated him with studied neglect. So when Nayan lost his mother at the age of eleven, he felt there was no tie binding him to his home; he attached himself to a Vedic scholar at Nask, Ganesh Shastri Lele, who was quick to realize the keen intelligence and budding skill in oratory in his young charge; under him Narayan acquired rich knowledge of Vedic lore and the Sanskrit language.

At this time he also turned his attention to the study of English. But his method was unique; taking a joke of a companion literally, he began committing to memory an English dictionary and plodded on till the letter M! But soon he was taken into a High School and educated free of charge. But two years later the burden of caring for his younger brothers and sisters fell on him and he had to leave school and start earning a livelihood. But he pursued his studies during his leisure moments. At the age of eighteen he was married to Manubai Gokhale, who was then eleven. She took the name of Lakshmibai.

The next ten years saw Narayan constantly on the move from place to place and from occupation to occupation; they were also the years when an intellectual unrest took hold of him and he began to consider seriously problems of religious truth. For a time he lived like a sadhu in Khandesh; later he settled down to teaching; for a while he did clerical work in Poona and in Bombay. During this period he lost a daughter born to him in 1889. Then in 1891 was born a son, Dattatreya, who later at baptism took the name of Devdatt, now popularly known as Dattu.

Finally a wealthy citizen of Nagpur, Appa Saheb Buti, employed him as tutor to his son; there Narayan found at his disposal a well-stocked library of religious literature where he spent long hours browsing through the tomes. It was there that Tilak's intellectual quest reached one of its momentous decisions.

New Faith

For many years, Tilak attested, he had found the caste system hateful. Besides, his poetic temperament found it hard to accept the impersonal conception of the Absolute as propounded in orthodox Hindu literature. Nor, on the other hand, did he find much sense in idol worship. After reading the sacred books of Buddhism and Jainism and the Kuran, the conviction began to grow upon him that these religions were not of divine foundation but the handiwork of men. His religious deity would henceforth be Nature. He began to formulate a system for this new religion, when a small incident changed the course of his life.

In a train journey to Rajnandgaon he fell into conversation with a European gentleman who showed interest in his planned religion. In the course of this conversation the gentleman gave him a Bible and Tilak readily promised to read it. Out of sheer courtesy Tilak kept his word. He thought of skimming through the book, but when he came to the Sermon on the Mount he could not proceed further ; there he found "answers to the most abstruse problems of Hindu philosophy." It amazed him "to see how there the most profound problems were completely solved." Yet he did not accept the new faith too readily. Only after he felt confident that God was leading him through the right path did he accept Christ as his Guru and was baptised by the Rev. Tukaram Natuji at the American church in Byculla on February 10, 1895.

Whereas his mental doubts were set to rest, trouble broke out from other sources. There was a furore when the fact of his baptism was disclosed. Every sort of incitement and pressure was brought to bear to make him return to the Hindu fold ; on several occasions he was providentially protected from attempts on his life.

But what caused Tilak the keenest pangs was the separation from his wife and child. News of his baptism threw Lakshmibai into a frenzied state ; she even attempted suicide, so distraught she became. Five painful years Tilak spent in prayer for the reunion with his wife and son. Finally, these two joined him as Christians in the fold of Christ.

Tilak's becoming a Christian ushered in the last twenty-one fruitful years of his life (till his death on May 9, 1919) which he spent mainly at the American Marathi Mission at Ahmednagar. There he became a friend of Rev. R, A, Hume, who showed great understanding towards the problems and temperament of Tilak. In 1900 he was joined there by his wife and son ; and in the next year his only surviving daughter was born.

Narayan Waman Tilak

From 1896 Tilak attended the seminary, studying divinity mostly in private in the seminary library. At the same time he lectured to the other students on subjects like Hinduism, the Bhagwadgita, the presentation of the Christian faith to Indians, etc. He was ordained on August 31, 1904 and after that devoted himself to the work of the ministry as he wished to be "exclusively and wholly a preacher of Jesus and Him crucified."

THE POET

The enormous output of Tilak's poetic talent renders futile anything like an attempt to give an adequate idea of the achievement of Tilak in the field of poetry within the limited space permitted in an article of this nature. Even the mere mention of those poems which find a place in the popular anthologies would take too long.

Tilak belongs to that group of Marathi poets who formed the avant garde of modern trends in Marathi poetry. He was intimately associated with such lights as Keshavsut, Datta and Balkavi Thomre. Professor Patwardhan of Fergusson College, Poona, described the new movement as "hoisting a flag of revolt against the eighteenth-century standards of Marathi poetry.....Mr. Tilak was among the first to break away from the trodden path and introduce innovations, both as regards metre and conception....." The relative merits of Keshavsut and Tilak as the twin pioneers of this movement are still open to discussion, but there is one aspect in which Tilak excels Keshavsut, and that is in the religious devotion of his poems.

Tilak's poetical activity may be roughly divided into four periods.

The first period comprises the years before his acceptance of Christianity in 1895. During this time he was an eager student of Sanskrit and Vedic literature; therefore we find evident marks of classical scholarship in them. But at the same time, due to his interest in English poetry and oratory, we see traces of ideas that entered his mind through that medium.

Next comes the period (1895-1900) when Tilak became known as the poet of flowers and children. That was the time when he brought forth the new kind of stream of Marathi poetry which spoke to the men of Maharashtra in a language that was familiar to them and depicted the actual world of beuty within which they lived. Capable as Tilak was of entering into the hearts of children and drawing them close to his own, it is the flower-poems, however, that are most characteristic of Tilak; he even called himself "the bee among the flowers." His outstanding poem **The Flower of the Forest** has been the subject of close study and given various interpretations. Its philosophy seems summed up in the words:

> "He that for love's sake yielded up his flesh,
> He only findeth true salvation.
> Love is salvation, love is happiness,
> Yea, love is heav'n, and God Himself is Love."

(Eng. trans. by Rev. J. C. Winslow)

The poet in one of his letters said that the poem "gives the process of my growth," and Tilak's grandson, Ashok, says in a recent biography that the flower represents Tilak and the poet stands for Christ.

Then we enter the third period that lasts till 1912. The poems of this period present an expansion of the view of his earlier children-and-flower poems. They now treat of love and home life and draw on his experience of many years of married life. His nature-poems treat not only of flowers but also of birds, beasts, trees, hills and valleys, the hours and the seasons, and the whole earth is visualized as a great temple filled with the presence of God and echoing with his praises. Contemporary with these poems are those that show his patriotic spirit, about which we shall speak in the next section. To this period also belong his earlier productions of a religious nature which we shall touch upon when dealing with Tilak the Preacher.

The last six years of his life were devoted completely to the composition of devotional works, especially the Life of Christ in **ovi** verse, the **Christayan**, whose only eleven chapters flowed from his pen before his death.

Critics are agreed that the poems of Tilak are a harmonious blend of the new and the old. To Tilak himself his art was not so much a creation of his own brain but a breath of the Divine Spirit, a gift given him by God; nature was only a help

The Patriot

At his entry into the Christian fold his patriotism began to be called in question.

such aspersions cut him to the quick because they were totally baseless, as we see from his words and behaviour.

He tells us that in his early years he came under the influence of a school master who "made the little heads under his charge as dizzy with patriotism as his own ....." and thus during a lesson in geography his mind would often muse "over the deep problem of India's future." And this patriotism was to grow in him with the years, so that he could write in his will: "I don't think I have loved my parents, children, friends, even myself, as much as I love my country."

How fervent and enlightened was his love for his country may be seen from his poems on the subject. In his **My Motherland** he says: "My body will I sacrifice, my life will I lay down in thy service, my noble land....Born to fulfil my relationship as a son to thee, I will fulfil it. May God help me." In one of his latter abhangs he wrote:

"Thrice blessed is thy womb, my Motherland,
Whence mighty rishis, saints and sages spring!"

And on one occasion when he heard some fellow students in the seminary make offensive remarks about India and the Indians, he left their company and composed a poem beginning with—

"When as I heard men slander thee, Mother, it grieved me so,
For very rage I thought my soul would burst her bars and go!"

Gradually men who were convinced that a new religion had not denationalized them associated with him freely. Bal Gangadhar Tilak, the nationalist leader, even sent him a presentation copy of **Gitarahasya,** written during his imprisonment in Mandalay. In patriotism Tilak saw a powerful bond for uniting India: "There is only one thing that will unite Christians Musalmans, Parsees and Hindus, with their thousand and one castes, and that is the love of country."

Even his efforts at spreading the Gospel of Christ showed that he was a true Indian. He used whatever he felt was good and true and beautiful in Indian culture and tradition. He taught his fellow Christians to study and love the poems of the poet-saints of Maharashtra which "form our first Old Testament."

But this brings us to the last section of our study.

The Preacher

No one will deny that the vast bulk of Tilak's poetic productions deal with devotional themes and in these he not only reflects and develops the poetic inheritance of Maharashtra but shows an unmistakable inspiration from his loving allegiance to Christ. "To me to live is Christ" was a Pauline sentence very dear to him. For Tilak Christianity was not primarily a set of doctrines and rules but a life of fellowship with Christ. We could quote endlessly from his later poems and thus show what Christ meant for him. But more than that, his whole life was a witness to the love of Christ in action. His motto may well be said to have been "to do (first) and (then) to teach."

The means he chose to present Christ to his Indian brethren were eminetly suited to their mentality and upbringing.

Soon after his ordination he built a house at Rahuri, which he called "Christ-Sadan." It was intended to welcome enquirers and help them to understand the meaning and necessity of the salvation offered by Christ. Letters were also sent out to various parts of India in reply to enquiries.

He reached a wider audience through periodicals which he started or to which he contributed articles and poems. In one of these he started a series of chapters translated from the **Imitation of Christ,** the famous classic by Thomas A Kempis. In the columns of these papers he expressed his views on a variety of subjects, turning on them the searchlight of Christian principles. His literary merit received recognition when in May 1915 he was appointed president of the Natyasammelan, a convention of playwrights and actors.

Village preaching was done with the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

help of bhajans of various kinds; in some, certain thoughts or teachings of Christ were expounded and a refrain of praise interspersed the stanzas; others were meant to worship, praise, ask favours or pardon from God. Already in 1906 Tilak published a collection of over a hundred bhajans in a **Bhajan Sangraha.** At other times he composed poems after the pattern of Tukaram's abhangs; these were finally collected in his **Abhanganjali.** Another device employed was the kirtan that had been popularized by the poet Namdev in the fourteenth century. In Tilak's own words, "A real kirtan ought to be a happy combination of music, poetry, eloquence, and humour, all contributing to drive home religious truth." Tilak himself was a master of this art; audiences would sit spell-bound listening to his inspired and inspiring singing of kirtans.

These and other attempts of Tilak at "baptizing" the culture of India and Maharashtra drew criticism from some quarters. But this did not deter the preacher. He modestly explained his reasons and pursued his course. Speaking at a function recently at the Papal Athenaeum in Poona, Mr. D. N. Tilak, the son of the poet, alluded to this fact and remarked: "Now after 40 years we know that Father was right."

———:O:———

THE CAMPAIGN AGAINST TUBERCULOSIS

SET about 6,000 feet above sea-level in sylvan surroundings of tall firs, pines and deodars, 4 miles from Kashmir's beauty spot, Gulmarg, is one of India's oldest sanatoria at Tangmarg. In this idyllic setting about 100 patients are getting free treatment at the sanatorium which, with all the necessary facilities, admits patients of pulmonary tuberculosis referred by the Chest Diseases Hospital, Srinagar. With a park for the recreation of patients who are capable of moving about, the sanatorium also has arrangements for occupational therapy and rehabilitation. Patients guide each other teaching new arts and crafts which will enable them later to earn a living. In early winter, the patients are given stoves to keep themselves warm and when it begins to snow they are moved down to Srinagar.

Tuberculosis sanatoria at one time used to be the hub of TB control programmes. They were purposely located in far away places with salubrious climate and among the solitude of pine forests. Today the picture has considerably changed. More and more TB hospitals are being opened in or near crowded cities. Effective drugs are now available making diet and climate secondary factors in treatment.

RECENT RESEARCHES

Recent researches have shown that treatment with modern anti-TB drugs even in homes of patients is as effective as treatment in hospitals and sanatoria. For this reason many of the TB hospitals, like the Tangmarg Sanatorium, now provide domiciliary treatment on an out-patients' basis as well. The Tangmarg Sanatorium has treated over 1000 patients at their residences, social workers have paid visits to their homes and the needy have been given milk and diet supplements.

The prevalence of TB in Jammu and Kashmir, like some other States, has not yet been the subject of a special survey. However, during 1955-58 a nation-wide TB survey was carried out on a sampling basis. This revealed that the prevalence varied from 1.1 per cent to 2.4 per cent in different areas of the country with an average of about 1.5 per cent. Experts feel that the prevalence of the disease and its severity is not more in areas which could not be included in the sample survey. It may be that in certain areas which were rather inaccessible in the past, the advent of urbanisation and industrialisation might have caused a temporary rise in incidence. But wide differences are not expected.

The story of TB in Jammu and Kashmir bears a marked resemblance to that in other States. In India, there are about 5 million cases of TB of which 1.5 million are infectious. For this large number, the country has about 30,000

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

141 TB hospitals and sanatoria and 224 TB clinics. In 1947 there were only little more than 40 TB clinics and hospitals with accommodation for only 7,000 beds.

A view of the T.B. Sanatorium at Dharampore in Simla Hills

Domiciliary Treatment

The inadequacy of bed strength for hospitalising only the infectious among the TB cases is obvious apparent. But it is now no longer necessary to admit patients in hospitals. Treatment at home is as effective provided the drugs are taken regularly and continuously for a sufficiently long period, say one year at least. Only in a few cases should there be need for hospitalisation for special surgical treatment or because drugs have failed. For this class of patients, the number of existing beds would barely be sufficient. Another great advantage of domiciliary treatment is that the patient is not required to leave the home and live away from the family members in an institution. This ensures that the home is not broken up and many unpleasant consequences avoided without any hazard to the patient's recovery.

In addition, if TB control schemes under the Third Five-Year Plan were confined merely to the establishment of hospitals and sanatoria, the entire allocation for Health of Rs. 341.8 crores would be consumed.

The success of the domiciliary method of treatment as observed by the TB Chemotherapy Centre at Madras and other centres has resulted in the formulation of a comprehensive District TB Control Programme. The main TB clinic is situated in the district town and is responsible for the anti-TB work in the entire district. Under the TB clinic there are a number of sub-centres established in association with primary health centres, rural dispensaries and other health institutions. When a TB case is discovered his contacts are subjected to a tuberculosin test, X-ray, and sputum examination, and given protective BCG vaccination, which is an integral part of this approach. The emphasis is mainly on the administration of effective drugs over a sufficiently long period, so that those suffering from TB recover without any risk of spread of the disease. Concurrent health education and motivation of patients and their families is the key to the success of domiciliary treatment.

BCG Vaccination

BCG vaccination was first taken up in 1948, with the help of the International TB Campaign. Later, the WHO and UNICEF came into the picture, the programme gathered momentum and a mass BCG vaccination got under way. Today 175 BCG teams each consisting of a team leader and six technicians are functioning all over the country. By the end of the Second Five-Year Plan, 163 million tests were made, of which over 50 million were protected with BCG.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In August 1956, a small BCG assessment team was constituted to retest persons vaccinated during the mass campaign and find out whether the desired degree of allergy needed for protection has been produced among the vaccinated persons. It is also investigating several other important aspects connected with BCG vaccination, for example, preservation of vaccine, prevalence of non-specific tuberculin sensitivity and the allergy producing capacity of freeze dried vaccine produced by the BCG Vaccine Laboratory, Guindy.

The Guindy Laboratory is the largest vaccine producing laboratory in the world. Its production is according to international standard and meets the requirements not only of the country but also of some countries in the South-East Asia region. To overcome the shortcomings of the liquid vaccine, a plant for the manufacture of freeze dried vaccine was recently installed in the laboratory.

Under the First and Second Plans the allocations for TB control were Rs. 4 crores and Rs. 8 crores respectively. Consequently, large number of TB clinics, many TB Demonstration and Training Centres and a few Rehabilitation Work Centres were established in addition to TB beds. During the Third Five-Year Plan Rs. 12 crores approximately have been provided for the campaign.

The Third Plan target in respect of TB clinics is 200 at the rate of 40 clinics a year. With the achievements of this target there should be nearly 400 TB clinics in the country. This would mean that 350 districts in the country would have at least one clinic for effective TB control programme. It is also planned to add about 5,000 isolation beds to the 30,000 today.

Under the Third Plan BCG vaccination will also be continued but the stress would be more on covering the group below 20 years. This should account for 100 million tests in 5 years. During this period an attempt would be made to integrate BCG vaccination in the normal working of TB clinics and routine functioning of public health services.

The paucity of training facilities was one of the reasons for the slow implementation of TB control schemes during the Second Five-Year Plan. With the target of 5 additional TB Demonstration and Training Centres, over and above the 10 already in existence and with the large number of key workers to be trained by the National TB Institute, it is expected that the shortage of trained personnel would cease to be a factor holding up the programme.

The WHO and UNICEF are collaborating with the Government of India in the establishment of TB clinics and the National TB Institute at Bangalore for training the large number of personnel required for the district TB Control Programme. UNICEF assistance is also being given in the shape of X-ray and laboratory equipment. The WHO provides technical personnel to advise the national TB control officers.

Voluntary Efforts

It is the constant endeavour of the Government to encourage participation of voluntary public institutions and social workers in the war against TB. The TB Association of India is among the foremost of such organisations. The Association has branches in all the States and some of the State organiations have branches at district level as well. The Association also conducts the TB Seals Sale Campaign, collects funds for anti-TB activities, opens clinics and sanatoria and helps in TB control activities in many other ways. During the last 10 years the Association has collected over Rs. 50 lakhs through the sale of TB Seals alone.

The war against TB is thus being relentlessly waged in the hills and dales, on the plains and in the homes. For various factors—financial, technical and shortage of trained personnel—the result will take sufficiently long to manifest itself. TB control has in any case to be a long drawn struggle as happened in other countries; it would take a decade or two for mortality and morbidity to decline appreciably in India as well.

THE CONCEPT OF DECADENCE IN LITERATURE.

By D. K. MATHUR

Lecturer in English, University of Jodhpur.

The futility of trying to understand literature primarily through moments cannot be demonstrated better than by the difficulties a student encounters on grappling with the essential meaning of the term 'decadence'. Like other kindred literary terms signifying movements—Romanticism, Classicism, Symbolism, etc.—this term is also wrapped in a diffused connotation, so that no single definition is adequate to point out, nor all definitions to exhaust, its real significance with reference to literature. This unsatisfactory state of affairs is borne out by the fact that there is not much critical or expository literature on this specific subject; perhaps, the only contribution, which should be deemed fundamental is by the late Prof. C. E. M. Joad—"Decadence, a philosophical inquiry. (1948)". This philosophical essay on decadence reaches some conclusions which are useful for a literary inquiry and dispel some vagueness surrounding the subject; but, in spite of its pioneer attempt, this book, at its best, embodies only one point of view. There are, however, several other brilliant obiter dicta on decadence both by critics and philosophers, but somehow any extensive, much less exhaustive, treatment of it is still wanting.

How divergent are the views on it may be easily seen from the different definitions given. The Concise Oxford Dictionary defines it as a period of literary production immediately following a brilliant efflorescence. Thus, the drama of Shakespeare's predecessors and followers Ford, Shirley, Beaumont, and Fletcher, is decadent because it doesn't keep up Shakespeare's level. Chambers's dictionary relates decadence to Symbolism and thereby treats it as a literary movement of the later nineteenth century in France. Webster's says that the new psychology and the resulting pessimism are its hall-mark, and refers to later nineteenth century French literature as decadent. In the histories of English and French literatures decadence is a literary movement like Romanticism and the French phrase for it is fin-de-siecle (=end of century). They give specific reasons for calling this end of century literature decadent; yet it is not quite clear why this name is given to later nineteenth century literature only and not to some other periods also which have some characteristics common to it. Others have preferred to call this end of the century a period of Transition. Thus, the question still remains to be answered: Is this a Transition or Decadence? Eighty-two years after 1880—the date when decadence set in; —we have not yet been able to give any satisfactory, much less a definite, answer to it. This confusion is worse confounded by another literary movement kindred in spirit called Art for Art's Sake (the Aesthetic) movement. The aesthetes and decadents go together, and the boundary lines dividing them are not clear. Still further across the channel Baudelaire's name is invoked with reference to decadence. He it was who gave a powerful expression to the spirit of decadence and the modern mind in Les Fleurs du Mal where in the Preface he enlists ennui as its chief mark. Some historians of English literature have pointed out that there have been a few 'dead seasons' in English literary production, e.g., the novel after Scott and the drama between Sheridan and Shaw. This, they say, is literary decadence. But the late John Middleton Murray in his brilliant essay on Baudelaire distinguished between two kinds of decadence—historical and literary. He opposes the definition of decadence as immorality and asserts that essentially decadence is a recurring phenomenon and literary decadence is different from historical. Literature written during

historical decadence cannot be called decadent literature. Dr. Radhakrishnan in the conclusion to Indian Philosophy raises the question of criticism versus creative thought and then calls decadence as essentially a period of transition. Decadence, according to him, is apparent, not real. Prof. Joad's definition is based on philosophy of values. The burden of his thesis is that contemporary literature and philosophy are decadent because they are charged with "dropping of the object"—that is with excessive subjectivity. Mr. A. C. Ward makes explicit what is implicit in Prof. Joad's view. According to him not denial of value, but false value is the mark of decadence.

It was necessary to give in brief all these points of view to show how difficult is it to define decadence per se. But simply because the definitions are too many and of varying value, it does not follow that the search for clearly defining the term is to be given up. English literature from 1880 to the present day is distinguished by some special tendencies which are new and are held to be decadent from different points of view. There is, thus, what Prof. Pinto calls a crisis in English poetry after 1880 which has not yet been fully resolved. Both the content and form of poetry have changed and a 'dissociation of sensibility' is clearly marked. Older values and practice have been discarded and new ones have not yet clearly emerged; so that the process of destruction and demolition has continued without compensation on the constructive side. The modern mind in its craze for uptodatism has no doubt set up the 'subject' as the standard of judgment; values, as the Existentialists say, are purely personal. Modern psychology changed the concept of man: the inner world underwent a thorough change. The outer world of Physics and Astronomy reduced the status of the homo sapiens to that of the rarest of rare accidents in this universe. This two-fold change brought in and reinforced the new concept of man which was positively damaging. It completely demolished the older idea of man as the crown of creation. Thus, when we say with reference to literature that it reflects the zeitgeist of the age, we assert a vital truth about it, keeping always in mind that literature is by no means only that. All literature worth its name must not only reflect the spirit of the times but also transcend it; it must be the idealization of emotion and not merely like a photographic copy of it.

This is tantamount to saying that by and large literature is the expression of the concept of life an author adopts. Poetry is the expression of the national imagination of a country; but much more is it the expression of the concept of life (including the concept of the universe) that particular writer accepts. Thus, Wordsworth accepted Rousseau's view of man and his poetry is, on the whole, optimistic. Thomas Hardy grew up under the influence of Evolutionism and Schopenhauer; and he is a thoroughly pessimistic writer. The moderns have generally held that all human experience is significant. The Stream of Consciousness novelists, the Surrealists and the Naturalists—all fin de siecle writers have held that experience of any kind, however trivial according to older standards, is significant and worthy of expression in literature. Thus James Joyce, Virginia Woolf, D. H. Lawrence, Dylan Thomas and others write without any inhibitions whatever. Of course, this position is finally untenable for the simple reason that if all experience is significant, no experience is insignificant. As regards revaluation of established (now called bourgeois) values, both moral and literary, their answer is that certainly we live in an age of new values. The overturning of older values and ideals cannot be better illustrated than from two observations by Somerset Maugham and Aldous Huxley respectively. In his fascinating autobiography (?) Maugham says that suffering never makes a man noble; on the contrary, it makes a man cruel, wicked, and suspicious. Huxley in his outstanding essay on Baudelaire remarks that debauchery was a moral sin in the old days; now, however, it is simply a medical affair. These examples have been picked up at random only to show which way the wind is blowing in the realm of values.

It is clear that these changes have taken

...ve as an inevitable consequence of the ...ange in the concept of man resulting from ...coveries of science and psychology. The ...cept of man has been changing so rapidly ...ring the last 80 years that a brief survey ...uld be interesting. Round about the end ...the last century there was the liberal ...manist view of man according to which ...an was the master of his own fate; man ...as perfectible by his own efforts. This was ...e basic tenet of the socialists like Shaw ...d Wells. Then the question arose: what ...the reason for man's unhappiness? If man ...naturally good the wrong must lie in his ...cumstances. This was the belief of ...homas Hardy. Those who accepted this ...ew of man rejected traditional Christian-... Christianity, according to Samuel But-..., author of Erewhon, Shaw, and Bergson ...as not the final religion. It was sub-...tituted and replaced by the new philosophy ...the elan vital (life force). (Man and ...perman by Shaw, Creative Evolution by ...ergson, and The Way Of All Flesh by ...amuel Butler). Evil was due to ignorance ...man.

About the same time a revolutionary ...ew of life and society was sweep-...g the continent. Man, according to ...is Marxist view, is determined by ...conomic circumstances and is not ...free agent as the idealists said. This ...anged the concept of history the key to ...hich was now economics, neither politics ...r military strategy. Man became a socio-...conomic entity devoid of any spiritual ...ement. This view was then superseded by ...e Freudian concept that man is deter-...ned by the Unconscious. Fundamentally, ...an is irrational and a bundle of impulses ...hich follow no logic at all. That is the real ...ality; that is the natural man. The result ...as Surrealism and the Stream of Con-...ousness movements in literature. Prof. ...ead has a fine chapter on the Invasion of ...terature by Psychology in his 'Guide to ...odern Thought'. Psychology alone has ...een enough to upset totally the ancient ...ew of life and man. Assisted by Physics ...d recent Space Research this view has ...een confirmed. In one word, man has com-...etely lost his moorings. The two World ...ars and their aftermath have deepened the disillusionment, pessimism, angst, and the ennui that were inevitably with us all this time. This post-war mood is best expressed by the latest movement in European thought, Existentialism. Sartre and his disciples are popularising the view that life is absurd and devoid of any meaning whatever. Man in the existentialist predicament hopes for no salvation; in fact, there is no salvation at all. In between come those who consider the future of Totalitarianism. Jules Romains in France views man's individual personality as submerged in the group (Unanimism) while George Orwell in 1884 shocked the civilized world by visualizing the horrors of life under a totalitarian system where even punishment is measured. His Animal Farm, which has been hailed as a powerful satire a la Swift, expresses contempt for man by calling him a pig. God had already been disposed of by Swinburne and Gide and it is no longer a blashphemy to be a Satanist of any hue. Baudelaire's Satanism (and Milton's also) is different from the Satanism of the moderns. Milton's Satan revolts consciously and purposively against God who is a tyrant, Satan is a Godist first and knows what he is about to do. The modern Satanist has no awareness of the good or of God. Aldous Huxley calls him a Satanist without being a Godist. He lives in a world of the nihilist. Complete blankness stares him in the face. Hence the gloom and darkening shadow ever widening between life and letters.

The question therefore emerges: how far can this damaged concept of man—the dehumanization of man—be held responsible for contemporary decadence? Of all the definitions given above the relevant one is that of Mr. Murray. All these definitions are partly correct. Decadence in literature has generally been confused with historical, political, or military decadence. It is almost always seen that a period of historical decadence goes with a period of literary decadence also. The literature of the Restoration is a case in point. It is the usual concomittance of the two decadences that confirms our belief in the theory of the relation of the zeitgeist to its literary output. But that is not valid absolutely. There have been periods of historical decadence

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wherein literary activity has been extraordinary. Chaucer and his age are the glaring example of this. The circumstances in which the father of English poetry wrote were the most unpromising and though it must be said that Chaucer best expresses his century, it cannot be asserted that he is not writing in an age of historical and political decadence. This is equivalent to saying that the relation of the times to literature is a fact but not always the whole truth. Periods of literary decadence have very often been periods of historical decadence also and **vice versa.** Their relation cannot be denied. Nor were all English dramatists of Shakespeare's time all Shakespeares. It is not sufficient to agree with dictionary definitions that what follows a period of culmination is decadence simply because it is less spectacular. On this score alone Ford, Webster, etc., cannot be dubbed as decadent. Further, writing on or about decadent men and society does not make the author decadent. This is obvious. Then, decadence as immorality is hardly acceptable in literature, yet it remains a highly controversial point. It is difficult to separate morality from life on the one hand and life from literature on the other. In recent years we have witnessed the cases of Lady Chatterley's Lover (the unexpurgated edition) and Pasternak's Dr. Zhivago. From the literary point of view these works may be third rate and unnecessary; from the moral or political point of view such works may be shocking and dangerous to political institutions; but thereby they cannot be called decadent as such. Literature embraces all levels of life's realities: moral and immoral, tragic and comic, ugly and beautiful. It cannot be partial to any. You may condemn Lawrence for writing unnecessary and silly four-letter words; you may condemn Pasternak for openly denouncing Bolshevism as hooliganism; they cannot be condemned as decadent authors solely on that account.

As a literary movement the decadent spirit (L'Esprit decadent) has been defined by the Oxford Companion to French Literature as a term applied to the "state of mind prevalent between 1880 and 1890 in the small literary societies" in France which reflected "the overwhelming 'lan-gueur,' futility, distate for any moral or religious restraint, a horror of banality, and a seeking after any novelty of sensation, however unnatural." The term was first used by Laforgue—a Symbolist French poet, and may have come from a sonnet of Verlaine's "Je suis l'Empire a la fin de la decadence." Verlaine said of decadence—"This word implies....the refined thoughts of extreme civilization, a high literary culture, a soul capable of intense voluptuousness.....It is made of a mixture of sensual spirit and sad flesh and all the passionate splendours of the lower empire."

What influence it had on literature may be seen from Huysman's novel "A Rebours" (Against the Grain). Des Esseintes, its hero, is the effete survivor of a worn-out aristocracy who hates banal society and lives alone among beautiful things. Not natural beauty but artificial things alone satisfy him. He leads a perverse life, is full of ennui, and falls ill. His doctor brings him back into the real world and he begins to realise religion as a source of salvation. Des Esseintes is the typical decadent character in literature. The Decadent, says Enid Starkie "was a highly evolved being, the final product of a dying civilization, with the charm of things on the point of fading." He was not interested in Nature poetry but was withdrawn into the drawing room of Des Esseintes which was decorated with candles, lilies, and incense. Only the rarest form of art pleased him and the most sophisticated pleasures and vice were his routine affairs. The decadent was very tall and thin, and "always walked with a slouch, hollowing out his consumptive chest. His sombre eyes were made to appear still more dark and dissipated by their rim of mascara. He always dressed in the latest fashion and spent most of his income on clothes, which were very tight-fitting, and this increased the slimness of his silhouette. He normally sported a monocle, and carried a light cane, or a long stick....He wore one light-coloured glove, the other he always carried leaving his right hand bare, to show his fingers covered with gemmed rings; rubies, sapphires, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

emeralds. The Decadent always looked weary, and everywhere he passed he left a trail of scent, and it was rumoured that he indulged in hashish and opium. He enjoyed the reputation of practising every kind of vice, since virtue is a characteristic of the bourgeois."

Des Esseintes' rooms were fulsomely decorated. His way of living was highly extravagant. He delivered sermons on the proper cut of suits, shirts and shoes for his tailors were very meticulous. He once gave a "mourning dinner" in a dining room hung with black draperies, and the fountains in his garden "spouted streams of black ink into the air." The dinner was served on a black silk cloth, an orchestra played funeral music behind black curtains, while coal-black negresses, who were entirely naked, served the guests with food which was of dark colour.

Des Esseintes was a hater of women and nature. "Women he considered merely as man's vice, his tourer or the ornament of his house to grace his board. He said that 'artificiality' is the distinctive mark of man's genius." Hence he preferred the counterfeit to the natural.

The figure of the decadent was crystallised in France in the person of Des Esseintes. In England Oscar Wilde became the leader of decadence. His novel "The Picture of Dorian Gray" was inspired by A Rebours. Wilde was an aesthete and wanted to live life artistically. As the aesthetes believed art is autonomous and knows no restraints, so also life lived artistically would obey no laws except its own. In this novel Wotton tells Gray "The only way to get rid of a temptation is to yield to it." The little future Lord Henry says to Gray, "You have a wonderfully beautiful face, Mr. Gray....And Beauty is a form of Genius." Gray's picture painted by Basil Hallward begins to deteriorate while Gray's youth remains as it is. This reversal of the natural order of things is the heart of the matter. Later Gray realised the folly of believing in the unsullied splendour of youth. Disillusioned he turns from this life of a shallow Hedonism to a new life. He goes up to his room and kills himself before his picture.

Not only in the content of life and character, but in form, style, and language also there is too much polish and artificiality. Readers of his famous comedy "The Importance of being Earnest," "Salome" and "De Profundis" will be struck dumb with admiration at the brilliance of verbal effects. The comedy is superficial but highly stageworthy and interesting. The dialogues are pointed, crisp, brilliant, witty, and the words used are simply irreplaceable. Verbal brilliance is characteristic of the decadents. Trivial plots and ideas couched under the magic of words—the **bon mot** is the secret of the style of the decadents. In Wilde this finish reaches a culmination. He will continue to be remembered as a brilliant stylist.

Wilde is the most important of the Decadents and Aesthetes though Arthur Symons, and poets of the Rhymer's Club had their own share in propagating. But now the decadent movement was already merging into Symbolism. English decadentism as a movement had a brief spell and was never unmixed. It was a diffused mood and certainly got inspiration from France. The English decadents had no clear-cut programme. The works of Wilde, Symons, the paintings of Beardsley, The Yellow Book, The Savoy—all these carried contempt for bourgeois ideals. "But it is an easy mistake," says George Sampson, "to suppose that the literature of the last Victorian decades was a literature of decadence, cultivated by the apostles of art for art's sake upon more than a little absinthe." They revolt straight from Victorian ideals of bourgeois respectability and are not decadents per se. "The decadents and detrimentals of the nineties, with all their follies and excesses, made a clear distinction between Art and Produce. They were inspired not by the alleged profundities of psychology, but by the frank, unconceding art of the new French painters and poets. That literature was a fine art, that it was a necessity of civilized life, that it was to be pursued as an art without fear and without shame, that its theme, could be found in any aspects or circumstances of life, that those themes should be presented with artistic veracity without any reference to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the tastes, desires and prejudices of the bourgeois that literature, as an art, had no concern with the inculcation of ideas currently accepted as moral, that 'academic' art was invariably 'produce' and not art at all, that the true response to art could be found in the select few at one end, and in the unsophisticated, ingenuous frequenters of the old music-halls, at the other, and scarcely at all in the solidly respectable bourgeois patrons of Mudie's and the Royal Academy—these were among the faithfully accepted credenda of the nineties." Alongside of this Decadent school other nondecadent tendecies are Naturalism in Moore, Realism in Crackenthorpe, Neo-classicism in Lionel Johnson, and Idealism of the Celtic Revival. Nor is Decadence to be equated to the Art for Art's Sake school. This school has been more misrepresented and misunderstood: rather than damaging the cause of art, it has drawn attention to its intrinsic value and to art as one of the ends of life. In this way the 1890s in English literature were more of a period of transition than of decadence.

Decadence per se in its germinal form is rather to be found in the work of some of our contemporaries. Its roots are to be sought for in the damaged concept of man himself, the very roots of art are now sullied and rotten. Here is no question of value, artistic or moral; the very foundation of life and hence of art is being negatived. There is a widespread contempt for man and life, rather than the search for truth about him. Not Baudelairean ennui (the eight deadly sin as he would call it) but the stark nihilism of the moderns strikes us as a decadent tendency. Some examples may be picked up at random. In Orwell's Animal Farm animals look from pig to man and from man to pig and from pig to man again, but already it was impossible to say which was which. In 1884, O'Brien asks W. Smith whether he was prepared to die, commit acts of sabotage which may cause death of hundreds of innocent people, betray his own country to foreign powers, to throw sulphuric acid in a child's face for his interest, etc., and the answer in each case is affirmative. Smith is so dehumanized that not a single word of protest comes out of him. Further examples can be given from several authors including O'Neill, Camus, S. Beauvoir and Huxley. It will be said in protest that their works are meant to be a satire on the human condition as it exists today in the manner of Swift and Shakespeare's Timon of Athens. No decadence is implied. This is again a very difficult question inasmuch as the writer portrays a world as he finds it, and we have already maintained that writing of or about decadent people does not make the literature itself decadent. Nevertheless, it is clear that satire is against a particular vice or folly—social or individual—and not against existence itself. If it is argued that the writer has no choice but to depict life and the world as they are, the answer is the same: literature must transcend its environments; it is not merely a photograph of life and society but an imaginative idealization of it. If in the process of doing so decadent tendencies have to be incorporated, of course, no objection can be raised. But when the very existence of man is derided and held to be meaningless we do have germs of decadence. M. Arnold said truly that literature must be rooted in life, though we need not agree with him about the narrow meaning he gave to life. In the works of almost all our contemporaries life itself has ceased to be of any significance and meaning. Cruelty, torture, and insanity are the only themes that possess their minds. The Death wish is supreme. What redeems slightly this insanity fair of literature is the continuance of other tendencies, even this consciousness that such and such literature is decadent. By contrast, Thomas Hardy's pessimism and characters are intensely human and Hemingway's Farewell to Arms leaves the impression of blankness of life, yet it keeps up pity for the suffering hero and the dead heroine. Their sad lot, though partly unconvincing, is yet typical of the modern man. He doesn't decry and condemn human life itself. Whether the former decadent tendencies will prevail and gain the upper hand or the latter ones which are still touched with human feeling, in other words, whether we are living in an age of transition or decadence only time will show.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

***Reviews and notices of books in Gujrati*:**

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review*, should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

IN SEARCH OF THE SUPREME, (Vol. I) : *By M. K. Gandhi, Navajivan Publishing House, Ahmedabad-14, Pp. 388. Price Rs. 5/-.*

Mahatma Gandhi was all Godloving and he was nothing if not one entirely dependent upon God for his very life and activities. To him Truth was God and non-violence was the way to Him.

In this volume the writings, speeches and utterances of Mahatmaji have been classified into five sections, *viz.*, (1) God ; (2) Faith, Reason and Morality; (3) Prayer, Worship and Guidance ; (4) Spirituality and Penance and (5) Life, Dealth and After and topics divided into 256.

To read this book is to associate oneself with a great soul which uplifts the mind and the spirit to a higher level. Indeed Gandhiji is a great spiritual asset to humanity.

EVOLUTION OF AGRARIAN RELATIONS IN INDIA : *By Sri Bhowani Sen. People's Publishing House, New Delhi, pages 328. Price Rs. 8.50.*

The purpose of the author is to give a general idea of India's agrarian relations in the post-independence period. In order to do so, he has discussed in eight chapters, Natures of the Agrarian Problem, Heritage of the Past, Rural Economy under British Rule, The Transition in Agrarian Relations, Growth of Capitalist Relations in Agriculture, Nature of Agrarian Legislations since Independence and finally Trends of India's Rural Economy.

According to the author despite changes and modifications in the course of last decade, Indian agriculture is yet largely enmeshed in semi-feudal relations. The following elements are firmly entrenched in India's rural economy : Inferior tenancy with obligation to pay uneconomic rent ; unequal exchange between the peasant and the merchant; firm grip of money over rural economy ; and effects of casteism on certain aspects of production.

Although the policy followed by the Ruling Party is at best a compromise of different trends, the solution lies along the path of democratic planning which may be called peasants' path summed up as follows : land to tillers, elimination of usury and introduction of state trading in agricultural commodities. Complete abolition of all remnants of feudalism is necessary by strict imposition of a ceiling on all land holdings. Thus landless and the poor tillers may be given lands taken away from landlords. The author also wants complete nationalization of banks and rapid extension of the Banking System to rural areas to provide cheap and abundant agricultural credit. Redemption of peasants' debt at the cost of the state is also advocated.

But land reform is no panacea for the solution of all economic problems. So the Government of India is tackling this problems along with many others which face the country at present.

We congratulate the author for placing a strong case for further land reform pointing out the present defects and shortcomings substantiated by facts and figures.

RUSSIA, AMERICA AND THE WORLD : *By Louis Fischer, Bharatiya Vidya Bhavan, Bombay. Pp. 228. Price Rs. 2/-.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In this book the well-known and powerful writer has discussed the most burning questions of the day and occasionally has given his own opinion in regard to the solutions of some other problems. The subjects discussed in thirteen chapters are—The cold war, Difficult dialogue, The Roots of Soviet foreign policy, The Russian Bear and the Chinese Tiger, Khrushchev, The Creative Peninsula, The Vanity of Empire, Nehru and the future of India, China, Pakistan and India, A matter of Love, Israel in Africa, The future of Communism and A Foreign Policy for America.

Greatest personalities and their policies have been discussed with such clarity that a perusal of these pages will benefit not only students and men of politics, but also the ordinary readers interested in their own well-being and welfare of the world. Naturally communism, its philosophy and its methods have found much space but the so-called capitalism of the nineteenth century with its exploiting and empire building activities is changing so rapidly that if not in near, but in distant future, there is possibility of both these 'isms' changing beyond recognition their original colour and content. The writer wants a better world and a better world cannot be created by a set of dogmas held fast by a nation or group of nations. Mr. Louis Fischer wants more heart than reason in the foreign policies of nations. He is right when he says, "In the long run, and often in the short run, the Gandhian method is invincible."

A. B. DUTTA

AN ENQUIRY INTO THE NATURE AND FUNCTION OF ART: *By Dr. S. K. Nandi. Published by the Uiniversity of Calcutta. (With Foreword by Dr. Niharrajan Roy). Price Rupees Ten only.*

Dr. Niharranjan Roy, Dean of the Faculty of Arts, Calcutta University, has rightly called Dr. Nandi, one of the front rank aestheticians of new India and Dr. Nandi has amply justified the above remark by his penetrating analysis and deep scholarship as evident in the book under review.

The concept of philosophy in general and of aesthetics in particular has been undergoing rapid changes under the impact of the study of Semantics, so earnestly taken up by scholars all the world over. Analysis has justly been considered to be the mission of philosophy and now-a-days philosophy does not take pride in giving 'truths' but it engages itself in a strenuous pursuit of meaning. This entails analysis and the book under review being a study in the metaphysics of aesthetic forms and structure analyses the aesthetic theories of such stalwarts as Plato, Aristotle, Kant, Hegel, Romain Rolland, Benedetto Croce and Rabindranath Tagore. With remarkable clarity and precision the theories have been presented. The conventional views on Plato and Aristotle have been subjected to strict logical scrutiny and the author has offered a defence for Plato although he has characterised Plato's motive as 'extra-aesthetic.' Aristotle has been accused of going by the Platonic legacy of utilitarianism. Kant and Hegel are well-known for their aesthetic philosophy. The author has taken pains to expound and critically evaluate their theories. Hegel's five-fold classification of art has been cited and its validity thoroughly discussed. The author refers to Hegel's philosophy of fine arts and makes out a case against Hegel regarding the latter's colossal ignorance of the true nature and content of the ancient Indian art forms. Hegel's reference to Indian art as Grotesque has been rightly criticised by the author of the book under review and he deserves commendation for undoing the wrong done to Indian art by a scholar of Hegel's stature. Immanuel Kant's aesthetics is not a pleasant study. It requires year long researches to unravel the meanings of the different passages of the third critique. The author did not always go by the conventional interpretations but has taken care to interpret Kantian ideas in his own way. We admit that his interpretation at places have been sparkling.

Dr. Nandi has broken new grounds in the last two chapters of his book. Aesthetics of Romain Rolland is very little known in India as well as in his own country. French scholars have not as yet accomplished and presented a rounded system of Rolland's aesthetics. It is a fascinating study. One wonders to find out that the French savant said so many things and in such a systematic way on the fundamental problems of art and aesthetics. The last chapter offers an analysis and comparative study of the aesthetic theories of Benedetto Croce and Rabindranath Tagore. As a system-builder, Croce definitely scores above Tagore. In versatility, again, Tagore is beyond Croce for all times to come. One is an academic philosopher and the other is a seer of truths. So, they together make an interest-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

study. Dr. Nandi's leanings seem to be rards the Crocean type of idealism as it ns to be fitted in a rounded system. ore talked and wrote on art and aesthe- While he talked as a poet or a creative his views came very near those, as ocated by Croce. Where Tagore philoso- es on art as an academic philosopher, drifts away from Croce and drifts from his own views as evidenced his creative writings. This contra- ion in Tagore has been adroitly ught up on the surface by the lysis that Dr. Nandi presents. We may agree with his views on all counts but commend his spirit of enquiry and flaire scientific analysis. This type of analysis are and we recommend this book to all ious students of art, literature and thetics for a sound intellectual stimula- n. At places the author is challenging his challenge has got to be met by searchers of the new generation.

J. B.

RABINDRANATH TAGORE, PIONEER EDUCATION : *By L. K. Elmhirst, published John Murray Ltd., 50, Albemarle Street, don, W.1 Price 15s. net.*

The book under review presents a facet of gyraid-minded, versatile Tagore in so far as elates to his views and ideas on education, ing round, particularly, the founding of riketan, the Institute of Rural Reconstruc- It contains some Essays and also some anges between Tagore and Elmhirst, and is ghly illuminative and instructive study sug- e of a deep, cogent thinking.

Leonard Elmhirst and his wife Dorothy Elm- occupy a unique place in the annals of the a-Bharati in accepting to translate into Tagore's dream to help India on her feet installing a model for resuscitating the village life and economy. While yet a t in the University of Cornell, U.S.A. for ee in the science and economics of practi- ming, Leonard met Tagore, on invitation, at New York and felt inspired to investigate the decline of the arts and agriculture of the villages in the neighbourhood of Santiniketan—where people once enjoyed a decent economic and social condition and a culture that no longer survived. Leonard came to India and set to work by the first week of February, 1922. Thanks to Dorothy —they were married in 1925—she financed the enterprise from the very start and continued to do so uptil 1947. "That afternoon", Leonard speaks of the day he arrived at the Village Surul, the place of operation, with a small staff and some ten college students, "we dug trenches and fixed latrines with buckets. . . . . 'But where', said the boys, "is the sweeper who will empty the latrine buckets?' 'Don't worry, there will be a sweeper in the morning', I said. The following morning, they caught sight of me emptying the buckets. Three boys immediately ran to assist. 'If this is to be part of the training', they said, 'can we not do it for ourselves from now on?' . . . . For a time I saw little of Tagore. One or other of the staff kept him in touch. They told me, the same week we set out, that they had found him (Tagore) digging a trench in his garden and emptying his own bucket of waste matter into it."

Tagore never tired stressing that along with the material advancement of the village there must be the search for a creative, cultural life. The result was the establishment of a boarding school that goes by the name of Siksha-Satra. The boys arrived on Monday morning each with a small sack of rice enough for five days, and went home on Saturday. The boys and girls were thus to be equipped with an education in terms of their needs to grow, to imagine and to explore so as to be able to play their role in the village with understanding and capacity for expansion.

Some years after Gandhiji paid a visit to this school and was so much impressed that he took the loan of a member of the staff to help him plan an all-India revolution in primary education. Gandhiji chose the term 'Basic Education' for the system which was then worked out for him. 'But Basic', says Elmhirst, 'draws only in part upon the ideas of Tagore, and has had engrafted on to it other ideas for which Tagore would not have given his approval'. I do not know what precisely are the terms of acknowledgement to Tagore in the preamble of the scheme of Basic Education as it operates now in India.

The best return,, I should think, Elmhirst & Elmhirst got for the signal service they have done India is what Tagore wrote to Leonard

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

about five years after he had started the work. "Your spirit", he wrote, "will still work in Surul, and I shall always remember you not merely as a friend, but as a sharer in the intimacy of a conjoint creation." About another four years after when, by the time, the seed Elmhirst had sown grew up into a fine tree bearing fruits, Tagore wrote him, "We two were of unequal age, but I was not aware of the difference for a moment and our companionship was so utterly simple and intimate. I think you are the only one who closely came to know me when I was young and old at the same time".

As a fitting epilogue to their marriage, Dorothy and Leonard Elmhirst have founded and dedicated themselves to the upbringing of Dartington Hall in Devonshire. It is the home of many—varied endeavours in Humanities, Agriculture, Forestry and Industry, etcetera. Leonard has done his part in the Tagore centenary by giving the world a live blueprint of village reconstruction in India. Alongside, he has given us an idea how Tagore sleeplessly devoted himself to circumvent the misery and frustration implicit in a hide-bound, metallic system of education. It is an eminently readable book, worth the subject of memoir, and will adorn any really valuable bookcase.

JOGES C. BOSE

MIRACLE MAN WITH UNRIVALLED POWER

Highly Appreciated By George VI King of England.

JYOTISH-SAMRAT PANDIT SRI RAMESH CHANDRA BHATTACHARYA, JYOTISHARNAB, M.R.A.S. (London) of International fame, President of the world-renowned Baranashi Pandit Maha Sabha of Banaras and All India Astrological and Astronomical Society of Calcutta has WON unique fame not only in India but throughout the world (e.g., in England, America, Africa, Australia, China, Japan, Malaya, Java, Singapore, Hongkong, etc.) and many notable persons from every nook and corner of the world have sent unsolicited testimonials acknowledging his mighty and supernatural powers. This powerfully gifted greatest Astrologer & Palmist, Tantric can tell at a glance all about one's past, present and future and with the help of Yogic and Tantric powers can redress the pernicious influence of evil planets, help to win difficult law suits, ensure safety from impending dangers, poverty, prevent childlessness and free people from debts and family unhappiness.

Despaired persons are strongly advised to test the powers of Panditji

The Child in Society

The *Aryan Path*, July 1962, publishes, an article based on Mr. M. A. Langdell's address to the Institute of World Culture, excerpts from which are well worth reproduction as they relate to one of the most vital problems of today :

The National Association of Schoolmasters has maintained throughout the forty years of its existence the great importance of the family unit in the field of education and in the wider areas of society generally. The whole history of mankind reveals the necessity of the continuance of the security, the comfort, the educative forces to be found in the sound family unit. The word itself derived from the Latin has great significance when seen in relationship to *familia*—household *famulus*—servant or attendant. One member of the household bears a responsibility for the rest. The responsibilities of parenthood are fundamental to the establishment of the true home.

Mr. Harry Bell in his presidential address to the Association at Blackpool last Easter said :—

Though marriage is essentially a partnership, I am firmly of the opinion that the roles of the respective partners can be clearly defined and are determined by the differing physical and emotional characteristics of the two sexes. Thus by virtue of his greater physical potential the male is the provider and by virtue of her greater capacity for patience, love and understanding the mother is the administrator. Thereby we can see quite clearly the quality of the impact that these two profoundly important people should make upon the growing child. Mother the sheet anchor, the giver of love, comfort, security ; by her constant presence, the forehead of stability in the child's changing world. The wise Solomon of the home to whom the young child may turn to seek solutions to its many problems, in fact, the one person who can provide all the ingredients of healthy physical and mental growth. There is no need, therefore, to emphasize the profound importance of the mothers in our society and the outstanding part that they play in the moral, emotional and physical development of our future citizens. Yet it is true that, in the main, young women enter upon the sacred work unskilled, untrained, unprepared and often quite unaware that a woman can find the deepest satisfaction in the development of the skill and character necessary in homemaking.

Alas, it is true also that so often these days she is not there in the home with her children, rather is she engaged in the pursuit of tawdry, material improvement for the home. On her return she is too tired, too jaded, too preoccupied with her other life to give herself wholly and unselfishly to her children. And what of the father in this situation, is he able to maintain his position as head of the house, thus presenting to his children an image of strength and wise leadership ? Is he still able to assert that essential control and discipline in the home from which grows self-discipline and self-control ? Or is it more likely, as so often is the case, that he will make a futile endeavour to take over, quite inadequately, where his wife has failed, then give the whole thing up as a hopeless task and seek solace outside the home ?

The education of the child, by which I imply the full preparation for life in the testing world of the latter half of the twentieth century, begins in the home. It may be said to begin in the warmth and security of the womb. Certainly the roots to full and healthy growth are established and sent deep before the child reaches school age. The infant needs love, security, warmth, routine and two parents with "one voice." Inevitably crises occur in every child's life—the change from home to school, the arrival of another baby in the home, the change from primary to secondary education, the stirrings of adolescence and others which are part of the family life. On such occasions the home is the refuge, the source of comfort and guidance. I quote again :—

Many of the anti-social characteristics which become apparent in some adults can be traced back to unhappy childhood caused through inadequate family life. Those of us who spend our working days in the world of children are frequently made aware of the awful tragedies brought about by the unhappy and broken home and by the refusal or inability of parents to face up to their responsibilities. All too often we are brought face to face with some of the serious consequences arising out of disturbances in a child's early human attachments. We see the small child unduly worried and bewildered by some slight change in its school programme and we know that it is unhappy and insecure at home. We witness the sad decline of a child's standards of conduct, honesty and loyalty and we know that it is inwardly worried by parental

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

conflict. The belligerent, unpopular boy who bullies his way through school is probably unwanted and unloved at home. The child who shows no regard for discipline and scant respect for persons or property is likely to be living in an environment where these attitudes are part of everyday living. Most of all we are concerned that in all probability these children, spending their most formative years in an environment where doubtful values exist, will themselves one day become unsatisfactory parents.

It is used to be accepted that three educative forces supported the child in its growth towards the establishment of the mature social being. Like three legs of a tripod they held up the structure. They were the home, the school and the church. Sadly it is true that the influence of the last has gone in many cases. My experience in a large secondary school in an industrial area reveals that most families have little contact with organized religion. One support has gone. The influence of home and family is much less apparent for good than ever before. Children get themselves off to school ; they return to empty houses ; they are part of the "latch-key army" or, worse, they run the streets until someone comes home. Some come to school too tired, unfit in body and spirit, to learn. The responsibilities that are the parents' for even the bodily welfare of children are in some cases shrugged off and passed to the school.

The remaining leg of the tripod is the school which continues to teach fundamental values and does not confine itself to the narrower duty of imparting knowledge. The good school teaches the inherent value of work, the necessity for truth and honesty in daily life. It attempts to develop a sense of responsibility and a social conscience. The teacher sometimes feels abandoned, wonders whether his is a voice crying in the wilderness and his proclaimed values alien in an age when current slogans include—"I'm all-right Jack"—"Couldn't care less"—"Never had it so good." Self-interest, material things, Pools, Bingo, the "fast buck"—are these the modern values ? If society as a whole condones or ignores these things how can it blame the young, the adolescent, flush with money as he is, when he goes off the rails ? He is walking on shifting sands and overhead—who knows ?—the atom bomb. Eat, drink and be merry, for tomorrow . . . . ? The adults of today carry the burden of blame for our young people who go wrong. Perhaps our desire for liberty has opened the door to licence. Perhaps in a fully educated society of mature beings, the temptations of our age, the salacious, the meretricious, the bad book, film, play and television would be spurned and cease to be big business. Until such time as society is educated and mature, surely the State has a responsibility to protect its future citizens :—

In 1934 there were 195,000 indictable offences known to the police, in 1959 there were 675,600. This is a threefold increase and represents, with the exception of 1954, a steady annual rise. Perhaps the most distressing feature of this dreadful trend is the fact that last year, very nearly a half of all those found guilty of indictable offences were under 21 years of age. More disturbing still is the knowledge that the biggest single group of those before the courts was that between the ages of 14 years and 17 years. Now these delinquents are mere children and are either still attending or have very recently left our educational establishments. To that section of our society which concerns itself with moral welfare, and this group must include all connected with education, this startling evidence of the growth of crime must be taken as a measure of failure. We cannot afford to be complacent while crime and violence increases, while the prisons of this country are full to overflowing because one in sixty-eight of the population is committing an indictable offence annually.

No section of the community can escape part of the censure which the previous statement reveals. These young people were in our schools until recently; and teachers, I am certain, are not complacent. That they feel depressed is certain; that they feel a little let down is not surprising: classes are too large, trained teachers are too few, dilapidated schools too common. This nation can only afford apparently 3 to 4 per cent of the national income for education. Russia devotes 10 to 12 per cent and the United States 9 to 10 per cent. Educate on the cheap and inevitably this nation will decline in the modern world to the third rate. A new look at education with a hand on heart would be the foundation of preventive medicine against the present sickness in our society.

Such measures are vital but will not cure the present epidemic, and one feels depressed as does Mr. Foster of the Central After Care Association, Borstal division, when he says "We are trying to present as acceptable standards that must seem farcical when compared with their manner of life in their natural habitat," and "We are trying in a brief period to reshape a pattern of conduct that is the product of years of sordid experience." Poilce, magistrates, probation officers, psychologists, after-care officers and other excellent people are heavily engaged in the struggle against the criminal and anti-social

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

activities of so large a section of our young people. A good deal of research is being made into the reasons for the behaviour, and explanations are offered as to why the individual is anti-social. Is not the answer simple? They have not been taught the difference between right and wrong. They have no social conscience.

The Rising Trend In Prices : 1955-62

A special article published in the *Eastern Economist* in its issue dated August 3, on the above subject would appear to be of especial interest in the context of current economic pressures within the country :—

Great anxiety has been expressed recently in regard to the rise in prices which has imposed considerable pressure, as always, upon those least able to bear it. The Congress Parliamentary Party Executive Committee set-up, a month ago, a special sub-committee to study the whole problem of prices so as to suggest ways and means for curbing another steep rise. It is the object of this special article to analyse the available statistical evidence so as to highlight the commodities where the pressure has been the heaviest and also to measure the rate of rise in prices since the beginning of the Second Five-Year Plan.

The All India Working Class Cost of Living Index which represents the average of working class indices of 27 industrial centres all over the country shows that upward pressures are usually generated in the second half of the year, *i.e.*, from July to December. In 1960, the rise in prices in the second half over the first half was of the order of 2.5 per cent. Similarly, in 1961, the rise was of the order of 3.2 per cent. It is believed that this will be repeated in 1962 as well.

Table I

All India Cost of Living Index : 1956-62 (Base : 1949=100)

Month	1956	1957	1958	1959	1960	1961	1962
January	97	107	111	117	122	123	127
February	97	107	110	118	122	123	127
March	100	107	110	117	121	124	127
April	103	108	111	117	122	124	127
May	104	110	113	119	123	124	127
June	106	112	116	122	124	125	...
Six Months' Average :	101	109	112	118	122	124	...
July	107	112	119	124	126	127	
August	109	113	120	125	126	128	
September	108	114	121	124	125	128	
October	109	113	123	126	125	128	
November	110	114	122	126	124	128	
December	109	113	119	122	124	128	
Six Months' Average :	109	113	121	125	125	128	
Percentage Changes of Second half over first half	+7.9	+3.7	+8.0	+5.9	+2.5	+3.2

Digitized by Arya Samaj Foundation Chennai and eGangotri

Table II

Index Numbers of Wrolesale Prices of All Commodities : 1955-62
(Averages) (Base : 1952-53=100)

	1955	1956	1957	1958	1959	1960,	1961	1962
Average of First Half of the Year	91.0	98.6	107.2	107.7	113.3	120.6	126.3	124.9
Averages of Second Half of the Year	92.1	106.7	109.8	114.8	117.8	125.3	125.4	...
Percentage Change of First Half over Second Half of the Year	+1.2	+8.2	+1.9	+7.1	+4.0	+3.9	+0.7	...

The behaviour of the index since 1956 shows a remarkably uniform pattern wherein the average index in the first half of the year turns out to be the same as the average in the second half of the preceding year. This fact is brought out by Table I above. On this analogy the second half of 1962 will certainly cross the limit of 130 (Base : 1940=100)—an all time peak. The conclusion which emerges from a scrutiny of this index is that the secular trend in prices is up, and there seems to be no prospect of the consumer prices either stabilizing or declining in the short run.

The same technique of measuring the rate of rise in wholesale prices in the second half of the year as compared to the first half reveals an interesting pattern though not conforming exactly to the behaviour of the All India Working Class Cost of Living Index. Except for 1961, the average of the index of the wholesale prices for the second half has always been higher than the average of the first half since 1955. A steep fall in jute prices last year which affected both raw jute and jute manufactures kept the index subdued with the result that 1961 did not follow the pattern exhibited in the earlier years. But this is certain that prices have been steadily rising from year to year whatever the manner of comparison. Whether the figures are looked at from year to year or month to month, the trend has been upwards.

Table III

Index Numbers of Wholesale Prices of Selected Commodities : 1955-62 (Base : 1952-53=100)

Croup	June, 55	June, 56	June, 57	June, 58	June, 59	June, 60	June, 61	June, 62
I. Food Articles (50.4)	84	99	109	113	119	120	121	125
II. Liquor & Tobacco (2.1)	82	81	92	92	98	110	100	100
III. Fuel, Power, Light Lubricants (3.0)	95	99	112	116	116	119	123	123
IV. Industrial Raw Materials (15.5)	93	113	121	115	120	140	149	136
V. Manufactures (29.0)	98	104	109	108	109	120	126	129
VI. *All Commodities* (100.0)	90	102	111	112	116	123	126	127

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Table III (above) sets out the indices of wholesale prices of selected commodities for the month of June from 1955 to 1962. There is no commodity which has shown a tendency to drop.

However useful these indices may be in measuring inflationary pressures in the Indian economy, they do leave out certain essential elements such as expenditure on education, transport, housing, etc., which are imposing increasing burdens on the urban population particularly. No index gives due weight to these pressures. The wholesale price index has no provision for measuring the changes in rents except for recording the prices of cement, steel, bricks, etc. The rise in prices of these componnts fails to measure accurately the staggering increase in house rents. The consumer price indices assume a constant rent because of the application of the Rent Control Acts in most of the urban centres. In fact, urbanization in this country has progressed very fast in recent years and families migrating to urban areas find it very hard to get accommodation at reasonable rates. That is why slum areas are growing in all urban centres. No index evolved so far in the country takes care of these additional pressures.

The Making of Tomorrow

We reproduce below excepts from an Editorial published in *The Aryan Path*, August 1962, as a thought provoking challenge :

There are no miracles in nature. Everything that happens, happens under law, eternal, immutable and ever active, however veiled its workings are from ordinary sight. Probably not a businessman could be found who would demur to those propositions in theory. And yet it is as miracle-workers extraordinary that most planners of new orders stand forth on the world stage. A "new world" with the same prejudices and pettiness in all of us? A "new world" with the same selfish men at the head of affairs as before? Will that not be the same old world, behind however smiling a new mask?

Man, alone among beings, having free-will has the power to break the fundamental law of harmony that underlies all life. But, having broken it, he does not have the power to side-step the reaction. That will follow, as inevitably as the living bough pressed down springs back....

The makers of tomorrow can no more build a new world out of nothing than could the Deity Itself. It is the attitude of the true scientist that they require. *Ex nihilo nihil fit,* he doggedly maintains. What can any world, any situation, be but the result of permutation or of combination of pre-existing elements? Ideal solutions made *in vacuo* can be of little practical avail.

When a new material structure is to be erected, the plan must take account of the materials available. And a sorry lot of materials are our world architects confronted with! Timbers half eaten through by the white ants of race and colour prejudice. Girders half rusted away by superstitions and animosities in the name of religion and by materialism in the name of science. To use these as they are is to invite disaster. We cannot scrap them altogether; they are all we have. But they must be treated, the depredations of the rust and termites checked. If they are adequately treated and reinforced with the concrete of right intent and brotherly good will we can yet raise a better edifice than any that humanity has known in modern times.

FOREIGN PERIODICALS

Of Mutts & Medicare

Karl E. Meyer writing in the *New Leader* in its issue dated 25th June, says :

Free enterprise, American style, is not without its triumphs; it may have failed the aged and infirm, but it spreads its beneficences grandly on the dog. In New York, for example, you can outfit your Afghan hound in lace pyjamas ($25), false eyelashes ($.95) or a custom-made grey chetserfield overcoat with a velvet collar and maching top hat (a bargain at $33.50). Or your mastiff can be scented with Kennel No. 9 and immortalized in *Our Puppy's Baby Book*, with spaces provided for paw prints and such entries as "My First Birthday" and "My First Christmas."

I came upon this important Americana in a recent issue of the *Saturday Evening Post*, in an article about canine affluence that some future Gibbon may consult with profit. The author, Toni Howard, notes that the classified telephone directory in Manhattan lists 115 hotels, country clubs, bath clubs and beauty shops for dogs, where hi-fi music soothes Wowser as his toes are manicured in emporia, with names like. The Poodle Boutique and Bow Wow Glamour. Air conditioned? Certainly, madam.

All told, Americans, out of worthy sentiment, spend around $3 billion each year on pet furnishings and supplies; pet food alone outsells baby food by nearly two to one. Yet this same society is currently in the midst of a political uproar over a health-care plan for aged humans that involves an average payment per worker of about $1 a month through Social Security. Some Americans manage to rise above sentiment when the helpless and dependent are merely people.

The fuss over the health plan, which is nearing a showdown in Congress, is an anomaly that is difficult to explain except in terms of our country's remaining an under-developed area in its attitude toward doctors. Somehow, the American Medical Association (AMA) has persuaded many that one of the blessings of Our Way of Life consists of going broke paying doctor bills without any help from the Government.

Yet the help is urgently required by the aged. Only about half of those over 65 have some hospitalization insurance, compared with about 70 per cent of younger people—but private spending for medical care of persons past 65 is nearly twice as much as the rest of the population. Nine out of 10 of the aged face the pleasant prospect of being hospitalized at least once for an average stay of 14.9 days.

In face of this, President Kennedy's plan, embodied in the King-Anderson bill, is a mild poultice applied timidly with mercurochrome. The Government itself would provide no care, hire no doctors and offer no services; it would only establish a modest program for helping to pay some bills. The plan would offer benefits immediately only to about 14.7 million persons who are over 65, and it would benefit them skimpily.

The plan would provide payments for hospital services for 90 days in each illness, subject to a deductible arrangement in which the patient would contribute $10 a day for up to nine days. A few other services would also be paid for, but a prolonged terminal illness would still bankrupt the old and their younger relatives. Nor is there any provision for drug costs, for expensive surgery or for the kind of cumulative doctors' bills that are a crushing burden on the aged.

AMA has called attention to these inadequacies, and a recent television counterattack has derided the plan as a "cruel hoax and a delusion." In doing this, the AMA has managed the neat trick of at once condemning the bill because it does not go far enough and because anything the Government does under a compulsory plan would be a wicked invitation to creeping Socialism.

The doctors' lobby prefers the existing Kerr-Mills program, now adopted by 26 states, in which free medical care is provided only for those who take a pauper's oath: Anybody unAmerican enough not to pay his doctor's bills has to swallow the bitter pill of a means test.

Supporters of the King-Anderson bill concede its limitations, but are frankly more interested in establishing the principle of health-care through Social Security than in debating details. They want to provide health assistance as a right that can be claimed without loss of self-respect to the aged. Moreover, they point out, the problem is not in helping the impecunious but in preventing those of moderate income from being bankrupt. Too often, costly care for the aged comes out of the pocket of relatives who must sacrifice their children's education in order to enjoy the felicities of free enterprise.

Shashikant, Prabhavati and Vijay are the children of B. R. Patil, Bombay. Shashikant, the eldest, is studying engineering. Vijay and Prabhavati are in the First Year (Science) in college.

Although Patil's only income is a small Government pension, he is able to afford a sound education for his children. "A few months ago," he said, "I received Rs 2500 from a Life Insurance Policy taken in 1946. I was earning only Rs 140 at that time". Patil added proudly: "Now I have enough money to educate my children properly. It's a great relief."

No scraping and saving now for B. R. Patil. He had the foresight to leave his children's education to Life Insurance.

THEIR PARENTS ARE CONFIDENT OF THEIR FUTURE

There is no substitute for **LIFE INSURANCE**

10 YEARS OF SERVICE

Ten years ago, the handloom industry was passing through an acute crisis. Stocks had accumulated, sales were on the decline, production was curtailed, thousands of weavers were facing unemployment. A helping hand was sorely needed.

Set up in 1952, the All India Handloom Board adopted many positive measures for rehabilitating the industry and placing it on a sound footing. The Third Five Year Plan has set a target of 2800 million yards of handloom cloth as compared to actual production of 1100 million yards in 1952 and 1900 million yards in 1959. India's most cherished cottage industry is well on the way to meeting the challenge.

অষ্টাদশপর্ব্ব মহাভারত

ব্যাসদেব কৃত মহাভারত পুরাণ-ইতিহাসের অন্তর্গত হইলেও, কাব্য হিসাবে ইহা মধুরতম। বস্তুতঃ মহাভারতের মত বিরাট গ্রন্থ আর দ্বিতীয় নাই। একসঙ্গে সহস্রাধিক চরিত্রের যথাযোগ্য মর্য্যাদা দান কম কৃতিত্বের কথা নয়। অপূর্ব্ব ইহার আখ্যানভাগ। তেমনি অপূর্ব্ব চরিত্র-বিশ্লেষণ। রাজনীতি সমাজনীতির গূঢ়তত্ত্ব ও তাহার অনুশীলনী ইহাকে আরও গুরুত্ব দান করিয়াছে। বস্তুতঃ, ব্যাসদেব শাস্ত্র-সাগর মন্থন করিয়া অমৃত পরিবেশন করিয়াছেন। 'যা নাই ভারতে, তা নাই ভারতে' এই প্রবাদবাক্যটিই মহাভারতের শ্রেষ্ঠ পরিচয়।

সংস্কৃত-কাব্যের এই অপূর্ব্ব রসাস্বাদনে সাধারণ লোক দীর্ঘদিন বঞ্চিতই ছিল। কাশীরামদাস তাঁহার সুললিত পয়ার ছন্দে সেই অভাব দূর করিলেন। এজন্য বাঙালীমাত্রই তাঁর নিকট কৃতজ্ঞ।

আজ মুখে মুখে এই মহাভারত সর্ব্বত্র প্রচারিত। ইহার ফল একদিকে যেমন ভাল হইয়াছে তেমনি মন্দও হইয়াছে শতগুণ। মূল কাশীরামদাসের মহাভারত আজ নানা কারণে বিকৃত—যিনি যতটুকু পারিয়াছেন, তিনি ততটুকু আপন মনোমত রচনা ইহাতে সংযোজন করিয়া দিয়াছেন। এই প্রক্ষিপ্ত অংশগুলি ও ভুল পাঠের পুনরুদ্ধার করিতে আজ পর্য্যন্ত কেহই সাহসী হন নাই। তাই রামানন্দ চট্টোপাধ্যায় সম্পাদিত এই মহাভারতের এত সুনাম।

পূর্ব্ব সংস্করণ শেষ হইয়া যাওয়ায় পাঠকের আগ্রহাতিশয্যে বহু অর্থ ব্যয় করিয়া এই অমূল্য গ্রন্থের পুনর্মুদ্রণ প্রকাশিত হইল।

ভারতের শ্রেষ্ঠ শিল্পীদের অঙ্কিত প্রাচীন রঙীন চিত্র প্রায় পঞ্চাশটি সন্নিবেশিত

সুন্দর ছাপা ও সুন্দর কাগজে এই সংস্করণ আপনাকে লোভনীয় করিয়া তুলিবে।

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place.....Like Tagore's the late Mr. Chatterjee's genius was essentially constructive....By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country.... No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students." —*Hindusthan Standard*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya.....The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated." —*Amrita Bazar Patrika*

HOW MUCH IS RUPEES

It terms of national waste, the total loss to the Eastern Railway due to thefts of fittings and vandalism in railway coaches and wagons is much more than this figure indicates.

To you this figure means temporary denial of many amenities. To us, who serve you, such losses are serious impediments to our efforts to render satisfactory national service.

Moreover, fittings and equipment damaged or stolen are not easy to replace. Surely, such vandalism shocks your civic sense. Your co-operation is essential for protecting national property.

Every year, the Eastern Railway alone suffers a loss of over Rs. 17 lakh through thefts of carriage and wagon fittings and equipment, and through wilful damage done to them.

THE MODERN REVIEW

OCTOBER 1962

VOL. CXII, No. 4 WHOLE No. 670

NOTES

The World

The World situation did not alter appreciably in the month of September. Tension in Berlin, which rose to a peak in August over the shooting of some refugees who attempted to flee West Berlin was maintained, although at a somewhat lower level, by the Russians who methodically began to transport their sentries to the Russian War Memorial in West Berlin in armoured vehicles. Soviet work crews went on with the installation of new ground-to-air rocket sites along the three air corridors to the West from West Berlin and also in a circle surrounding the city. There has been an exchange of acrimonious notes over the renewed demand by the Soviets that the Allies withdraw their occupation forces from the city. No time limit was set in the latest demand, as in the previous two demands, and there is no attempt to raise the tension to the breaking point.

The U-2, the famous high-altitude reconnaissance plane used by the U.S.A., has again caused trouble. The Soviets charged that a U-2 had violated Soviet air-space by "flying for nine minutes" over the southern corner of Sakhalin island. The U.S. response was that "an American patrol plane, caught by strong winds, might have unintentionally overflown the Russian territory". The Russians rejected the U.S. explanation as being unbelievable. The net result has been that the Geneva talks on the cessation of nuclear tests have received another set-back.

In Algeria a truce of sorts has been brought about, stopping the fratricidal war between the Wilaya 4 Guerillas and the regular army of 45,000 men under their Chief of Staff, Colonel Houari Boumedienne, who has political ambitions of his own.

The Central figure in the Algerian situation is that of M. Ahmed Ben Bella, a Vice-Premier in the defunct provisional government of M. Ben Khedda, and the leader of the seven-man Political Bureau that supplanted it. M. Ben Bella is one of the "Committee of Nine" that launched the rebellion in 1954 and as such has a very considerable hold on the people, though his main strength now comes from the regular army.

The guerillas forced M. Ben Bella to flee from the Capital, Algiers. On his orders the regulars marched against the Wilaya 4 guerillas and with their heavy equipment and training they advanced inexorably. The people of Algeria tried to intervene, as thousands of them, men, women and even children went into the streets and the fields while the actual fight was on in those areas, crying for "peace, unity and bread". In the meanwhile, when the advance guards of the regulars were nearing the city, M. Ben Bella slipped into the city and negotiated for a truce with the guerillas. His task with the regulars was more difficult, and in the end several thousands of regular troops entered Algiers. The truce is on as yet, though occasional bursts of firing have disturbed the elections, which were on at the time of writing.

In the Congo, things are taking a clearer shape in recent days. The shifty and slippery M. Tshombe is still there, with his own private army and counsellors. But the main Congo army

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has taken matters in hand to a certain extent and barring massive interference by interested foreign financiers and their mercenaries, the situation may turn towards stability. Outwardly M. Tshombe had accepted the U.N. Plan for ending his country's cessasion which he said was "the basis of an acceptable settlement which we hope will permit the establishment of a "Viable Congo."

The U.N. Plan provides for the provincial autonomy for Katanga under a new Federal Constitution that would establish the Leopoldville Government of Premier Cyrille Adoula as the Congo's central authority. This plan entails the integration of the Katangese fighting forces into the Central Congo army and the sharing of Katanga's revenues, derived from mineral royalties—which amounted to 40 million dollars last year—with the Central Government. The Acting Secretary-General of the U.N., Mr. U. Thant, had clearly told M. Tshombe that the alternative to the acceptance of these terms would be a call for severe economic sanctions against his government. The main question now is, how much reliance can be placed on M. Tshombe's acceptance "with enthusiasm" of the new Constitution and the other terms of the plan "in principle".

Tshombe is being helped in his shifty intransigence by the covert moves of the international financiers controlling the rich mining resources of the Katanga area. They are being aided in their moves by the reactionary Rhodesian Premier Sir Roy Welensky.

In Asia the main points of world tension have shifted to the northern frontiers of India. Red China has again resumed her pressure tactics—this time in the NEFA area of the Eastern Himalayas. The Chinese, as usual, have accused the Indian troops of incursion into Chinese territory. These mendacious notes are so well-timed that there can be no doubt that they were ready to be sent when orders were given to the Chinese forces to cross into the Indian side of the frontiers. The attempts at driving out of the Indian troops and occupation of the Indian posts by the Chinese have been foiled upto-date.

There is some speculation regarding the shifting of the Chinese pressure from the Ladakh area to the NEFA zone, at a point where the frontiers of Bhutan, Tibet and India converge in a rough triangle. The most accepted idea is that these are preparations for the winter.

There is a new shift in the Cold War tensions—this time to the New World. Recently reports have been made of the flowing in of large-scale supplies of armaments and war equipment, together with about 4,000 trainers and military "technicians", from the Soviets to Cuba. The U.S. has taken notice of all these, and apart from stepping up of the programme of preparedness by measures such as the proposed increase in the call-up of draftees, there is an attempt to persuade the Latin Nations of the Americas to act in concert against the Castro regime, through the O.A.S. The action is likely to take the form of economic isolation of Cuba.

In other spheres, political and economic, the main events occuring in September, were the meeting of President De Gaulle of France and Chancellor Adenauer of West Germany, and a Conference of the Commonwealth Prime Ministers and leaders with the British Premier Macmillan and his colleagues. Both of these events bear in them the seeds of new and massive shifts and conflicts, on an international scale, in political and economic bonds and loyalties.

The European Economic Community (E.E.C.) which is composed of the six nations now linked by the European Common Market (E.C.M.), namely France, West Germany, Belgium, Netherlands, Luxembourg and Italy have, up to the present, close links with each other on economic lines. These links provide for a common tariff barrier against the import of products from the outer world and an arrangement for free movement within this community.

De Gaulle's move is for the domination of all Europe—beyond the "Iron Curtain"—by the two nations. France and Germany, bound together by a common programme, would become "a common source of power, influence and deeds" according to De Gaulle, to form a dam of power and prosperity, to stop the ambitions of the Soviets. Britain does not figure in De Gaulle's programme, though when and if Britain enters the Common Market,—as she is "hell-bent to do" according to a West Indies Premier—room must be made for her in the proposed Union. Of course, the scheme is merely a scheme as yet.

The meeting of the Commonwealth Ministers and leaders, with Mr. Macmillan, was held to discuss an issue that will permanently affect their own individual nation's future. This issue was, Britain's bid to enter Europe's Common Market. Little has come out of the prolonged dis-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sions, which were held both jointly and separately, beyond the expression of vague hopes for the solution of an extremely tangled problem, and clear warnings about the break-up of the Commonwealth.

French Chauvinism with its economic implications, if reinforced with solidarity with West Germany is not likely to "make the way easy" for Britain and the Commonwealth. The inevitable consequence would be that most African nations would look for channels leading to the other Side of the Wall. In Asia, India's Plans would be jeopardised immeasurably and may force her to seek remedies elsewhere. Pakistan is likely to seek "most favoured nation" treatment from her present Allies failing which, she may or may not shift her loyalties—as her dictator wills.

The World outlook for India's Five-Year Plans, Third and Fourth, is distinctly gloomy with these new threats to her export trade. But, of course, everything is in a speculative phase, where these economic drifts are concerned.

THE EDITOR

Public Vs. Private Sector

Had India's economy been a healthy, clean and socially useful net-work of institutions, establishments, organisations and other functioning units helping production, distribution and consumption, there would have been a social advantage in setting up two rival sectors in the economy; one managed by the State and the other through private enterprise. But the Indian economy is unfortunately far from clean and healthy. From the village level where usurious money lending and cheating by *aratdars* are rampant, while the public servants, who should protect the public from the rapacious "businessmen", operate with the exploiters of the people freely and whole-heartedly. Right upto the highest level of giant business and almighty departments, things are corrupt, unclean and anti-social. In the circumstances it is as grave a social sin to stimulate the growth of big business as it is to arrange a further spread of controls, permits and quotas. In other words, moral planning should have preceded economic planning ; for in the absence of a proper moral atmosphere all efforts at social welfare leads to social injury as the ungodly public servants prosper inordinately, as do the private exploiters of the people. The public at large continue to pay the ever-increasing taxes and suffer from want, unemployment, *Zuloom* and hardship at every step. The more the public pay, the less they get from the public departments and organisations and from the privately managed shops and establishments.

Let us take a few examples. The private sector normally sells food-stuff to the people. Food adulteration is quite common and widespread in India. The milk is watered, the ghee, butter and oils are impure, sugar is dirty, rice has *Kankar* in it and flour contains chalk or other unknown adulterants. And to top all this the people are cheated in price and weight too. The public departments which come into the picture do not try to remedy things but aggravate the situation by obtaining infected milk powder or foreign flour and some public servants help the shop-keepers by creating artificial shortages here and there.

One cannot say with confidence that the government departments dealing with supplies, which are eventually distributed by private shop-keepers, are quite free from corruption. The general impression is that all priorities, etc., are eye wash and that supplies, generally speaking, can be moved by "oiling". This has reference to many important articles of consumption and to materials required for construction and for industrial purposes. Regarding other public utility supplies, such as power including gas and coal, one can cite the State managed Oriental Gas Company as a very clear example of mismanagement and brainless misuse of a public prerogative. The consumers of Gas in Cacutta seldom obtain even a bare minimum supply of Gas at any time and, what makes it quite criminal is the manner in which bills are made out on past averages of consumption without giving any current supplies. Thus many consumers pay money for Gas which they never get. The Calcutta Electric Supply Corporation is very much better managed but their supplies are always short of public requirements. Telephones are now a department of the State-monopolistic Posts and Telegraphs and they march in step with the latter ; which means that Telephone service is pretty bad everywhere in India. People say that the American Telephone system is managed by two great private corporations and that they are extremely efficient and render real public service. There are a number

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of State managed Telephone systems on the Continent of Europe which are quite as efficient. So that the inefficiency of the Indian Telephone system cannot be ascribed to the nature of the management. For railways, road transport and policing are also managed in India by the State partly or exclusively ; and the services given to the people are not as they should be. The people of India pay taxes and for goods purchased and they get very little in return. One has to pay through one's nose, to use a vulgar expression, to have one's house and property guarded, one's children educated, sick persons treated and to get good food and adequate clothing of proper quality. In all other civilised countries people get good food, proper clothing, suitable housing, education, medical aid and protection in return for the taxes they pay. In India, the people get promises of an *Eldorado* which is round the corner and no one knows the distance at which the corner is situated. The Indian Government, including the *chhota* Governments of the States, are more or less impervious to any moral persuasion. They will not improve their essential public services but will continue to grab further rights, privileges and functions on the ground that, in theory, socialism is better than private capitalism. No one denies the truth of that ; but one is reminded of the cat turning *Vaishnava* in order to engender trust in the heart of the mice, when one hears sermons on socialism from persons who are essentially and fundamentally incapable of acting morally towards their fellow beings. In India both the public and the private sectors require to be chastised with impartial and adamant vigour. Otherwise, all talks of economic planning are for ever moon shine.

A. C.

China, Tibet and India

When the Chinese invaded Tibet, they did so, knowing that Tibet was another country belonging to another race of men whose religion, language, way of life and socio-economic habits, were not Chinese. They also knew that Tibet had enormous stores of unexploited natural resources which, if controlled by the Chinese, would yield great profit to the Chinese people. And, then, there was the allure of vast spaces where China's teeming and ever-growing millions could migrate and build a China in the Himalayas which will fulfil the greedy "ideals" of a nation which sought to establish Justice on Earth by every unjust and cirminal means it could make use of. For China claimed Tibet as an integral part of China on the ground that Tibet was part of the Chinese Empire of the Manchus and which Empire was liquidated by circumstances connected with the liberation of the peoples of China from thraldom. No one could argue that the liberation of a nation by destruction of its imperial and dynastic dictatorship should retain for its people the imperialistic prerogatives that its deposed overlords enjoyed over yet other nations by right of conquest. The argument that the Chinese People's Republic had inherited the imperial domains of the Manchus, is totally fallacious and morally untenable. Using the same sort of hooligan-logic one might say that Germany was France or that the whole of Europe was Italy by reason of the territorial annexations made by Louis XIV or the Roman Emperors. Burma could then claim wide areas in India or India in Burma. In fact, if the crimes of history could be used as "Title", then the entire moral justification of revolutions and fights for freedom would vanish. China's crime against Tibet is a crime of imperialistic aggression and no amount of sophistry by twisting Marxism to fit in with Maoism will convince the thinkers of the world of the justice of this act of international banditry.

The Government of India knew all the above facts and some more. But they had become worshippers of expediency, as were their predecessors and mentors, the British; and the Government of India, therefore, began their brotherhood-with-China display with the idea of appeasing that newly born Empire. But, as the Chinese had begun to think of the Himalayas as their territory, the Government of India's *bhai-bhai* songs did not put the Chinese Empire builders to sleep. Nor did *Panch Shil* or any other imaginary forces that our political leaders believed in as realities of world politics. Unfortunately, auto-suggestion or wishful thinking as found among politicians of the powerless blocs of the world are not of much use in real politics. China, therefore, gave Pandit Nehru grin for grin and hand shake for hand shake and went about its business of grabbing Indian territory, fully confident that India would never be able to oust the Chinese once they got in. In fact, upto now the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

hese are in occupation of thousands of square ds of Indian territory and they are coming ther into India everyday. The recent statements by Mr. Menon go to prove that our forces as yet under civilian direction and that rtial Law has not been proclaimed in NEFA, dakh and other areas where the Chinese are ding India. So long as this is not done and rly Military experts are not given the orders drive the Chinese out beyond such and such ndaries, nothing substantial will be done.

i Jagat !

Acharya Vinoba Bhabe is another of a long ng of lovers of Humanity. Before him have e many who preached the cult of love, therhood of all men, equality of all humans, essity for a single world State, non-violence, -resistance of evil and all kinds of other moral ciples which aimed at curing the evils of man civilisation. Seven hundred years before hrist, were born men who changed the entire look of the majority of human beings, *viz.*, Jain Tirthankars, Gautama the Buddha and various disciples. Since those days we have sed through various ages and all had their ts, martyrs, teachers, philosophers, idealists d social reformers. India produced a very large ber of mystics, *bhaktas*, *gurus*, interpreters moral laws, sufis, *fakirs*, renouncers of *Sansara* d itinerant teachers of godly wisdom. We have great religious thinkers who initiated new ths, as well as intellectuals of rare talent who ld clear doubts and reach correct conclusions h perfect precision. Like the *rishis* of yore the e thinkers of India were also intellectually y superior. But each one had a number of ciples who also preached what their *Gurus* ght them. In the field of mysticism, *bhakti* or communion with God, we find great teachers like Chaitanya, Guru Nanak, Kabir, Dadu, Ramkrishna and Sri Aurobindo. Among philosophical-logical teachers, we can name Shankaracharya, Ramanuja, Raghunandan and Ramkrishna. And then, at a later stage, we come across class of socio-political reformers who thought human problems and their solutions. In ope, we find among such people men like d Marx and Count Leo Tolstoy and in India Rabindranath Tagore and Mahatma Gandhi. Rabindranath Tagore's Viswa-Bharati was the result of his deep thinking about building up a single united community of human beings. Mahatma Gandhi laid stress upon human love and non-violence. Marx could have given out a slogan "Jai Shramik", or Rabindranath might have called out "Jai Viswa". Mahatma Gandhi's slogan ought to have been "Jai Prem." We cannot class Acharya Vinoba Bhabe with any degree of accurancy, as we are not quite sure of his ultimate objective. Gramdan, Bhudan, etc., are semi-political approaches to certain fundamental ethical problems. He is giving out his slogan "Jai Jagat" without taking into account such *Jagat-basis* as the Chinese, the South Africans, the Indonesians and the head hunters of certain little known places within our Jagat. Victory or Jai to such people may be disconcerting even for a saint out of Gandhian cloisters. If he had meant the universe by Jagat one could have found consolation in thoughts of Martians living in peaceful co-existence with the denizens of other planets (including the Earthly Chinese). And that would have been a fine approach to a cosmonautical and galactic problems of the ethical variety. But Vinobaji does not mean to carry the message of Bhudan to the extremities of the solar system ; his passion being *Bhu*, that is the Earth. In the circumstances one can at best give a faint cry of "Jai Jagat" to only those who have no land to give away.

The Acharya says he has great respect for the principles of Communism but as communists are not guided by love and compassion, they have not so much chance of establishing an undivided Jagat. That is true ; but the Congress also agreed to a suicidal division of this great Peninsula and created two India's out of one, one of which is now called Pakistan. The Americans, the British, the E.C.M. countries and many others believe in divisions and we have, as a result, all sorts of blocs which have no love or compassion for one another. In such a setting Acharya Vinoba Bhabe can well declare that there is need for a united world and the cry "Jai Jagat" in the hope of rousing the peoples of the world to a sense of their common humanity. But what hopes has he of achieving this by *Padayatra* and *bhudan* ? For he cannot in one life-time traverse all the paths of the world on foot. Nor can he

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pass on the message of bhudan to the peoples of the world without Akashyatra and Akashbani. When Chaitanya Mahaprabhu walked the roads of Eastern India, he had no alternative in a manner of speaking. When Gandhiji indulged in marching to this or that place, his purpose was to make a gesture on a grand scale. What exactly is Vinobaji aiming at? One should be told that in clear and precise terms.

A. C.

Nepal and India

His Majesty King Mahendra of Nepal is placed in a very slippery position in his mountain kingdom. On one side he has the Chinese Army commanded by unscrupulous Communist expansionists who have ripped out the old order from the ancient theocracy of Tibet for purposes of exploitation (called liberation), and on the other side he has the great Socialist Republic of India in which Capitalism and Aristocracy vie with liberty, equality and fraternity in never ceasing waves of ups and downs for both groups of contenders. King Mahendra has established a total monarchy in the face of opposition and although he is largely supported and aided by the Indian Government and his Indian sympathisers there are people in India of Nepalese origin who have not much loyalty for the King of Nepal. These people can obtain help from Indians as well as from foreigners in India and organise anti-monarchy activities in Nepal. Considering the fact that in India China has been organising anti-Indian activities by her paid stooges, His Majesty King Mahendra should not be surprised if his subjects obtained help from the Chinese or other foreigners in India to carry on their disloyal activities against their King. And that would not justify any suspicion that the Indian Government had a hand in all that. The Indian Government might also fail to curb the activities of the so-called Nepalese Rebels who might have their bases in India. But then the Indian Government fails to achieve many other objectives too. They cannot stop Chinese intrigues in India. They cannot stop robberies and banditry all over India. They cannot stop Gold Smuggling and the killing of their own officials in and out side India. They cannot prevent rioting, looting of bazars and burning of public vehicles. They cannot arrest tax-evasion and waste and misuse of public funds. So that King Mahendra's idea, that his India-based rebels have the sympathies of the Government of India is utterly imaginary and untrue. As a matter of fact, if the Indian Government had actually helped those rebels, he would have been finished long ago. Those forces within India which fought for liberty, equality and justice for the Indian people, have died out completely under the tender care of the poitical leaders of India, since 1947. King Mahendra's advisers are barking up the wrong tree entirely as far as the Nepalese rebels are concerned.

A. C.

Sri Prafulla Chandra Sen

Sri Prafulla Chandra Sen, the new Chief Minister of West Bengal has proved himself to be capable, hardworking and a wise man within a very short time after taking over the Chief Ministership. The way he handled the recent rioting by the unruly elements in Calcutta showed his reticence as well as strength of purpose. The rioting stopped within a few hours. He has not many body guards, nor are the approaches to the offices of the Chief Minister packed with armed men. He moves freely among his people and grants interview to hundreds of people regularly. There is an atmosphere of work in Writers' Buildings now and the wanglers no longer vitiate the air in the outer corridors. His idea of a minister for Calcutta affairs is a good one and if he can find the right man Calcutta will again be a great clean city in which people will find ample scope for honest work and good living combined with high thinking. The people of Calcutta are now living in a nest of vice and in the company of thousands of unscrupulous adventurers to whom a healthy economy is poison. Calcutta must he cleaned up, physically, psychologically and in its socio-economic set up.

Police !

They say that the police are comparable to the rainbows in the sky. For they always show up after a strom and when all the damage has already been done. Then they show great restraint, self-control, reticence and all those other qualities of the mind, heart and soul which have given opportunity to scholars to coin a thousand abstract

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

like sympathy, compassion, consideration, sightedness, ultimate implications, consciousness of consequences, repercussions and what To compare great things with matters of import the police always watch tram cars burnt or houses being set on fire with culate dignity, poise and equanimity. The among them say "Jai Ramji" *sotto voce* wait for inspiration while the educated from Count Leo Tolstoy and Mahatma hi and abstain from action during the period it takes for passions and tram cars to burn The police also think deeply and well before go out of their thanas to catch thieves, ress rowdyism or protect people from erers or drunks. A thana which is within a throw from a place where the law is being n, may be a thousand miles away for all good its nearness does to the victims of law ers. The police roll up after half-an-hour or ll day and begin to cross examine all who nothing about the incidents. It is a good that the police do not guard our frontiers, had it been so, they would have found the se in madras before they woke up.

A. C.

l Retention Prices

The Government of India's recent decision the Ministry of Steel and Heavy Industry to ride the recommendations of the Tariff mission, a decision entirely without any precedent, in respect of the retention prices paid to the two main producers of steel the private sector for the two years 1960-62 to slash the recommended retention price as much as Rs. 27.50 per tonne, appears ve mortified not merely the producers conl themselves, which would but be natural, also the entire industrial world of the ry in the private sector. That the Govern's decision to materially ignore the reendations of the Tariff Commission in this lf was entirely without precedent, appears to have deepened the displeasure of all rned.

Shorn of unnecessary complexities, the facts ll seem to be that in dealing with the question essing a fair level of price to the producers, Tariff Commission had assumed certain norms judgement which consisted mainly of, first, assuming production norms at 90 per cent of the rated capacity of the plants concerned. This appeared, in the Government's estimate, too low a production-norm which, in their view should have been assumed at 100 per cent of rated capacity. Actual production quantum during the period in question appears to have aggregated at an average of 80.5 and 90 per cent respectively by the two producers concerned and the norm that the producers desired to be adopted by the Commission for assessing a fair retention price was 80 per cent which was not accepted. The Commission also refused to include annual bonuses to workers and managing agency commission as part of production expenses and a few other demands made by the producers. In the matter of depreciation, while the Companies concerned desired that it should be assumed at 6.25 per cent on additions to gross block since 1952 and a consolidated amount on the old block, the Commission was prepared to concede an over-all rate of only 5 per cent as being 'more than adequate.' In computing the standard block for assessing a fair return on investment also, the Commission had refused to accept the higher norm desired by the producers and allowed Rs. 1,300 per tonne of saleable steel for the purpose, while providing for a gross return of 8 per cent on the block which, after taxes would leave a net return, it is contended, of only 4 per cent from out of which, moreover, the charges covering bonus to workers and managing agency commission would have to be met. Again, provision for working capital has been maintained by the Commission at six months' works costs and the interest on such capital at the old rate of 5 per cent. On these, what the industry apparently considers already unfair bases, the Tariff Commission had recommended a retention price of Rs. 550 to the producers.

The fact that the Minister of Steel and Heavy Industry, contrary to usual past practice in this behalf, refused to accept the Tariff Commission's recommendations, and slashed the actual price allowed by Rs. 27.50 to Rs. 522.50 would very naturally give rise to a great deal of indignation in the affected quarters. The reasons advanced by the Union Minister concerned for such an unusual decision, includes an element of Rs. 8 per tonne credited by the Tariff Commission for financing repayment of special advances given to the producers by Government from Steel Price

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Equalization Fund. This would seem to be somewhat extraordinary in terms of the Government's own recommendations, in March, 1961, to the Tariff Commission in this behalf. The Government's desire to compute standard block on the basis of production at 100 per cent of plant capacity instead of the 90 per cent assumed by the Commission, thus reducing the standard block from Rs. 1,300 per tonne as assumed by the Commission to Rs. 1,170 per tonne, accounts for a further slash of Rs. 16.50 per tonne in the recommended retention price. This part of the Government's decision is, obviously, based upon the assumption that inefficiencies in production performances, reducing actual production quantum below rated plant capacity, should not be allowed to be reflected in the retention price. The producers, however, contend, and we think with a great deal of reason, that for most of the factors responsible for shortfalls in production performances, it is the Government and their various agencies upon whom the producers have to vitally depend for their production processes, are primarily responsible and the producers do not deserve to be penalized for defaults for which they are not wholly responsible or over the causes of which they have no virtual control. Finally, the Government consider an allowance equivalent to 8 months' works costs as necessary working capital especially in view of the large funds they hold from intending purchasers without interest, a little too high, and which has accounted for a further element of Rs. 3 per tonne in the total slash made in the recommended rentention price.

The decisions of the Minister of Steel and Heavy Industry in this behalf could not be altogether rejected as being wholly irrational or unfair, having especial regard to the continuously rising cost of steel since 1953 and the correspondingly increasing retention prices that have been allowed to the producers from time to time since then, if the Government themselves were not very substantially responsible for the rise in cost of production over the years. If coal and other raw materials deliveries could be assured on schedule of a standard quality, if prompt transport of the finished product to the markets concerned could be regularly assured in adequate volumes, if production lags were not created by reasons of Government's failure to provide the necessary servicing and maintenance facilities for a great deal of which every heavy industry in the country is necessarily beholden to the Government; if freight rates had not gone up substantially, the cost of raw materials maintained at an even level; if the wgaes bill had not been allowed to be very substantially inflated which they have done and, in most cases by direct or indirect Government pressure or intervention, it would be only reasonable to expect that Government should do everything possible and within their command, to maintain steel prices at a steady and stable level and the case for increasing retention prices to the producers concerned would have, indeed, been a bad one. Especially so, having regard to the fact that steel not merely provides the most vital industrial base for development and growth of the national economy, but also that by thus allowing steel prices to rise in the manner it has, the basic cost differential between indigenous steel and the landed cost of imported steel of corresponding specifications and quality, have almost disappeared during the last few years of expansion of this industry in the country.

Another important factor which, we feel, needs to be very carefully taken into account in this context and which, as far as we are aware, does not seem to have so far engaged official attention, is that Government's national labour and employment policies over the years of development have been such, that while the steel industry has been developed and expanded, so far as its new plant (or additions thereto as the case may be) and equipments are concerned, on a primarily capital-intensive basis, the organization of the industry so far as personnel and manning are concerned, still remains overwhelmingly labour-intensive in character and, in consequence, it not merely keeps productivity at a low level, but also that, in the circumstances, all endeavours towards developing productivity prove expensively futile.

Finally, in the context of the present controversy, one thing that appears to us to have absolutely no justification is to have made the steel producers wait for a decision in respect of the retention price they would be allowed for a period of some two and a half years after it was due. Already another fresh period in respect of which a further decision in this regard would have to be taken has commenced since April last, and it is only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sonable to expect that a final decision is taken d communicated to the parties affected without inexcusable dilatoriness that has been charac- ing Government's action in this behalf. This s unnecessary loads upon the capacity of the dustry (of course in the private sector) to raise essary additional capital which has already n rendered difficult by the attenuated profits, pared to other equities, the investment in d has to be reconciled to.

K. N.

Amazing Attack On Fundamental Rights

That a Minister of Government should, m time to time, be given to extravagant erances on this and that public question, ecially when the Minister concerned may pen to belong to the Union Council of nisters, is not surprizing. Such verbosity uld, from our experiences of the past een years and more since the Congress s ascended to the pedestal of power, rmally seem to be a principal alification for the job of a minister of vernment. And, as verbosity is bound to extravagance in Ministerial utterances s come to be regarded almost as a normal dition of existence in the country of ich, therefore, no one considers it either essary or even worthwhile taking any ice of. After all, any intelligent student of rent public affairs appreciates that a great l, often a colossal measure, of ignorance ich would seem to be a qualification for nisters has to be screened off the public w, and what better cover could there for such ignorance than the all- vasive one of verbosity ? Besides, every tral Minister has, before him, constantly noble example of his Chief who, if there e any Olympic contest for loquacity, uld surely leave any other Prime Minis- of the world, past or present, easily half ld behind. A member of the Council of nisters would not be considered human, he did not endeavour to emulate such le example.

And, when a Minister happens to be of the fairer sex, it is only natural that should talk twenty-four to the dozen. one should, at least, we do not,, mind. a privilege which she has derived from e Maker and no one, surely, has the right to question the propriety of a woman's spoutings ? Apart from being fundamentally harmless, they are often very highly diverting. They have, usually, the soporific qualities of a soothing hypnotic and very seldom does one take any serious account of actually what a woman may have been talking about. That is, perhaps, why no public notice seems to have been taken of a most devastating thing that Dr. Sushila Nayyar, Union Minister of Health, has been reported to have said at a recent seminar on Drug Standard Control organized by the Indian Pharmaceutical Association in Bombay, attended by a sprinkling of distinguished doctors, chemists, pharmaceutists, and representatives of leading manufacturers of drugs and medicines in the country. While earlier faced with the question of the need for official measures to prevent transactions in spurious and substandard drugs, Dr. Nayyar trotted forth all sorts of excuses why it was difficult to take such measures and, apparently, only very reluctantly agreed to the adoption of measures for tightening inspection procedures with a view to conformation to the requirements of the Standardization of Drugs Act, she appears now, at this Bombay seminar, to have swung right off to the opposite extreme and is reported to have made a perfervid appeal to lawyers not to accept the defence of anyone accused under the Drugs act who, she said, were "worse than murderers." Such a statement, cutting away as it does at the very roots of the rule of law and justice, would be ordinarily considered amazing if it came from any responsible person, but it is all the more devastating when it is made by a Minister of Government who has, obviously, been speaking in her official capacity !

While we have not the least sympathy for a drug-faker and would most fervently endorse any proposal for meting out the most exemplary punishment to anyone, however highly placed he may be in the social or political ladder, who has been proved guilty of such criminal act, we cannot bring ourselves to overlook the implications of this statement, what can only mean destroying the very basis of criminal jurisprudence. The fundamental principle

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of law and justice, that every man accused of however hienous a crime, must be held to be innocent until he has been proved guilty beyond any shadow of doubt, has always been regarded as a salutory one and we cannot think of any reason why this should now be sought to be repudiated in the manner that Dr. Nayyar would have it done. This would, if seriously taken, repudiate the very fundamental basis of civilized existence and would, patently, be an affront to the very foundations upon which the Constitution of India has been laid.

What would seem all the more amazing in this connection is that no one seems to have taken any serious notice of this most mischievously insidious observation of the Union Health Minister which, if it were really to be publicly and officially endorsed, would mean the destruction of the principles of 'liberty and justice' and would portend tyranny of the most obstreperous kind which no one with any pretensions to civilized behaviour could afford to countenance or even overlook.

But, to revert to the main question of drugs adulteration, we have already held that the evil cannot be stamped out either by an appeal to the drug-faker's apparently non-existent moral susceptibilities nor by overt threats of a reign of terror as Dr. Sushila Nayyar would have it, but by a careful administration of the provisions of the Standardization of Drugs Act and, where necessary, by tightening the provisions of the Act by suitable amendments of the statute, where they are found to fall short of current requirements. The Drugs Act was passed and brought on to the Statute Book as far back as in 1940 and the deliberations at the Seminar at which such a devastating statement is reported to have been made by the Health Minister, appears to have clearly brought out that the definition of 'spurious drugs' in this Act is so loose that not even ten per cent of those detected can at all be brought to court and of these only a very microscopic percentage is actually ever convicted. It is amazing that it should have taken more than two decades to find out this simple fact, for now has not been either the only or the first time, that the question of spurious drugs has obtruded itself upon the public consciousness. It should not also, we feel, be difficult to unearth, given the necessary honest determination for the purpose, the the actual sources of supply and channels of distribution of spurious or sub-standard drugs or to find out who actually it is that puts and maintains them in business. The principal victims of the drug-faker's art would seem to be those large buyers in bulk who do not usually conduct their business across the counter, and consist, mainly, of large Government institutions and other similar public organizations. A careful probe into the system of their purchase machinery, we feel, might be revealing of where is it actually that the seat of the evil has its habitat.

K. N.

India's Cotton Markets Abroad

Traditionally Jute manufactures and cotton textiles, closely followed by tea, comprised the principal articles of India's trade abroad. Even with the changes that have been occuring in the pattern of India's foreign trade under the aegis of national development planning, jute manufactures and cotton textiles seem still to be accounting for a good fifty per cent of the country's total trade abroad. Of these, so far as Indian cotton-textiles are concerned, the picture has of late been a steadily deteriorating one. This appears to have been very forcefully brought out at a joint meeting of the Import and Export Advisory Committees held early last month in New Delhi. While targets of cotton textile exports have been placed at the figure of 800 million yards expectations of actual export performances during the current year, it seems, is not likely to even reach the 500 million yards mark and would be unlikely to exceed 300 million yards in the following year. Actual earnings in terms of foreign exchange would be likely to be proportionately less than even such attenuated exports would be expected to provide because of a drop in international prices.

Indeed, India's exports of cotton piece-goods have been in pretty bad shape of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...e, especially so since 1960 and in the ...llowing year they touched the lowest ...el in terms of yardage since 1956. Dur... the first quarter of the curret year it ...ppears to have further substantially ...eriorated to something like 134 million ...ards (compared to 152 million yards dur... the corresponding period of last year), ...d the provisional estimates of exports ...ring the second quarter (April-June) ...ppears to have been placed at the even ...enuated level of 110 million yards com...ared to some 139 million yards of the cor...sponding period of last year.

This steadily declining volume of ...dia's cotton textile exports during the ...st two years appears to have been attri...ted, primarily, to the development and ...pansion in the indigenous industry in ...me of our traditional importing countries, ...hough part of it must also, it is said, be ...tributed to the tightening raw materials ...sition. But that a very large part of this ...teriorating trend in our cotton textiles ...ports must also be attributed to the ...vere competition that India is to-day fac...g in the world market, is a fact which ...em to be undeniable. In India's tradi...nal markets in South-East Asia, West ...sia and Africa, competition is said to be ...pecially keen from Japan and China. ...t that even severer competition is likely ...be have to be faced from newer suppliers ...ch as France, West Germany, the East ...ropean countries, Turkey and Egypt, ...ould also seem to be equally inevitable. ...e visible signs of the overall effect of ...is on our textile exports is already re...ected in the fact that despite an expan...on in the total international trade in this ...mmodity in 1960 by as much as 11 per ...nt over that of the preceding year, ...dia's exports during the corresponding ...riod declined by the even more substan...al margin of 14.7 per cent. Trends in the ...llowing year appear to have been even ...ore dismal. In 1961 exports of cotton ...xtiles from the major communist coun...ies are found to have dropped by 6.3 per ...nt, but India instead of having been able ...profit from this circumstance, appears ...have further dropped her trade by 17.4 ...r cent. This would seem to be an unmistakable indicant of the fact that Indian cotton piecegoods are being steadily and increasingly prized out of the world market.

The implications of the situation, especially in the context of India's widening unfavourable trade balances, would seem to be very serious indeed. To establish new lines of exports in the world market, if at all we are able to do so, would not be an easy matter to accomplish and will, in any case, call for a great deal of time and sustained effort. It would seem, therefore, to be vital that India makes every possible effort to arrest the decline in one of her traditional export commodities, one of the most important among the few that the country can boast of, which had long been established in the world market. The principal reason for this decline would seem to be the mounting costs of production of Indian textiles and our corresponding inability to compare favourably in prices in the world market. One of the country's most fruitful textile exports years, 1951, appears to have been boosted by the fact that the price of Indian cotton then was some 21 per cent below world prices and the fact that India is no longer able to maintain this one-time enviable position may be, correspondinly, accounted for by the fact that currently the price of Indian cotton has gone up to very nearly a level where it is found to be approximately 25 per cent above world prices. The conclusion that would seem to emerge from these facts is that the dominant element in the costs of production of cotton textiles is, perhaps, not so much their manufacturing costs, as the price of raw cotton. If this fact is found to be tenable, it would seem to take away much of the substance from arguments in favour of rationalization of the cotton mills industry in the country for, while the process may reduce manufacturing costs to a certain extent, it cannot, surely, be expected to eliminate the disadvantages derived from the prices of cotton which would seem, in this country, to be so largely out of parity at the level of international transactions.

Such a view of the matter would seem to be supported by the fact that the export prices of Indian cotton textiles appear to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have been following the movements in cotton prices in the country. Thus, taking the year 1959 as a base, the index of cotton prices rising to 109.7 in the following year, pushed up the export price index of Indian textiles to 123.8, a decline to 105.6 in 1961 is found, again, to have correspondingly reduced the export price index to 118.2. If, therefore, India really intends to maintain her traditional supremacy in the world textiles market, something must be done to maintain the prices of raw cotton in the country at a level of competitive advantage with world prices of the commodity. The question, primarily, is not one of a remunerative price to the cotton growers in the country,—measures may, we feel be devised to protect their basic interests notwithstanding,—but the more vital one of our export existence, in the especial context of our present critical foreign exchange shortage. It should not, we feel, be impossible for the Planning Commission to evolve appropriate measures, difficult though it may be, for covering the vital needs of the situation.

Mysterious Happenings in New Delhi And Trivandrum

The news, a week ago, that Union Commerce & Industry Minister, K. C. Reddy, had been appointed Governor of the Punjab was, indeed, surprising. But what would seem to be almost shocking is that this news from the Capital was followed, the very next day, by the further announcement that Shri Reddy had, after initially accepting the offer of this new appointment, rescinded his earlier acceptance, and that, therefore, Sri Pattam Thannu Pillai, Chief Minister in the Kerala PSP-Congress Coalition Government, had been made the offer and, on his acceptance, been oppointed Governor of the Punjab.

What would seem to be not merely surprising but of especial significance, is that the earlier decision to offer the appointment to a Cabinet Minister of the Union Government of Shri K. C. Reddy's stature and seniority was made at a time when the Prime Minister was away from the country. The prerogative of making changes in the personnel of his Council of Ministers is presumably that of the Prime Minister alone and the constitutional propriety of a junior Cabinet Minister, even if he happened to hold the vital portfolio of Home Affairs and even, moveover, having regard to the Prime Minister's clearly laid down instructions that in the absence of himself and of his second-in-command, Shri Morarji Desai, from the country, although Shri Jagjivan Ram, as the senior-most Minister, would preside over Cabinet meetings, it would be the Home Minister, Shri Lalbahadur Shastri who would have the authority to take decisions in behalf of the Prime Minister, presuming to effect a change in the composition of the Council of Ministers at his own discretion, would clearly seem to be in question. The Home Minister, it may be conceded may have had every constitutional and legal authority to fill in a vacant Gubarnational Office by a person of his own choice. But where such a choice may have inherent in itself a consequential change in the composition of the Government's Council of Ministers, he would seem to have been clearly overstepping the bounds of his authority. It may be argued that the Home Minister's choice of Shri K. C. Reddy as a possible Governor of the Punjab had the latter's fullest agreement initially and that, therefore, the question of propriety in respect of the Home Minister's procurement of the necessary Presidential sanction to this appointment would not seem to arise. Such a view of what has actually happened cannot be accepted, because since the appointment clearly involved a change in the composition of the Council of Ministers, it would, as clearly, be an encroachment by the Home Minister upon the closed field of the Prime Minister's personal prerogatives. The fact that the Prime Minister had, in clear and distinct terms delegated the powers of decision in his behalf to the Home Minister during his absence from the country, should not make any difference to the basic principles of constitutional propriety, because the powers of both initiating and effecting changes in the composition of the Council of Ministers must be exercised by the Prime Minister alone and cannot, in any case should not, be delegated to any other Minister who may, otherwise, be authorised to act on behalf of the Prime Minister during his absence from the country.

What may seem equally surprising in this connection is that the Home Minister would, at all, presume to take such an obviously invidious decision at a time when the Prime Minister was away from the country. What emergency could

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...arnational vacancy occasion that its filling ...d to be so hastily decided upon even if it may ...volve a change in the Government's Council of ...nisters and, moreover, which could not wait ... the Prime Minister's return to the country ... less than a week later, is beyond ordinary ...prehension. The suspicion would seem, natu...ly, to arise that this was a manouever to which ...e Prime Minister was privy already before he ... the country and may have had his fullest ...quiescence. If such a suspicion has any subs...ce in fact, it is clearly, a most dishonest intri...e in which he must have allowed himself know...ly to be involved. But if the Home Minister ...y have, by any chance taken such a decision ...rely at his own personal discretion, it must ... regarded as most improper and presumptu... on his part and would deserve to be dealt ...h in appropriately severe measures. In the ...on the Home Minister had endeavoured un...cessfully to take, he had not merely been ...ating well-established conventions of Parlia...ntary democracy universally obeyed and res...ted, he had also been setting up precedents of ...e gravest and most far-reaching implications.

Of almost like gravity, in our view, was Shri ...C. Reddy's reported initial acceptance of the ...r of this appointment for, thereby, he in...ed himself in an impropriety which a person ... his seniority and sagacity should not, clearly, ...e done. He, however, pulled himself out of ...s highly questionable transaction just in time ...ch left the Home Minister in the unenvious ...tion of the too clever proving himself an ...ct fool. It is, perhaps, in this light that his all ... hasty and obviously face-saving offer to the ...genarian PSP Chief Minister was made. But ...t would seem to be equally surprising is that ...m Thanu Pillai was reported to have lite... jumped at the offer and accepted it with ...st unseemly alacrity. Why should a Chief ...ster of a State at all agree to change his ... of power for the merely ornamental one of ...vernor if he had no apprehensions of being ...n out otherwise, would also seem to be a ...stion that would be pertinently asked in this ...ection. If, Mr. Shankar in Trivandrum ... his masters in Delhi are really truthful when ... insist that all is love and peace in the Con...-PSP joint family, Pattom Thannu Pillai's ... acceptance of the Governorships of the ...ath would seem to involve a mystery beyond the comprehension of ordinarily honest intelligence.

The whole transaction, from its early beginnings and derailment in New Delhi to its ultimate and rather unexpected conclusion in Trivandrum, would seem to exude mysterious happenings under the counter which might not, for all that may be guessed, have the qualities that would be ready to fearlessly expose themselves to the honest light of the day.

Sons Of The Soil

In an impassioned address made before the State Committee on Employment, Shri P. C. Sen, Chief Minister, West Bengal, is reported to have pleaded for a certain measure of priority to be given by employers to the natives of the State in selecting their future employees. The Bengalees, he said, were suffering from a growing sense of neglect and, in the special circumstances created by the influx of refugees and the daily increasing burdens of population, made them deserving of a certain measure of especial consideration in this behalf. Giving details, the Chief Minister said that the average holding of cultivable land in the State, a meagre .33 acres (approximately 1 bigha or 14.400 sq. feet), was the lowest in the world and was wholly unable to support the burdens of the State population, whatever the extent of artificial aids like irrigation water or fertilizers that may be pressed into it. The need, therefore, would seem to be both insistent and obvious for the establishment of more small-scale and cottage industries in the State and for a greater proportion of absorption of the unemployed Bengalees in organized industry. The Chief Minister was, as could be expected, careful enough to make it abundantly clear at the very outset that he was not being either provincial or sectional while preferring this plea and that the forces and realities of economics have been compelling him to do so.

While there is every reason to endorse the Chief Minister's plea in this behalf with the utmost emphasis that we could command, we really do not appreciate the apology under which he claims to advance his cause. It has been a common enough experience lately that whenever the question of providing a certain measure of priority to the natives of the State may come up, Congress and Government leaders would seldom

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wish to be identified with such a proposal and when, on occasions, sheer force of circumstances may compel them to do so with obvious reluctance, they are apt to turn immediately apologetic as if by doing so they were alinigning themselves with forces of reaction. Occasional exceptions to this general rule among Congress stalwarts have been known to have ended in loss of favour for those who may be bold enough to prove themselves an exception in this regard. An outstanding case in point was that of Janab Abdus Sattar, formerly State Labour Minister who, by his perfervid appeals for more employment to the Bengalees, earned the deepest disfavour of his leaders and those who hold the destiny of Ministers in the palms of their hands.

In the matter of employment, we feel, a fundmaental postulate has to be clearly stated and understood. It is that except where specialized skills or training are called for and, where a suitably qualified candidate may not be locallly available possessing such skills, employment should, generally, whether be it in Government, organized industry, commerce or trade or the professions, go to local residents in preference to immigrants from the outside. A natural distinction can and, we feel, should be made between what we have been trying, for lack of a more suitable vocabulary, to describe as local residents as distinct from immigrants from outside meaning, thereby, those whose homes are in the immediate neighbourhood of the locales of employment and who have no other homes elsewhere to go to, as distinct and apart from those who are only temporary sojourners within the locale of the State and who have, and would go back on superannuation, if employed here, to their homes elsewhere. This is a universally observed norm in the distribution of employment all over the world and there does not seem to be anything either parochial or anti-national in observing this salutory principle. Even within India such principles have been and are being observed elsewhere without anyone having to feel the least apologetic about it. In Bihar, for instance, the State Government openly maintains a liason officer of its own at the locale of every orgaized industry in the State to ensure that local residents have the priority in the matter of ordinary employment to which they are entitled. If, on occasions, these machinery of the State Government may go off the rails now and then and abuse the discretion vested in them in spreading and encouraging separatist tendencies, that is obviously most undesirable and should be dealt with promptly and adequately whenever that may happen. Otherwise there need not be as, we believe, there is not, anything in the measures that different State Governments may and, in many instances, are actually taking to ensure, as far as possible, adequate employment to the permanent residents within the State, that may be in clevage with the requirements of national integration.

In fact, Bengal and the Bengalees are, we feel, deserving of especially sympathetic consideration in this matter. She has always been saddled, ever since Independence, with unusual difficulties, some of them traditional, and extraordinarily heavy burdens, which have devolved upon them by reasons of history for which they had no responsibility whatever. The impact of the Partition of the country, decided at the apex of leadership without any reference to the people who were bound to be the most severely affected in consequence, and the mass exodus of displaced persons (it hurts our sensibility to call them refugees as if they had no moral rights here) have, together laid such burdens upon the State which its physical and geographical resources are wholly unable to carry. Organized industry and trade in the State which, next to Government, control the largest sources of employment are mostly under the control and at the disposal of outsiders who have generally always preferred immigrants from their respective home States than the local residents. These outsiders, representatives and mouthpieces of the largest group of vested interests in the country, have not merely always exploited the resources of the State and its people, they have made living and life in all metropolitan and urban areas well-nigh insupportable by their speculations in land to such an extent that the Bengalees as a whole, manual and white collar workers alike have been virtually reduced to the status of homeless vagrants in their own homes. If, in the circumstances, it is insisted that the children of the soil must be allowed a certain measure of priority in the matter of employment and other things this is the least of their rights and there is not the slightest reason for anyone to feel apologetic about it.

eign Delegations And Travelling For Pleasure

In a recent statement attributed to the thorities of the International Air Trans- t Association, it is said that if, instead of ntinuing their present blanket restric- ns upon the country's nationals against sits abroad on holidays or for pleasure, Government of India were to place a n upon the innumerable visits abroad Indians on international delegations of sorts of description, both official or erwise, which do not, ordinarily, seem serve any visibly useful purpose at all, e measure would, on the one hand, help earn a great deal of reciprocal foreign change to the coffers of the Governmentile, at the same time, preventing the stage of and ensuring the conservation a great deal of precious exchange which thus being uselessly frittered away. ile it may not be entirely realistic to thdraw all current restrictions against official foreign travel where foreign ex- ange allowances have to be conceded for e purpose, we have certainly been unable find complete justification for the Gov- ment of India's blanket measures in this half. For one thing, they are not, as y presumably cannot, be enforced to e extent provided by the rules formulat- in this behalf. For another, the loophole vided by the provision for permitting eign travel where no foreign exchange mits are sought, as for instance when intending traveller is presumed to be ying at the expense of a friend or rela- e resident in the country of his destina- n, opens up a great deal of scope for otisms of one kind or another on the one d, and a great deal of illicit transactions foreign currency both within the country d abroad which cannot be entirely un- own to Government authorities and ich cannot, moreover, do any good to the dit of the country's reputation or cur- cy. It were far better if, instead, the vernment were able to devise measures ich would enable a certain measure of eign travel by Indians to be undertaken hout having to resort to all sorts of pre- ications and transactions involving legal lapses and moral turpitude. After all, the proportion of the population who are able to indulge in the luxury of foreign visits at their personal expense must be infinitesimally microscopic and, so long as foreign exchanges for the purpose is granted to them on a fair and reasonably moderate basis, the total dent of such allowances upon the foreign exchange funds could not be very deep. On the other hand, it is quite possible, even probable, that such measures may stimulate unofficial reciprocal visits to the country by foreigners in increasingly larger numbers and that may, instead of a net debit by reason of Indians visiting abroad, provide a substantial net credit to the foreign exchange funds of the country. The proposal, we feel, is in any case well deserving of careful consideration on its own merits.

But if we would support the IATA's suggestions in the above matter with a measure of if not quite reservation, at least qualification, we have no hesitation whatever in wholeheartedly endorsing their views in respect of almost the wholesale uselessness of our innumerable foreign delegations abroad. They not merely waste a great deal of foreign exchange which the country cannot, at the present juncture, at all afford to have so wasted, but having regard, frequently, to the composition of most Indian delegations to international forums abroad, they must also be destructive, in a large number of cases, of the country's reputation in foreign lands. We woud not even exclude all official delegations abroad from the purview of such restrictions as have been suggested in this context, unless a definite prior estimate can be made of results that are likely to flow to the country from such delegations abroad. Our experience of such official delegations abroad have not always been very happy. How many persons or teams, for instance, have visited countries abroad during the last ten years or so on the avowed objective of 'export promotion'?—and what actual net result has eventuated in consequence, is a question that one might ask? What would be more to the point would be the question of the qualification of such official visitants(!) abroad except that they, or at least

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

some of them, may have been somebody's nephew or an in-law? We have no doubt that if an impartial assessment were to be made of these delegations broad, Indian participation in most of them would be found to have been either wholly unnecessary or, atleast, completely useless. It is probable that a great proportion of such visits on even purchase missions or export-promotion forays would have to be classed in the same category. Is it not time that something was done to permit none but only selective official travel abroad and only of those whose visits are genuinely expected to yield some results? We know that there is a circular issued by the Union Finance Ministry in force which discourages all but essential foreign official travel, but what we are not sure of is whether persons selected for official visits abroad are really passed through a high-level and impartial selection procedure which seem to be absolutely essential in the circumstances.

The National Library

We have perused with keen interest a copy of the Annual Report of the National Libary, Calcutta, for the year 1958-59 which has so kindly been forwarded to us by the Librarian to reach us only last week. It is an interesting document and reflects, in a measure, the widely useful purpose the Library serves to the intellectuals of the country, especially to those of the city of Calcutta, in the face of the rather difficult circumstances in which the institution has to function and the very inadequate resources placed at its disposal by Government. But since the report relates to a period which has elapsed nearly four years ago, circumstances may have substantially altered in the meanwhile; we do not know. We wish the Library authorities were a little more expeditions in publishing their Annual Reports for, a report now of conditions that obtained some four years ago, can hardly be of any practical utility.

We also wish the Report included a brief historical retrospect of the institution's origin and development which would not merely be interesting but would be likely to have highly educative values. The National Library, which was first established under the name of the Calcutta Public Library as a tribute to the universally respected memory of the late Lord Metcalfe and was initially housed in the Metcalfe Hall on Hare Street, started as an unofficial organization and amongst its past Secretaries and Librarians (the two posts used to be combined in one single incumbent) were included such outstanding figures as the late Harish Mukherjee, the intrepid Editor of the one time famous Calcutta periodical, the Hindu Patriot, the late Bipin Chandra Pal and others. The Library, which was subsequently taken over by the Government of India and renamed the Imperial Library, continued to be housed in the Metcalfe Hall for long years afterwards until, really, it had outgrown the accomodation that the premises could provide and included such distinguished personages as the late Principal Harinath Dey, after its officialization, among its Librarians. It would, we feel, be a very interesting and educative historial document if a compendium were to be published dealing with the origin and development of the institution either separately or as an addendum to its next Annual Report.

HAROLD LASKI AND THE CONCEPT OF INDIVIDUAL LIBERTY

By RANI MUKHOPADHAYA

Senior Lecturer in Economics and Political Science, Hooghly Women's College.

ideal of liberty has inspired the philosophers all ages. As an essential quality for the develop- of the human personality, this ideal has much discussed and interpreted in different by thinkers of different times.

John Locke appears to stand for "absolute just and true liberty, equal and impar- liberty."[1] In *A Letter Concerning Toleration* get a complete view of his arguments for and religious liberty. "The Commonwealth to me," he says, "to be a society of men stituted only for the procuring, preserving, advancing their own civil interests. Civil rests I call life, liberty, health, and indolency body; and the possession of outward things, as money, lands, houses, furniture, and the It is the duty of the civil magistrate, by the partial execution of equal laws, to secure unto the people in general, and to every one of subjects in particular, the just possession of things belonging to this life."[2] "The whole isdiction of the magistrate," he continues, aches only to these civil concernments, and that civil power, right, and dominion, is bounded confined to the only care of promoting these gs; and that it neither can nor ought in any nner to be extended to the salvation of souls."[3] d, "the care of souls cannot belong to the il magistrate, because his power consists only outward force; but true and saving religion sists in the inward persuasion of the mind, hout which nothing can be acceptable to God."[4] While Locke defends the freedom of soul m undue encroachment of civil magistrates, S. Mill—the Benthamite utilitarian thinker— es to the other extreme and aims to safeguard individual, even his eccentricities and oddities, against the attack not only of the State but also of society. He unequivocally declares, "over himself, over his own body and mind the individual is sovereign." Mill asserts, "one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of civilized community, against his will, is to prevent harm to others." The State and society, according to him, can check the other-regarding action of the individual but not his self-regarding action. "His own good," he says, "either physical or moral, is not a sufficient warrant.....The only part of the conduct of any one, for which he is amenable to society is that which concerns others."[5] Mill demands that freedom of opinion, whether right or wrong, should be guaranteed to all individuals. "If all mankind," he declares, "minus one were of one opinion and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind."[6] And "if we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed."[7] "No one can be a great thinker," he observes, "who does not recognise, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead."[8] "Genius can only breathe freely in an

atmosphere of freedom;"[9] so he thinks that "protection against the tyranny of the magistrate is not enough : he needs protection also against the tyranny of the prevailing opinion and feelling."[10] For the harmonious development of human faculties he tries to protect the individual against the tyranny of the State and Society and he is also equally conscious about the dangers of democracy, that is, the tyranny of the majority.

To Hobhouse "the foundation of liberty is the idea of growth . . . . Liberalism is the belief that society can safely be founded on this self-directing power of personality, that it is only on this foundation that a true community can be built, and that so established its foundations are so deep and so wide that there is no limit that we can place to the extent of the building. Liberty then becomes not so much a right of the individual as a necessity of society."[11] Of course, he admits that liberty cannot "dispense with restraint," and restraint "is not an end but a means to an end, and one of the principal elements in that end is the enlargement of liberty."[12] Hobhouse[13] denies Mill's idea of the self-regarding and the other-regarding action of man and believes in the distinction "between coercive and non-coercive actions" of the State. "The function of the state coercion," he holds, "is to override individual coercion, and, of course, coercion exercised by any association of individuals within the State. It is by this means that it maintains liberty."[14] According to him, "there is no intrinsic and inevitable conflict between liberty and compulsion, but at bottom a mutual need."[15] And "liberty and compulsion have complementary functions, and the self-governing State is at once the product and the condition of the self-governing individual."[16]

Hobhouse does not overlook the fact that certain economic conditions are necessary for the development of human liberty and "the function of the State is to secure conditions upon which its citizens are able to win by their own efforts all that is necessary to a full civic efficiency. . . . . It is for the State to take care that economic conditions are such that the normal man who is not defective in mind or body or will can by useful labour feed, house and clothe himself and his family. The 'right to work' and the right to a 'living wage' are just as valid as the rights of person or property. That is to say, they are integral conditions of a good social order."[17]

Thus, while fighting for individual liberty Hobhouse is more conscious about the need of state regulation and of certain economic conditions of society than J. S. Mill.

Professor Laski appears to have been profoundly influenced in his enunciation of the concept of liberty by these views. The central focus of attention for him is the freedom of the individual in all phases of human activity. With this end in view he challenges the concept of idealism.

"What is termed the idealist theory of the state," he thinks, "is broadly the argument that individual freedom means obedience to the law of society to which I belong. My personality, it is said, is simply an expression of the organized whole to which I belong."[18] According to the idealistic point of view, to quote Laski again, "my true liberty, is, therefore, a kind of permanent tutelage to the State, a sacrifice of my limited purpose to its larger end upon the ground that, as this larger end is realized, so I, too, am given realization. I may, in fact, be most fully free when I am most suffused with the sense of compulsion."[19] So Laski denies

9. *Ibid.*, p. 122.
10. *Ibid.*, p. 68.
11. Hobhouse, *Liberalism*, the Home University Library, pp. 122-23.
12. *Ibid.*, p. 133.
13. "If liberty," he states elsewhere, "is a social conception, there can be no liberty without social restrain . . . . Excess of liberty contradicts itself. In short, there is no such thing; there is only liberty for one and restraint for another. If liberty then be regarded as a social ideal, the problem of establishing liberty must be a problem of organizing restraints; and thus the conception of a liberty which is to set an entire people free from its government appears to be a self-contradictory ideal."—See Hobhouse, *Social Evolution and Political Theory*, pp. 189-90.

of the assumptions of idealism" and clares that "my true self is all that I am and And "the ultimate isolation of the indi- is the basis from which any adequate ry of politics must start."[21] "I cannot be- he thinks, "that a man no longer master himself is in any meaning sense free."[22]

Laski defines liberty both in a negative in a positive point of view. "I mean by rty," he observes, "the absence of restraint those social conditions which, in modern ization, are the necessary guarantees of vidual happiness." The absence of restraint lies the "power to expand, the choice by the vidual of his own way of life without imposed hibitions from without. Men cannot, as seau claimed, forced into freedom. They do as Hegel insisted, find their liberty in dience to the law. They are free when the s under which they live leave them without sense of frustration in realms they deem ficant."[23]

But he realizes that the purely negative dition is not sufficient enough to maintain rty. "By liberty," he further asserts else- re, "the eager maintenance of that atmosphere which men have the opportunity to be their selves." Liberty in this sense "is a product rights . . . . Without rights there cannot be rty, because, without rights, men are subjects law unrelated to the needs of personality."[24] Hobhouse Laski feels, however, that certain lations are necessary as "the consequence of gariousness; for we cannot live together with- common rules." "Restraint," he says, "is felt even when it frustrates the life of spiritual chment."[25] By accepting the principle of State lation Laski seems to contradict to a certain nt his own challenge to the idealistic concept. In such a context Laski cannot accept "Mill's ous attempt to define the limits of State inter- ce." Like Hobhouse Laski refutes Mill's idea self-regarding and other-regarding actions of To him "all conduct is social conduct in the that whatever I do has results upon me as a member of society." "Liberty thus involve in its nature restraints," he says, "because the separate freedoms I use are not freedoms to destroy the freedoms of those with whom I live."[26]

Professor Ernest Barker's view may be mentioned in this connection that (I) "the truth that every man ought to be free has for its other side the complementary and consequential truth that no man can be absolutely free;" (II) that "the need of liberty for each is necessarily qualified and conditioned by the need of liberty for all;" (III) that "liberty in the State, or legal liberty, is never the absolute liberty of each, but always the qualified liberty of all;" (IV) that "liberty within the State is thus a relative and regulated liberty," and (V) that "a relative and regulated liberty, actually operative and enjoyed, is a liberty greater in amount than absolute liberty could ever be—if indeed such liberty could ever exist or ever amount to anything more than nothing at all."[27]

Though Laski recognises that regulations and restraints are necessary in social life, yet he is aware that "there will never be liberty in any State where there is an excessive concentration of power at the centre,"[28] and concludes that "without democracy there cannot be liberty." Democracy always implies the existence of multi-party system in which liberty can flourish. Because "the one-party state is under the constant temptation to overpass the boundaries beyond which liberty degenerates into dictatorship."[29] The state-power in one-party state, he says, "becomes the apparatus of the party, so that it can use the supreme coercive power to make its will into law. It is thus able not only to enforce unity on the society; it is able, also, to repress those who oppose the unity of the society by putting them in a position where they are bound to break the law. In this atmosphere, criticism passes easily into conspiracy, and the attempt by a group within the party to capture its control is bound, if it fails, to be something it is difficult to separate from treason."[30]

Thus, according to him, though "the Soviet Union stands in the forefront of civilization,"

yet "there is no liberty to criticise the fundamentals of the regime. There is no liberty to found parties to oust the communist leaders. A man cannot find a journal of opinion or publish a book, or hold a meeting to advocate views which in the judgement of the dictatorship, would threaten the stability of the system."[31]

Like Locke he limits the duties of the State power and favours the retention of rights of individuals which are to be safeguarded by the State. He goes so far as to support the right to resistance against the authority of the State. "Freedoms are . . . . opportunities," he holds, "which history has shown to be essential to the development of personality. And freedoms are inseparable from rights because, otherwise, their realization is hedged about with an uncertainty which destroys their quality." "Nothing, therefore," he insists, "is so likely to maintain a condition of liberty as the knowledge that the invasion of rights will result in protest, and, if need be resistance. . . . . The implied threat of contingent anarchy is a safeguard against the abuse of government."[32] "Liberty," he states, "means being faithful to oneself, and it is maintained by the courage to resist. This, and this only, gives life to the safeguards of liberty; and this only is the clue to the preservation of genuine integrity in the individual life."[33] "Man," according to him, "is nature's rebel, and it is his habit to protest against the will that seeks to bind his will."[34] "Men are entitled to disobey a State," he further observes, "which ceases to secure their self-realization. Rebellion, therefore, is as T.H. Green insisted, a contingent duty on the part of the citizen." And "the only State to which I owe allegiance is the State in which I discover moral adequacy."[35]

Moreover, while Laski admits that liberty exists in democracy, he does not thinks that the "average man can be made happy merely by living in a democracy." "I do not see," he says, "how he can avoid a sense of continuous frustration unless he does. For if he does not share in making the government, if he cannot, where his fellows so choose, be himself made one of the rulers of the State, he is excluded from that which secures him the certainty that his experience counts."[36] "Even in a democracy," he further adds, "we must have ways and means of protecting the minority against a majority which seeks to invade its freedom."[37] The right, therefore, "to the franchise is essential to liberty; and a citizen excluded from it is unfree."[38]

His views in this connection are quite in accord with J. S. Mill's views, who says "in a really equal democracy, every or any section should be represented, not disproportionately, but proportionately. A majority of the electors would always have a majority of the representatives; but a minority of the electors would always have a minority of the representatives. Man for man they would be as fully represented as the majority. Unless they are, there is not equal government, but a government of inequality and privilege: one part of the people ruling over the rest: there is a part whose fair and equal share of influence in the representation is withheld from them: contrary to all just government, but, above all, contrary to the principle of democracy, which profess equality as its very root and foundation."[39]

Laski postulates that certain other conditions are necessary to maintain liberty. Freedom of thought and expression and education ought not to be suppressed. For suppression "drives a small body of men to desperation and to reduce the masses to complete apathy in political matters." "Most men," he declares, "who are prohibited from thinking as their experience teaches them soon cease to think at all. Men who cease to think cease also in any genuine sense to be citizens. They become mere inert recipients of orders which they obey without scrutiny of any kind."[40] We may, again, mention J. S. Mill's opinion in this connection. "The peculiar evil of silencing the expression of an opinion is," he holds, "that it is robbing the human race; posterity as well as the existing generation; those who dissent

the opinion, still more than those who hold

Moreover, freedom can never exist "in the sence of special privilege." "Special privilage incompatible with freedom," Laski insists, because the latter quality belongs to all alike in ir character as human beings." Again, there never be liberty "where the rights of some end upon the pleasure of others."[42]

The primary condition of liberty, he thinks, an expanding economy and man can enjoy rty when his basic material wants are assured. The whole quality of my citizenship," he insists, may be impaired by the manner in which the alth of the community is distributed; and life I seem to enjoy political freedom, the sence of economic freedom may, in fact, render ory my hope of a harmony of impulses."[43]

To Laski liberty and equality are, therefore, separable terms. "The penumbra of freedom," holds, "its purpose and its life, is the movent for equality."[44] But "Equality does not an identity of treatment" as "there can be no imate identity of treatment so long as men are ferent in want and capacity and need."[45] It eans "all the absence of special privilage" and at "adequate opportunities are laid open to all."

Equality, according to him "involves up to e margin of sufficiency of identity of response to imary needs." He advocates the approximate uality of wealth, because "where there are eat inequalities of fortune, there is always equality of treatment," that is, "great inequaies of wealth make impossible the attainment freedom."[46] "Political equality," he declares, "is never real unless it is accompanied by virtual economic equality; political power, otherwise, is bound to be the handmaiden of economic power,"[47] and liberty cannot exist in such an atmosphere.

Finally, Laski concludes that, "every study of freedom is a plea for toleration; and every plea for toleration is a vindication of the rights of reason."[48] "Friends of liberty," he says, "are always a minority in every society. That is why the maintenance of liberty is a thing that has to be fought for afresh every day, lest an inert acceptance of some particular imposition make the field of action accessible to, a general tyranny."[49] Man can be free, he further states, "ultimately, only by willing to be free," and the individual is "the author of his own freedom." "There is never likely to be an enlightened State," he observes, "until there is respect for individuality, but, also, there will not be respect for individuality until there is an enlightened State." And "it is only the emphasis upon equality which will break this vicious circle."[50]

In conclusion, we may say that like other thinkers mentioned previously, Laski develops the whole theory of liberty on the basis of Benthamit utilitarianism. Both Mill and Laski concentrate their attention on the liberty of the individual; both emphasize the importance of the individual and try to protect him from undue encroachment from any quarter. But while Mill, however, is more concerned with the question of social interference with the rights of the individual, Laski being more realistic in this connection like Hobhouse, lays more stress on State interference with the rights of individual and his economic position in society.

NON-GANDHIAN INFLUENCES ON PRE-INDEPENDENCE IDEOLOGY OF INDIAN NATIONAL CONGRESS

By PITAMBAR DATT KAUSHIK,

Assistant Professor in Politics, University of Saugor, (M. P.)

It is popularly believed that Gandhism and the Congress Ideology, during the pre-independence era, after Gandhi had entered the Indian political arena, were one and the same thing. Gandhi himself was often dubbed as a "dictator"[1] and the Congress as a "one man show."[2] The charge was substantiated on the basis of a number of facts. To mention but a few examples it was pointed out that in 1920-22, he alone led the Non-co-operation Movement and he alone suspended it. Again in 1930-34, he alone led the Civil Disobedience Movement ; he alone conferred with the Viceroy ; he alone represented the Congress at the Round Table Conference and he alone suspended the Satyagraha in 1934. In 1940, again he alone conducted the individual Satyagraha and in 1942, again it was he whom A.I.C.C. formally requested, "to take the lead and guide the nation in the steps to be taken."[3]

All this is largely true and nobody can dispute that the Congress ideology after the First World War was mainly a creation of Gandhi, yet, it is too much to say that the Congress was a "one man show" or that the Congress ideology was identical with the Gandhian principles. On the contrary there were significant differences between the two and more than once Gandhi suffered defeat in Congress parleys. In 1924, this so-called dictator wept openly in a meeting of the A.I.C.C. because 70 out of 148 members who voted believed in political murders—a clear indication of the fact their non-violence was only skin deep.[4] In 1934, he retired from the Congress in sheer disgust. In 1939, Subhas Chandra Bose was elected to the Congress Presidency in spite of his open and determined opposition.[5] In June, 1940, the Working Committee bluntly turned down his request to extend the principle of non-violence to war[6] and in December, 1941, even formally relieved him of the leadership of the Congress.[7]

All these events show that Gandhi was not a dictator and the Congress not a body of his "yes men". Indeed, the fact, that despite all these revolts Gandhi did not cause a split shows that Gandhi embodied in his very being "a basic adherence to toleration in life" which in politics "implies an instinctive acceptance of democracy."[8]

Gandhian ideas, no doubt had a very deep and powerful impress on the Congress, yet as Sadiq Ali, a General Secretary of the Congress, pointed out, "The Congress was too vast and heterogeneous an organization to digest all that Gandhiji had to give it."[9] The fact is that though Gandhi had been the central sun of the Congress, from whom most Congressmen derived their lights, yet there were stars which had their own lights however dim they might have been. A C. R. Das or a Pt. Motilal Nehru, a Subhas or a Jawahar were luminaries that would not only illumine the political sky of any country but profoundly influence the destiny of any nation. Such a luminary never shines in altogether borrowed lights or exercises altogether delegated authority. Though Gandhian thought was the main source of Congress Ideology, yet there were also other thought currents which profoundly influenced its development. These thought currents were represented by C. R. Das and Motilal Nehru before 1927 and by Jawaharlal Nehru and Subhas Chandra Bose after 1927.

C. R. Das and Motilal Nehru

Gandhi was a saint in the guise of a politician, but Das and Nehru were patriotic statesmen pure and simple. While Gandhi "introduced into human politics the strongest religious impetus of the last two thousand years,"[10] Motilal Nehru was opinion that, "religion has been degraded and politics has sunk into the mire. Complete divorce of one from the other is the only remedy."[11] Gandhi was an idealist,—in his own words "a practical idealist."[12]—, but Das and Motilal were patriotic realists. ". . . pure idealism . . . .," said Motilal, "has no place in politics and is but a happy dream which must sooner or later end in a rude awakening. However high pitched the ideal may be, and higher the better, the actual work to be done in the pursuit of that ideal must be guided solely by practical considerations."[13] Both Das and Motilal believed in swift action. They have no patience

slow moving devices like Gandhi's constructive programme. They could enthusiastically take up Non-co-operation or Civil Disobedience because there was swift and breathless activity in them, but when non-co-operation was suspended their way lay not in constructive programme but in council entry, where they could attack the British lion in his den. To quote Gandhi himself, "Their method is not my method. I am trying to work from the bottom upward. To the onlooker it is exasperatingly slow work. They are working from the top downward—a process much more difficult and complicated than the former."[14]

The difference between the ideology and outlook of Gandhi on the one hand and Das and Motilal on the other was best illustrated in their respective attitudes towards non-violence and non-co-operation. Both Das and Motilal used to swear by non-violence and non-co-operation. As early as 1919 Motilal spoke of his faith in "truth, fearlessness and non-violence."[15] And in 1922 he claimed to be ". . . . one of those who hold non-violence on principles."[16] But their non-violence was very different from its Gandhian prototype. It had little place for the doctrines of change of heart of the enemy" or "non-embarrassment of the enemy." The non-violence of Das had room even for political murders and when on the 27th 1924 at Ahmedabad at the meeting of the A.I.C.C. Gandhi moved the resolution condemning the murder of Mr. Earnest Day by Gopi Nath Saha, Das hotly opposed it.[17] To Das and Motilal non-violence was not a high moral principle connoting a search of truth through the method of love but only absence of direct violence.[18] Little wonder that to them, "Council entry is and can be, thoroughly consistent with the principle of Non-co-operation,"[19] while to Gandhi council entry was equally inconsistent with non-co-operation in 1924[20] as in 1920.[21] However, after the suspension of the Non-co-operation Movement in 1922, the interpretation of Das and Motilal received the support of an increasingly larger numbers of Congressmen. A party of Congressmen, the Swaraj Party, was organized under their leadership with the avowed purpose of capturing the Councils and from 1923 to 1927 the influence of Das and Motilal in Congress was as potent, if not more, as that of the Mahatma himself.

Jawaharlal Nehru

Next to Gandhi, Jawaharlal Nehru was the greatest architect of the ideology and programme of the 20th century Congress. He came to prominence in Congress after 1925 with his slogan of 'Complete Independence,' and compelled Gandhi and others to make it the creed of the Congress at Lahore in 1929. From the very beginning he became the leader of the left wing of the Congress and in 1933 bluntly declared, "The choice before the world today lies between Communism and Fascism, and I am all for the former."[22] Although he soon renounced Communism in favour of Socialism and was reconciled with Gandhi to an extent that Gandhi declared that, "Jawaharlal will be my successor,"[23] yet there continued to be many important differences between the two.

The basic difference between the two was that while Gandhi represented the 'religious mind' of India, Nehru was the embodiment of her 'secular instinct.'[24] Gandhi regarded politics and religion as inseparable,[25] Nehru believed that, "usually religion becomes an asocial quest for God or the Absolute, and the religious man is concerned far more with his own salvation than with the good of society."[26] Under Gandhi's influence he was "more and more" "attracted" towards the doctrine of non-violence, but he "did not give an absolute allegiance to it."[27] He recognized the necessity of force. "Everything that comes in the way," he said, "will have to be removed, gently if possible, forcibly if necessary. And there seems little doubt that coercion will often be necessary."[28] While Gandhi wanted to make Congress an instrument of the spiritual regeneration of India, Nehru wished to make it the spearhead of economic and social revolution. Nehru believed that, "without a conscious ideology and objective the energy and enthusiasm of the masses must end largely in smoke"[29] and hence wanted a clear picture of independent India and Swaraj for which the Congress was fighting. But Gandhi regarded these questions as premature. To him the real thing was the creation of the true religious and moral spirit among the people and the development of a sound national character. Gandhi had little faith in foreign propaganda and believed that the world was bound to recognize India's claims as soon as the nation developed an overwhelming strength

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from within. But Nehru was an internationalist and believed that the "Indian problem is not only a national problem."[30] ". . . . if we ignore the world," he warned his countrymen, "we do so at our own peril" because "India today is a part of a world movement. Not only China, Turkey, Persia and Egypt, but also Russia and the countries of the West are taking part in this movement, and India cannot isolate herself from it."[31]

It was, however, in the field of economic ideology that the differences between Gandhi and Nehru were most marked. "Few of us, I think," wrote Nehru, "accepted Gandhiji's old ideas about machinery and modern civilization."[32] To Gandhi modern civilization was a "disease" and machinery represented "a great sin."[33] But Nehru had no conflict with machinery "provided that machinery is used primarily for absorbing labour and not for creating fresh unemployment.[34] Gandhi denounced industrialization as "a curse for mankind"[35] and wanted "every village of India" to be "a self supporting and self contained unit, exchanging only such necessary commodities with other villages where they are not locally producable."[36] He had little faith in state planning and kept himself aloof from the National Planning Committee organized by the Congress in 1938. On the contrary, Nehru had great faith in Planning and stood for "the rapid industrialization of the country."[37] Gandhi repudiated the theory of class struggle, ruled out the abolition of private property and advanced his famous doctrine of "Trusteeship" as the solution of economic problems. Nehru, on the other hand was "convinced that the only key to the solution of world problems and of India's problems lies in socialism,"[38] which meant ". . . . the ending of vested interest in land and industry, as well as the feudal and autocratic Indian state system, ... ending of private property . . . . and the replacement of the present profit system by a higher ideal of co-operation."[39] Both Gandhi and Nehru aimed at the amelioration of the peasantry but while Gandhi's programme for achieving this end was a programme of spinning wheel and village industries,[40] of Swadeshi and Satyagraha,[41] of trusteeship[42] and change of heart on the part of zamindars,[43] Nehru's programme was a programme of rent reduction, debt cancellation and abolition of landlordism.[44]

Thus there were many differences,—some of them fundamental—, between Gandhi and Nehru. Indeed once Gandhi himself wrote to Nehru that, ". . . . The differences between you and me appear to me to be so vast and so radical that there seems to be no meeting ground between us . . . ."[45] Yet one must not over-emphasise these differences, because when all is said and done it remains true that to a large extent Nehru was "the Plato to Gandhi's Socrates"[46] and having put his "faith in him (Gandhi) gave him almost a blank cheque."[47] He never questioned the Gandhian leadership but tried to mould the Congress ideology in accordance with his ideas within the four corners of that leadership. In that he succeeded admirably and gave an orientation to it which it could never have had under pure Gandhism. Briefly speaking, he introduced the Independence creed, when Gandhi was flirting with the idea of Dominion Status; created interest in world problems and laid the foundations of the future foreign policy of independent India; brought socialism into the Congress; gave a concrete shape to the concept of national Planning and saved the Congress from failing into the labyrinth of unadulterated pacifism.

SUBHAS CHANDRA BOSE

Another person who influenced the Congress ideology profoundly, though not to an extent commensurate with Gandhi or even with Nehru, was Subhas Chandra Bose. In the beginning Subhas and Jawahar jointly led the revolt against Gandhi. At that time, except that Subhas disliked Communism while Jawahar admired Russia,[48] their respective ideologies were the same. But it could not last long. Nehru's ever-growing loyalty to Gandhi sealed the fate of their friendship. "Gandhiji is our biggest gun",[49] was the faith of Nehru; ". . . . as a political leader Gandhi has failed",[50] was the belief of Bose. "Failure with Gandhi is preferable to the gaining of a temporary advantage without him",[51] said Nehru; "One's duty to a personality should never take precedence over one's duty and the Impersonal whatever that may mean",[52] maintained Bose. This conflict of loyalties separated the paths of the two. One became the political heir apparent of Gandhi, other the standard bearer of revolt against Gandhian leadership.

Strange as it seems, Bose was as much a man of religion as Gandhi was,[53] yet, for him

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ion had no place in politics. Instead he be-
d that, "A subject race has nothing but poli-
"[54] and his *mantra* was: "Consecration of
s, life at the altar of freedom".[55] He had little
h in non-violence and none in the doctrine of
ity of means. In his opinion, "Gandhism had
found wanting, because it was wedded to
-violence. . . . ."[56] Gandhi's spiritualism had
attractions for Bose. ". . . . ascetics and
ics", he said, "have held . . . honoured place
society, but it is not their lead that we shall
t to follow if we are to create a new India,
ce free, happy and great. . . . We have to
e in the present."[57] To Bose, "Gandhi's method
too lofty for this materialistic world and, as
political leader, he is too straight forward in
dealings with his opponents."[58] He regarded
ndhi's "habit of putting all his cards on the
le, his opposition to the policy of social boy-
of political opponents, his hope of a change
heart on the part of the British Government,
" as "some of the defects in his leadership
d tactics."[59] Gandhi was essentially a man of
ce, but to Bose, "There was nothing that lured
e more than a life of adventure."[60] Gandhi was
ays ready to negotiate with the enemy, but
e advocated a path of "uncompromising mili-
y."[61] To him Gandhi's programme was
o passive" and at the Lahore Congress he de-
nced "the programme laid down by his
andhi's) resolution" as "not such as to carry
towards the goal of Complete Indepen-
ce."[62] He moved a counter resolution exhort-
the Congress to turn itself into a parallel
ernment by expanding its structure, organize
people in support and then "launch the cam-
n of civil disobedience including non-pay-
t of taxes and general strikes" that would
e a normal administration impossible.[63]

On economic issues also Bose and Gandhi
ered radically. Bose deplored the Gandhian
ol of thought for creating "a feeling and an
ession that modernism is bad, large-scale
duction is an evil, wants should not be in-
sed and standard of living should not be
l . . . and that the soul is so important that
ical culture and military training can be
ted."[64] He considered Gandhi's programme
e "bourgeoise", and wanted the Congress to
pt a radical economic programme"[65] "in-
ing abolition of land-lordism . . . extension
the co-operative movement . . . a comprehensive
scheme of industrial development under state ownership and state control"[66]

The differences between Gandhi and Bose are best reflected in the symbols they adopted. The Congress under Gandhi as well as the Indian National Army under Bose adopted as their standard a tri-colour in the green, white and saffron, but while Gandhi placed a spinning wheel in its centre, Bose replaced the wheel by a springing tiger.[67] What these symbols connote? The spinning wheel might be taken as a symbol of peace and *Ahimsa*, democracy and village industries, simplicity and *Aparigraha*. But what about the tiger? Has he anything to do with *Ahimsa*, democracy or *Aparigraha?* Little wonder that Bose, during his visit to Europe in 1936, asked Hitler, Ribbentrop and other members of the Nazi hierarchy as to when they were going to strike at Britain, "so that we might also take up arms simultaneously against the British."[68] He organized his Forward Bloc on militaristic lines,[69] formed an Indian Legion in Germany from among the Indian war prisoners,[70] knocked at the doors of India with his I.N.A. and declared that, "India does not suffer from one ailment. She suffers from so many political ills that only a ruthless dictator can cure her."[71] Just like a tiger, Bose had no faith in the policy of the 'golden mean'. He was "an extremist" and his "principle . . . all or none".[72]

All this seems to bring, Bose very near to the fascist ideology. But no, the only 'ism' he knew was "Nationalism". Gandhi was a moralist, Nehru a democrat, but Bose was an Indian nationalist first, an Indian nationalist last and an Indian nationalist always. Influenced though he was by Mussolini, Hitler and Stalin, his ideal was neither Mussolini, nor Hitler, nor Stalin but Kamal Pasha. Mustafa Kamal's swift modernization of a backward oriental state appealed to him deeply. India, he thought, was in need of a material and social reconstruction on the same scale and hence needs the same type of administration, *i.e.*, "a strong Central Government with dictatorial powers for some years to come. . . . Government by a strong party bound together by military discipline."[73]

A man with such ideas and such ability, as Bose possessed, was bound to come into conflict with Gandhi. He had, in fact, in 1939, humbled Gandhi in the first round of the struggle,[74] but was ultimately defeated and expelled from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Congress. But Gandhi could expel from the Congress only Bose the person, he was unable to expel his ideas. For a long time to come the ideas and ideals of Bose remained the beacon of a substantial number of Congressmen.

Others

Besides Nehru and Bose other elements which provided non-Gandhian thought currents in the Congress were the Socialists led by Acharya Narendra Deo and Jai Prakash Narayan; the Communists led by Masani and Asaf Ali; the Kisan Sabhaites led by Swami Sahajanand Saraswati. The Socialists claimed to be following the way shown by Nehru, while Nehru himself, they asserted, had wandered away from it.[75] The Communists were Marxists who took inspiration from Russia. The Kisan Sabhaites also looked towards Moscow and tried to organize the peasantry on the model of Trade Union organizations of labour. The Communists and Kisan Sabhaites remained more or less 'outcastes' in the Congress and their following was never very large, but the Socialists, though a permanent minority in the Congress, did influence its ideology and programme to a considerable extent.

The Parting of Ways?

The cumulative effect of all these influences was that official Congress ideology and programme parted company from Gandhian principles at many points.

Firstly, non-violence could never become a creed with the Congress, but always remained a policy. Not once but twice,—at Lahore Congress in 1929, and at Bombay Congress in 1934,—Gandhi tried to secure the change of "peaceful and legitimate means" into "truthful and non-violent means" but both the times, he had to pocket his pride.[76] It was but natural because the Congress had only one supreme aim, namely, "the attainment of Swaraj", but Gandhi's goal was "as much Swaraj as non-violence".[77] "There is nothing on earth", said Gandhi in December, 1926, "that I would not give up for the sake of the country excepting, of course, two things and two only, namely, truth and non-violence. I would not sacrifice these two for all the world."[78]

Secondly, they differed in their attitude towards non-co-operation. Gandhi was a non-co-operator by conviction. He regarded "non-co-operation with an unjust Government . . . a duty."[79] But to the Congress non-co-operation was not a 'duty' but an 'instrument' to be used for achieving the country's independence. That is why as soon as Gandhi suspended the Non-co-operation Movement in 1922, the Congress rapidly moved towards the policy of council-entry and responsive co-operation, though Gandhi was hotly opposed to it.

Thirdly, the Congress did not give complete allegiance to the doctrine of the Purity of Means. As Pattabhi Sitaramayya remarked; "With him (Gandhi) what counts is direction, not destination, attempt not attainment, means not ends."[80] With the Congress it was almost the reverse. What counted with the Congress was destination rather than the direction, attainment rather than the attempt, ends rather than the means. This is why when after the outbreak of the Second World War there seemed a possibility of attaining independence on the basis of active participation in the war effort, the Congress threw overboard Gandhi as well as his non-violence.

Fourthly, it gave a very very qualified allegiance to Gandhi's economic views. It was not very enthusiastic about Gandhi's constructive programme. It "has . . . always been in favour of the industrialization of India. . . ."[81] The Congressmen in general never accepted Gandhi's views about machinery and modern civilization. The 'music of the spinning wheel' was only faintly audible to them and they had only a skin deep faith in the ethics or the economics of Khaddar. Gandhi's attempts to introduce 'Yarn Franchise' in the Congress organization ended in dismal failure.[82]

Last, but not the least, the Congress refused to become "primarily an instrument of moral and spiritual regeneration of India" and confined its activities mainly to the political and socio-economic fields. That is why when during the Second World War, Gandhi urged the Congress to offer unconditional moral co-operation to Britain, the Congress not only refused to oblige, but also absolved him of its leadership. Soon, of course, the Congress had to request Gandhi again "to take the lead and guide the nation", but the aftermath of the 'Quit India' resolution proved almost 'a parting of ways.' This, of course, 1946, because of the incarceration of most

the important Congress leaders, there was le activity on the part of the Congress, save e revolution of 1942-43, which was far from ng non-violent in the Gandhian sense of the m. After June, 1945, events moved fast and on th August, 1947, India saw the dawn of inde- ndence. The attainment of independence, how- er, further widened the gulf between Gandhi d the Congress. Prior to independence the Con- ss leaders had to accept many of Gandhian ts because they were unable to put forward er an alternative plan of action or an alter- ve leadership. But in the post-independence they rejected or side-tracked many of ndhian ideals and ideas as too lofty, mediaeval impractical.

But it does not mean that the Congress has mpletely renounced Gandhi or that its loyalty Gandhi was only a make believe. The fact is like other great prophets,—Buddha, Christ Mohammad—,Gandhi also was too great, his als too high to be completely followed by his ciples. Naturally they often seem to drift away m their masters. But the master's teachings ays remained as an inspiring ideal which is er achieved but whose imprint always remains faceable. Prior to Independence, barring e notable exceptions, the Congress followed lead of the Mahatma. Since then it might e drifted further away from Gandhi but the mp of the master is still there and perhaps never be completely erased away.

74. This is not quite correct or justified.—On the first occasion when Sri Subhas Chandra Bose was elected Congress President, Mahatma Gandhi did not, most definitely, oppose his candidature. It was the Working Committee who had completely ignored Subhas's candidature in spite of two proposals nominating him for the office having been received from the Sind and the Maharashtra Congress Committees, a fact which was deliberately suppressed from Mahatma Gandhi. It was when the late Ramananda Chatterjee, Founder-Editor of this Journal, pointed out this obvious injustice in a letter to Mahatma Gandhi that, at the latter's insistance, Subhas's candidature had to be accepted.

It was only when Subhas preferred his candidature again for a second time next year that for reasons which were not connected with his political creeds that Mahatma opposed his candidature. The contents of a most confidential communication were, without Subhas's knowledge or consent, filched and published by a Calcutta daily newspaper and for which Mahatma Gandhi naturally (but unjustly) held Subhas to be responsible and found himself compelled to vehemently and publicly opposed his candidature for the office of the Congress President. It may also be incidentally mentioned that previously having authored a resolution discouraging candidatures for the Presidential Office for more than one term in succession by the same person, Subhas was, thus, violating a principle enunciated by himself.—Ed. *M. LIFE WITH AN ARTIST

By Mrs. D. P. ROY CHOWDHURY

III

First Years After Marriage

Deviprosad Roy Chowdhury, the artist with m I have to deal, became the Principal of Government School of Arts and Crafts, dras, shortly after we were engaged to be rried. When he applied for the post with his dentials 23 years ago, the authorities were picious about his sincerity and thought he s just pulling their legs and would not accept job when offered. This I learnt later from A. Mc. G. C. Tampoe, I.C.S., one of those o were responsible for bringing him to dras. The others who come under the same were Dr. Subbarayan, Sri S. V. Ramaswamy daliar, Mr. C. W. E. Cotton, Sri Venkata-alam, the art critic and Sri Kamaladevi attopadhyaya. Little did they know how much was in need of a stable income, to force him welcome the fetters of routine work that he d once thrown away with such disdain. The ference was only in this that while in the first se he was just a pupil, in the second he was head of an institution.

Our marriage was not yet solemnized when accepted the post. He, therefore, had no other ernative and proceeded alone to his place of rk. But when Deviprosad sets his mind on ything he does not believe in waiting. He gan to pester his father with letters for fixing date of marriage. The father knew that the ly way to appease his son was to give in to his shes. He, in his turn, therefore, urged my rents to expedite the wedding. All arrange-nts were made in a hurry. Sri Deviprosad k a weak's leave for the marriage and went k to his work leaving me where I was. The incipal's quarters were not in his possession m. Therefore, the wife had to wait.

Odd Marriage Customs

Before I state how and when I started for r new home, I would like to narrate one or two our marriage customs and their application my case, which might interest the readers. On the night of the wedding, the newly married couple are hardly left alone. Towards the morning we were given a few hours' respite. When we tried to come out of the room for our much needed cup of tea, to our dismay, we found the door locked from outside. The custom is, the bridegroom should pay a fair amount of gate fee to his sisters-in-law before he and his bride were allowed to be out of their bridal chamber.

I noticed my husband's face wearing a mischievous smile. "Do you want to see some fun?" he said and then with a twist of his hand he took the screws out from the bolt by sheer strength, leaving the lock untouched. Thus the prisoners became free bfore the gate-keepers could be at their posts. When my husband proposed to demonstrate how he would stretch the iron bars of the window in order to come out of the room if he had failed to unlock the door, my mother who was full of humour repied with a mock fright, "Oh, no, please don't ! The landlord is sure to bring a damage suit against us and it would be such a shame to see our new son-in-law involved in it."

"Ful Khela"

Towards evening I had to part with my old surroundings for the new. It is a leap in the dark which every bride takes with a throbbing heart and I was no exception. Some more ceremonies were awaiting us at the bridegroom's place. As soon as we arrived they started what they call "Ful Khela". Everybody present tosses flowers at each other and soon the whole place takes the appearance of having a carpet woven of flowers. Even the bride and the bridegroom are expected to take part in this artistic pastime. My attention, however, was not centered on these ceremonial customs. I knew my husband's people belonged to the orthodox Hindu community, but excepting his father I had met none of his relations before this occasion. It may seem incredible but it is a fact. I was, therefore, perplexed with what I saw and heard around me. I noticed the women members of the house taking part in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the rituals with their shoes on. This is inconceivable among strict Hindus, specially during festive occasions. Besides, they were addressing each other in terms that are used by people belonging to other communities than my own. Some of them went so far as to address me as "Bhabiji". In the depth of my heart there was a severe conflict. Could I have taken a false step? Have I married outside my religious sect? In that case what was I to do? Such were the questions that rushed into my bewildered brain. I had too much faith in the man I married to think that he could have cheated me and yet I could not disbelieve my eyes and ears. Surely there was some mistake somewhere. The marks of my inward struggle must have been visible in the expression of my face, for my husband enquired with some anxiety what was wrong, why did I become so serious all of a sudden? I almost became tongue tied. I shook my head and with great effort managed to say "Nothing" almost in a whisper, keeping a forced smile on my lips, though an unuttered sob was choking my throat. Had not my husband been pre-occupied with other thoughts, I could not have escaped him so easily. I came to know afterwards that my husband's family originally belonged to the Khsatriyas of the Punjab, that is why some of their customs and ways were so different from ours and I heaved a sigh of relief.

Grand Old Man of the Family

My grandfather-in-law was not happy about his grandson but he liked me and was pleased to have me as a member of his family, perhaps, because an acodemic degree was attached to my name. His feelings towards his grandson also softened after our marriage. Probably, he came to realise that after all his grandson was not as worthless as he took him to be. He was 93 years old when I knew him, yet he was quite strong and virile. But the grand old man had no sense of proportion! He chose a wrong moment to get unwell and to feel that his end was not far off. It was about this time that Sri Deviprosad was able to take possession of the bungalow allotted to the Principal and was writing to his father to be ready to start for Madras. The artist's father was the eldest son of the old man and could not, therefore, dream of leaving him in that state, neither could he think of sending away his daughter-in-law when his father was on his death bed.

Months passed, the old gentleman was still lingering. The artist was getting impatient of his loneliness. Wires and letters were coming in quick succession. The father of the artist was in a fix. What was he to do? How was he to get out of this dilemma? One day he took courage and broached the subject to his old father. He took the situation in a sporting spirit and gave his full consent for my send-off. But there was yet another question to solve, who was to accompany me for that long journey? My brother who had nothing particular to do at the time came to the rescue. I started with him for Madras at the beginning of May, 1929, saying a final goodbye to the grand old man. He died a month after I reached my new home.

It was hot weather. The school was closed for the summer vacation. The artist had ample time at his disposal to use it as he pleased. He started painting pictures in right earnest. A model was needed and my brother was chosen as the victim. Some of the artist's earlier works owe part of their existence to this ever-obliging model. Settling the house, getting familiar with the place and such other minor matters kept me occupied. We did not notice how quickly the days passed till it was time for my brother's return. After he was gone we were left the sole companions of each other with none to dispute our rights.

A Novice in Housekeeping

It is true I was a novice in the art of housekeeping but I did not have to face much difficulty. At my husband's injunction I brought an expert cook from Calcutta who had the additional quality of being an expert thief. He managed everything very smoothly at our cost and in his interest and when he had to return home in the middle of the year owing to some illness, he was extremely sorry to leave such a lucrative job! I do not know whether he meant to console me or himself when he said he would come back as soon as he was fit for work.

My husband's personal bearer, who also falls in the same category as the cook and was collected from our own province, left our service two months after my arrival. He had no hesitation in telling me that he had never worked under a master who had a wife and came with a defi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

understanding that he would be allowed to home as soon as Madam arrived. Then he broke the news that he had kept some in the master's suitcase,—mentioning the ount, of course, and it was quite a large sum would be much obliged if Madam handed the same to its owner. Sure enough the was in the place mentioned. When I asked husband whose property it was, he neither to know nor care. I, therefore, had to the bearer's word for granted. This gave the first inkling about the management of an ai's household.

A large number of the people in Madras are to speak English. Even the servant class a smattering knowledge of the language, gh I admit, at times, some of them are so original in their expressions that it is diffi- to grasp what they mean. But there are a exceptions who speak and understand hing but their own tongue. Since Madras is a mil speaking City, the head of the Madras ool of Arts and Crafts where most of the dents and teachers belonged to the local place, s expected to know elementary Tamil at least. Deviprosad was, therefore, asked to prepare self to sit for a preliminary examination in language. Though he was not pleased with prospect, he forthwith engaged a "munshi" se duty it was to come thrice a week to teach new language to an unwilling pupil, not an task at all. He, therefore, must have been hty pleased to find that he could collect his ary without having to exert himself. For, ever, he came Sri Deviprosad found a ready se to send him away after a short conversa- carried on in English, of course. I evinced e interest and tried to pick up as much Tamil I could by asking questions. I presume the that I could learn a language where his own rance was profound, was not very pleasing my husband. He does not belong to the legal ession but he is exceptionally good at argu- his own case. By this trick he soon managed get an exemption from sitting for the examina- One can hardly imagine his joy at being to perform such a wonderful feat! The unshi" was dismissed immediately. He might e missed the few coins that were coming into pockets but I am sure he was pleased at heart being released from performing an impossible

At the commencement of his work as Principal, if anyone was unable to understand what he wanted, he would draw on a piece of paper the object of his desire. But now his method of driving home his point has completely changed. He either does it by various inimitable gesticulations or by raising the tone of his voice to a very high pitch, expecting it would convey the intended meaning to the person spoken to. If he is not successful in his endeavour, it is the fault of the listener, and he gets wild at the incorrigible stupidity of the person! After years spent in Madras if my husband is able to speak a few sentences in correct Tamil, he feels extremely pleased and looks at everybody present with an expression, which means to say that he had achieved something which deserved applause.

When the school resumed its session after the termination of the vacation, Sri Deviprosad had to spend the greater part of the day at his office. Perhaps he realized that it would be rather trying for his bride to spend the whole day with her own thoughts specially in a place where she was yet an absolute stranger. He therefore made it a point to spend the mornings in his own quarters, so that even if he could not give her company, he could atleast be near her.

"After the Storm"

In a small wooden balcony upstairs, he had all his equipment for painting. There he used to sit and put into pencil and colour the forms that were taking shape in his ever imaginative brain. I often sat silently and watched while he worked. It was in no way less solemn an occasion than the worship of a deity by its devotee. Sometimes I left him with an almost finished picture and an hour later came back and found an entirely different theme on the same canvas ready to welcome me. Such a one is his well known "After the Storm." Some household duty called me away from his side when he almost completed the picture of a beautiful woman in some captivating pose. It was a wet and windy day. The rain had stopped a little while ago. On my return I found my husband standing before a fniished picture. The woman had vanished as if by magic and a wet crow perched on a branch, had taken its place. The vision came to him in a flash, on actually seeing a crow after the cessation of the rain, and it was at once depicted on the paper.

I had enough sense to realize that when an artist was busy creating something he did not like to be disturbed. Yet I had to come sometimes in the midst of his work for some advice or other. He always obliged me by answering in short, nonchalant sentences without lifting up his eyes from his work. I soon discovered that those answers were not meant to be taken seriously, for when I referred to them later, he knew nothing.

I was still not quite practised in playing the part of a housewife. Therefore, in spite of his indifference, there were occasions when I had to come to him for help. This disturbed the concentration of the artist and to escape from such unwarranted intrusions, he thought it wise to shift his place of work to a room down-stairs though he was shrewd enough to conceal his ulterior motive by saying that the space upstairs was not sufficient for his work. Perhaps he counted on the invincible staircase of our bungalow as his only safe-guard. He was soon disillusioned, however, and found that he made a wrong calculation regarding the strength of his wife.

Ignorant as I was about the ways of artists, I took him at his word and continued to treat him as the master of the house, while the poor man was racking his brain to find a place of refuge. As a last resort he packed his bags and baggages and retreated to his studio in the school. Here he was well guarded by his peons and the students and was safe from encroachment and interference.

A "Prohibited Area"

All these developments taught me the preliminary lesson of how to deal with an artist. I knew that the studio was a prohibited area for me, so I took to pencil and paper as the instrument for conveying my messages to the unwilling head of the house. To my consternation I found that no notice was taken of them if they arrived when he was in a creative mood. I then followed a displomatic policy and enquired of my husband which was the time to contact him when I needed his invaluable help and advice. The man in him was flattered and he gave me a specific hour. I cannot vouchsafe that my messages are promply attended to even if I keep to the time but on the whole I get better results now.

I do not think it could be considered as a disgression or paying compliments to myself if I said that the love of art was ingrained in myself from my child-hood. I used to dabble with colours which, perhaps, most children of an impressionable age do, and found pleasure in imitating the pictures that appealed to my fancy.

Those who witnessed me in my attempts declared that I was gifted with an artistic taste. This appreciation enhanced my interest in the subject though, of course, I never took it seriously nor was I expected to. In artists, however, I took no interest. Though several books were available on the lives of artists, I never cared to read them. If Providence had been so kind as to give me a hint that one day it would fall to my lot to manage the househould of one of the foremost artists of our time, things might have been different. As it was, I had no chance of preparing myself for my future position. The result was I had to struggle blindly against the hurdles that came on my way till the light of my own experience illuminated the path.

Sri Devi Prasad Roy Chowdhury has all the qualities that contribute to the making of a true artist. He feels extremely annoyed if anybody takes the liberty of disturbing him while he is in the mood to work. In fact his peons have strict instructions not to allow any one in when he is in the Studio.

Devi Prasad is an early riser. He would be up from his bed a little after 4 A.M., take his exercise and then start his early cups of tea. He did not like to trouble the servants at such an inconvenient hour and had his own arrangements in a room attached to our sleeping apartment. I have my suspicion that he did not quite enjoy drinking his tea alone, for one evening he suddenly questionad me whether I had ever tried rising before the sun was up. My usual hour is 5.30 or 6.O'clock at the latest. I, therefore, answered in the negative. The artist then suggested, that I should try it for a few days. It was very refreshing and instilled extra energy for work according to him. He was always so active and energetic that I could not quite disbelieve his words and agreed to give his suggestion a trial. Very soon, however, I was disillusioned. Instead of feeling more energetic I felt lazy and sleepy for the rest of the day. After a few days' unsuccessful experiment I took courage and disclosed my difficulties to him. He

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ked at me disappointedly and then smiled in way which told me, though not in so many ds, that he did not expect this from his ner in life. However, he allowed me to revert my old habit.

The crisis came a year after, when my son peared on the scene. Sri Devi Prasad is a er of children and was happy to have a baby the house. So long as the child remained a e nothing untoward happened. We cared for fondled our son together. The little extra time I had to deduct from his share and devote to baby he did not grudge. He knew that the ant's need was greater than his own. But as n as the child outgrew the age of mere lling, trouble arose. He flatly refused to e responsibility to guide the boy during his iod of schooling. His excuse was that since had never crossed the threshould of an versity he was absolutely unsuited to the job. ead of guiding him in the right direction, re was every possibility of his misguiding n. Under the circumstances it was better that e child should be left entirely to the mother's e so far as his school education was con- rned. I knew that this was no reasoning at all I knew it was just an excuse to shirk res- nsibility, but I had to accept it. He did not e approve of the existing system of cation. But he was aware of the fact that there s no other path left open to a child than to a school. This was an additional reason for being so insistent on shoving the whole den on my shoulders. I remember one parti- ar occasion when a phone call came from the ool to discuss certain points regarding our The artist promptly put the receiver down ing, "My wife manages these things, would kindly speak to her?"

As the boy grew in years, my obligations ame heavier. Consequently I had to spend e time with him than I could in the company my husband, specially because the son in- ted the father's antipathy for learning under mpulsion. This my husband resented. His rge against me was that I was all mother. the moment I agreed to rectify my defect if could share with me the responsibility of ing up the child, he quickly changed the e.

When the boy grew up to be a young man, would sometimes join our company and listen to our conversation. He was quick enough to discern from these that his father had full sympathy with his son's attitude towards the education imparted in the schools and colleges of our time. He took advantage of it by discontinuing his studies before he finished his college course on the ground that it would not be of much help in the line which he had decided to choose as his career. When the authorities questioned him whether his parents would not be sorry because he did not sit for the examination, he cooly replied, "My mother might, but not my father."

While the artist is engaged in some sort of creative work he does not feel the need of a companion. In fact he would much rather he had none. It is only when his mind is free that he craves a friend to whom he could open out his heart unreservedly and discuss any subject that pleased him, no matter how unconventional and unpalatable it may seem to others. This sort of diversion gave him relief from mental as well as physical strain. Since he could not get the company of his wife as much as he would like to, he invented another method of finding recreation. At the back of our drawing room upstairs there is a small terrace. Here he started developing what is called a Bengali village in miniature. Small cottages, figures of men and women in their different vocations, came into being by the magic touch of the artist. Green fields, narrow paths whose turfs were pressed by the soft feet of the village wives as they went their way to fill their goglets, the small pond with the floating lotus, the distant temple, were all brought in front of our vision in concrete from. It reached its climax in the tamarind tree under whose shady branches the village travellers rested their tired limbs on their journey forward !

This little plant which sprouted out from a seedling is now a full grown tree, a year or two younger than my son. It is not more than two feet in height though it has the form and structure of a big tree. The shape of each branch, each small twig, is the work of the artist. Without having any knowledge of the science he started this experiment and was extremely happy when it proved a success. This gave him the impetus to try his method on some other trees as well. There are plantains, casuarina and bamboos but they are all babies compared to the

tamarind tree. Our drawing room which can also be taken as the art gallery of my husband's works, has visitors throughout the day. I have noticed that even people who did not understand anything of art were attracted by this concrete picture of our homeland. Owing to the continuous drought of Madras these little pets of my husband were losing a little of their freshness. He, therefore, shifted them downstairs where they are flourishing under his unfailing and immediate care. Every morning the artist attends to their needs before he starts his duties as an official. It is a pleasurable pastime for him. Many of the figures of this landscape are missing from their posts now. Either they are ravaged by the inclemency of the weather or mutilated by the curiosity of the crows and the squirrels, but the trees are standing as faithfully as ever.

Sri Devi Prasad is not what one would call a sociable person. He prefers to be left alone with his thoughts instead of being forced to accommodate himself in a company where he finds himself to be an absolute misfit. He has a dread of conventional parties with the restrained and superficial conversations of such places. Yet he has to attend some of them to fulfil social obligations and occasionally to please his wife.

But once Devi Prasad is thrown in the midst of a congenial atmosphere he becomes animated and is the most interesting and coveted company full of mirth and jokes.

Another secret cause of his dislike for these formal social functions, which I discovered from my long association with him, is his aversion to discard his inartistic but convenient garb in order to don something more suitable for elegant and fastidious society.

There was a time when Devi Prasad was attracted by picture houses and was a frequent visitor to these places of entertainment. But with the growth of years and wisdom, his fondness for light entertainment has faded away. Now he spends part of the evenings in writing stories or articles. This hobby which he started developing some years back enabled him to establish his name as a writer in his own language. There is a great demand for his stories written from his experiences in the jungles. I have heard people say that his descriptions are so vivid that they almost visualize the spot and feel its atmosphere.

When he gets tired of writing, he comes back to the landscape of his creation, sits before it with the cup that cheers him from his fatigue and carries him to the land of dreams. Perhaps like Omar Khayam of old he hears a voice which cries :

> Awake, my little ones and fill the cup,
> Before life's liquor in its cup be dry.

EMERSON

By AMAL HALDAR

LPH Waldo Emerson, the American Poet and ayist, was doubtless one of the most remark- e men of his times. He was born in the beginn- of the 19th Century, in 1803, at a most ificant period, when a transformation was s on in the European mind. All through 17th and 18th Century, history and literature that the Western races had pre-eminently loped the intellectual side of their nature, faculty of reason; and the great philosophers the time thought it possible that man could arrive at a knowledge of God by mere ulation and theorizing. This showed itself the deification of reason during the French olution when a woman, representing the dess of Reason, was shown to the people in streets of Paris, and the French authorities the time actually went through the farce of ouncing by a public decree that the God of istianity did not exist.

The great philosopher Kant, however dered the Western World the eminent service proving by most conclusive arguments that intellect of man alone was incapable of ing God; and his great disciples, Fichte, elling and Hegel, showed to the world by r brilliant oratory and inspired writings that cause of all Being had its seat in the human rt, and that man could only come to a know- e of God through love and devoted service. is is the message of Transcendental Idealism, school of philosophy which flurished in rmany during the first three decades of the Century. Such a philosphy could only be ed when the mind of Europe was no longer ely intellectual, but when the emotional side the race was also simultaneously developed. We this in the outburst of song in contemporary atures, in the increase of tolerance and philan- pic endeavors among the educated classes, a more sympathetic attitude on the part of towards his fellow creatures and surround-

Now if we bear in mind that Emerson was during this period of transition in Europe, passing from one view of the Universe to the other, it will be easier for us to understand the fundamental note of his character and the ideas he represented.

Emerson traced his descent from a long line of Puritans,—as seven of his forefathers were ministers in New-England Churches. They represent the element of reason, and provide him with the splendid heredity of a quick perception, a keen analytic intellect, habits of independence, and steadfast loyalty and deveotion to principles. There having been so many preachers in his family, it was almost natural that Ralph Waldo should become one too; and so we see him, after having graduated from Harvard College and prepared himself for the pulpit at a divinity school in Cambridge, Mass, filling the position of a Unitarian minister in several New-England Churches, chiefly in Boston. Now the Unitarian faith being the embodiment of retionalistic docutrines in theology, it was quite consistent, if it denied that divinity of Christ and the miraculous element in the life of the great Teacher, while it laid a great deal of stress on the historical facts connected with the story of the Gospel.

But Emerson, although of Puritan stock, had become enamoured of the new Philosophy of life which sought the solution of spiritual problems by methods tranceding reason and the speculations of the intellect. The Transcendental Idealism of Germany reached Emerson through the writings of Coleridge; and the doctrine of the inner light, the revelation of God in the heart, which transformed the dry facts of theology into the mystic experiences of the soul, strongly appealed to the spiritual nature of Emerson and made him finally renounce his charge and leave the ministry of the Church, when he could no longer conform himself to certain usages and outward forms, as they had become utterly meaningles to him. Soon after having taken this step, he embarked in a sailing vessel for the Mediterranean, and then travelled through Italy, France, England and Scotland. While on this tour he saw the four men he most desired to see, *viz.*, Landor,

Carlyle, Coleridge and Wordsworth. "The comfort of meeting such men of genius," he wrote, "is that they talk sincerely." Carlyle like Coleridge was a representative of the German idealistic Philosophy in England; but both these great thinkers applied the teachings of Fichte and Schelling chiefly to social and moral questions, and roused an enthusiasm among the cultured English public for the genius of Goethe and the poets of the German Romantic School, whose works reflected in a beautiful form certain aspects of the new Idealism. But great ideas are universal, no nation has an exclusive claim upon them. The time was ripe for the Western mind to produce the flower of Idealism, and although the parent stock sprang up in Germany, its ramifications extended all over the Occident. Even if there had been no intercourse between the continent and England, Coleridge, Wordsworth and the other bards of the Lake School would probably have struck the idealistic note in their nature poetry; and Emerson's spiritual vision might have enabled him to see the idea behind the symbol and glimpses of reality behind the transitory forms of life, even if he had never studied the contemporary literature of Europe. As it was, Emerson certainly derived great benefit from his intercourse with some of the most prominent literary men of England, and his visit to Carlyle was the beginning of a life-long friendship.

The two men were bound together by a community of ideals, yet their temperaments were essentially different. With the ardor of the chiding prophet, Carlyle was constantly inveighing against the hollowness, cant and insincerity of the times; he has a sovereign contempt for all sham and pretence, and severely blames those who hide a lack of true feeling behind an empty mask. To him the inner life is everything; the outward form is of very little importance. His brow is often clouded, his manner sometimes rough and abrupt. Emerson, on the other hand, shows the serenity and calm of a clear mountain lake, whose unruffled surface reflects all the surrounding objects of nature without distortion. He was an intensely interested spectator at the great drama of life, but there was an absence of passionate heat and unnecessary haste in his nature. Without being conventional he had a fine sense of the propriety of things, and his quiet *mirthfulness*, his gentle ways and the steady charm of his personality attracted to him the hearts of the people.

Emerson published Carlyle's first books in America, and Carlyle introduced Emerson's Essays into England. The things that each admired most in the other were self-reliance, directness and moral courage. A passage in Emerson's diary, written on his homeward voyage, strikes the key-note of his life.

"A man contains all that is needful to his government within himself . . . . all real good or evil that can befall him must be from himself . . . . There is a correspondence between the human soul and everything that exists in the world . . . . The Highest revelation is that God is in every man."

After his return from England, he went to live with his mother at Concord, Mass, and began his career as a public lecturer in Boston. Two years later, in 1835, he married Miss Lydia Jackson, having previously bought a spacious old house and a large garden at Concord. There he spent the remainder of his life, a devoted husband, a wise and tender father, a careful householder, a virtuous villager, a friendly neighbor, and the central and luminous figure of the American Transcendental Idealists, of whom Dr. Ripley, Orestes Brownson, Theodore Parker, Margaret Fuller and Henry Thoreau were also distinguished members.

More and more, as Emerson's fame spread, those who would "live in the spirit" came to listen to the voice and would sit at the feet of the "Sage of Concord." There was something in his imperturbable kindly presence, his gentle and refined appearance, his commanding style of thought and speech which announced him as the possessor of the great secret that many were seeking—the secret of a freer, deeper and more harmonious life.

Now the works which have made Emerson famous among the philosophers and literary men of the English-speaking world are chiefly prose works, his "Essays;" yet he himself always attached more importance to his potical productions, because he thought that his verse was a truer expression of his genius. "I am born a poet," he used to say, and, writing to Carlyle he calls himself "half a bard."

There is no doubt that Emerson had the most important qualifications of a poet, but he lacked one. He had the artistic eye which saw the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

beauty of all forms of life; he had the creative imagination which enabled him to express the idea in a bold, concrete form, by striking metaphors and characteristic phrases. But he lacked the musical ear, the feeling for rhythm and cadence; therefore his verses are deficient in smoothness and finish, in the regularity of the metre, in the melody of the rhyme.

It seems to me that one of his shorter poems, which he prefixed as a motto to his essay on "Experience," is characteristic of his genius. The poem might well bear the title of "Karma," and there is a true theosophical ring in it. The poet imagines the mental qualities and the manifold activities of man, which are the cause of his destiny, passing before him in a long procession of weird gigantic entities. Admist this strange company of spiritual beings "little man" is seen walking timidly, forlorn, and with a helpless look in his eyes; for he does not know what that strange spectacle means by which he sees himself surrounded. But his Higher Self in the shape of "Nature" comes to his assistance.

An angelic form approaches him, takes him by the hand and explains to him the mystery of life.

"The lords of life, the lords of life,—
I saw them pass,
In their own guise:
Like and unlike,
Portly and grim,
Use and Surprise
Surface and Dream,
Succession swift and spectral wrong
Temperament without a tongue,
And the inventor of the game
Omnipresent without name;—
Some to see, some to be guessed,
They marched from east to west;
Little man, least of all,
Among the legs of his guardians tall,
Walked about with puzzled look:—
Him by the hand dear Nature took;
Dearest Nature, strong and kind,
Whispered, "Darling, never mind!
To-morrow they will wear another face
The founder thou ! these are thy race."

But the "Essays" are, after all, a more complete expression of Emerson's thought. He, perhaps more than any other American writer of his time, had a claim to the title of "philosopher;" yet his teaching did not assume the form of a regular philosophic system. He saw the truth by flashes, by intuitive perception; but did not arrive at it by the process of reasoning. "I do not know what arguments mean in reference to any expression of a thought," he used to say of himself. His style is therefore brilliant, epigrammatic and forcible; but it has the incompleteness of sporadic vision; it is necessarily fragmentary. His thought is always clear in sentences, but not in paragraphs, because the mind of the reader often has to supply the connecting links between the different statements.

As to the quality of thought which forms the essence of his teaching, it is quite obvious that it often bears a resemblance to Eastern doctrines. It was not so much that he had derived his religious and metaphysical ideas from the sacred books of the Hindus, although he had read some of the Puranas, the Upanishads and the Bhagavad Gita in English translations, but that the Philosophy of Idealism which he represented was the peculiar method of the Western mind in expressing that doctrine of Unity, of the Infinite and all pervadig Spirit that is immanent in Nature, which is the life throbbing in the heart of all beings, and which yet transcends all forms.

Now Emerson, as mentioned before, was not a theorist and maker of systems, he never committed himself to the doctrine of reincarnation, yet his belief in such teaching might be inferred from the opening lines of his Essay on "Experience;" "Where do we find ourselves in a series of which we do not know the extremes, and believe that it has none. We wake and find ourselves on a stair; there are stairs below us which we seem to have ascended, there are stairs above us, many a one, which go upward and out of sight. But the genius, which according to the old belief stands at the door by which we enter, and gives us the lethe to drink that we may tell no tales, mixed the cup too strongly, and we cannot shake off the lethargy now at noon day."

As in the conversation between Krishna and Arjuna and in the divine wisdom of the Upanishads, man's inner nature, his mental and moral qualities, and the attributes and nature of the Infinite Self are often made the subjects of discussion, in fact, the centre of interest for pupil and teacher, so in Emerson's Essays the inner causes of man's experiences are laid bare

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

with a skill and truth beyond mere intellectual acumen, and which show the author to be one of those who have first hand knowledge. The ideal he sets up before us in his Essay on "Character" is not will-power or cleverness or a fascinating manner, but nothing short of a superior and harmonious development of the whole man; "a reserved force which acts directly by presence and without any means, a natural power like light and heat with which all nature co-operates," for to Emerson, "Character is the moral order seen through the medium of an individual nature." Could there be a more original and truer definition?

He begins the Essay by saying that we always feel there is more in great men, such as Lord Chatham or Mirabeau, the Gracchi or Sir Walter Raleigh, far more than they manifest in their actions; that the greater part of their power is latent. Men intuitively know whether people in whom they ought to repose their trust have this force of character or not; they feel its absence or presence in the politician who stands for great issues, knowing that "they cannot come at their ends by sending to Congress a learned, acute and fluent speaker, if he be not one who, before he was appointed by the people to represent them, was appointed by God Almighty to stand for a fact, invicibly persuaded of that fact in himself, so that the most confident and the most violent persons learn that here is resistance on which both impudence and terror are wasted, namely faith in a fact."

The strong character is not that of the tyrant, or the bully, or the great conqueror disregarding human rights; it is that of the man of principle. He represents the highest standard of morality for the average mass of people, and might be truly called "the conscience of the society" to which he belongs.

We can only arrive at an estimate of the power displayed in character by its resistance to circumstances. Weakness yields to environment, character controls it. But our actions will never do us complete justice; because the act is finite, and we are infinite. There is a constant influx of divine power into our innermost nature, or, in the words of Emerson, "there is a door in every man's mind through which the Creator passes."

Another aspect of character is independence. There is a certain amount of energy displayed in competition, in the struggle for power; but there is more energy inherent in the possession of it. Emerson had a profound respect for independence, and that is what he says about this side of character:

"The face which character wears to me is self-sufficingness.

"I revere the person who is riches; so that I cannot think of him as alone, or poor, or exiled, or unhappy, or a client, but as a perpetual patron, benefactor, or beatified man. Character is centrality, the impossibility of being displaced or overset. A man should give us the sense of a mass."

The verses serving as a motto to the Essay on Character very aptly describe this power in the individual man :

The sun set; but set not his hope;
Stars rose; his rath was earlier up;
Fixed on the enormous galaxy,
Deeper and older seemed his eye;
And matched his sufferance sublime
The taciturnity of time.
He spoke, and words more soft than rain,
Brought the Age of Gold again;
His action won such reverence sweet,
As hid all measure of the feet.
Work of his hand
He nor commends nor grieves;
Pleads for itself the fact;
As unrepenting nature leaves
Her every act.

Supplementary to the chapter on "character" is the chapter on "Manners." If character is the inherent force in man which marks a certain stage of his mental and moral development and which makes itself felt even without action, manners are the outward expression of this force in relation to his fellow men, his conduct in the daily walks of life, which will be necessarily the more formal and ceremonious, the higher his rank in society is.

People who are somewhat indifferent about their own manners, sometimes sneer at social observances as meaningless conventions and empty forms, the cloak of insincerity and selfishness. Now while it is quite true that morals and not manners "Make the man," and that a pleasant smile and a polite phrase may often hide a selfish motive. It is equally true that it is extremely difficult to be always well mannered, that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...ulking cannot manifest the habitual serenity ...d self control of the perfect gentleman, and ...t the standard of polite society is, after all, ...t the result of the whims and freaks of ...shion-leaders, but that it is based on native ...ength, on force of character.

Lastly, the man of society must also show ...leration and good sense. It is true, the fashion-...le world will sometimes tolerate eccentricity; ...will admit the artist in shabby clothes, the ...sician with unkempt locks, the brilliant ...conteur whose wild gestures prove destructive ...the tea-table, and are a constant danger to the ...knacks in my lady's drawing-room; but it ...l admit these anomalies only, if there is genius ...hind the unconventional exterior. "Therefore," ...e author draws the conclusion, "if you wish to ...loved, love measure."

However, we must not get the impression ...m the preceding that Emerson conceives the ...s of etiquettee to be a code of hard and fast, ...les, unchangeable like the proverbial statutes ...the Medes and Persians.

It is true that social observances, certain ...ms of courtesy, are the ring which surrounds ...lite society; but this ring is not of iron, it is ...stic, and expands according to the needs of ...ong individuals. There are some persons who ...e natural gentlemen; who are at home every-...ere and adapt themselves easily to their ...roundings into whatsoever sphere of life their ...stiny may lead them. Generally, a man born ...ong the lower ranks of the people would feel ...remely diffident, and show a very awkward ...d embarrassed manner, when he finds him-...f among the higher classes. Not so our natural ...tlemen. He is neither bold nor awkward, he ...modest, yet self-confident, and his manners ...w a grace and dignity which he never learned ...any conventional circles. Speaking of the way ...which such a man enters society, we read ...the same chapter on "Manners:"

"A natural gentleman will find his way in ...d will keep the oldest patrician out who has ...t his intrinsic rank."

So we see that good-breeding is not confined ...the members of the upper classes, although ...found more frequently among them; its roots ...far deeper than the position a man is hold-...in his present life; it is largely the outcome ...past lives modified, of course, by his ...ucation and surroundings in the present. Good breeding is, therefore, the flower of spiritual development, it is the beauty aspect of the soul. Emerson makes us fully realize that good manners are by no means a mere outward accomplishment, but that they have their deepest sources in a heart of love.

In studying Emerson's life and works no one, I think, would get an approximately true conception of his genius without reading his Essay on "The Over-Soul," which seems to me to strike the key-note of his philosophy. To do this work complete justice, one ought to quote it in its entirety, for it is not only in the sublimity of thought, but also in the inimitable force and originality of the language, the bold metaphor, the graphic and clearly cut phrase in which its peculiar charm and beauty lie. An account of it must be at best fragmentary.

How do we come to know the existance of this "Over-Soul," this Infinite power which is above, around and in everything? By looking into our innermost nature. There seem to be two beings within ourselves; one, the consciousness which is behind all our thoughts, words and actions-of-daily life, the other is the spectator, the critic, the judge, which is never satisfied with present attainments, but is always pointing out new tasks and holding up higher ideals before our minds. Thus man is not a constant quantity, but an ever changing power, infinite in its possibilities and illimitable in its range.

This seems to indicate that there is a constant influx into our nature from a mysterious but inexhaustible source, an ocean of power, which is God. Let us read this thought now in Emerson's beautiful words:

"The Supreme Critic on the errors of the past and the present, and the only prophet of that which must be, is that great Nature in which we rest, as the earth lies in the soft arms of the atmosphere; that Unity, that Over-Soul, within which every man's particular being is contained and made one with all other; that common heart, of which all sincere conversation in worship, to which all right action is submission; that over powering reality which confutes our tricks and talents, and constrains every one to pass for what he is, and to speak from his character and not from his tongue, and which ever more tends to pass into our thought and had, and become wisdom and virtue, power and beauty.

When it breathes through his intellect, it is genius, when in breathes through his will, it is virtue, when it flows through his affection, it is love. And the blindness of the intellect begins, when it would be something of itself. The weakness of the will begins, when the individual would be something of itself . . . . as there is no screen or ceiling between our heads and the infinite heavens, so is there no bar or wall in the soul where man, the effect, ceases and God, the cause, begins. The walls are taken away. We lie open on one side to the deeps of spiritual nature, to the attributes of God."

There is a constant communication between the Great Soul and the smaller soul. When the volume of force pouring from the Great Self into the personal self is larger than usual, it causes an expansion of the lower nature accompanied by a feeling of bliss.

"A thrill passes through as men at the reception of new truth, or at the performance of a great action which comes out of the heart of Nature.

This greater influx of the Divine Life often takes the form of religious revelations. Such a sudden insight into deeper spiritual truth often has an overwhelming effect on the Soul, which it leaves as it were 'blasted with excess of light.' The soul looking into Heaven is in ecstasy, while the body shudders and becomes insensible, or the tongue in its attempt to tell the vision is uttering strange wild sayings which seem to the world like madness. The peculiar characteristic of ravishment is found is the trances of Socrates, the 'union' of Plotinus, the vision of Porphyry, the conversion of Paul, the aurora of Boehmen, the convulsions of George Fox and his Quakers, the illumination of Swedenborg."

Religious revelations are the disclosure of the soul, not the telling of fortunes. Often in past ages, men would resort to oracles to find answers to "Sensual questions; even the representatives of the body politic, before great issues, would consult the gods. But the answers were often equivocal and misleading; for the Soul will not have us read any other cipher than that of cause and effect." Emerson thinks it well that the future is hidden from us, for it teaches men to live and do their duty in the present.

But the Great Soul does not not only speak in the prophet, the sage, or the great religious teacher, it reveals itself in every genius, whether he has a spiritual or an intellectual massage to bring to the world. The great poet, painter, musician or sculptor is able to see more of the shining radiance of the Great Self than the ordinary man of the world, and enamored of Its transcending beauty, he strives to express the vision in a beautiful form recognisable by the senses, so that all, even those who cannot see the idea, might receive the truth. But the work of art, beautiful and inspiring though it may be, must not be made by us the object of excessive veneration, for the artist is greater than the work, and the Soul is far greater than many poets or artists.

"The inspiration which uttered itself in Hamlet and Lear could utter things as good from day to day for ever. Why then should I make account of Hamlet and Lear, as if we had not the Soul, from which they fell as syllables from the tongue?"

The Great Soul is in all men, this cannot be repeated too often; and that makes us all intuitively understand each other and discern the spirit that in each of us is. In every activity of life we are constantly revealing our inner nature: in working and resting, in eating and drinking, in trials and persecutions or in friendly social intercourse the Soul manifests itself through us and every day is really a Day of Judgment.

"We are all discerners of spirit. That diagnosis lies aloft in our life as an unconscious power. The intercourse of Society,—its trade, its religion, its friendships, its quarrels,—is one wide, judicial investigation of character. In full court, or in small committees, or confronted face to face, accuser and accused, men offer themselves to be judged. Against their will they exhibit those decisive trifles by which character is read."

Now Emerson makes a distinction between men that speak from within, and those that speak from without. "Jesus," he says, "speaks always from within, and in a degree that transceds all others . . . . I believe before hand that it ought so to be, all men stand continually in the expectation of such a teacher."

Steadily, tranquilly and cheerfully, the great American sage finished the voyage of life. Ever working for the best interests of his country, whether as lecturer or as a writer, he kept in touch with all the great questions of the day. "I think we must get rid of slavery or get rid

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

freedom," he said in 1858; and at the outbreak of the civil war of the American States, he became a powerful advocate of the cause of the Union. The nation showed its appreciation of his public work, when Harvard College bestowed upon him the degree of L.L.D. In 1872, he went on his third foreign journey, and this time as far as Egypt. About the same time his mental powers began to fail, especially his memory. But his character remained serene and unshaken in dignity.

On the 27th of April, 1882, his spirit left the earth. Calmly, peacefully he sank to rest, "like one who lying down on his couch quietly folds his garment about him and falls asleep." The service Emerson has rendered to his country is inestimable. He was one of those great spiritual forces that has acted as a salutary leaven to the somewhat materialistic American mind, his whole life being an exemplification of the doctrine of "plain living and high thinking," and of the truth that wisdom is better than riches, and righteousness stronger than the wealth of the millionaire.

———:O:———

KALIDAS' LAST JOURNEY—A STORY

By DR. H. D. BHATT, ('Shailesh')

Kalidas was a great traveller and a worshipper of nature from his very childhood. He made a number of long journeys in his life time. According to a legend, although Kalidas had produced 'Shakuntala', 'Raghuvansa', 'Kumarsambhava', 'Vikram-Urvasiyam', 'Ritusambhara', 'Malvikagnimistra', it was only after writing Meghduta that he reached the peak of his fame.

Two or three incidents of his life are supposed to be directly connected with his Meghduta, a poem of high calibre. Some people hold the view that the Yaksha of Meghduta is really Kalidas. He had to leave his home because of financial difficulties and the tears that flowed at the separation from his beloved, became the verses of Meghduta. The story goes on to say that the verses of Meghduta became so popular that they could be heard everywhere. People would sit for hours listening to them. And when Prince Kumargupta of Ceylon read it, he was lost in ecstacy. Inspired and guided by Meghduta, Kumargupta wrote 'Janaki Haran'. Janaki Haran, like Meghduta, attracted great attention. The sonorous rhymes found utterance on the lips of every man. When Kalidas himself read 'Janaki Haran' he was delighted and was filled with joy, as if he had come to possess a vast treasure.

"A long congratulatory letter to Kumargupta", he mused, still better, why not a full poem? He ultimately gave up his intention of writing the letter and left his home one day. He would not listen to his wife's lamentations or to other temptations and started for Ceylon.

Men told him of the difficulties and hazards of such a long journey, but the poet was burning with desire to meet Kumargupta. With him were his writing materials. His poetic genius flowed on the way as did the numerous streams down to the Himalayas, and a new Meghduta was complete by the time he reached his destination.

Kalidas was in ecstasy "Now I shall be able to see Kumargupta; how pleased he will be? And of course, when I present him with this.....I do hope he does not go mad with joy."

Ceylon, at that time, was at the height of its beauty and glory. It represented on earth 'Alaka', the abode of gods, shaped by human hands: broad highways, gardens with multi-coloured flowers, tall shady trees along the avenues, stately buildings and palaces.

When Kalidas stepped on the Ceylonese soil, he lost himself in wonder at all its beauty and majesty. Feet were treading, eyes were feasting, on the one expanse,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized By Arya Samaj Foundation Chennai and eGangotri

and the poet within was composing another great classic. Suddenly through the dusk came a voice, musical and soft. Kalidas awoke from his trance. His eyes were dazzled. It was as if the beauty queen 'Psyche' herself had taken form before him. His lips moved but no words came out. The young woman, as if understanding the stranger's plight, enquired from where he had come and whom he wished to see.

Kalidas, recovering himself, said, "I come from India. I have heard about this land and that is why I am here. I am a stranger to the place and am acquainted with none. You will earn my gratitude if you will kindly tell me where to pass the night." The woman looked at him from head to foot and extended her hospitality. The poet was gratified and overwhelmed. She unlocked a room, lit a lamp and bade the stranger rest awhile.

Kalidas looked around. Portraits, each surpassing the other, adorned the walls and fine silken draperies hung from the ceiling. Their magnificence awed him. After a while the damsel came in and graciously asked him to wash in the adjoining room and be ready for the dinner. Kalidas got up mechanically, washed himself and dined. After due thanks to his beautiful and generous host, whom he found alone in this vast palace, he retired to bed, but there was no sleep. He lay silent on the bed. There was light in the opposite room and the window was open. There she sat in her girlish beauty, lost in thought. She had a pen in her hand and was softly humming to herself.

Time passed and midnight came but the girl still sat absorbed. Kalidas could no longer remain where he was and headed for her oom where she sat intrigued, anxious as if in a maze. He knocked. She was surprised and curious, also a bit frightened. But gathering strength she opened the door and asked with authority what he wanted.

"Nothing."

"Then why have you come?"

"To ask you something." The stranger had by now recovered.

The woman enquired, "And what is that?"

"Why are you up so late? What has made you unhappy? What has given you this restlessness, anxiety? I am being impertinent only to ascertain the cause. Do forgive me for it."

"No, there is nothing, nothing. It is just that I could not sleep." She sounded preoccupied.

"But you are in some kind of trouble. If so you will tell me I shall be obliged."

At this repeated insistence, the young beauty informed him in her simple way, "I am in love with the prince. And he also loves me. I do not want to tell any body about this but without telling you there seems no escape. It is this that he has set a problem in connexion with our marriage."

Kalidas enquired with great curiosity: "If you consider me worthy of trust, please continue. Perhaps I may be of some service to you."

"The Indians are very honest and trustworthy, that is why I am telling you. The problem is not a big one but for me big enough. The prince is a poet and it is his desire that I should be one, too. Of course, it is quite impossible for me. He has given me a line and told me to complete it. Only then can our marriage be possible." The girl explained with the simplicity which comes so easily to the fair sex. The stranger read the line:

"It is only heard and never seen that a lotus grows on another"

and immediately wrote underneath it:

"Oh, Girl, how thine lotus face has two lotus eyes?" and offered it to the girl. She read it again and again and was delighted. She thanked him profusely and escorted him to his bedroom. Then she came back to read it once again and seemed to reel as the pleasure mounted to her head. All of a sudden a thought electrified her. "What if he tells the prince that he has written it". She dared not think any more. An idea came that he should be dismissed then and there, but God forbid that he should meet the Prince some day. She was confused and her face darkened. Taking out her small sword she got up and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

waited for the stranger's room. He was found asleep. She entered the room. A storm seemed to rise within her and the knife was plunged in his chest.

He muttered "Dear friend, good bye. Unlucky Kalidas. He could not meet you. Good-bye."

When she heard the name Kalidas, she was stunned. A feverish search of his baggage brought out Meghduta and the newly created poem. She read and cursed herself. That knife went into her bosom and she fell at the feet of Kalidas.

Kumargupta came to see the damsel, the next morning. Looking into the guest room he was completely unnerved. After some considerable time he recovered himself and tried to read the situation but was unable to do so. He came to Padmini's bedroom and picking up the fallen paper read and reread it.

His face changed. Hastening to the guest room he fell at Kalidas's feet. Everything was clear. When the new poem was read he almost was beside himself with grief.

Everybody was invited there. The whole of Ceylon was steeped in sorrow. Lights were out. Songs, dances, all sounds of jollity and laughter were stopped. All were informed. Kalidas's name brought every one on the run. Men, women, old and young, were all assembled.

The dead body was decorated and brought to the burning place for last rites. The pyre was of sandal wood. The body of Kalidas was put on it and the pyre was lit. Flames were reaching to the sky and then Kumargupta rose to address the people, "My people, it is my misfortune that the great poet Kalidas came to our country to die. This is his great poem which he wrote for me. He could not meet me but I will go to meet him." Saying this he jumped into the raging pyre with the poem in his hand. Ceylon was plunged in gloom. Sorrow and grief were on all sides. This is the last journey of Kalidas.

——:O:——

MADHYA PRADESH
A Profile

By Y. KRISHAN

The State of Madhya Pradesh is a geographical reality with "split personalities" politically and administratively. Though it had its birth in 1956, as a result of the States Reorganisation and is largely homogenous linguistically, it still continues to be a mixture of its four original integrating units, *viz.*, Madhya Bharat, Vindhya Pradesh, Mahakoshal region of the former Madhya Pradesh and Bhopal. Emotionally, it is the least integrated State in India. In the case of other States, regional dissensions are largely confined to linguistic minorities and the question of emotional integration is largely one of integrating linguistic minorities in the dominant linguistic group and the elimination of caste and parochial consciousness. Linguistic homogenity has failed to give a sense of unity to the peoples of Madhya Pradesh. Political thinking is on regional lines, the political leadership including the alignment in the Government is rooted in regional loyalties. In fact, the political leaders and, following them the civil servants, even think and act in terms of the political units existing prior to the merger of the princely States such as Gwalior, Indore, Rewa and Chattisgarh. The facade of unity in the ruling party has been maintained by importing a Chief Minister, from outside who has no regional affiliations and who is, therefore, most acceptable to the warring factions. Regional orientation of Government naturally affects its decisions on the matter of allocation of funds for development for various regions, recruitment, posting, promotions and transfers of officials, location of Headquarters

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of various Departments of Government and action to be taken against defaulting officials. Even after a lapse of five years since the formation of the State, the service personnel of the various component units has not been integrated and their service conditions and scales of pay not unified. In consequence there is a virtual administrative breakdown, nay a paralysis of the governmental machinery. Delays are the normal feature of the administration. In fact, it is a wonder how it is functioning at all. The administrative inefficiency is further aggravated by the fact that the Heads of Departments of Government are dispersed all over the State and the channels of communication are difficult.

Failure to effect service integration has had far reaching consequences: there is widespread discontent among service personnel who are remunerated differently for doing identical jobs under the same roof and whose mutual relationship is embittered by squabbles of relative seniority. This only serves to accentuate regional feelings. While the rank and file is demoralised and discontented, officers of the All-India Services feel helpless and are apathetic or complacent because of the ministerial indecision which is essentially due to regional jealousies and conflicts. No wonder that the administrative machinery was not able to cope with the Jabbalpur riots that occurred recently and that there was serious trouble in Bastar. In fact, rampant regionalism has not unnaturally given strength to the demand for a separate State the Adivasis (tribals) who constitute a substantial portion of the population. It would not be surprising if some members of the ruling party had a hand in formenting or at least encouraging communal and political troubles to cause embarrassment to their regional rivals.

Educationally Madhya Pradesh is backward. Percentage of literacy is very low. Means of communications are primitive which tends to accentuate regional exclusiveness. Industrially it is an underveloped area. Its premier industrial town is Indore, having the largest population of 9 lakhs but it smarts under a sense of injury at having been denied the honour of being the capital of Madhya Pradesh on regional considerations. Bhopal is still a medieval town which is groaning under the honour thurst on it by being made the capital. It is an extremely dirty and congested city whose water supply is a constant source of danger to its overgrown population. It is woefully deficient in amenities of modern life. To a large measure, however, it typifies the backwardness of Madhya Pradesh where maintenance of regional honour is the chief virtue and maintenance of the status quo a matter of utmost satisfaction.

ASTRONOMICAL REFERENCES IN THE MAHABHARATA

By A. N. CHANDRA

Puranas are the ancient storehouse of dom and may be tapped for all branches of wledge. *Mahabharata*, as we find it now, unds in astronomical references which, -a-ris our present day knowledge, yields y interesting information. True, it has been ced that many portions of the great epic have n interpolated by different authors at different es changing the true shape of facts, still it tains much which is original. Here, we shall go into that controversy, but only pick up persent the astronomical references from the t epic which, according to some, was com- d near about the 4th or 5th century B.C.

In *Mahabharata*, the twety-seven constella- s started from Aswini and they were be- ed to be the wives of the Moon.[1] When the erunners of the *Vedic* culture lived somewhere r the Polar region in about 13,000 B.C., God hma introduced Dhanistadi system of mea- ing time,[2] but at a later date under the orders God Vishnu the system to count time from Nakshatra Sravana was introduced.[3] In *Maha- rata*, we find references to these systems.[4] e principle adopted was to give every star minence when it rose exactly in the east and sacrifices started with the star concerned.[5] seems that upto the time of *Mahabharata*, kshatra meant a star or a cluster of stars not a division of the ecliptic. In the great most of the major events have been des- ed in reference to the position of the Moon the various contellations and rarely by Solar sit.

In *Udyoga Parva*, we find that Krishna left Hastinapur in the month of Kaumudi, when on was in the constellation Revati, at the end Sarata and in the beginning of Hemanta.[6] in *Salya Parva*, it is seen that Krishna sed the Pandavas to start for the battlefield en Moon was in Pushya,[7] but the Pandavas ted two days later, *i.e.*, when the Moon was in sha.[8] Balaram, the elder bother of Krishna, not like to join the war ; so he went on pil- age with all the Yadavas when the Moon was in Pushya (Maitra Nakshatra).[9] It may be noticed that reference to the position of the Moon is predominent in the above cited cases.

Reference to month has also been quoted in a few instances, such as, कौमुदे मासि *i.e.*, in Kaumudi month, पौर्णमासी च कार्तिकी *i.e.*, on the full Moon day of Kartika, श्रावणं पा-क प्रभ *i.e.*, Sravana like fire, or माघोदयं समनु प्राप्तो मासो सौम्यो युधिष्ठिर *i.e.*, Oh Yudhisthira, this is the sacred month of Magha. It seems that at that time Solar months were not in force and dated as we know it now were never quoted. Even week days have not been mentioned. A period of time was, it appears, measured by Tithis and, therefore, by a Lunar period from Moon. Any particular period was thus indicated by the transit of the Moon through one or more of these twenty-seven Nakshatras. Allegorically, the Moon was said to have been visiting his 27 wives one after the other.

The positions of other Planets and the Sun have also been indicated in reference to the con- setllations and not in respect of the Zodiacal Signs which leads us to believe that these signs were either not discovered or were not much in use to denote the position of the heavenly bodies. We find that on the eve of the war Jupiter and Saturn were near the constellation Bishakha;[10] in Visma Parva we find that Mars was retrograde in Magha[11] or that Jupiter was in Sravana[12] or Saturn is afflicting Uttaravadrapada[13] or Venus is upon Purbavadrapada.[14] Such instances are many and can be quoted at length.

The five Planets, viz, Mars, Mercury, Jupiter, Venus and Saturn and also the Sun, Moon, Rahu and Ketu, the two nodes of the Moon were known and have been mentioned in many places. Retrograde movement of the Planets were also known and have been mentioned. The posi- tion of Mars, Jupiter and Saturn at the war has been mentioned earlier. As regards Venus and Mercury we find a mention that Mars and Venus

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were together with Mercury.[15] The Sun and the Moon were treated as Planets as in astrology and we find reference to seven fiery Planets in the Salya Parva.[16] Unless Herschel and Neptune were known to the astronomers of that time, we may take it that the Sun and the Moon were included in "saptamahagraha" *i.e.*, seven great Planets. If instead of Sun and Moon, Rahu and Ketu the nodes of the Moon were meant, then दिप्यमानाश्च संयेतु दिति carries no meaning as these nodes can not glow like the Sun and Moon.

The applied aspect of the Planetary positions on human beings and mundane affairs were taken into consideration. It is apparent, therefore, that astrology was in common use at the time. It was believed that Solar and Lunar eclipses, retrogression of the Planets, *etc.*, were not good omen and did not speak well of the future. In Visma Parva, we find a reference that Saturn is afflicting Uttaravadrapada[17] and Ketu is on fire with fumes.[18] The first is an astrological term and the second is pure imagination. In the Visma Parva, we further find that both the Sun and the Moon are afflicting the Rohini constellation and this indicates astrological aspect and not the position of the Sun and the Moon.[19] Instances where the future is predicted from the signs are not rare. In the month preceeding the war there were two eclipses, Solar and Lunar. This happened before the scheduled time अपर्वणि and this was taken to bring disaster to the people in general.[20] In Visma Prava, there is a reference that if vulture falls on the head, it brings fear to the people.[21] In Mausala Parva, it has been stated that King Yudhisthira saw strange signs and symptoms in the thirty-sixth year of his reign which presaged the advent of Kali Yuga.[22]

Special mention of Solar and Lunar eclipses before and during the war has been made in many places and its evil effects on human beings and mundane affairs have been stressed. The how and why of these eclipses were known to the Indian Astronomers earlier, even during the Rig-Vedic time.[23] In Mahabharata, we find that on the day of the battle there was a Solar eclipse[24] and in the month preceeding the war there were two eclipses, Solar and Lunar, before scheduled time.[25] These eclipses occurred before time अपर्वणि on the thirteenth day of the Moon, on a त्रहस्पर्ष day, when three tithis met. Visma Parava refers to a Lunar eclipse on the full Moon day of the month Kartika and it was a क्षयमास of twenty-six days only.[26]

The position of the Planets, if determined correctly, can give an idea of the time when the Mahabharata war happened. But unfortunately evidences are conflicting and the positions can not be determined correctly. We know that there was a Solar elipse on the day of the war; therefore, it was a day of Amavasya, *i.e.*, new Moon day, and the Sun and the Moon were together in the same sign of the Zodiac. We have already seen that Moon was in Bishakha, therefore, Sun was also in Bishakha. Saturn and Jupiter were also near Bisakha विशाखाया समीपस्थौ बृहस्पति शनिश्चरौ। This may either be Libra or Scorpio. They were there together for one year सम्वत्सर स्थायिनौ च From this it may be safely assumed that Jupiter was retrograde for most of the period. Mars was covering Brahmarsi and was red in appearance.[27] Thus it was in Libra together with Venus and Mercury भृगुसुनु धरा पुत्रौ शनिपुत्र समन्वितौ As Mars was in Libra the other two Planets were also there. There was, therefore, a configuration of all the heavenly bodies either in the same or in two consecutive signs of the Zodiac, Libra and Scorpio. On consideration of the Planetary position of the period some scholars have found out that this configuration could have occurred in 3137 B.C. and have fixed this year as the year of the Mahabharata war.

The division of the Yugas, *i.e.*, Krita (Satya), Treta, Dwapara and Kali has been mentioned in several places and from the omens obtaining during this period it was predicted that the advent of Kali Yuga was near at hand. It is said that the Bharata war was fought at the juxtaposition of the Dwapara and Kali Yugas.[28] Thus Kali was to begin very shortly अचिरात् प्रवर्तते and King Yudhisthira, in his thirty-sixth year of reign saw bad omens"

In the Stri Parva, we find Gandhari cursing Krishna by saying that thirty-six years from the war Krishna will die, his kinsmen will be killed, his councillors and children will die, he will roam about in the forest and will be killed in a very evil manner.[29] The period when Krishna died coincided with this time as well as the time when Yudhisthira saw the bad omens. It is said in Vishnupurana that Kali came when Krishna died.[30] According to the Puranas, Kali

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

consists of 4,32,000 human years. The ...ale of the division of the Yugas can not be ...ctly ascertained at such a distant date but ...ppears that it has some bearing on the 360 ...rees of the Zodiac (300×1200) and also to ...time taken to complete one full precessional ...ation of the Equinoctical points which takes ...t 25,960 years at 50 bikalas per year or 72 ...s for each degree of the ecliptic. From the ...tion of 4,32,000 years to the Kali Yuga, it ...ld not be far out to assume that the astrono...s of that time were quite aware of the prece...al revolution.

It has been said that grandfather Visma ...d die according to his will. He retired from ...battlefield on the 10th day of the war and ...ed for 58 days so that he could die in Uttar...a.[31] Uttarayana is the phenomenon of Sun's ...ing the Equator and moving northwards. ...religious men wanted to die in Uttarayana as ...as taken to be the path of Gods देवयान This ...ens when the Sun enters the celestial northern ...sphere. Bhisma left the world after waiting ...58 days, in the Lunar month of Magha, in ...bright half and on the 11th day.[32]

The data given hereinbefore may be ...ined by the scholars to fix a time period of Mahabharata war. We know that कौमुदेमासि ...n the Moon was in खेती Krishna started for ...inapur for the settlement of the dispute ...een the two parties and on his failure, the ...ava warriors gathered in Kurukshetra, when ...Moon was in मघा This is the 7th or the 8th ...of the dark half as Krishna said that there ...be New Moon after 7 days[33] and on this ...Moon day the great war started. Therefore, ...e New Moon day the Sun and the Moon ...together in Bishakha. In the previous month ...was a Lunar eclipse when the Moon was in ...ka: Therefore, Sun was in opposition. *i.e.*, ...degrees apart. In a fortnight Sun moves ...13 to 14 degrees; hence Sun was on the ...part of Bishakha during the Lunar eclipse ...on the last part when the war started. After ...ys from the begining of the war, when ...ma died, Uttarayana took place and the Sun ...at about 278 degrees of the Sideral Zodiac. ...we see that Bhisma died on or about the ...7th Magha, war started on or about the first of Agrahayana and Krishna went to Hastinapur on or about 22nd Kartika.

SCIENCE AND INTERNATIONALISM

By RAGHUVIR SAHAY NIGAM

It has been said that the future evelopment and growth of Science will not epend upon the break-through achieved individual or even a group of scientists, even by one nation, but upon interna-nal co-ordination and co-operation.

Annihilation of distance, quick means transport, inter-dependence of nations the web of Life, the impossibility of ilised and comfortable existence without er-national exchange of goods (smugg-s are also inter-nationalists in a sense) d lastly the pollution of the atmosphere atomic fall-out have compelled Man to ink of people beyond the national bound-ies. Mountain peaks to climb cannot be d everywhere, game is found only in the lds, medicinal herbs are not universally istributed.

Problems can only be attacked teams of scientists, geographical factors emand crossing of man-made boundaries, thropological and ethnological problems ill take you to foreign lands till national unds appear mere tribal enclaves. Pala-tology tells us that the earth had had any species as the top-rulers, and the mo-sapiens may on account of having own dragon's teeth may pass into the mbo of geological history. Cry halt now, Man, to your attempts at self-annihila-n.

Co-operation in the study of meteorlo-al and climatological factors on an inter-ional basis last year must teach us that e world is ONE. International Atomic ergy Commission, however impotent to op nuclear armaments-race, is there. ternational Aid to developing nations s become a field for competition.

Humanity is maturing and has come to e Age of Reason if a few mad-caps do not ecipitate a global war within these enty years, Man will continue to flourish r centuries to come. The populace needs ing freed from the net of prejudices, short-sighted economic interests, demago-gic persuasions, ambitious scheming of rulers, before it can take to scientific mode of thinking, rationalsation etc.

Science has enabled Man to conquer Nature, but its greatest triumph will be if it inculcates the habit of calm rational scientific thinking in the populace. It is the common man that has now got the destiny of man in his hands and the edu-cation of masters will be the supreme act of science and scientists. Even the leaders in the armaments race look to scientists for the furtherance of their plans. Humanity is come to man-hood and will easily brush aside all shimmering cob-webs woven by Religion and Politics (Sant Vinoba Bhave has pronounced the end of Religion and Politics and heralded the coming of Science and Spirituality).

Science should not be taught in isola-tion with other traits of human personality. It should lead Technology and not subserve it at the behests of the Economic Man.

If the earth is to be made fit for man to live, Man must also be made fit to live. Forces of evolution can now be studied and the course of humanity in future can be guided, and a better type evolved. Conditions favourable to the emergence of a nobler type have to be created (care should be taken that the result is not Beautiful Futility) with all the demonaic energy of man bent on **Conquer-ing** deserts, oceans, space and planets. Science advancing vertically, and organi-cally expanding in other directions can achieve this millennium.

Nearer home we have the problem of national integration. These very methods applied after due consideration of exist-ing local factors are to be applied. Let anthropological and entnthnological studies dispel many notions about the superiority of castes, study of migrations of populations showing how the Pants came to Kumaon.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Chavans to Maharashtra, Tagores and Chatterjis to Bengal, how a Namboordripad Brahman came to officiate as a priest in Badrinath. Collection of statistics of income these days will show to D.M.K. people how much more are southerners earning in the trans-vindhyan region than are the northerners in their zone.

How historical events in the north shaped the history of the south, how religions and migrations affected the life of one people and are even now affecting for good or evil to a much greater extent. It is the policy of making much of the States (though really they had been moities of one unitary whole unlike that in U.S.A.) that has created these regional schisms. Raising the standard of education and research will put into shade and shame protagonists of regional languages. Establishment of a National University will throw into the back-ground all the regionalised universities. The hard necessity to have the best teachers can be exploited by having an all-India cadre of University professors, all-India services, river-basin corporations for flood control, development of roads etc. Zones should be made more powerful and states denigrated. Unite or die. Politicians are always afraid of extending of spheres because they feel they will loom lesser on the horizon. By February 1962, all the contending politicians should have been painted as devils, and every party besmeared with pitch. Politics shall have been shown in its naked brutish uncouthness.

Growth of scientific knowledge with its compelling dose of scientific mode of thinking shall have done its part in the scheme of national integration.

Similarly inter-nationalism can also be promoted by scientifc developments and the ever-widening spheres embraced by it shall be developing an inter-national outlook if within these 20 years there is no global armageddon, and flights into Space are not accompanied by the shooting of inter-continental ballistic missiles.

The leavening influence of science is working beneath the cold crust of international jealousies. The latter shall have to give way.

———: O :———

THE BHAKRA-NANGAL IRRIGATION SYSTEM

By Prof. K. S. SHARMA, M.A., M.Com.,
Head of the Dept. of Economics, D.A.V. College, Bulandshahr.

Among the achievements of the Punjab after partition, the Bhakra-Nangal Project stands out as the most remarkable which we are all proud of. The rapid progress made by the project during the last twelve years is its outstanding achievement. This the biggest and the most ambitious enterprise of the Government holds out a great promise of prosperity and progress not only to the people of Punjab but also to the people of U.P., Rajasthan and Himachal Pradesh. This splendid multipurpose project, unique in its dimensions and varied in its possibilities, has surpassed even the loftiest of the lofty dams in the world of today. It is likely to rejuvenate the lost aspirations and regenerate the life of the people of India.

Jungles had been cleared, hillocks broken down and the Sutlej like the sleeping dragon has been completely chained. The area which had once hummed with activity with the unbroken and deafening roar of engines, bulldozers and shovels and the dancing of trollies pouring concrete round the clock is now coming to a satisfactory close; where silence in the narrow valley will reign supreme again. Bhakra Dam the highest straight gravity dam in the world, has attained its final height of 740 feet from the deepest foundations. The project is now assuming fast the shape of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

completion—October 31, 1962, being the target date. Within the period of thirteen years a network of canals have been constructed.

Nangal-Hydel Channel

The Nangal-Hydel channel which takes off from the left bank of the river Sutlej is a Chef-d'oeuvre of engineering skill. It is the channel which feeds the Bhakra Main Line canal and its distributory system. It is also utilised for the generation of hydro-electric power. The principal features are :

Length—39.6 miles
Flow capacity—12,500 cusecs.
Excavation—23.8 million cubic yards.
Lining—34 million square feet.
Number of cross drainage works—58.
Number of bridges—34.

The total length of the canal is about 39.6 miles upto Rupar from where the main Bhakra Line Canal takes off its tail. It is designed to carry 14,500 cusics of water for the first 9,700 feet of its length and 12,500 cusics thereafter. The normal bed-width and water-depth of the canal are 80 feet and 20.5 feet respectively. The top-width being 140 feet.

The construction of the canal throughout the region presented a major construction challenge, many problems encountered being without precedent. The excavation involved 24 million cubic feet of earth and gravel. High ridges and deep ravines required excavation and earth-fill from 40 feet to 80 feet in height. The excavation work was more or less mechanised. The built-up banks of this canal were compacted with sheep foot rollers. By this technique the soil could be compacted even harder than the outside natural surface.

The canal is lined with concrete upto Kotla Power house about 18 miles from Nangal and with tile lining beyond Kotla. Lining is 5 inches thick in the bed so as to reduce the loss of valuable water through seepage and also to allow water to flow through it with a high velocity. To avoid cracks the concrete is laid in slabs of suitable dimensions, the joints resting on concrete sleepers underneath. It has been calculated that the total number of tiles used in lining the Bhakra canals and its branches are 65 crores and of bricks in masonry works in the entire irrigation system is 28 crores. These if put end to end, will go round the earth seven times at the equator.

The maintenance cost of the canal would be much lower in comparison to other canals in India because there would be no silt problem to be tackled in the channel. The water running at a high speed will wash it down the canal automatically. The canal has been provided with underground drainage in the tracts where sub-soil level is high so as to drain out seepage water at the bottom.

The canal was opened on 8th July, 1954, by Pt. Jawaharlal Nehru. The ceremony marked the inauguration of the Bhakra Canals described by the Prime Minister in his speech as a "living witness of the growing strength of a nation and its determination to go ahead." Declaring the Canal system opened before a vast multitude of men, women and children, he dedicated the project, "to the good of the Indian people." Pt. Nehru after having a view of this huge constructional undertaking said that he looked upon these places of big works as "temples and places of worship," "I feel more religious minded when I see the great works", he reitterated.

Rupar Head-works and Its Remodelling

Rupar Head-works feed Sirhind Canal which takes off from the left bank of the river Sutlej at Rupar. Prior to this remodelling, the Head Works consisted of a weir 2,370 feet long and the canal head regulator consisting of 13 bays of 20 feet each. It was found necessary to remodel the Rupar Head Works on account of the following reasons :

(i) The capacity of the Sirhind Canal was to be improved from 9040 cusecs to 12000 cusecs.

(ii) A new canal, called the Best Doab Canal was to be taken out from the right bank of the river Sutlej. It was, therefore, required to construct gates on the right

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

side for the proper control of the river and the silt that it would carry.

(iii) The Head-works prior to remodelling was short of the required capacity. The former was designed to pass a maximum flood discharge of 3,50,000 cusecs only but actually a flood of 4,90,000 cusecs had passed causing considerable damage to the works.

The Head-works now have been completely remodelled at a cost of Rs. 1.26 crores. Now the remodelled weir consists of 60 feet, each separated by 7 feet thick piers. The height of the gates has been raised by two feet and a 22 feet side bridge across the barrage has been constructed.

Remodelling of the Sirhind Canal

There were certain reasons which compelled the authorities to remodel the Sirhind Canal system. There were considerable areas commanded by the Sirhind Canal which were included in the project irrigation boundary to start with, but were not actually brought under irrigation due to shortage of supplies. It was, therefore, proposed to supply water to irrigate these areas. At the same time, it was also decided to improve the water allowances on the Sirhind Canal to provide irrigation to the areas of the Punjab lying south west of the canal and the entire area of the earstwhile PEPSU. The revised capacity of the Sirhind Canal main line is worked out to 12,567 cusecs. The Sirhind Canal, its branches and distributories have been remodelled at a cost of Rs. 4.51 crores for extending irrigation to new areas of the Punjab.

Bhakra Main Line

The Bhakra Main Line is a continuation of the Nangal Hydel channel, and is designed to carry a discharge of 12,455 cusecs. Starting from Rupar it passes through the Malaves of the earstwhile PEPSU and proceeds almost straight to the border of Hissar district where it bifurcates into two branches—one lined (Bhakra Main Branch) and the other relined (Fatehbad Branch).

Work on the Bhakra Main Line started in 1950. About two years were spent on excavation work and lining was started on experimental basis in April, 1952. Thereafter, the work gained speed and in 2 years' time the entire Main Line was lined.

This is the biggest lined canal, 108 miles long. In fact a lined canal of this size and length does not exist anyhwere in the world. An idea of the magnitude of the work in lining this canal can be had from the fact that it involved the use of 28 crores of tiles, 20 lakh bags of cement, 2000 masons and about 15,000 labourers working daily. All tiles used in this work if placed end to end would go twice round the world at the equator.

Bhakra Main Branch

The Bhakra Main Branch takes off from the tail of the Bhakra Main Line near Tohana and runs west upto the boundry of Rajasthan where it feeds two Rajasthan channels. It is a lined channel 90 miles long, carrying discharge of about 5000 cusecs at the head and about 2000 cusecs at the tail. The work on the Bhakra Main Branch was started in May, 1949. The completion of such a gigantic system of canals in a period of about 5 years is a proud achievement.

Fatehbad Branch

This branch is 160 miles long and takes off from the tail end of the Bhakra Main Line with a head discharge of 1997 cusecs. One of it's offshoots pushes itself towards the Rajasthan border where it feeds Rajasthan channels. Both the canals i.e., the Bhakra Main Line and the Fatehbad Branch will irrigate the arid zones of the Hissar district, Dhudhal tract, Rajasthan and the earstwhile PEPSU. The last 30 miles of these canals pass through such a dry region that water is not available even at a depth of 100 feet.

Narwana Branch

Like the Upper Jhelum Canal and the Upper Chenab Canal left by us in Western Pakistan, the Narwana Branch is the only canal in the Punjab (I) which has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

signed and constructed as a feeder chan- d across the Doab. Taking off from the akra Main Line at Mile 32, near Sirhind, runs parallel to the railway line from hind to Ambala and then to Kurukshetra ere it joins the existing Sirsa Branch of e Western Jumna Canal near Budhera.

Acute shortage of supply has been the stant feature of the Western Jumna nal. Its three branches hardly run for days in a month which by no stretch of agination can provide thriving agricul- re. How to increase the supply on the stern Jumna Canal remained a pressing blem, until at last the construction of rwana Branch was decided upon. Now existing Sirsa Branch with a discharge 1894 cusecs will be fed through the rwana Branch by means of Bhakra water.

The Narwana Branch is 64.2 miles long d carries a discharge of 4500 cusecs at its d. It tails off into Sirsa branch deliver- a discharge of 2952 cusecs. An area of 3,000 acres of the Punjab and 1,73,000 es of the earstwhile PEPSU will be irri- ed on the west of the canal. A discharge 2952 cusecs will be passed into Sirsa nch which will increase the intensity of gation of about 10,25,000 acres in Hissar Karnal districts and in earstwhile PSU. The total irirgation will, there- e, come to about 17,93,500 acres. The or benefit of its construction will go to districts of the Punjab in addition to the gation of the forest areas of the Gula -Tehsil of Karnal district.

The Narwana Branch comprises 64.2 s of lined canal, 400 miles of distribu- s and minors, 160 miles of drains. The l length of channels aligned and con- ted comes to 874 miles.

One can imagine the vast magnitude of work accomplished when he is told 60,000 tons of cement, 10,000 tons of and 14,00,000,000 tiles have been used 50,00,00,000 cubic feet of earth, 00,000 square feet of lining, 25 crores age works, 100 falls and regulators and bridges have since been constructed on Narwana Branch. The drainage prob- was both colossal and complicated and oil met with along Narwana Branch ally hard. In spite of the serious bottlenecks created by non-availability of qualified staff and scarcity of materials causing delay, the speed with which the work has been completed two years ahead of the schedule has no parallel in the history of the Punjab Irrigation Department for more than a centuary.

It makes an interesting study to note that the perennial full supply discharge of 45,000 cusecs of the Narwana Branch at its head is equivalent to the construction of about 3 lakhs of new percolation wells. It will bring an area of about 10 lakh acres under irrigation in the Punjab, including the earstwhile PEPSU, increasing food production to the tune of 3.5 lakhs tons annually i.e., worth Rs. 20 crores. It is needless to say that this increase in the income of the farmers is bound to open up new evenue of employment even in the non-agricultural spheres. Besides, the present devastation done by the floods will be controlled and the jungle infested areas brought under the plough.

Beas Doab Canal

The tract of land enclosed by the two great rivers of the Punjab—the Sutlej and the Beas—is called Doab and more rightly known as the 'Garden of the Punjab'—is a fertile piece of land but unfortunately devoid of irrigation facilities. Their traditional form of irrigation has been by means of wells. The under-ground water has however, been progressively depleted during the last 50 years by extensive well-irrigation.

The Bias Doab Canal system consists of 90 miles of main and branch canals, 600 miles of distributories and minors. Thanks to the untiring effeorts of our engineers and the labourers, a job which should have ordinarily taken 7 years to complete has been finished in two years' time, a rare achievement of which Punjabis are justly proud of. This has resulted in making available the benefits of canal irrigation to the farmers of the area much earlier than the scheduled time.

The engineers have put in the requisite tremendous efforts by collecting about 21000 men workers on the canal during the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

winter of 1952-53. On an average 10,000 men have worked for 2 years. In this period the total amount of the works executed have been 50 crores cubic feet of earthwork, 27.2 miles of lining and 396 bridges.

The estimated cost of the Bias Doab Canal is Rs. 4.3 crores. The areas to be irrigated are Jullundar and Hoshiarpur districts. The discharge of the canal at its head is 1800 cusecs which is equivalent to the services of 1 lakh new persian wells. The major benefits of this canal go to Jullundar district. Most of the 'Barani' and 'Banjar' areas will come under cultivation bringing about an increase in the production of food grains and additional income to the agriculturists. In the ultimate analysis, the accelerated construction of this canal is an integral part of the over-all schemes launched by the present State Government to ameliorate the economic and social conditions of the public in general and the displaced persons who were deprived of their canal irrigated lands in the West Punjab in particular.

The opening of these canals and the extension of old ones has ushered a new ara of prosperity and plenty in the North-Western India. Distribution of supplies has been improved resulting in an increase of irrigation by 30 per cent within the shortest possible period. The measures adopted by the Government to increase irrigation have never been so comprehensive and consumate in the past as were adopted in the Punjab after partition. The tempo of work has indeed been the highest ever recorded in the State. Let th figures lay bare the truth themselves. The opening of the Barwala and Sidhwan branches serving over 7 lakh acres within a period of 2 years of the start of the work and another five distributories in 1952-53 were stupendous tasks ahead. Last five years have seen a net work of 2800 miles of the canals branches and ditributories completed. These include the Bhakra canal the longest lined canal and the Nangal Hydel channel the most difficult canal ever constructed in the world.

———:O:———

CULTURAL PATTERNS REGULATING LAWS OF INHERITANCE OF THE SANTALS

By AJIT KUMAR DANDA, M.SC.,
Cultural Research Institute

In the month of October, 1960, the author undertook the survey of a Santal village, *viz.*, Muramsol, of Jhargram sub-division in Midnapore district. The object of that study was to get some first hand idea about the laws of inheritance of the Santals. It is a fact, that the Santals have no codefied law of inheritance as yet, and connection seems to guide the procedure.

The act of codification of anything is a [illegible] thinking. Because legislative measure cannot change the actual practice of the society if it is not given the status of a norm. By legislation we may create a physical fencing but this is nothing but a barricade to individual thinking. What is apparent may appear to be the just opposite of the actual norm. Naturally, we will encourage inhibition rather than imposition in this respect.

The village studied, is about 25 miles away in the north-western direction from Jhargram town which is the sub-divisional headquarter. It is connected with Jhargram and Gidni Railway Stations by bus route. Public buses ply several times a day through this village. The district board pucca road has crossed through the heart of this village.

The village studied is purely a purposive sample. Little statistical procedure was followed while selecting this village for study. As the study was exploratory in nature there was no harm in taking a purposive sample [illegible]

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion. It is true, however, that the result is nificant to a limited degree.

There are 31 families in the village with an rall population of 180, of which 93 are males 87 are females. Of the total population, only persons were studied, *i.e.*, 13.3 per cent and e 24 persons are represented by both sexes, proportion of which is 5.1, males and females ectively. In spite of the selectiveness of ple and feebleness in numerical strength, of informants, the limited value of this study not be ignored.

Printed questionnaires were administered ch contained 41 questions regarding the laws inheritance and almost all the probable wers with their alternatives were put forward re the informant to choose his return. Each the alternatives were pursued further to study norm and attitude of the persons concerned. ough this method has the drawback of some- biasing the informant, yet here in this case, was felt necessary to give him a ready answer its form or shape at hand. As the subject of dy is a highly complicated one, the applica- of this method was worth following. Side side with it, the actual movement of the assets e studied with the application of Genealogical hod or case history method. All the 41 ques- s with probable returns were put-forward variabilities in norm and attitude were ked against 25 items only. Here, however, I l discuss about the extent of variation of m and attitude in the laws of inheritance of persons concerned.

The general standard or pattern of be- iour of the society is called the norm. But, the society itself is going through a processes hange we may not expect any stability in the m and ideas which are practically the exter- outburst of thoughts of the folk organisers. e to contact and other factors, the ideas of a ular era change with the march of time. this process of change we find certain new ghts or ideas which being consolidated take shape of attitude. In the latter phases of the ess of change; sometimes the attitude re- es the previous norm and itself takes the e of it.

The norm is the codified form may be d as a law. But there are certain cases find that the law has encased itself within the sleeves of books being disapproved from all corners of the society.

The term law is confined to "social control through the systematic application of the force of politically organised society". But instead of systematic social control if it disturbs the central balance of the society, the absolute value of the whole phenomenon comes down to nothing, whatever the relative values may be.

However, so far the age groups of the informants are concerned, they may be classified into the following five categories :—

Age group :	Number of persons.
—20	3
20 + —30	6
30 + —40	6
40 + —50	6
50 +	3
Total :	24

Of the 24 informants only 6, *i.e.*, 25 per cent did not show any variation in their norm and attitude and 75 per cent, *i.e.*, 18 differed in their norm and attitude to one or some of the items.

Out of six persons, who did not show any variation four persons belong to the age group 50 and above. Their age fairly satisfy their orthodoxy. Of the other two, who did not show any sign of variation one was 40 years old and the other was 19 years of age.

If we take the number of items into consideration we find the variability up to the extent of 60.97 per cent and when the number of informants are counted we find that 75 per cent of them differ from the actual norm. In both the cases the percentages are significant to a greater degree which apparently may promulgate the chaotic condition of the society. But, in fact, the society is going on well without causing any injurious sore on persons, in spite of so much diversities. There are certain reasons behind it.

First of all the norm of a society may be considered as the behaviour pattern of the major portion of the society. At least once [illegible] supported by the majority. In course of tim[illegible] the change of the world new ideas may [illegible] among the members of the society [illegible] Yet the change in behaviour pattern [illegible] readily acceptable, as in the case [illegible] objects.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Secondly, the outward expression of norm, so far as the laws of inheritance are concerned, is very limited.

Thirdly, individual flexibility allow some tolerance.

Fourthly, all the 75 per cent of people do not differ in all the 60.97 per cent of cases. Most of the people differ—one or two item. From the last table it will be clear that as many as 14 persons differ in one item only. On the other hand, only one person differs in 12 items which is the maximum. Lastly, rationality of the social being do not disturb the central pivot of the social balance due to some minor reasons.

Of the 18 persons who differed in norm and attitude 14 persons differed against question one. The question was "if a man dies with three sons (born of the same wife) surviving" which of the following provisions is correct according to you", etc. Then the answers were put forward with its probable alternatives. I shall not deal with them here in detail. However, all the 24 informants agreed that the eldest son got a larger share but 14 persons of the 24, *i.e.*, 58.3 per cent cast their opinion in favour of the answer that the three sons should inherit the property equally. Their argument is that as the sons belong to the same father and mother there should not be any differential treatment in this regard. The opponents also had their own argument. According to them the eldest son is entitled to entertain the relatives and it is he who is to worship the family deity and to offer sacrifices to the deceased ancestors. So the larger share enjoyed by him is quite legitimate. However, as I am not to discuss the arguments and counter arguments here, I will delimit my discussion towards the extent of variation.

The next item against which a major number of people differed is the serial 17 and the number of persons differed is 8. Here the question was "if a man dies with his daughter's son and own brother surviving which of the following provisions is correct according to you", etc. All the informants agreed that the [illegible] property is inherited by the deceased, brother, [illegible] indicative of the fact that the family is joint [illegible] society [illegible]oned. But 8 of the 24 informants, *i.e.*, legislation [illegible] said that the daughter's son should [illegible] this is [illegible] property if the property had been [illegible] *thinking* [illegible] before—the death. One thing, which *just* [illegible] will no[illegible] be out of place to mention here is that there is a great controversy about the property right of the women in different patriarchal societies. The Hindu Succession Act has given equal share of property rights to the Hindu women. But there are certain laws which cannot gain ground against social convention, in spite of its legislative protection. The name of Widow Remarriage Act may be mentioned here as an example. The Hindu Succession Act is also a matter worthy of observation. Among the Santals also the women have no right to inherit the property. But this question has obtaind the sympathy of 1|3rd of the total persons questioned. This is undoubtedly a noteworthy trend which may perhaps be a recent development.

The Santals have their own customary laws of inheritance which is neither purely Mitasshara nor Daybhag or anything else. Naturally there are certain local variations found in different areas. As they have got no codified law of their own, instinctively they become influenced by the law of the loca people.

In the area of my study the Santals are living side by side with the Hindus and naturally they have become Hinduised to a greater degree. Among the Hindus the modern trend is towards the equal property right of both the sexes. The impact of Hindus also has imported identical forces among the neighbouring tribals.

The next items in which a large number of informants differed are the serials 15,16, 20 and 32. Seven persons differed in their norm and attitude against each of these four items. But one thing that should be remembered here is that the same group of seven persons did not show the variation against all these four items. They are different groups from the total number of 18 persons.

Question 15 asks "if a man dies with his daughter and brother surviving which of the following provisions is correct according to you, etc". It is the usual custom of the society that the brothers will inherit the property and the daughter will get her maintenance till marriage. Each of the informants admitted that; but 7 of them, *i.e.*, 29.16 per cent said that the daughters should inherit the property.

Question 16 asks "if a man dies with his son's daughter and own brother surviving, which of the following provisions is correct according to you, etc". The convention is that the [illegible]

ld inherit the property but 29.16 per cent the informants differed in their norm and ude. Of them 16.7 per cent are of opinion the property should be equally shared by brother and son's daughter and 12.40 per cent of opinion that the son's daughters should erit the property to the exclusion of brothers.

In serial 20 the question was "if a man dies a son's daughter and a brother's son sur- g which of the following provisions is ct according to you, etc". In this case also per cent of the informants differed in their and attitude. All the informants agreed the brother's son would inherit the pro- , but 12.40 per cent are of opinion that the daughter should inherit the property and per cent are in favour of dividing the pro- equally between them.

In case of question number 32, the matter most identical. Here it was asked, "if a man with his father's father and brother's son iving which of the following provisionis are ct according to you, etc". All the informants ed that the convention is that the brother's should inherit the property, but 7 persons red from this norm of the society. Of them sons are of opinion that the property should qually shared by them and 2 persons said the property should go to the father's father the exclusion of brother's son. According to the property is sure to go to the brother's in the long run. So let the ancestor enjoy property so long he is alive.

In question number 21 it was asked, "if a dies with a daughter's daughter and a her's son surviving which of the following isions is correct according to you, etc". In this case all the informants agreed that property is inherited by brother's son but them, *i.e.*, 25 per cent are in favour of the daughter's daughters equal share of rty.

So far as the question numbers 3, 12 and are concerned 3 persons difffred in their and attitude in each case. Question number "if a man dies with three sons born of wife and two sons born of another wife of the following provisions is correct ing to you", etc. The usual norm is that three sons born of one wife will get one-half property and the two sons born of another get the other half. But all the three persons who differed in their norm and attitude agreed that the 5 sons should get equal share.

In question 12 it was asked "on the death of a woman who was married more than once, do you think that property originally inherited by her from one husband should devolve upon the heirs of that husband and not upon the children by another husband or heirs of another husband. Each of the informants answered in the affirmative but 12.5 per cent of them argued, if the woman originally inherited the property from her respective husband then property should be equally distributed amongst her heirs.

"Question 31 asked if a man dies with a brother's daughter and a sister's son surviving which of the following provisions is correct according to you etc." All the informants agreed that the brother's daughter would enjoy the property till her marriage and ultimately the property would go to the sister's son. But 12.5 per cent of them are in favour of giving the property to the brother's daughter to the exclusion of sister's son.

So far question numbebr 8, 9 and 14 are concerned only 2 persons different in their norm and attitude and only one person different each of another 13 items. As the number of heads differed are meagre, I will not discuss these cases here in details. Not only that, as the subject of study is the extent of variability in norm and attitude, it is of no use to discuss these cases in elaborations.

The following table will show the total number of persons differed in their norm and attitude and the total number of items.

No. of persons.	*Total no. of items.*
14	1
8	1
7	4
6	1
3	3
2	3
1	12
Total :	25

From the above analysis, it will not to conclude anything definitely and alised way as the sample is small and one. However, what ever we may purely on empirical statement. But it is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

picuous that a fairly large number of people deviated from their norm sofar as laws of inheritance are concerned. What is the reason behind this deviation is yet a matter for consideration.

One thing which I wish to mention here is that the society itself is running well inspite of so many deviations. Apparently it may seem to be sometning unnatural. But it is because the inherent conservatism in our minds which copensates the innate disturbances.

Another thing which is noteworthy to mention here is that the attitude of the Santal law of inheritance is growing as per the Hindu concept. Whether this trend has been imbibed from them or not; is still to be revealed.

———:O:———

SOME LINKS BETWEEN BENGAL AND RAJPUTANA

By O. C. GANGOLY

I cannot express in words how happy I feel in coming to this meeting and take part in the opening of this Exhibition of Paintings and Drawings executed by young artists from Rajasthan.

In Calcutta there has been a lot of development in the growth of Modern Painting and we have in Calcutta, almost every week Exhibitions of the works of Modern Artists.

But this is first time that we are having an Exhibition of living artists from Rajputana.

The practice of pictorial art in Rajputana comes down from several centuries and the traditions of Rajput Painting come down to as late as the end of the 18th and beginning of the 19th centuries. Although the generations of the old Master of Rajputana at various centuries—have gradually died down. I believe, there are still some practising painters, here and there, who are carrying on the great traditions of the Rajput School.

And the responsibility of developing the old traditions now rest on the young painters of Rajasthan, who are the legitimate heirs to the great traditions of the old School, the works of which have been carried to all parts of the world and have won unstinted praise and admiration. [illegible] are all anxious to see how the present heirs [illegible] great traditions, the new and young [illegible] of Rajputana, are able to do credit to [illegible]luable heritage and on what path of [illegible]velopment the modern practitioners will [illegible] carry the traditions of old. Most of the masterpieces of Rajput Painting are to be seen in the soil of Rajasthan and have found their way to all the Museums of the world. And it is a difficult task for our young artists to get access to them and facilities to study them except in good reproductions and in photographs.

It is, therefore, necessary to provide proper facilities to our young painters to study the great masterpieces of this School.

For, unless they can realize by actual study of the old Masters how much has been achieved it is not possible for the moderns to chalk out the paths of new developments.

We are all anxious to see how modern representatives of these old Schools build the ways for new developments. I only hope the young painters should avoid the baneful influence of the Modernistic manners and techniques imported from Europe. Our young painters should stand firmly rooted on their own traditions and yet find new ways of developments along lines, manners and methods not previously tried by the old Masters.

In their new experiments they deserve our sympathy, appreciation, encouragement and patronage. They can learn much from the experiments of the New School of Modern Painting founded by Dr. Abanindra Nath Tagore. And many of the new Bengal artists, disciples of Tagore, have carefully studied the old Masters of Rajasthan and have greatly benefited by such study.

Bengal and Rajasthan, separated by long distances of space, and cultural climate, have on several occasions in the past and [illegible]

the products of their respective cultures and have been tied up by many intimate relations of understanding. We can cite at least three significant occasions of mutual understanding and respect.

The famous masterpiece of Vaishnava devotional poem the great *Gita-Govinda* of Jayadeva (12th century) was carried to Rajputana and was studied by a great connoisseur of literature the famous RANA KUMBHA OF MEWAR (1419-1460 A.D.) who has recorded his reactions to the great Bengali masterpiece in his learned and illuminating commentry—on the *Gita-Govinda* known under the name of *Rasikapriya*.

So that by composing this commentary, Rana-Kumbha built an intellectual link between Bengal and Rajasthan annihilating the great distance that separates the two countries. It has been well said : that "One touch of Vaishnavism makes the whole world kin."

The touch of Vaishanvism—that the *Gita-Govinda* has stretched out of Rajputana, has tied two distant culture—areas in one intimate knot of close kinship.

Another link between the two distant countries was built by Raja Man Singh of Jaipur when he came to Bengal under the orders of emperor Akbar When he returned from Bengal after finishing the royal commission—Man Singh carried with him the Image of Kali,—known to us as *Yasoreshwari*, (Shalyadevi) all the way from Jessore and installed this Image of Kali in a temple he built for the Goddess—on the hill of Amber. So that if Vaishnavism was one of the links—the cult of Shakti—provided another link between Bengal and Rajputana. Along with the Image of Kali went a group of Bengaless to Amber and the descendents of this group of Bengalees are still living at Amber as the priests and *sevayets* of the Goddess

Going to Fetch water

Digitized by Arya Samaj Foundation Chennai and eGangotri

Visvesvari. These colonized Bengalees have now forgotten their own native language—speak in the Hindi language.

A third link between the two countries is provided by the activity of King Jay Singh when he founded the new city of Jaipur, in the year 1731. For planning and building the city Raja Jai Singh requisitioned the services of a Bengali town-planner named Vidyadhar Bhattacharyya, who planned the beautiful city of Jaipur for the King and his name is still commeorated in the name of a Street called *Vidyadharki rasta.* The house where Vidyadhar lived is still identified and pointed out to visitors. The later links between Bengal and Rajasthan have been kept up by generations of traders and commercial people who began to pour into Calcutta about the year 1890 and these traders and commercial adventurers have contributed greatly to the building and development of the new city of Calcutta. And now a group of young painters of Rajputana have today built a new link by exhibiting their paintings for the appreciation and understanding of the cultured citizens of Bengal.

On behalf of the citizens of Calcutta, I have great pleasure in according to these paintings and their painters a warm welcome of appreciation and understanding.

Our politicians are busy devising means to bring about an emotional integration between different groups of our people and I personally believe that the best means of attaining an 'emotional integration' is by appreciating the Visual Art productions of the different parts of our great country.

Gentlemen, I have great pleasure in declaring this Exhibition open. I am sure all the lovers of Art—in this city will crowd into this hall and pay their tribute to the productions of these young painters.*

UNITED NATIONS' NEW PROBLEM

By J. A. NAIK

When in October, 1945, the leaders of 50 States met at San Francisco to found an International organisation in place of the dead League of Nations, they had borne in mind the fact that the major weakness of the League was both constitutional and functional. The League had to deal with an indefinite number of big powers with their unsettled roles. During its course Germany was given a permanent seat; when Japan resigned, Russia received one. Italy withdrew in the wake of the Ethiopian crisis and U.S. never joined.

Both the League Council and the League Assembly were given identical mandates to deal with any matter . . . affecting the peace of the world." Even though the Council, along with its big powers, was conceived to shoulder the major responsibility, as years rolled on, its importance decreased as major decisions began to be taken in the Assembly.

In order to avoid exactly this defect, the United Nations' Organisation was made, in constitution, a government of the big. The Security Council gave permanent seats to five major powers with the right to veto any resolution dealing with substantial matters not procedural in nature. It was thought that the functional strength of an international organisation lay in its big power association. The defiance of its decisions by big powers lead either to the latter's exit, as was witnessed in the case of the League, or saps the former's strength.

With a view to strengthen the effectual functioning of the United Nations' Organisation, the Security Council was made its principal organ whose "primary responsibility" was "the maintenance of inter-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

national peace and security." The members "agree to accept and carry out the decisions of the Security Council." The General Assembly, on the other hand, "may discuss any questions relating to the maintenance of international peace and security" and .... "may make recommendations with regard to any such questions to the State or States concerned or to the Security Council or to both."

The U.N.O. functioned in accordance with the provisions of the Charter during its earlier period. As the course of international politics led big powers into blocks, unaccommodative to each other, decisions of the Security Council began to be halted and hampered by exercise of the powers of veto and thus the Security Council became very often a non-functional body. Irrespective of its paralytic state, pressing problems of the world community had their own way. The expediency, the cold-war politics, and the pressure of the unresolved problems brought a smooth constitutional change in the working of the U.N.O. It is this unamended change in the United Nations which has posed a new problem for the big powers and, as some of them feel, is possibly leading the U.N.O. towards the way of the League.

The United Nations' Organisation, thus, underwent a change which affected both the working of the organisation and the big powers in it. The Security Council which was intended to be an agency of the international govt. proved far below its alloted role and the General Assembly, contemplated to be a deliberative body, went ahead of its limited functions. This decline of the Security Council, and through it of the hold of the big powers, and the ascendency of the General Assembly went on record when in 1950 North Korea committed aggression on South Korea and the Security Council, as expected, was deadlocked by the use of the Soviet veto. America was impatient to act swiftly and her representatives took the matter before the General Assembly under a 'Uniting for Peace' resolution. Passing of this resolution by the General Assembly, and acting upon it by the U.N., constituted a precedent amounting to almost a constitutional change in the functioning of the world body. The new role of the General Assembly was emphasised in the resolution which provided that "if the Security Council, because of lack of unanimity of the permanent members, fails to exercise its primary responsibility .... in any case where there apears to be a threat to the peace, breach of the peace, or act of aggression, the General Assembly shall consider the matter immediately with a view to making appropriate recommendations to Members for collective measures, including, in the case of a breach of the peace or act of aggression, the use of armed forces when necessary." The General Assembly then recommended that each member should maintain "within its national armed forces elements trained.....for service as U.N. unit or units." In addition a "Collective Measures Committee" was to formulate plans for the application of sanctions as required. The new role of the General Assembly, thus, was to fill the vacuum created by the inaction of the Security Council. A further resolution passed made the General Assembly summonable in such circumstances on 24 hours notice. In the event the Security Council deadlocked it became, thus, the primary specific responsibility of the General Assembly to act for the preservation of peace and security. It was certainly more than an organisational improvement.

Over and above such usurpation of authority by the General Assembly the Security Council was crippled in other ways also. Provisions of the Character require the General Assembly not to proceed with matters on the Council agenda. Course of events, however, led to a different practice. A number of cases have been removed from the deadlocked Security Council to the General Assembly by a simple majority vote on the interpretation that such a removal is a procedural matter and hence not requiring the unanimous votes of all the big five. A simple majority of seven, as in other such cases, suffices now to bring any matter before the General Assembly irrespective of its seizure by the Security Council. Furthermore the General Assembly has interpreted Article 12 liberally and has made recommendations on issues lingering on the Council agenda at the same time. These new

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

practices have virtually side-tracked the Security Council when it seems to be unwilling to move on.

What is more important here is not whether the Security Council is losing its ground or the General Assembly is gaining. We are more concerned with its repercussions on the big powers who were intended to be the governing heads of the organisation. With its decline, the Security Council brought descendency on the big, and with its rise the General Assembly brought importance to the small. Whether this is helpful to the international organisation itself is worth examining.

If one follows the recent trends of behaviour in the U.N. of some of the big, or the reactions of the leaders and the press, it makes clear to him that the West, at least, is not very happy over the course of the change that has overtaken the U.N. Voting analysis in the U.N. shows that both France and U.K. are lagging far behind the tune of the times. The world war ended nearly two decades ago. But the French have not still adjusted themselves to the requirements of the current trends. On any resolution with some liberal provisions, such as conceding freedom to some African countries, opposing segregative policies of Africa's White rulers, or keeping Portugal within the bounds of human decency, etc., de Gaulle's France is still on its pedestal of the past. On more than one occasion General de Gulle has shown his open hostility to the domination of the 'small and weak'.

The reaction is understandable in case of the French and the English ; for, a nation with lost power is generally the last to adjust with the rest. It is more so with regard to people whose attachment to the past governs their sense of the present. The English will normally have it. But what they are more concerned with is the American reaction. An Assistant Editor of a leading American weekly (Look : Oct. 10, 1961) has asked whether the 'new-nation rule' will lead the U.S. to 'destroy the U.N.' Adlai Stevenson is reported to have said : "The crisis of our loyalty to the U.N. is still ahead of us. We lost our position of domination . Are we prepared to accept this change ? Our test—our decision—remains to be seen."

The second factor which is crucial in this respect is whether the small nations will use their power with a sense of responsibility befitting their new role. It is too early to hazard any conjecture in this regard. It depends upon so many factors, such as their unity, their participation in cold war politics, their leadership, etc.

If, however, the emergence of the numerically larger group takes the U.N. consistantly against one or two really big powers, one is afraid whether the history of the League of Nations would also be repeating itself in the U.N. premises. The majority may carry resolutions along with it. But in international politics, as in family affairs, it is not what we say that shapes things ; it is the strength behind that really counts.

MODERN SCULPTURE IN THE UNITED STATES

Industrial Civilization Affects Current Trends

By PAUL MOCSANYI

RICHARD Stankiewicz, one of the "angry young men" in American sculpture, said the other day:

"I do not agree with those who separate machines from nature and say 'when a bird builds its nest it's *nature*, but when man builds a machine it's artificial.' Why? Man too builds by instinct. And is thinking unnatural? The machine is a correction projected from the mind of man."

Many of the leading sculptors in this country started their careers as artisans, mechanics or engineers. Herbert Ferber was a dentist, David Hare a commercial color photographer, Alexander Calder studied engineering, Richard Lippold was an industrial designer, Devid Smith welded armor plates on tanks during the war, Theodore Roszak built aircraft and taught aircraft mechanics.

Some artists use hand cranks and small motors to make their sculptures look like working machines. Others have adopted working methods borrowed from industry and technology, like welding. They work with heavy, obdurate material, the very nature of which is hostile to traditional refinements of sensibility.

In the workshops of Calder, Smith, Lipton and Ferber, to name only a few, one would look in vain for casts, marble, plaster or armatures. Their places are cluttered by steel shavings, wire, nuts, bolt, punched metal, lathes and saws.

Herbert Ferber's "Horned Sculpture" offers a good example of a method described by Sam Hunter in his book, "Modern American Painting and Sculpture":

"Ferber proceeds by stages, from a line or wash drawing to a small, working model, and then attacks the final large-scale sculpture as an independent structure, often discarding or elaborating on some of the features of his model. He cuts with automatic shears from sheet copper or brass appropriately shaped strips. The flat strips are joined by welding to form narrow v-shaped troughs and sharply angular zigzags, or they are bent and hammered into a variety of curved shapes. These individual elements are then welded together into an open construction or geometric and organic forms. In the process Ferber continues to cut, perforate or build out his surfaces with the torch in irregular bosses and protuberances. In this way, he can introduce new structural tensions, which may either reassert his original forms or actively oppose them. . . ."

Seymour Lipton has given an interesting account of his evolution in this direction:

"In the late thirties I made wooden pieces based on social problems, the formal mood stemming from memories of Gothic and primitive sculpture, as well as German Expressionism. I soon found wood and social problems too limiting for my creative freedom. I went into metal casting. Leaving the human figure in 1942, I began using skeletal forms, horns, pelvis, first in bronze and then in lead construction and other ways to convey the basic struggles in nature on a broader biological level. . . .

"I sought to make a sculpture as an evolving entity, to make a thing suggesting a process. I felt the rightness of curved, convoluted forms, outgrowing but not fully spread, as a new sculptural phraselogy for what I was doing, concern with internal and external anatomy. . . ."

Alexander Calder, began with a vision of the celestial universe. As a boy he had been fascinated by 18th-century toys demonstrating the planetary system. It was the age-old dream to make things that can move. Art had been too static for him.

Calder used to start a piece of sculpture by fairly complete drawings. Now he digs into it immediately by cutting out a number of shapes. Then he files them and smooths them. Next he arranges them on a table with wires between the pieces and finally he cuts out some more pieces in an effort to balance the whole as perfectly as possible.

Some of the younger artists, like Stankiewicz and Chamberlain, make their sculptures by assembling, hammering, sewing and welding together discarded objects of use, like broken wheels or dented oil cans. Critics have said that sculpture of this kind brings the junkyard into the realm of art. These artists probably would reply that the junkyard is no less part of the American scene than the Statue of Liberty and the White House.

"Since the war America has witnessed a phenomenal upsurge of sculpture," wrote the critic A. L. Chanin on this occasion in an article published by *The New York Times Magazine.* "As startling as the constant output of new works are the unorthodox ideas they express."

Alexander Calder is one of the most inventive modern sculptors in the United States. Critics may or may not like his work, depending on their own attitude toward modern *vs.* classical styles, but few would deny his originality or his unmistakably American character.

James Johnson Sweeney, a prominent art critic and museum director, pointed out in a penetrating essay that Calder's art is imbued with the rugged spirit of the American frontier. Sweeney wrote of Calder's "coarseness and strength combined with acuteness and inquisitiveness," his "practical, inventive turn of mind, quick to find expedients," his "masterful grasp of material things," his "restless, nervous energy," and the "buoyancy and exuberance which come with freedom."

Calder was born in Philadelphia in 1898. His mother was a painter, and his father and grandfather were distinguished sculptors of an earlier period. The third generation artist in the family did not take much from any of them in his own work.

Although familiar with studios from boyhood, the younger Calder found little satisfaction in sculpture. The work he saw as a boy was "too static to reflect our world of movement," he said later. His imagination was more readily stirred by 18th century toys which could imitate the movements of the planetary system. Tools and machines fascinated him, and these interests led him to the Stevens Institute of Technology, from which he graduated in 1919. His first job was that of industrial draftsman.

The young Calder was deeply attracted by the contrasts he saw in the circus, the risks taken by high wire performers, the suspense and surprise coupled with humour, and the element of chance which often tipped the balance between failure and success. Perhaps with an inherited yearning to put this life into some enduring artistic form, he began to study painting at night classes, and worked for a time as a magazine illustrator. In 1926 he sailed for Paris to learn wood carving from the sculptor Jose De Creeft, and began experimenting with wire sculpture. Still an avid follower of the circus, he began working on miniatures of his own, using wood and wire to produce a troupe of tumblers, lion tamers, sword swallowers, acrobats, trapeze artists, trained dogs, and meanagerie animals. He made them move somewhat as their flesh-and-blood counterparts did, and he found pleasure in the effort even if his dogs could not always clear a hurdle, or his acrobats usually landed in the net.

Alexander Calder's witty wire figure, "Circus Horse"

De Creeft became interested and introduced Calder to the Paris "Salon des Humorists," which arranged an exhibition of this strange "circus." The show was a hit and Calder became established among Paris artists as a genuine humorist, with highly original talent.

This success established the general direction of Calder's career. In the following years his work reflected his early dislike for traditional forms, and became more and more abstract.

Calder's first experiments with mobile sculpture came next. Still fascinated by freedom of movement, and loving the unpredictable, he produced his first "wind mobile," a construction

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

so delicately balanced that the slightest movement of air could set his work dancing.

He achieved another international success at the Paris Exhibition in 1937, when he was commissioned by Spanish authorities to design a piece of sculpture that spouted mercury. Calder's "Fountain" was an outstanding success. One French critic, unaware of Calder's background, wrote : "In the field of plastic expression, Spain has realized a masterpiece."

David Smith's "Royal Bird," done in stainless steel

During World War II Calder returned to the United States. Metal was scarce, and he began making sculpture of small odds and ends of wood, sometimes painting them in contrasting colours. Then he wired them together in a way that would produce the movement he always sought in all of his work. He called them "constellations."

After the war, he exhibited his mobiles again in Paris. This time Jean Paul Sartre wrote the catalogue preface. He saw in Calder's art an illustration of some of his own philosophical concepts.

Calder himself stated his aesthetic principles in the following words :

"Disparity in form, colour, size, weight, motion is what makes a composition, and if this is allowed, then the number of elements can be very few. . . . Symmetry and order do not make a composition. It is the apparent accident to regularity, which the artist actually controls, by which he makes or mars a work."

Calder had large retrospective shows in 1943 at the Museum of Modern Art in New York, and in 1952 at the Biennale in Venice, where he won first prize for non-Italian sculpture. He also won first prize at the Carnegie International in 1959.

Other sculptors from many nations have explored the tragic aspects of life. Calder makes people smile.

There are two main currents in modern American sculpture: one lays emphasis on the power of organic life; the other is preoccupied with the growing ascendancy of mechanization in the world of man. Theodore Roszak and Devid Smith are outstanding representatives of these two approaches.

Roszak was born in 1907 in Posen, Germany (now Poznan, Poland). Two years later his parents emigrated to the United States.

He studied painting at the Chicago Art Institute, and from 1929 until 1931 was in Prague, Czechoslovakia, on a fellowship. Under the influence of the German Bauhaus and the Russian constructivists, whose theories and experiments were widely discussed by the artists of Prague, Roszak took up modelling and construction. He worked in a geometric, frugal style which he kept for years after his return to Chicago.

Chance led him to new paths. Working in an aircraft factory during the war, he noticed the strange and beautiful fretted surfaces and nodules his acetylene torch left in its wake during the welding process. One day, while exploring the artistic possibilities of this technique, something went wrong. The result was a strange but beautiful form. Accepting this accidental suggestion, Roszak ventured into a world of grotesquely distorted flora and fauna that characterize his later style.

"Accidents may awaken dormant responses that can be plastically useful," he said. "But I should not care to stake my creative life upon the exclusive use of such chance procedures. Their suggestions are helpful only within the essential framework of *consciously directed effort*."

His first impulse for a new work comes usually from the sight of some strange rock formation, plant or animal.

Since the late forties he has produced organic forms that, without being copies of natural objects, look like plants, animals or man from an outlandish, luxuriant, fantastic and grotesque

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

land. They might suggest almost anything: th, abundance, struggle, decay, death, or thing else.

"The forms that I find necessary to assert meant to be blunt reminders of primordial e and struggle, reminiscent of those brute es that not only produced life, but in turn ened to destroy it," Roszak says.

Devid Smith also works in metal, but in y ways he and Roszak stand in sharp con- to one another. Smith was born in 1906 Decatur, Indiana, a small community in the west. He studied painting at the Arts Student gue in New York. During World War II he ked as a welder of tanks and locomotives.

At the age of 27, Smith picked up an art azine with reproductions of Picasso's iron structions. At once he started working in ed iron. At first he used solder to hold bits metal together. On a summer junket he rowed welding equipment from a local garage- and began to weld.

Cast iron and stainless steel are his main stic materials today. "They possess little art story," said Smith. "What associations they sess are those of this century: power, struc- movement, progress, suspension, destruction, tality . . . ."

Unlike Roszak, Smith doesn't believe in ning a sculpture. "I start with one part," he te in his "Notes on My Work." "Then a unit of parts, until a whole appears . . . The order of the whole can be perceived but not planned . . . . When I work, there is no consciousness of ideals but intuition and impulse."

Smith takes his subjects from industry, agriculture, dance, music and even Greek mythology. His subject matter might be a landscape, a still life, an interior, a group or an individual figure. Sometimes his art is strongly social conscious. At other times it is symbolic, surrealistic or purely characterized by bold structural projects and counter reliefs. But whatever his theme or his style, his sculptures are created, with rare exceptions, in the image of the machine.

While in his earlier work there was an ostentatious display of technical bravura, in his later years Smith has avoided all showmanship. He strives for simplicity; his artistic statement is terse and to the point, without any adornment. He does not care to please and does not mind to hurt.

Hilton Kramer pointed out, this unusual combination of a welding workshop in an isolated mountain spot which brings together two old-fashioned ideals of American life : the proud individualism and keen workmanship of the man who lives by his skills, and the independent spirit of the man who lives on his own land. Both are ideals of freedom out of the American past.

———:O:———

THE CHINESE BRUSH—A SENSITIVE IMPLEMENT

By CHI YEN-LANG

The brush he uses is a short length of boo into which are fixed the hairs of ious animals. Firmly gripped in the d, it is wielded from the shoulder and ow, and not from the wrist. It produces ne, a stroke or a dot of any thickness at will of the artist and reveals his perso- ity. "The brushwork is the man," is a nese saying.

Such is the amazing power of the nese writing brush. Over the centuries Chinese have developed what is basi- y no more than an ancient writing implement into a sensitive instrument for any artist. No other tool has played such a vital part in the development of Chinese calligraphy and painting as the brush.

Almost the sole writing and painting tool in China until the introduction of the pen and pencil at the turn of the 19th century, the Chinese writing brush has scarcely changed through its entire history.

Modern Chinese brushes are of three general types: soft hair, usualy that of goat; stiff hair, of rabbit or weasel; medium hair, a mixture of goat and rabbit.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The hairs are tied into a tuft and set directly into the hollow bamboo. An accomplished calligrapher or painter will choose the kind of brush best suited to his style.

Stiff brushes are made of choice hairs from the strong and elastic hairs in the backs of the rabbits native to the mountain-ous areas of Huoan and Kiangsi Provinces. Blackish Purple in colour, it is generally considered to be the best of rabbit brushes. Soft brushes are made of white hairs from the goat, the best of which is found in Chekiang and Kiangsu provinces. Weasel hairs come from the tails of the animal, and the best of these is found in North China. The colour is usually greyish white.

Dipped in a light Chinese ink, a good brush will cling together to form a fine point. When pressed against the paper, the hairs will spread out evenly, but when lifted they will resume their original tapering and compact shape.

A popular Chinese story goes that General Meng Tien of the Chin dynesty (221-206 B.C.) was the inventor of the Chinese brush. While supervising the building of the Great Wall, he saw a tuft of goat hair stuck to one of the stones. Peeling it off, he noticed its reserblance to the whittled, sharpened willow sticks then used for writing. After many experiments he made a brush and introduced it for manufacture in his home town of Huchow in what is now Chekiang province, the most famous brush-making centre in China.

In fact, Chinese brushes appeared much earlier than his time. The earliest known brush in China was discovered in 1945 in a tomb from the Warring States period (475-221 B.C.) at Changsha, Hunan province. In a full-length case, it was made of rabbit hair set in a bamboo holder.

At first the brush was mainly a writing implement. Since Chinese is not an alphabetical language, each word (syllable) is represented by an idiograph that may contain lines, strokes, waves and dots in varying thicknesses. To acquire a fine hand in writing demands mastery in manipulating the brush and modulating the strokes. From this technique developed traditional Chinese painting, for which the same brush and ink are used. This particular branch of handwriting, with its unbroken tradition of nearly 2,000 years, is one of the greatest schools of painting the world has seen.

A legend illustrates how the brush developed in the Chinese painter's hand. Chang Sheng-yu, a great painter of the 6th century, attained such a high level in manipulating his brush that when he painted a dragon and started to fill in the eyes, the dragon took to the clouds in the sky.

Chekiang, Hunan and Kiangsi have been the three most famous brush-making provinces in China, while Huchow in Chekiang has the longest tradition. Brush-making in Huchow was perfected through the centuries with the help of many painters and calligraphers. The Yuan dynasty painter-calligrapher Chao Meng-fu (1254-1322) after long years of experimentation, formulated a whole set of requirements for good brushes, which he passed on to a local maker. Today the city boasts of many long-standing brush manufactories, including one established in 1740.

Peking, the traditional cultural centre of China, is among the most famous brush-making cities in China. The city's output has jumped from the pre-liberation figure of 200,000 in 1949 to the present 3 million. A large brush co-operative with some 500 workers has replaced the former home industry operated individually by handicraftsmen. Over 120 varieties of brushes, each for a particular purpose, are being manufactured, as compared with 30 in 1949. The glass and ceramic industry, for instance, recently ordered special types of brush for painting and decorating their products.

With the flowering of traditional painting in China today, good brushes are in great demand. To improve their quality, brush workers visited famous painters and calligraphers, and even hold conferences with them.

INDIA'S BALANCE OF PAYMENTS

By KARUNA K. NANDI

One of the principal problems of rrent Indian development planning uld seem to be the continuing deteriora- n in the country's balance of payments ition. This has, obviously, a mounting nificance in the especial context of the reasingly larger incidences of foreign sistance that would be required to cover e requirements of development planning gets of the Third Five-Year Plan and ich would, on the face of it, continue to w during the next few quinquennial ans ahead. Of additional significance uld seem to be the fact that redemption ligations in respect of capital assistance ready used from abroad, over and beyond e current-account obligations would cor- spondingly and increasingly load adverse- India's balance of payment position in is behalf.

Thus, although during the year 1961-62, e trade gap was reduced by the compara- ely substantial amount of Rs. 159 crores, dia's over-all balance of payments vertheless worsened considerably; the vantage thus acquired having been wip- out by the increased load in the invisible count causing a much larger than usual -flow of short-term capital and, what uld continue to be endemic in the years ead, by the increasing incidences of pital repayments. As a result, the untry's foreign exchange reserves fell, ring the year, by a further net Rs. 6.3 res to the level of Rs. 297.3 crores even er the net drawing, during the year, of further Rs. 58.4 crores from the Inter- tional Monetary Fund had been account- untry's foreign exchange reserves was, s, of the order of Rs. 65 crores, which s about Rs. 16 crores more than during e immediately preceding year.

Thus, a study of the actual position during the year under review would demonstrate that although the deficit on current account during the year was large enough, it was nevertheless appreciably smaller than in the previous year. What would appear to be significant in this context is that while in the immediately preceding year inspite of net earnings on the invisible account, it was accounted for in its entirety by the trade gap alone, the position was somewhat reversed in the following year, the trade gap having been narrowed down by as much as Rs. 159 crores, but the increased net deficit by very nearly Rs. 48 crores was accounted for by a sharp deterioration in the invisible account.

Current Account Transactions

The table below will demonstrate that compared to 1960-61, the current account deficits in each quarter of 1961-62 was smaller, especially during the third and last quarter of the year. It would be a mistake, however, to deduce from these trends that basically India had acquired increased strength in her trading operations abroad, inspite of the fact that there was a substantial upsurge in her exports during the year which aggregated as much as Rs. 688 crores, the highest since 1950-51. This gave rise earlier to the rather wishful notion that it might, thus, be possible to realise the Third Plan annual export target of Rs. 740 crores if the tempo of exports could be maintained at this level while continuing the present rather severe import-curbs. Thus, it is noticed, that during the year under reference in the present study, imports gradually decreased from Rs. 250 cores in the first quarter, to Rs. 242 corres in the second and Rs. 217 crores in the third quarter of the year, their basic trends reasserted themselves to rise to the level of Rs. 269 crores in the last quarter while exports, which were at the level of Rs. 160 crores in the first quarter, rose through

1. "Report On Currency & Finance, 1961- Reserve Bank of India, Pp. 105.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Rs. 168 crores in the second Rs. 180 crores in third and a slight fall to Rs. 168 crores in the last quarter.

This last, which was, then, considered to be only a temporary fall-back appears, however, to have re-asserted itself as a trend for the immediate future and figures during the first quarter of the current year register a further substantial fall inspite of all the additional measures for export promotion that have since been adopted by the new Board of Trade.

Rs. 205 crores in 1960-61 to Rs. 78 crores only in 1961-62. This improvement in the balances position would appear to have accrued almost wholly out of better trade balances, although a part of the benefit had been lost in the unfavourable balances in invisible transactions amounting to Rs. 26 crores net excluding official donations. Part of this was accounted for by the rise in the exports of jute manufactures and sugar by a net Rs. 16 crores, but most of it, by Rs. 140 crores, was accounted for by a net fall in import payments, a substantially reduced

India's Balance of Payments[3]

It is significant that regionally, it was the dollar area of the country's trade which accounted, most substantially for the reduction in the deficit on current account. In our trade with the dollar area the deficit would appear to have narrowed very substantially from approximately

incidence of P.L. 480 food and raw cotton accounting for the bulk of the reduction. The payments position with the non-dollar countries, however, demonstrates a generally worsening condition of varying magnitudes as compared to that in 1960-61 :

Sterling Area Trade

The situation as it transpires from the fore-ing would seem to indicate that worsening nds in our balance of payments is generally counted for by increasing smaller 'invisible' nings in most of the areas concerned despite e increasingly rigorous curbs on imports that ve been placed during the period in question, en while taking into account the higher levels ained in export performances during the year all but the sterling areas. In the sterling area dia's exports during the year is found to have clined by approximately 3 per cent to Rs. 292 res. But having regard to the fact that the rling area remains to-date India's largest ecitve export market, the significance of even s comparatively slight decline in her trade th these countries should be of very important ment. Of especial significance should be cur-t trends especially in respect of the conditions der which Britain, it is now more than amply ar, intends to join the community of the ropean Economic Community and its inevit-e future impact upon India's exports abroad. hough certain safeguards to Commonwealth de may be conceded for a temporary period rrently it is visualized to be effective upto 65-66 only) the immediate impact of Britain's ctive acceptance into the E.E.C. even during s proposed transitional period, would be bound be severe and from trends already in evidence ing regard to the figures of India's balance payments during the first quarter of the cur-e year, a further worsening of the situation uld, clearly, be an inevitable eventuality.

Other European Countries

But, to resume the present analysis of our rent trade position and visible immediate future trends, it would appear that the payments position with the O.E.E.C. countries is not likely to improve; on the contrary, from immediate past indications, it is likely to deteriorate further. India's current deficits with these countries have been steadily moving upwards from Rs. 105 crores in 1959-60 to Rs. 142 crores in 1960-61 and to Rs. 146 crores during the past year. Most of this was, of course, covered by, on the one side, the increasing import bill on account of purchases of machinery and capital equipments, especially from West Germany and Italy and, on the other hand, by the rising trends in invisible transactions, obviously accounted for by investment income payments on fairly large West German credits. Exports moved up somewhat by about Rs. 6 crores but it would be too optimistic, especially in view of the stiffening external tariffs, to accept this as an already established trend. With the R.N.S.A. (rest of the non-sterling area countries) group of countries on the other hand, India had a small favourable balance of just about Rs. 1.3 crores in 1960-61, which was converted in 1961-62 to the comparatively substantial deficit of Rs. 9 crores. The actual deficit on commodity account rose from Rs. 6 crores to Rs. 13 crores, India's imports from these countries having risen by the very substantial amount of Rs. 30 crores compared to 1960-61, accounted for by increasing purchases of capital equipments and iron and steel from East European countries. Exports also moved up comparatively substantially, accounted for mostly by raw wool, tea, oil cakes and jute manufactures.

A point of some significance is the increasing trade with East European countries on a rupee payment basis obviously compelled by the

3. "Report On Currency & Finance", Pp. 106.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

precarious foreign exchange position. In consequence trade with these countries has continuously increased over the past few years, its total volume having moved up from Rs. 97 crores in 1959-60 to Rs. 106 crores in 1960-61 and Rs. 164 crores in 1961-62. Of this imports accounted for Rs. 100 crores, having moved up from Rs. 59 crores in 1960-61 by more than 69 per cent, while exports moved up by very nearly 27 per cent to Rs. 64 crores over the same period. Although this had the net effect of widening the deficit from the previous year of Rs. 12 crores to as much as Rs. 36 crores or by 300 per cent, it may be well worth the country's while to explore possibiities of enlarging the area of her trade with this group of countries even though it may result in substantially higher import bills and increased payments deficits in the end, in the context of her increasing foreign exchange difficulties which do not seem likely to improve in the immediately visible future. It is true, that on a net showing and upon basic economic considerations endeavours should be increasingly directed towards wiping out deficits wherever they may occur—even where these could be met by funding rupee credits within the country on behalf of the net earning countries concerned—having regard to India's present development needs and the load of capital imports necessary to cover these, this may afford a measure of relief which might be very welcome, indeed, in the present circumstances.

India's Exports

Since export promotion would seem to lay one of the vital corner stones of curent development planning, it may be pertinent in this context to study in greater details the position of our present export markets abroad. It is found that with slight annual variations, the incidence of exports from India during the Second Five-Year Plan (1955-56 to 1960-61), averaged a value of approximately Rs. 612 crores per annum. The Third Plan programmes estimated a minimum export earning of an average Rs. 740 crores per annum or Rs. 3,700 crores over the five year of the current Plan period, In 1960-61, the first year of the current Plan period, exports looked up only hesitatingly to Rs. 630 crores, to be followed by a substantial Rs. 38 crore jump upward to Rs. 668 crores during the following year which, incidentally, has proved to be the most fruitful export year snice 1950-51, when, according to the then Union Finance Minister, the country had a very large "windfall" export earning. The first nine months of this year accounted for Rs. 7 crores higher earnings to Rs. 143 crores on exports of Jute manufactures, presumably, on account of the higher prices prevailing. Impressive gains were also recorded in the exports of sugar, raw cotton, coffee, oil cakes, hides and tanned skins. Gains registered in other sections included Cashew Kernels (total exports Rs. 21 crores), and comparatively smaller gains were also registered in the export of iron ore and engineering goods. Export declines, during the same period were registered by cotton textiles (by Rs. 12 crores), vegetable oils (Rs. 3 crores) and raw hides and skins (Rs. 2 crores). Of especial significance would seem to be the steadily declining trends in Indian cotton textiles exports, especially to the sterling area markets in the U.K., Austraia, Malaya and Burma. The higher prices of vegetable oils appear to have accounted for the current fall in their demands abroad.

A cursory analysis of India's export markets demonstrates that the biggest purchasers of our short-staple raw cotton was Japan, followed by U.K. and Hongkong; coffee had a particularly good market especially in East Europe and Germany and Italy; Purchases of Cashew kernels were accounted for mostly by the U.S.A. and the U.S.S.R. and the best market for oil cakes were in Hungary and East Germany.

Imports

As against exports, India's imports also shewed a decline of Rs. 122 crores to Rs. 97[illegible] crores, imports on private account having registered a fall of Rs. 22 crores against a corresponding decline in Government imports by Rs. 10[illegible] crores. Apart from the results of the severe tightening of the import policy, reimbursement lags on account of the deteriorating reserve position and a comparatively slow utilization of aid credits also accounted, to a certain extent for the slackening of the import rates which consequently, would seem to be, partially a temporary symptom only. Thus, to assist the payments position, Government imports were severely pruned by as much as a Rs. 100 crore

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

imports: Rs. 378 crores which were the st of any year since the inauguration of the d Plan except 1956-57). Although both opment and non-development imports were affected, the severest pruning was, natu- effected in non-development imports, deve- nt imports registering a decline of only 5 crores. Since development imports related y to expansions of heavy industry in the sector, they were obliged to maintain upward trends except railway stores which severely slashed by as much Rs. 10 crores. ction of non-development imports, which slashed by 30 per cent, were considerably ted by the reduction in P.L. 480 food im- s by Rs. 80 crores during the year under con- ration. In the private sector reduction in orts affected a large variety of items, espe- y raw materials and manufactures, particu- raw cotton (Rs. 21 crores), non-ferrous als (Rs. 5 crores) mineral oils and rayon iles (Rs. 4 crores) vehicles (Rs. 3 crores) other miscellaneous items (Rs. 7 crores). On elopment account, however, imports increased stantially by Rs. 24 crores to Rs. 138 crores st of which were procured from O.E.E.C. as on rupee payment bases.

Food Imports and Agricultural Deficits

The above details would indicate several portant conclusions. Of the greatest signifi- ance would seem to be India's continuing d, although on a substantially reduced scale 1961-62 (which, however, is hardly indicative an improving trend but was presumably a ritious gain), for dependence upon imported d grains in very substantial quantities. Al- ugh the process of development planning in e country was initially started off by endea- ring to lay down adequate agricultural bases improving production and yield, there was visible slackening of emphasis in this regard n as early as in the Second Plan and which ems to have been almost entirely withdrawn in e Third Plan programmes. All this, under- ndably, was done with a view to laying down bstantial industrial bases for rapid develop- nt and a possibly earlier arrival at the point a "self-generating take-off." It is thus seen t except for propaganda for increasing agri- ltural production, the principal bases for a substantial agricultural take-off, that of a rapidly accelerating fertilizer programme and irrigation have both slowed down considerably over the last Plan period and has been continuing well into the current Plan processes.

After ten years of development planning,—and it has been already underlined that the First Plan at least had a major agricultural bias and directed a major proportion of its resources towards laying down adequate agricultural bases by way of developing flood control measures, irrigation facilities, and laying down capacity for fertilizer production,—India remains still very substantially dependent upon food imports for the sustenance of her peoples. This, as it has been doing, was bound to put very substantial burdens on both the resources for and the process of development planning. It has, obviously, especial significance in the context of the country's balance of payments position. Thus, although on account of very favourable crops the need for food imports was somewhat less urgent in 1960-61, which accounted for a gross import-curb gain of Rs. 80 crores over the year, this could not be regarded as a permanent gain until agricultural bases have been so firmly laid as to ensure absoute certainty of minimum crop yields, at last, in the food grains sector, from year to year. Taking into account the progress in food grains production including pulses although on the face of it a 46 per cent rise in yield is noticeable over the two Plan periods from 1950-51 to 1960-61, we have still been very substantially short of our minimum requirements which had to be supplemented by massive imports of food grains. Food grains yield which was assessed at a gross 52.2 million tons in 1950-51, was found to have risen to the fairly substantial 65.8 million tons in 1955-56 and to 68.8 million tons in 1956-57, but fell sharply to 62.5 million tons next year, to rise gradually to 76 million tons in 1960-61.[4] At this level of production, the country is woefully short of her minimum subsistence requirements which has to be met very largely by massive foodgrains imports from year to year. The target for the Third Five-Year Plan has been placed at a 100 million tons, at which level, it is estimated that accounting for a population rise to 492 million persons (at the current rate

4. "Towards A Self-Reliant Economy", *Planning Commission*, Pp. 172.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of net annual increase), the country should be self-sufficient in food grains production. The position of Progress of Agricultural production during the First two Plans and Third Plan targets have been computed as follows :

Agricultural Production[5]

Item	Measure	1950-51	1955-56	1957-58	1960-61	% increase in 1960-61	Traget 1965 1965-66	% Increase over 1960-61
Rice	mill. tons.	20.9	27.1	28.6	32	54	45	41
Wheat	„ „	6.6	8.6	7.7	10	51	15	50
All Cereals	„ „	43.7	54.9	62.5	64.0	46	83.0	30
All Food Grains (Cereals and Pulses)	„ „	52.2	65.8	75.5	76.0	46	100.0	32
Oilseeds	„ „	5.1	5.8	6.1	7.1	39	9.8	38
Sugarcane (Gur)	„	5.6	6.0	6.9	8.0	43	10.0	25
Cotton	Mill. bales.	2.9	4.0	4.7	5.1	76	7.0	37
Jute*	„ „	3.3	4.2	4.1	4.0	31	6.2	55
All Commodities (Index of Production : 1949-50=100)		95.6	116.8	114.6	135.0	41	176.0	30

Even at the level of the targets set for the current Plan, agricultural production as a whole, will still remain a deficit one. The assessments as regards foodgrains, it has been claimed, if targets are reached would be likely to take the country to a level of self-sufficiency admittedly, however, on the basis of a somewhat inadequate daily ration of 17.5 ounces of cereals and pulses per head of the adult population of the country. But even in this particular sector, having regard to the extremely slow progress in irrigation and fertilizer production, the likelihood of targets being reached would seem to be rather remote. And so far as flood control measures are concerned, it has been increasingly made obvious during the last several years that all our river valley projects notwithstanding, Indian agriculture is still very largely dependent upon the mercy of the seasons.

Production Imbalance

All these various factors indicate that no early remission of the present rather dismal position in the country's balance of payments can be legitimately looked forward to in the assessable years ahead. One of the fundamental bases of rapidly successful industrial development, that of a surplus agriculture, seems to have been neglected and the attempt at what may be described as "putting the cart before the horse", that is, laying the economic bases for rapid industrialization ahead of basic agricultural sufficiency, has been creating a situation in which the process of industrial development may be following the irrationale of an overwhelmingly labour-intensive economy being fed by highly capital-intensive machinery of production. In fact, that is what has been obviously happening with the result that the unit of production per unit of capital employed for developing the production-organization has been so small that cost of production bears no relation whatever to competitive efficiency *vis-a-vis* world standards in this respect. The needs of development, however, have been making increasing incidences of imports, both visible and invisible, essential, while at the same time making the corresponding need for covering export incidences impossible to achieve.

Changing Pattern of Markets

An interesting fact that would seem to emerge from a study of our current foreign trade characteristics would seem to indicate a changing pattern of both demand and markets. Thus, one of India's most important conventional exports, jute manufactures, appears to have been facing

* Excluding Mesta which may provide 1.3 million bales in 1965-66.

5. "Towards A Self-Reliant Economy", *Planning Commission*, Pp. 172.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tuating demand over the years since the First n was launched and although it still remains rwhelmingly the most important item in lia's export merchandise, its former strength a world monopoly in packaging materials pears to have been definitely over. Tea, another st important Indian export merchandise, ems to be definitely on the decline, while dian coffee has been gradually beginning to k up and finding new markets which were not merly open to it. Another important deve-ing Indian export merchandise, although the ss annual value of its exports is still very all, indeed, would appear to be cashew kernels d which might repay a measure of develop-ent effort. Cotton textiles, however, seem defi-ely on the decline presumably because of its ability to provide competitive advantages in e price factor, and has been rapidly losing its arkets abroad. It would also appear at the same e that in spite of a somewhat preliminary rt some years ago, there has not been much ogress in our efforts to market Indian hand-m fabrics abroad and its future possibilities t yet as adequately explored as it might have en. Another significant fact which would also m to emerge from the above study is that al-ough exports of iron ore had advanced only rginally, there is no indication, so far, of the anning Commission's earlier expectations of ing able to develop a market abroad for Indian el after the projects of the Second Five-Year an had been completed. This would seem to e a problem of both production progress and st of production which, apparently, the Indian el manufacturers, both in the public and the vate sectors are yet unable to cope with at the esent moment. There is, however, a distinctly h potential for marketing large quantities of el billets abroad, if not the finished product, d unless the country is able to take advantage this, the vacuum at present available, would e bound to be filled in by other competitors in e field. In the main, it would not be very far rong to concude, that except in certain selected ses of our export merchandize, in most cases r export possibilities are being woefully be-ted by our higher cost of production. Our getable oils are a very pertinent case in point ich have been fast losing their markets road apparently for no other reason than our gher prices.

Export Promotion Measures

It is, perhaps, pertinent in the present context to review and restate the various export promotion measures and proposals that have been before the Government of India during the past few years for a better understanding of the problems that would seem to beset our export progress. This would seem to be especially necessary in the context of the fact that not merely the country's process of development planning, but her very existence even at the present dismal level of living in the country, would seem to depend vitally on our ability to export on a widening scale. The recommendations of the Mudaliar Committee not all of which appear to have been accepted by Government, and very few of those accepted so far implemented, listed a number of requirements which would seem to be of the greatest importance in this regard. Thus, for instance, their observation that export promotion has, so far, been based upon inadequate and imprecise information of not mearly both demand patterns and prices abroad, but also of the potentials and performances of our own export oriented industries, is a severe indictment of the manner in which export promotion has been and is being handled in this country. It is possible that with the constitution of the new Union Ministry of International Trade and the Board of Trade that has been formed under its aegis, errors and omissions may be corrected in the near future in this regard, but judging by results achieved so far, unless more vigorous measures are immediately adopted, not much progress could be expected in the near future. It is, indeed, necessary, to make an immediate and comprehensive survey of world markets and patterns of demand, to make precise and factual assessments of the reasons why our conventional export merchandize have been losing their markets abroad and measures adopted to obviate them. It is also necessary to make a thorough and comprehensive assessment of the possibilities of export-orientation of new Indian products and to explore potentials of new or so far unexpored markets for Indian exports. It is, above all, necessary to make a factual assessment of the production performances, keeping in view the need of developing productivity of export oriented industries in relation to their capacity. It is also equally necessary to provide such incentives or proffer such assistance as may be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

necessary, on the basis of factual surveys, to enable our export-oriented production machinery to develop competitive strength in the world markets. All this may call for a thorough revision of all economic factors impinging upon the production of our export-merchandise and their marketing prcesses which may include such factors as a wages and price-policy, tax remissions, transport facilities and concessions and a host of other facilities and requirements. The burden of work involved would, admittedly, be frightening, but if it results in setting India's export transactions back on a footing where it may gradually look up towards a balanced payments position in the end, it may be amply rewarding in the fact that only thus development planning in India, having regard to current trends, may be saved from eventual shipwreck.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

Reviews and notices of books in Gujrati :

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review* should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

LIVING BIOGRAPHIES OF GREAT SCIENTISTS : *By Henry Thomas and Danaly Thomas. Bharatiya Vidya Bhavan. Bombay 1961. Bhavan's Book University Series, No. 88. Pp. 233. Rs. 2.00.*

This short monograph contains the life-history of twenty-one outstanding scientists of the world from ancient to modern times. The list begins with Archimedes (287-212 B.C.) of ancient Greece and concludes with such titanic figures of our own times as Marie Curie (1867-1934), Frederik Grant Banting (1891-1941) and Albert Einstein (1879-1955). The work justifies its title by making the biographies living to the general reader. Stress is laid throughout upon tracing the careers of the eminent men often from very humble beginnings and through formidable difficulties to the summit of their success. In the course of this survey, the authors repeatedly show the supreme qualities of character of the great men such as their indomitable will, their imperviousness of fame, their sturdy independence, their simplicity and their kindliness. The great scientific discoveries are explained in non-technical language so as to make them intelligible to the uninitiated. Short lists of the important scientific contributions made by the scientists and of their publications are appended at the end of each narrative. The work is made immensely attractive by the story-telling style in which it is written. Altogether it is a highly stimulating production bringing together for an astonishingly low price a large and useful stock of information which is bound to be of great value to the class of readers for whom this series is meant.

ETERNAL VALUES FOR A CHANGING SOCIETY : *By Swami Ranganathananda. Published by Swami Gambhirananda, President. Advaita Ashrama, Mayavati, Almora, Himalayas. Price Rupees Three only.*

The value sense in man is a queer phenomenon. This value sense pertains to man where

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

he is a person, as distinguished from an individual. The definition of man as a 'rational animal' refers to man as person and man as individual. It is surprising that a value-reference seems to divide man into two watertight compartments, his animality and his rationality. Rationality is the differentia of man and as value-sense is exclusively restricted to the world of human beings it must be referred to the differentia. As the value-sense is not shared by other animals it must not be considered as 'shorafli'. This characteristic of values leads to a division of man into animality and rationality and it should be presumed that man's value-sense has hardly anything to do with his animal nature. But empirical evidence takes us to a different conclusion. We have seen that man's progress in civilization and culture means a harnessing of man's animal nature to a particular pattern of value-sense. Different types of civilisation bring forth different value-patterns in different ages and climes but a fundamental unity may be discerned in these widely varying types. May be, that is due to man's basic identity in their rational nature.

The author of the book under review presents in the very first chapter the philosophy of the *Sanatana Dharma, i.e.*, the eternal religion. The abiding values are sheltered in the life arteries of this religion whose philosophical basis was the conclusions of the *Vedanta*. Vedanta, we know, viewed life as a whole and this world-view was the basis of *Sanatana Dharma*. To view things sub-specie acteritatis, as was told by Spinoza, was to see things in their true character. This seeing things in their true nature was essential for proper evaluation. The *Sanatana Dharma* could give us a set of eternal values simply because it was based on a type of philosophy whose aim was 'to see into the truth of things'. These Vedantists pursued this aim with a passion, vigour and objectivity rare in the history of philosophic thought. Value is subject-dependent and its universality lies in its objectivity. This seems to be again paradoxical. The subjective value-sense finds its universality in being as objective as possible. This seemingly impossible has been achieved by the *Sanatana Dharma* as its value-patterns are rooted in the *Vedanta* philosophy. *Vedanta* symbolises man's passion for the highest truth. This passion of the Vedantist coupled with a deep interest in human happiness and welfare has transfomed a metaphysics into a living faith, a world-view into a social philosophy. 'An idea and a vision became transformed into a 'lamp unto our feet and a light unto our soul'. This basic character of the *Sanatana Dharma* makes it somewhat impersonal and objective and as such its universality is ensured. This *Dharma* is rational out and out and at the very outset we suggested that universality could come only through rationality. Because this *Sanatana Dharma* is philosophy based, it easily becomes universal and the way of life it prescribes or the value-sense it upholds, easily combats the onslaught of time. *Vedanta* is not only a system of philosophy but it is religion as well. That is how Swamiji interprets the character of *Vedanta*. The absolute of the *Vedanta* is not a mere logical postulate. It is a given fact of experience, an actuality, the basis of all presuppositions of logical thought and common experience, but ever beyond the grasp of both. The highest reality, as conceived by the Vedantist, is at once the absolute of metaphysics and the God of religion. It is the unity of reason and faith. This characterisation of the highest reality as the unity of reason and faith helps us understand how value-sense, though belonging to man's rational nature, transforms and transmits our animal nature through a slow but sure process. The learned author of the book thus propounds and presents a new meaning of an ancient religion, quite consistent with our hoary traditions and scientific outlook of modern times.

Apart from this lucid discussion on the nature of the Enternal Religion Swamiji presents in 'Part one' of the book very learned essays on the *Upanishads*,. the *Gita*, the message and personality of Lord Krishna, Gautama the Buddha, Sri Sankaracharya, Sri Ramakrishna, Swami Vivekananda, Sarada Devi and Shri Narayana Guru. They are illuminating and inspiring. They take us to the lofty heights of reason and intuition and we feel elated and sustained at that giddy height.

In 'part two' of the book we find essays entitled 'Science Democracy & Religion', 'Religion and the Spirit of Enquiry', 'Role of Religion in Politics', 'The Administration in a Welfare State', 'Law, Society and the Citizen' and 'The Indian Ideal of Womenhood'. It is an age of science & democracy. Science as knowledge and science as power have completely captured our imagination and there is a craze for teaching science all the world over. Humanities have been relegated to the background. With the emergence of science, democracy—political, economic and social—has been taking roots everywhere. For, true democracy consists in enhancing the dignity of the individual and ennobling the aspirations of the group. The persistent demand of the common man for being recognised and valued as a full and free citizen of his motherland finds its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

strongest endorsement in the ideal and practice of democracy. These democratic aspirations acquire a new meaning when they are valued against a spiritual background. We inherited this spirituality as a legacy from our forefathers and the author rightly observes :

> "India's spirituality can enable Indians and the peoples of the world to digest the formidable forces that are being generated and placed in man's hands today. The spiritual meaning of democratic living and fulfilment, as taught by India's ancient and modern seers—in other words, the religion of the spiritual oneness of humanity—has to be revieved and reactivated in man's thinking and day to day living and its powerful influence brought to bear on these new and ever newer forms of scientific and social power, thereby giving then a higher direction and a loftier spiritua and human purpose."

Thus, Swamiji reconciles science and religion as they both encourage a spirit of enquiry and this reconciliation gives a new and lofty direction to the forces of democracy to struggle and achieve the desired goal. Here in India science will have no opposition from philosophy or religion. In the West on had such an opposition. Our religion begets a spirit of enquiry and critical acumen. "Our national thought is quite helpful and conducive to the growth of science." This observation of the author finds corroboration in the recent utterances of the Union Minister for Scientific Research & Cultural Affairs, when he says that Indian will be at par in scientific research and technological know ledge how with other advanced countries in course of next twenty-five or thirty years. Our achievements in the field have been of considerable import.

The book deserves attention from all serious students of phiosophy & sociology and the common readers will find it profitable and interesting.

SUDHIR KUMAR NANDI

LEGACY OF GANDHIJI : *By Rajendra Prasad, Publishers. Shiva Lal Agarwala & Co., (P.) Ltd., Agra, Delhi, Jaypur. First Edition 1962. Price Rs. 5/.*

Ex-President, Dr. Rajendra Prasad was Gandhiji's collaborator and follower since he started his political life in India—after coming back from South Africa (In 1915). Rajendra Prasad sat at the feet of the Mahatma for about 30 years and was always in close association with him, and thus had a lot more to see of Gandhiji than many other Indian leaders of the period.

Gandhiji's public life, although it began in South Africa—reached its culmination in India, his land of birth.

The author has mentioned some incidents in Gandhiji's life. He ought to have mentioned that it was Rabindranath who placed his Santiniketan Ashram at Gandhiji's disposal. Gandhiji, after landing in Bombay—went with his wife, sons and a batch of 50 of the members of his "ashram" at South Africa to Santiniketan. It was in 1915—that the two great men, (or *Rishis*) of the Modern World, first saw each other in Santiniketan. Gandhiji was so impressed with Rabindranath that he had not had the slightest hesitation to accept Rabindranath as his *Gurudeva*. It was again Rabindranath who styled Gandhiji as the Mahatma by which name he was known throughout the world. In spite of differences in their respective views of life—the two never lost their love and respect for each other.

In this book of 130 pages, (royal 8vo.) Dr. Rajendra Prasad has devoted the major portion to Charkha and Khadi—which alone according to Gandhiji (and to Rajendra Prasad also) could cure India of her economic ills and foreign subjection. It may be called that Khadi and Charkha were the Mahatma's mission in life. One should be permitted to have his doubts on "Khadi and Charkha" as the cure-all of India's economic distress and it must be admitted that after Gandhiji's departure—Khadi and Charkha have lost much of the sanctity and the sentimental value even to the people who now continue to swear by him. Rajen Babu is compelled to write that "I see that a gloom has come over the various items of Gandhiji's programmes. It seems that we are giving them up one by one. I cannot deny that it is so." But whatever that might be— this book by Rajendra Prasad must be read with due respect and many things he has said in this book deserve the closest attention of those who want to learn about Gandhiji—and the principal human characteristics of his life. Gandhiji has departed from this life, but his work, his ideals and ideas will continue to live for centuries. Gandhiji's whole life was dedicated to the service of man, and through man, of God. He used all his powers for the uplift of humanity and when the end came, so sudden and tragic, he departed with God's name on his lips and merged with him.

In dealing with Gandhiji's Legacy, Rajendra Prasad has not spared Gandhiji's erstwhile collegues and followers, who now form the Union Government. He rightly observes "unfortunately, we must confess that even in Gandhiji's time; not merely today, there were indications that we were forgetting his teachings and were not observing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ordinary decency expected of us in our social aviour." But swearing by Gandhiji's name is ignant.

But to the common man, the depressed and down trodden, Gandhiji's name will live for er. What he preached—he practised in his own . Truly, he said and believed that "Truth God and God Truth". Gandhiji not only ached Non-violence and *Ahimsa*—by words of uth only, but he adopted the same as his ding principle in life. This he showed by his actions.

The book is nicely printed, finely got-up and utifully presented. But the price seems to be it too high for ordinary people—who are the cipal readers of such books.

C. K. H.

TOWARDS A SELF-RELIANT ECOMY: *Planning Commission, Government of dia Publications Division, Pp. 370, Price. 3.00.*

This attractively printed and jacketed proganda volume of the Planning Commission a sequel to the earlier volume, *The New dia: Progress Through Democracy*, put out by Publications Devision of the Government of dia four years ago. The present volume, as so ctly stated by Union Planning Minister and ce-President of the Planning Commission, Shri Lalilal Nanda, describes the "approach and ls of India's plan, especially in relation to Third Five-Year Plan" and has "been preed in the hope that it may lead to still wider derstanding of her problems."

What would appear to be somewhat of a radox in our Planning processes is that although is frankly recognized, and as frankly admitted the volume under review, that agriculture st have the *highest priority* (emphasis ours) all India's plans for development "to-day and r the future," it has in actual effect been egated to a position following, not preceding, needs of rapid industrialization, especially so the Third Plan, although the shift in emphasis between agriculture and industry, had already gun to obtrude itself visibly even as early as end of the First Plan period. Thus, although First Plan had an overwhelming agricultural s, there was already a shift in emphasis wards industry, although the country were yet long way away from the absolute minimum icultural bases, even in the primary produces, continued to be overwhelmingly, dependent on large food imports. At the end of the ond Plan, therefore, although agricultural production had increased by what would normally be considered a substantial margin, basic food imports had to continue in very large quantities throughout the period. Third Plan targets plan to raise food production, especially in food cereals and pulses to the 100 million ton mark, the necessary fertilizer production programmes as well actual irrigation water made available and envisaged (in spite of its being largely wishful) would however seem to lag far behind the measure required to sustain production at this level. A curious statement in the volume under review in this connection would seem to be the claim that with the achievement of Third Plan targets in this behalf, the country would arrive somewhat at a level of self-sufficiency with a per capita ration of 17.5 ounces per capita per day at the level of the anticipated population of 492 million persons in 1965-66. How 100 million tons can yield 17.5 ounces per day to 492 million persons is beyond the grasp of our arithmatical attainments! However, the impression I have gained about the purposes and outlooks of the country's development planning authorities after a more than ordinarily careful study of the volume under review is that in their imitational anxiety and impatience to reach a level of industrial sufficiency comparabe to the advanced countries of the modern world, the slower processes of growth to a level of minimum agricultural surplus, especially in food production, inspite of frank admissions of the need for precedence in this behalf, has been and is being deliberately evaded. The emphasis, obviously, is on industry with corresponding use of advanced technology. One is reminded in this context of Prof. John Galbraith's recent statement in this country that the use of advanced technology is, primarily, an accommodation to labour shortages and may prove to be ruinously expensive to an under-developed economy.

But even in the processes of industrial growth certain anomalies would seem to be all too apparent. Thus, the total capacity laid down for the steel industry in the private and public sectors together, at the end of the Second Plan aggregated 6.01 million tons. Investments required to cover this growth aggregated Rs. 525 crores resulting in the expansion of the private sector capacity from 1.30 million to 3.00 million tons and the laying down of three new public sector plants with an aggreagate capacity of 3.00 million tons. This capacity has been projected, under the Third Plan, to be raised to 9.2 million ingot tons by the end of the Plan

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

period and would call for fresh outlays aggregating Rs. 672 crores of which approximately Rs. 320 crores shall be in foreign exchange. It is conceivable that in the context of the emphasis that is being laid upon rapid industrial development and having regard to the large outlays in this behalf both in internal resources and in borrowed foreign exchange, the utmost emphasis would also be laid, at the same time, upon production performances levelling upto if not actually exceeding (which, by all normal standards should be the case) laid down plant capacity. Unfortunately, however, according to a recent estimate made by the Planning Commission themselves, while the gross demand for steel in terms of ingot tons in the country during the Third Plan period would be likely to aggregate some 29 million tons, actual production out-turn could not be expected to exceed approximately 21.8 million tons, leaving a short fall of some 7 million tons which, if it were necessary to cover by imports, would present a foreign exchange bill aggregating some Rs. 600 crores. Plan targets obviously have been projected upon the steel capacity laid down, but production performances, on the Planning Commission's own showing, could not be expected to cover their requirements to within more than about sixty per cent (and it is yet very much uncertain if even this has not been an over-estimated !).

On the employment front certain advances have been made and more substantial progress is promised during the Third Plan period. A question, however, which would seem to be very pertinent in this connection, that would seem to obtrude itself, is, what is the extent of the labour intensification that had to be provided in the highly capital-intensive new large industries under the Second Plan to achieve this result? This is a question which seems to have been deliberately evaded by the Planning Commission and as cleverly side-tracked by their highly glamorous committee of Economic Advisers obviously for the inevitably adverse impact such a paradox would be bound to have on productivity and costs of production.

It is not possible within the short compas of a review to include all that one would like to say about this attractive and bulky volume put out at the expense of the public exchaquer except to conclude that however plausible it might look on the surface, its propagandist purposes are all too obvious. It lacks even the elementary virtue of subtlety.

RESERVE BANK OF INDIA, Annual Report, 1962 :

The statutory Annual Report & Accounts of the Reserve Bank of India for the year 1962, so far as it relates to a comprehensive survey of the national economy during the year under report is, more or less, a summary of the Reserve Bank's more Elaborate Report on Currency & Fiance for the year 1961-62, issued earlier.

The assessment of trends in the national economy as detailed in the report admits the growth of developing strains and stresses alongside of development planning, although it seeks to explain away these factors as inevitable concomittants of growth. But what the report is not altogether successful in wholly conjuring away is the existence of a growing apprehension on account of the country's widening balance of payments gap which is likely to further substantially widen in the years ahead. Despite a bold front being maintained, the growing anxieties on account of the country's continued inability not merely to make any new dents in the world markets, but even to hold together her traditional export superiority in the past in certain export commodities, can be all too clearly read between the lines of the report.

Altogether it is a factual analysis of immediate past movements in the economy, current trends and future prospects and although the report necessarily endeavours to explain away or cover up defaults of development planning in certain aspects of its objectives and methodology, as it must, its principal value is in providing information which could be the basis for more realistic assessments as a guide to possibly more rational future policies. No student of applied economics in any of its branches could afford to do without the compendium which this report is in fact, or its more elaborate edition issued earlier, careful studies of either or both of which would be bound to prove amply rewarding.

The Real Path of Economic Development

Writing in the *Indian Libertarian* in its issue dated 15th August, Prof. C. Carl Wiegand exposes certain fundamental misconceptions about the postulates of Economic Development which would appear to be especially pertinent to India's current efforts at development planning:—

Few nations have been successful in developing an industrial system until they were able to produce agricultural surpluses. The industrial revolution of England followed and coincided with a rapid development of agriculture. The farm surpluses necessary to feed the growing industrial population require a gradual change from a primitive local self-sufficiency to the production of marketable surpluses. Land reforms, which are at present widely advertised as the solution of Latin America's problems, may or may not meet the needs of increased production. When the large estates of eastern Germany, which due to scientific farming and centuries of careful tending produced before the war large surpluses, were distributed among the workers and deserving party members, the production dropped sharply, and before long the Communist regime found it necessary to unite the individual farms into co-operatives with the peasant, like the serf of yester-years, prohibited from leaving the land. In theory, the new collectives could have been operated as efficiently as were the former private estates, but in reality they are not, and eastern Germany, which was a good exporter before the war, is now dependent upon food imports despite a sharp decline in the total population and in the *per capita* consumption.

The tendency in underdeveloped countries to overlook the importance of agriculture as a basis, not a prerequisite for industrial and economic growth in general, is in part at least the result of prejudice dating from the colonial rule. The nations no longer wish to be merely the producers of raw materials, the handmaidens of industrial nations. Dr. Raul Prebisch, one of Latin America's best-known economists, has built a whole theory of economic development upon this assumption, forgetting completely that until the end of the last century, the major portion of United States exports consisted of two farm products: cotton and wheat, and that even today farm exports account for about one-fourth of United States exports. The expansion of farm production even during decades of declining prices, did not prevent, but actually made possible the industrialisation of the United States.

Since the United States is today the most highly industrialised and mechanised nation and enjoys the highest standard of living, the leaders of many underdeveloped nations jump to the conclusion that their economic problems can be solved if they can only build enough modern factories. This is a dangerous illusion. The steel production does not necessarily determine "the *tempo* of progress of the economy as a whole", as India's Second Five-Year Plan assumed. The demand for steel is not self-generating, neither is the demand for machinery. Industrialisation requires a peculiar type of skilled worker, quite different from the skilled artisan, and a market for finished industrial products. Neither can be developed overnight, and stronger the cultural ties of a peasant-handicraft culture, the greater the difficulty of producing modern industrial workers and demand for machine-made products. Europe required centuries to achieve the transition. To speed this cultural process through government fiat, as the totalitarian countries have attempted, causes a profound cultural shock and indirectly retards economic development.

The case against heavy industries, created by the government and financed through heavy taxation or inflation is particularly obvious in India with its very large supply of cheap labour, and its acute shortage of investment capital. Economic logic calls, for the time being at least, for labour rather than capital-intensive industries. It requires at least $10,000 in capital investments to provide one job in an automated steel plant, compared with $100 to $200 in cottage industries. Some 100,000 steel plows at $20 each will do far more for India's economic development than a $2 million machine tool.

This raises the whole problematic question of capital formation and investments. One may well question a recent statement by one of India's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

highest government officials that "there is only one factor of growth missing, and that is capital." Even though capital is admittedly important, the lack of certain psychological, cultural and social prerequisites is probably a far more critical and difficult handicap. There are four ways in which investments can be financed: through private savings, private foreign investments, government funds obtained through taxation or through the printing press; and finally through foreign aid or inter-government loans. It is a widely held misconception that the four are complementary. The inter-American "Alliance of Progress" is based on this illusion. The four sources of investment capital can be complementary under ideal conditions, but in reality they are often mutually destructive. Private domestic capital formation and private foreign investments go hand-in-hand. Traditionally one depends upon the other. Public investments on the other hand, whether financed through taxation or through inflation, are likely to hamper —contrary to post-Keynesian doctrine—both private capital formation and private foreign investments, unless great care is taken not to undermine private capital formation through heavy taxation and to discourage private investments through direct government competition. Unfortunately, modern economic planners are rarely satisfied to use public funds to prepare the basis on which a private economy can develop. Instead of building roads, schools, irrigation systems, and enforce social and economic order, modern economic planners build steel mills and power plants in direct competition with private enterprise, and yet they wonder why private enterprise seeks greener pastures in other countries.

Foreign aid can provide a sound basis for economic development, but the temptation of inter-governmental loans being used to expand the public sector at the expense of the private sector is obvious. The leaders of many underdeveloped countries and certainly many American experts, trained in Keynesian theories and raised in the spirit of the "New Deal," are basically distrustful of private enterprise and too impatient to permit the development of a free economy by logical stages. They build steel mills before the peasant has learned to use a steel plow, they build super-highways instead of all-weather feeder roads even though the price of the cheapest car is equal to the average *per capita* income for ten years. When Mexico, and more recently Colombia, nationalised the remaining private power plants, in which American investors held a substantial stake, the foreign exchange needed to pay off the American owners was obtained through a loan from Washington. Instead of being used to build more power plants, American aid was used to spread socialism. Why should private investors, under such circumstances, risk their capital?

Investment policies in underdeveloped countries suffer from a basic defect in economic reasoning. Instead of starting with the available resources and planning their most effective allocation, much of what passes as economic planning in underdeveloped countries is concerned with production goals, usually far beyond the available supply of capital and skilled workers. While there is an old saying that some men succeed better than others because they attempt more, and the fraudulent check-passer may succeed better for a while than his more honest neighbour, in the long run he is likely to get into trouble; and inflating the currency in order to achieve utopian production goals, like passing bad checks, is a form of fraud, as the two great scholastis writers, Buridan and Oresme already warned more than 500 years ago. Nor does inflation pay in the long run. It hampers private capital formation, drives existing private capital abroad or into sterile treasure hoards, and scares away foreign investors.

Of all the dangerous socio-economic theories which have found wide currency in recent years, probably the most deadly is the idea, which always appeals to spend-happy politicians, that a nation need not worry about the effect of rising price on the balance of payments as long as the national income continues to grow at a rapid rate. As *The Economist* wrote recently: "One cannot believe the governments of the United States and Britain will labour under artificial and irrational restraints on their economic growth,"—meaning, the maintenance of a sound balance of payments position. In order to import machinery essential to economic growth, underdeveloped countries must export and they will find their foreign markets vanishing, if their prices rise above world market prices. The "growth-through-inflation" formula is undermining the strength of the United States, and it makes impossible the economic development of India except on a totalitarian basis and at a cost in human dignity and well-being far greater than even Mahatma Gandhi could have anticipated when he called the state a "soulless machine" which "can never be weaned from violence."

The Politics of Survival

David Marquand writing under caption "The Politics of Survival" in *The New Leader* of August 6, 1962 says:

Whatever else may be said of it, no one can accuse the British Conservative party of lacking an instinct for survival. That instinct was shown at its most ruthless in Prime Minister Macmillan's purge of the Cabinet last month. In the reconstruction, about a third of the Cabinet lost their jobs. Gnarled party war horses were put out to grass; new men were brought forward: but important though it was, this political face lift was not the most important aspect of the changes. The most significant feature of the purge was that poor, plodding Selwyn Lloyed—Chancellor of the Exchequer and chief exponent of the Government's economic policies—was thrown to the wolves. The reason for his fall was quite simply that the policies associated with his name have become bitterly unpopular with the electorate.

This point must be emphasized if the Cabinet changes, and the course of British politics in the last year, are to be put into perspective. Lloyed fell, not through extraordinary incompetence or sudden unpopularity in his own party, but because of his unpopularity in the country. But the polices which made him unpopular were not his alone, they were the policies of the whole Government—officially regarded until a few weeks ago as the height of fiscal wisdom.

Another point should be emphasized, too, and the Prime Minister wished only to change course under pressure of public opinion, and to promote younger men to high office, he could have done so without sacking Selwyn Lloyd. Lloyd, who was Foreign Secretary both during the Suez expedition and during the Anglo-American *rapprochement* that followed it, is no danger to the strategy of *reculer pour mieux sauter*. And if it had been thought unseemly that he himself should preside over the retreat from what were nominally his own policies, he could have been moved discreetly to some other department.

Instead he has been dismissed althogether, in the most abrupt and humilitating manner possible. Clearly, then, Macmillan wished not only to change course but to advertise the change as dramatically as he could. Lloyd's function was to act as the scapegoat whose sacrifice is designed to protect the rest of the tribe from the wrath of unseen powers.

But why should such a drastic maneuver be necessary? What has the Conservative party really to fear from unseen power? The answer is that it has a great deal to fear.

During the last six months the face of British politics has been transformed, at least for the time being, by an astonishing series of Parliamentary by-elections. In these by-elections the Conservative share of the total poll has fallen by as much as 30 per cent; the Labor share has remained more or less constant; and the Liberals have made off with the difference. Worse still from the Government's point of view, the Conservatives have lost two seats which would universally have been considered safe a year ago —one to Labor, the other to the Liberals.

If the pattern of these by-elections were to be repeated at a general election, the Conservative party would be massacred; the Labour party would have an enormous majority in the House of Commons; and the Liberals would once again become a major party in terms of Parliamentary seats. The "if" is, of course, a very sizeable one. By-elections are an unsafe guide to subsequent general elections: It is quite normal for the pendulum to swing away from the Government in the middle of its term of office, and to return once again at the end.

But when all the qualifications have been made, the fact remains that the Conservatives have suffered a humiliating slap in the face at the polls. It now looks like they will lose the next election. Why?

There are, in fact, two main reasons—one relatively superficial, the other more profound. The superficial reason is the Government's economic policies during the past year, particularly its so-called "pay pause." The pay pause was originally imposed a year ago to halt inflation. But, unfortunately for its own future political prospects, the Government imposed the pause without the agreement of the unions, and in a high-handed and arbitary manner perfectly calculated to alienate them.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The result was what might have been expected. The unions failed to co-operate. Breaches in the Government's incomes policy began to appear almost as soon as the policy was announced. Before long, it became clear that the pause would in fact affect only those too weak to resist it. The higher income groups were not touched by it in any case, and organized labour was able to fight back. Those who suffered were the unorganized and semi-organized white-collar workers—a social group whose support is indispensable for the Conservative party if it is to stay in power.

Not surprisingly, the white-collar workers took their revenge. In by-election after by-election, it was they, more than any other group, who deserted to the Liberals. It is they who have changed the British political landscape out of all recognition. It is to them that Selwyn Lloyd's head has now been presented on a platter. The Government can certainly be expected to exert its most strenuous efforts toward winning back this crucial group. What is not so certain is that these efforts will succeed.

For the Government has to face two formidable obstacles. The first of these is the schizophrenic social composition of the Conservative party, which is, above all, the party of the classes posturing as a party of the masses. In order to win elections it needs the support of the white-collar workers and the lower middle class generally, of the suburban commuters and mortgage payers who have recently been deserting *en masse* to the Liberals. To win their support, it has to present itself as the architect of prosperity and economic growth.

But the Conservative party is also the party of the "old" middle class, of the retired colonels and the widows living on fixed incomes in the genteel squalor of some seaside boarding house. And the economic interests of this group are diametrically opposed to those of the "new" middle class in the housing estates.

To the "new" middle class, economic growth means cars, washing machines, holidays on the Continent and a steady ascent up the ladder of status. To the "old" middle class it means, in practice, inflation—and inflation means slow strangulation. The "new" middle class saw Lloyd as an economic executioner ; the "old" saw him as a potential savior.

Already the voice of the "old" middle class has been heard, tuttutting morosely over Llyod's fall. Lord Avon (better known as Anthony Eden, and next to Churchill the leading elder statesman of the Tory party) has publicly suggested that Lloyd was badly treated. This is not to say that Macmillan now faces a revolt from outraged Llyodites : that is not the Conservative way. It is to say, though, that he will be unable to count on much enthusiasm from an important body of his followers until he convinces them, by results, that Lloyd's fall was necessary for the party's future.

The second and more profound reason for the bleak prospects, athough few Conservatives are prepared to admit it, is that the Government's unpopularity has deeper roots than the discontent of this or that social class. This is due to a growing sense that the country has been allowed to drift for too long, and a growing—if still confused— appetite for change.

The Conservatives won the election of 1951 because they promised to end "Socialist austerity". They won the two succeeding elections because it seemed that their promise had been kept. For 10 years, the British people voted against the restrictions and shortages of the 1940s, much as in the 1940s they had voted against Munich and the Great Depression. But just as the memory of the '30s started to grow dim during the last years of the Attlee Government, so the memory of the Attlee Government is growing dim now.

For the first time since the Conservatives came into office, the affluent society is being taken for granted. It is no longer enough merely to offer still more prosperity. It is also necessary to offer a solution to the problems which the existing level of prosperity has brought. Most important, it is necessary to hold out a vision of Britain more inspiring than that of endlessly increasing material prosperity, and more contemporary than the traditional Tory vision of empire.

The real reason for the Government's loss of popularity is that the Conservatives have so far been unable to do either of these things.

A FATHER'S DREAM

Twelve-year old Bindu, and her mother Mrs. Sharma. They live in comfort, though Sharma died three years ago.

"My husband had a Multi-purpose Policy with accident benefit provision for Rs. 20,000," Mrs. Sharma said. In October, 1959, when he died in a jeep accident, she got an immediate payment of Rs. 22,000. "I bought a house with this money," she said. "And I also get a monthly income of Rs. 200 under the policy." When these instalments cease in 1977, she will get a lump sum of Rs. 18,000. Thus against premiums paid amounting to about Rs. 3,270, she will receive in all Rs. 87,000.

"Bindu wants to be a doctor," says Mrs. Sharma proudly. There will be money for her training too, because Sharma had taken an Educational Annuity Policy for her in 1957. This policy will mature when she is 18 and will bring her Rs. 6,000.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place.....Like Tagore's the late Mr. Chatterjee's genius was essentially constructive....By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country.... No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students." —*Hindusthan Standard*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya.....The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated." —*Amrita Bazar Patrika*

DEAL *Only* IN

METRIC LENGTHS

With the compulsory use of metric linear measure throughout the country from 1st October, 1962, transactions are now in terms of the metre.

Here are some equivalents of standard garment lengths. Familiarity with the new unit will help you to give up thinking in terms of yards.

SHIRT	2 metres and 75 centimetres (2.75 metres)	instead of 3 yards
COAT	2.75 metres	instead of 3 yards each
TROUSERS	2.75 metres	
BLOUSE	0.90 metre	instead of 1 yard

A Sari of 6 yds. will be 5½ metres in length.

1 Metre = 1 yd. and 3⅜ inches
If a yard of cloth cost Re. 1.00 nP., a metre of the same cloth will cost Re. 1.09 nP.

THE MODERN REVIEW

NOVEMBER 1962

VOL. CXII, No. 5 WHOLE No. 671

NOTES

The World

Two sectors of the Cold War zones of the World contain just now the focal points of world tension. In one zone on the Himalayan frontiers of the Indian North-West and North-East, the Red Chinese have started a shooting war with the latest modern weapons and with masses of armed forces fully equipped with motor transport in large numbers and with mechanized arms and tanks at some points in Ladakh. In the other, the U.S. Government has imposed a naval blockade in force around Cuba, bringing to a head the rising tension caused by the arming of Cuba with missile bases and with jet aircraft inclusive of the latest Soviet jet bombers. This blockade move has received full support from Britain and a fair amount of approval from the O.A.S. (Organization of American States), though not all of the members have signified their full support. Elsewhere in the World the position remained very much the same at the end of October as it was a month back.

The only notable event, in the way of a change from the old order, was the revolt and uprising in Yemen against the new Imam, Seif-el-Islam el Badr. The actual revolt took place at the end of September and was led by Brigadier-General Abdullah Sallal, who is a Nasser sympathizer according to the Americans. It was first reported that the new Imam had died in his palace in San'a the Capital of Yemen, during the bombardment by the rebel forces at the outbreak of the revolt. But later it was found that he had managed to escape into Saudi Arabia, and was trying to stage a come-back with the aid of men, money and weapons provided by King Saud of Saudi Arabia and King Hussein of Jordan.

This aid, in the shape of two small armies of about 1000 men each, raised and equipped by Saud and Hussein materialized about the middle of October. The Imam invaded Yemen with these but was beaten back by Saud's Yemenite army of tribes-men and regulars equipped with Soviet arms and aided by Egyptian planes. Badr's forces were driven out of Yemen territory and the remnants fled into Saudi Arabia and the British protectorate of Aden. It was reported about the end of October that Badr died in Saudi Arabia shortly after this second and major set-back to his fortunes. The rest of the Arab World has now only two things left, King Saud and King Hussein. The revolt in Yemen seems to be simmering down into tranquillity, but one cannot be certain about these last strongholds of mediaevalism and tribal feuds.

After the settlement in Algeria of the joust for power in favour of Ben Bella, that sorely tried country and its people has now a chance to restore normalcy to their way of life. In the rest of Africa no major incident of World significance took place in October although the Congo problem is still far from being settled—and will be so, so long as British, French and Belgian financiers keep on fishing in troubled waters with the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

active aid of Roy Welenski the Rhodesian champion of British colonialism.

The Cuban affair was brewing for a long time. It started coming to a head last September as the tone of the following extracts from the **New York Times** of September 30 would show :

Russia's fleet of open-sea trawlers has sharply expanded in recent years. The trawlers helped the Soviet Union two years ago to surpass the U. S. in total marine catch and to move into fourth place among world fisheries, with an annual haul of more than 3,000,000 tons.

The Soviet fishing fleet has also been suspected of spying. Trawlers flying the Russian flag—and reported to be equipped with radar and other electronic gear—have repeatedly shown up at U.S. naval manouvers, at nuclear testing areas in the Pacific and in U. S. offshore waters which local fishermen have reported to be notably lacking in fish.

Last week the U. S. had new cause for concern over the Soviet fishermen. Fidel Castro announced that Russia would help his regime build a $12-million port in the Bay of Havana and Moscow announced that its Atlantic fishing fleet would harbor there. The U. S. Defense Department was worried that the new port not only would provide a Western Hemisphere base for spy missions by Russian trawlers but could also be easily adapted for use by submarines and other military vessels.

The announcement of the harbor project, part of the Russian economic and military build-up of the Castro regime, intensified debate in Washington over U. S. policy toward Cuba.

Thus far the Kennedy Administration has followed a three-part strategy : (1) close surveillance, with preparations to use force as necessary if the build-up appeared to give Castro capabilities for aggression or subversion anywhere in the Western Hemisphere ; (2) pressure on NATO allies and other non-Communist nations to withdraw their ships from the Soviet supply line to Cuba ; (3) increased efforts to persuade Latin-American nations to tighten hemispheric "isolation" of Cuba through economic and political sanctions.

The debate ranged over a wide range but the most crucial questions were those of the increase in the vulnerability of the American Continents if the Soviets could establish advanced bases for the aerial, naval and missile bases in Cuba, which is within a few minutes' flying distance from Florida. The implications of the Monroe Doctrine were discussed thread-bare as well. Indeed these questions swayed the public mind to a very great extent in the U.S.A., where the mid-term elections are in the offing.

Then came identification of several large-scale missile bases under construction and in various stages of nearing completion on the island of Cuba together with the confirmation of the news of the presence in increasing numbers of technicians etc., from the Soviet armed forces. The continuous supply of jet aircraft and other weapons of war were also confirmed. And the reaction of the U. S. Government finally culminated in this naval blockade.

The Secretary-General of the U.N.O., Mr. U Thant has asked both sides to call a halt for a fortnight while negotiations might be put into progress to find ways and means to release the tension which has mounted almost to the explosion point. Talks are proceeding through the agency of Mr. U Thant with both the Soviet's Premier Khruschev and President Kennedy of the U.S.A., but as yet there is no indication of any lowering of the tension. There is a newspaper report of an offer by the Soviets to dismantle all warlike arrangements like missile bases etc., in Cuba if the U.S.A. would receiprocate by abandoning the advance bases in Turkey. This offer has been virtually rejected.

Incidentally it may be said that the Semi-official approval given by the Soviets —as signified in an editorial of the Pravda— of the Chinese proposals for cease-fire and peace on our Himalayan frontiers is undoubtedly a resultant reaction of this naval blockade of Cuba by the U.S.A. It is evident that the Soviets would like a negotiated peace between China and India at this stage, so that she does not have to strain relations with China, nor alienate India by withholding help. The question of the insatiable greed of Expansionist China and the shifty

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

d treacherous nature of her constantly anging demands and assumptions has not een taken into consideration by the Soviets r obvious reasons.

This brings us to the consideration of hat is an undeclared War consequent on e invasion of the territories of India by ed China. It is a very difficult subject to mment upon, editorially, at this stage. On e one hand there is the question of tional solidarity, that is, united and unalified support for those in whose hands e have trusted the defence and preservaon of the sacred soil of our motherland and e liberty and prestige of the nationals of dia and, on the other, is the question as to w far the ignorant and inefficients of New elhi have jeopardised the defence organiation through the putting of incompetents and may be corrupt ones—in charge of ssential posts. We are well aware of the ct that it is dangerous to level slashing and maging criticisms at this crucial juncture, those who have grossly bungled and undered in the direction and administraon of the Defence department, but nonelless we have to ascertain beyond all ubt that the self-complacent wiseacres ho are at the helm of our affairs have at ast realized the limits of their knowledge d competence. Parliament has been lled into session a week before the previsly announced date and we hope this atter will be plainly determined through e united efforts of all members who have e freedom of India at their heart.

There is no doubt that the northern fences of India have been neglected badly ere communications are concerned and e Defence Forces have been badly let wn with regard to modern weapons and fensive equipment. It is useless to say at Foreign Exchange stood in the way be-se cascades of Foreign Exchange have en spent since 1958, in the execution of e precious Plans and in various other ys. And it was apparent to the whole rld since 1958, that Red China was preing for an invasion of India, though the e men of New Delhi might have been sfully—and wishfully—unaware of the ending massive assault that would follow en their preparations were over.

We had received an assurance, some time back, from Pandit Nehru that our defences in the NEFA area were **"adequate."** They have proved not only inadequate but also incapable of being reinfoced when the time came due to total lack of communications. Then again we find that the official spokesmen at New Delhi laying great emphasis on the employment by the Chinese of "mountain guns, heavy mortars and automatic weapons" in their assault on one of our positions. One wonders what New Delhi had thought the Chinese would use when they attacked. Half-bricks and match-locks perhaps! The names of these weapons sound impressive to totally ignorant people but as a matter of fact they are standard weapons which all armies of to-day are equipped with for use in difficult terrain. Our troops and our defences were most certainly not adequately equipped to beat back an assault with modern weapons. This was criminal negligence on the part of those who were responsible—but the reckoning can and should wait.

But despite woefully poor equipment and exceedingly poor arrangements for supply and relief, our **Jawans** have fought the enemy with their traditional valour and staunchness. The fighting quality of our troops was never in doubt and as the call comes there would be sufficiency in numbers too. But modern warfare is not merely a question of numbers and figting quality alone—though in the long run that tells as the Germans found out in Russia and the Japanese in China. The need of the moment is for fighting equipment that would match the invaders' armament. And that has to be obtained at any cost.

As regards the course of the actual war, the invaders are now moving away from their communication lines and the question of supplies is likely to become more difficult for them as the Himalayan Winter with its heavy snowfall sets in. This may give our defenders a breathing space—but nothing more.

At the time of writing these notes, there is fierce fighting going on, both in Ladakh and in the NEFA and our defences, on the lines taken up now, have held as yet. If only adequate arms and supplies could be rushed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

up in time then there would be a chance for stabilization in the near future, where our defence positions are concerned.

The President has proclaimed a State of Emergency on the 26th of October and the provisions of the Defence of India Act have also been resurrected through an ordinance issued on the same date. Mr. Desai has broadcast an appeal to the nation to mobilize financial resources. A Cabinet Committee has also been formed, consisting of Pandit Nehru, Mr. Desai, Mr. Nanda, Mr. Menon, Mr. Shastri and another, to deal with the emergency. We hope, they will discard their pet fads and shiboleths and wake-up to the fact that they have to match their wits against an enemy who is treacherous and ruthless in the extreme and who takes an intensely realistic view of World Affairs in which World opinion and World sympathy has no place.

The news has come through that Mr. Khruschev has accepted President Kenedy's assurance that U. S. will not invade Cuba and has therefore ordered all missile bases in Cuba to be dismantled and the arms and equipment to be returned to Russia. The World will breathe a sigh of relief.

Our Friends and Neighbours

Who is a friend ? Old Chanakya in his wisdom laid down a definition which still holds good after the lapse of over twenty-three centuries. He said "he is (indeed) a friend who stands fast alike in festivities or dissipation, famine or State-turmoil during trial at the King's tribunal and at the end near the funeral pyre."

India is passing through a period of intense trial and it is, therefore, the time for the testing of friendships. It should be remembered, however, during the accounting, that our relations with our friends have been conditioned to a large extent by the over-emphasis laid by those who are in charge of our foreign affairs, on the matter of non-alignment and friendliness to all—an attitude which may be construed as being lukewarm all round. Further, the inept and over-adroit talk indulged in by some of the great men of New Delhi has given offence to many who resent the "holier than thou" pose assumed by these ultra-clever men. The most prominent of the latter has been criticized in the following terms by the **Nation** of Rangoon, as reported by the **Statesman :**

Rangoon, October 30.—"India's Defence Minister has been deceived by his own cleverness," says the **Nation,** one of Burma's leading English dailies, in an editorial captioned : Mr. Menon and the War that has come to India.

Mr. Menon has long attempted to convince his colleagues, the paper adds, that he enjoys a special relationship with the Communist bloc and this is perhaps why Mr. Nehru gambled so heavily when giving him the Defence portfolio. The "special position" was proved to be illusory by the **Pravda** statement of October 25 when Moscow called the McMahon Line "notorious" and "a product of British imperialism" and said the Chinese terms for negotiations were acceptable and reasonable.

"But Mr. Menon's political astigmatism is not his only fault. His concepts of defence policies and military preparedness are even more shocking. Indian troops have fought valiantly but their fight against the well-equipped Chinese has been one-sided because they cannot match their enemy's modern weapons and support facilities. Lee Enfield rifles are no match for automatic Soviet weapons that are standard equipment for Chinese infantrymen."

The paper says : "If India is to come out of the proposed talks with honour she must abide by her resolve to arm and to render a good account of herself militarily. Mr. Menon's campaign for collection of gold to enable the country to buy arms cannot cover his sins of omission in the past in regard to India's defence. It is extremely doubtful if this defence can be effective under a Minister who by his unpreparedness and reliance on Communist promises has jeopardized it to a great extent."

It must be said, however, in taking into account the Rangoon daily's comments on the Russian attitude that Cold-War alignments and considerations have undoubtedly influenced the Soviet's reactions in the present crisis, which certainly has claustrophobic potentialities regarding the world situa-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

n. Otherwise the summing up by the tion is substantially correct.

On the other hand, the response of the estern Powers, particularly that of the S. and Britain has been extremely good. e only hope that Pandit Nehru would put st things first and not allow any of his pet shibboleths and prejudices to muddle the offers of assistance in arms and uipment, even if that involves the calling of technicians and specialists. The lapses our defence arrangements have been too eat—thanks to the admitted mental errations of Pandit Nehru and his coun-llors—and the crisis too acute to allow of y time for abstract considerations.

The most friendly response at this itical juncture has been from the Malayan ime Minister, Tengku Abdul Rahman, w on a visit to this country. We append low part of the report of his speech deli-ered at the Red Fort in Delhi on the 28th ctober, during the course of a civic recep-n given him. The extract is from the atesman:

The Prime Minister of Malaya, Tengku bdul Rahman, today warned all free tions, particularly those in Asia, against e evil intentions of China. "There is no ed to mince words. The Chinese aggres-n is a red signal of danger to the whole Asia. The crisis in India is a challenge to e entire free world," he said.

He called upon all free nations to nsider carefully the motives behind the inese aggression on Indian territory and t just sit and wait for the outcome. An en aggression on a great country like dia could not be without strong motives.

There could be a difference of opinion, t, according to him, the Chinese act was demonstration of strength so that the ole of Asia should look to her.

They wanted to capture the mind, heart d imagination of all Asian countries and put an end to all democratic set-ups in a and turn them into their slaves.

The Malayan Prime Minister, who was eaking at a civic reception given him at d Fort, said that Malaya was engaged an armed conflict with the Communists r 12 long years and the Malayans "know at they are like". The Chinese would make trouble anywhere, in any manner, in Asian countries to fulfil their evil motives. Malaya experienced it, Vietnam had suffered for a long time and now India was suffering at their hands, he said.

China, the Prime Minister said, could not tolerate the existence of India—a successful democracy which was a challenge to her bid for leadership of Asia. What was happening in India—a nation stripped to its depths by the open and hostile act on her borders by China—was of great importance to other countries.

In such a grave situation, he said, Malaya had full sympathy and support for India. "In your fight," he added, "you will have many friends and Malaya will be one of the strongest among them."

Amongst the Commonwealth countries, the response from Canada has been very friendly and the offer of arms and equipment that can be supplied by her has been categoric and clear.

There have been messages of sympathy and concern from a large number of friendly countries from all over the world and others are also pouring in, but we have to mention the above as being very remarkable amongst all received up to date.

Regarding our neighbours, Nepal and Pakistan, the position is different. We are told by our Prime Minister that our relations with Nepal are quite friendly and we would, indeed, like to believe it. But there are men close to the King of Nepal who are continuously poisoning his mind against India and some Nepalese papers are virulently anti-Indian. These are factors that are not conducive to mutual trust and friendship, taking into consideration that the King of Nepal is an absolute monarch. It is to be hoped, however, that the temporary misunderstanding caused by the alleged raids into Nepal across the Indian boundary by Nepalese rebels will be cleared up satisfactorily.

As for Pakistan the relation has been the reverse of fiendly. to put it mildly. Indeed the only concern so far expressed by President Ayub has been at the supply of arms to hard-pressed India. The concern has been expressed in blatantly un-friendly language. However, that was only to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

expected from a country where all the elements of democracy have been ruthlesssly suppressed by a succession of dictators. Further the present attitude of Pakistan has placed considerable handicaps on our war effort because a very considerable portion of our army have to be maintained, at the Indo-Pakistan border.

We are told that "quiet diplomatic moves have been initiated to smoothen relations between Pakistan and India. There are news agency reports of personal messages sent by President Kennedy to President Ayub Khan and Pandit Nehru inviting them to "bury the hatchet" in Kashmir at a time when China has launched war of aggression against India. It has been also reported from the Commonwealth Relations office at London that Mr. Macmillan has written to President Ayub Khan on the present situation. Nothing is known about the responses of President Ayub Khan to these moves.

India and China's Entry into U.N.

The following press despatch appeared the dailies on October 27.

U.N . H.Q., Oct. 26.—India accused China today of "premediated aggression" against Indian territory but supported a Soviet proposal for the seating of the Peking regime in the U.N.

Mr. B. N. Chakravarty, Chief Indian delegate, told the 110-nation General Assembly that his Government believed in the principle of universality for U.N. membership and would not make an exception in the case of the Chinese Communists.

"We also think," he said, "that the only efective way to check Chinese military adventurism is to make her accept her responsibilities as a member of the world organization and thereby be subjected to the views and discipline of this august body."

Mr. Chakravarty prefaced this statement with a declaration that "China has committed flagrant, massive and premeditated aggression on the eastern and western sectors of our territory while glibly talking of peaceful negotiations."

"China pursued its aggressive actions on Indian soil despite the fact that India, year after year, has championed the cause of China's admission to the U.N.

"Over the last few years the Chinese have forcibly occupied more than 12,000 miles of Indian territory. Despite repeated Chinese attacks and despite the fact that the Government of China has no evidence to back up its claims to 50,000 sq. miles of Indian territory, he said, the Indian Government still clings to its firm belief in the value of peaceful negotiations."

The words were spoken by Mr. B. N. Chakravarty without doubt, but the authorship of this exquisite piece of Quixotism was undoubtedly that of Pandit Nehru. No one else in this wide world is capable of mixing the hard realities of the present-day world with the half-digested metaphysics of the academic cloisters of a forgotten era in this fashion. It must have taken all the stern discipline acquired by Mr. Chakravarty during decades spent in the cadres of the Indian Civil Service, to utter them.

One of the most admirable practices that Mahatma Gandhi diplayed was the rigid, though self-imposed, restraint on his faculties of speech. And his greatest failure in the training and teaching of those of his disciples to whom he bestowed his leadership of men, was in the very same disciplining of this gift of expression.

It would have sufficed if the Indian delegate had dissocited homself from the move. But no, he must put forward before the assemblage of nations the illogical workings of the mind of a visionary.

We wonder if there be another person, with the same responsibilities as Pandit Nehru, or for that matter any person with a knowlege of the present day world with and a logical mind, who thinks that entry in the U.N.O. would in any way curb—let alone check—Chinese military adventurism.

Punishment for Spurious Drugs

The following press report that emanated from Mahabaleshwar on the 20th of October last contains an interesting pointer towards the shape of really deterrant punishments.

The Central Council of Health has recommended that confiscation of property of dealers and manufacturers dealing in spurious drugs should be provided in the Drugs

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

t. The Council also suggested that the nimum punishment should not be subject the discretion of the trial magistrate and o the relevant provision of the law uld be applicable to Government facto- s as well. These recommendations were luded in a resolution passed by the Coun- at its tenth meeting which concluded sterday at Mahabaleshwar.

The resolution also recommended that urvedic and Unani medicines should be ught within the purview of the Drugs t.

The Council called upon the State Gov- ments to develop drug control machin- y on the pattern of Maharashtra and jarat drug control administrations

Without entering in the legal implica- ns of the above recommendation we uld like to say that it measures up to the mon citizens' idea of meteing out condign nishment to those who want to loot inno- nt and helpless persons by-unscrupulous asures. The remark that "the minimum nishment should not be subject to the cretion of the trial magistrate" also re- cts correctly the laxity of our adminis- tors and executives who deal out justice their pleasure and on their whims.

But this is only one section—and not a ry big one either—of the fraudulent and minal practices of hoardes of swindlers and fiteers who are battening on the suffer- s of the helpless people. We do not know en the Government is really going to ve against the dishonest scoundrels who amassing crores through the agony of people.

e Government and the Profiteers

Of all the evils that have persisted since days of World War II, artificial scarcities d profiteering are the two that seem to y public opinion and affect the social and nomic welfare of the people most griev- sly. Indeed it has sapped public morale such an extent that even sane and intel- ctual people, who are conversant with blic affairs and have an effective faculty reasoning on intricate social and econo- problems, find it difficult to challenge conviction that has prevailed with the mon Citizen to the effect that **all the ministries and the executives** are working under the domination and direction of these filthy blood-suckers.

We ourselves have been forced to the conclusion that not only is corruption rampant in the highest places but that every one concerned with the administration and control of the Union and States is fully aware of the ways and and means through which corrupt practices—the inevitable corollary of large-scale profiteering—work with impunity. The extracts from a news-letter from Madras given below would indicate our meaning. The news-letter appeared in **the Hinusthan Standard,** dak edition, for October 4 :

MADRAS, SEPT. 28.—Women from all walks of life recently described at a public meeting their hardships due to the continuing rise in the cost of living. The Union Minister without portfolio, Mr. T. T. Krishnamachari, was present.

One working class woman said she and her husband had to go without food for several days because of high prices. A middle-class housewife complained that she had to send her very young son, still worthy of education, for a job just to meet the family expenditure.

An honorary woman magistrate apprehended that the rising cost of living would affect the moral capacity of Indian women ; how could they withstand privations for so long a period ?

Another woman referred to the dishonesty of food traders.

Mr. Krishnamachari said all these years he had been studying the trend of rising prices. He knew that the poor remained poor and the rich were becoming richer. The Government had no method to check the price trend.

Those who took part in the meeting included wives of Ministers, well-known social workers and Congress members.

The State Chief Minister, Mr. Kamaraj himself feels that something has to be done to hold the price line. Sometime ago the Tamil Nad Congress Committee appointed a committee to report on the increase in the prices of essential commodities. Mr. Krishnamachari was the chairman of that Committee. That report was not made public,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but Mr. Krishnamachari referred to it at the women's meeting. It was held that this report contained radical recommendations including the operation of the foodgrains trade by quasi-government organisations including co-operatives.

At the meeting the accent was on co-operatives. Many speakers wanted the grains trade to be taken away from the private sector and Mr. Krishnamachari agreed with the view.

Is this a prelude to the opening of such co-operatives in this State by women ? It seems that large-scale trade through women's co-operatives throughout the State, is in the offing.

What puzzled economists in this State was the bland avowal by Mr. Krishnamachari about inflationary tendencies and why the Government had not acted and still hesitated to act. Any way he had plunged himself into a controversy likely to disturb the Delhi Secretariat walls.

The hopeful note at the end of the above extract regarding the Delhi Secretariat walls, seems to have been over-optimistic. As yet we do not see any signs of an awakening of our tinsel gods to the dire plight they have placed the trusting peoples of India through the torrents of money—largely wasted—they have poured into their precious Plans which so far has only further impoverished the poor and super-fatted the bloated profiteers and corruption mongers.

There is a tacit assumption in the letter that the steep rise in the cost of essential commodities and protective food-stuffs is due to inflation alone. There is no doubt that the inflation consequent on the feckless spending on the Five-Year Plans is the main cause of the all-round rise in prices, but that rise does not by any means include the exactions of profiteers. Does inflation explain the rise of price of fish in Calcutta from six annas a seer in 1940 to four-and-half rupees in 1961-62, or does it indicate how the market (black of worse) price of a controlled drug fluctuates between Rs. 11.50 and Rs. 22 ?

The only explanation is the rapacity of the profiteers who are bleeding the helpless public with the knowledge of the officials and with the implied consent of the highest authorities who have not stirred a finger—though some of them have wagged their tongues vigorously—either to help the people or to restrain the profiteers, who are the greatest enemies of the common citizen, sapping as they do his **morale** and morals.

Lately the Planning Minister, Shri Gulzarilal Nanda, has awoken to the fact that the Plans have played havoc with the well-being and staunchness of the people. He has been thinking furiously—so we are told—and talking loudly in a high way. We append below some extracts from the news-report of a Press Conference held by him in New Delhi on October 24.

The Planning Minister, Mr. Gulzarilal Nanda, declared that the profiteering mentality in times of national emergencies was going to be "ruthlessly smashed."

He announced at a Press Conference that the Government was not going to tolerate any rise in prices because of the national crisis created by the border situation.

"There will be no relaxation in the measures aimed at controlling the rise in prices and no mercy will be shown', he declared.

Mr. Nanda said the Planning Commission has worked out a scheme of action to control prices which was now being considered by the Government. A decision was expected to be announced shortly.

Mr. Nanda said that he was going to personally supervise the implementation of measures aimed at controlling the rise in prices.

Asked whether the Third Plan was likely to be revised to divert greater resources to defence purposes, the Planning Minister replied, there was bound to be some adjustments in the Plan programmes. He declared, the defence needs would have 'overriding priority over everything else ?'

Mr. Nanda, however, hastened to point out that the border situation has only strengthened the Government's determination to implement the Plan as fully as possible so as to increase production and strengthen the national economy.

Mr. Nanda also announced at the Press Conference that the Bharat Sevak Samaj, a voluntary organisation with over one million members, has drawn up a seven-point

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

emergency programme to render services of arious kinds in the national crisis created y the border situation.

Proceeding further regarding the programme drawn up by the Bharat Sevak Samaj, Shri Nanda said it will primarily concentrate on constructional work in the border areas of the country and that "the organisation has also decided to set up a chain of consumer stores as a means of checking a rise in prices."

"The seven-point programme of the organisation consists of : 1. Rendering assistance to the families of military personnel ; 2. maintenance of the morale and solidarity of the community ; 3. to provide trained construction workers to meet the needs of defence ; 4. opening of consumer stores to check rise in prices ; 5. render emergency service in border areas ; 6. enlist people's co-operation in mobilizings, etc."

We confess that we are not impressed, either by Shri Nanda's "pep-talk" or by the prospects of the profiteers being controlled, without a drive being set into motion against corruption.

We are told at every step that the constitution stands in the way of the punishment of the guilty. Indeed, even our President has said that our laws and our administration takes equal care for the safety of the guilty ones and the innocent ones alike. He has put it in his accustomed mild and philosophical manner. But in reality the law-abiding and the innocent must suffer and perish if the law-breakers and the corrupt ones are allowed to work their will on the people with impunity, as they are doing today.

Unless corruption is eradicated with a strong and ruthless hand from the highest places and unless legislation against the corrupt and the lawless is effectively brought in, there is no way out. If the Constitution stands in the way it must be modified **or else it will soon be paving the way for a dictatorship.**

There must be redress for the hundreds of millions that are suffering the consequences of lax controls, ineffective laws and half-hearted measures for the checking of calamitous deterioration in the economic life of the people. Teeth and clamps must be put in the laws and lax administrators must be **punished and sacked.** Otherwise all this big talk about **morale** by Pandit Nehru or that on the checking of profiteering by Shri Nanda seem to be a futile waste of breath to us.

THE EDITOR

Inciting Marauders

Weakness in the body politic incites marauders to break in and to make the most of their victims' helplessness. Indian history since 1947 is a shameful chapter of glorified weakness. Before that the formation of the Indian National Army by Netaji Subhas Chandra Bose, which was the natural and logical development of the fight against the British carried on sporadically in Bengal, Madras, Punjab, Bihar, Uttar Pradesh and elsewhere, made the British understand that India could not be kept down by them for much longer. They, therefore, gave up their imperial domination over this nation as befitted a wise and practical nation. But the Indian side was neither wise nor practical. While a World War and great sacrifices made by our millions brought us nearer freedom, our leaders began to act in a manner which made them the laughing stock of the world. They spoke of love and human brotherhood while demanding freedom. Large numbers of political workers moved about with them, went to jail for peaceful defiance of the ruling power and there was a general belief that freedom would be won by peaceful means. Fundamentally one had nothing to say against brotherhood or human love. But a large number of persons who did not believe in love or peace took all this as a confession and proof of weakness. They demanded a partition of India on the false ground that there were two nations in India, Hindu and Muslim and there should, therefore, be two States instead of one. Our leaders, who were eager for freedom and had not mustered the strength to take it by force, passed long years fraught with rioting and mass murders committed by the "other nation" and eventually agreed to this partition in a weak-kneed fashion. The marauding "other nation" which was born in treachery and falsehood, continued its activities against India and are even to this day grabbing portions of India by treacher-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ous attacks. The greatest example of marauding and treachery was in Kashmir, where our leaders began singing love and peace, while our soldiers were dying for the country's freedom; and thus brought about a virtual partition of Kashmir, instead of throwing the marauders out entirely.

When China began to annex, by force large chunks of India, after having invaded Tibet and "liberated" it to form an integral part of China, our leaders sat and watched things peacefully while they extorted from our countrymen a **double-chouth** of their hard earned income in taxes, in order to spend the money in peaceful economic ventures most of which did not work out according to plan. As a result of this adventurous folly our army, navy and air force did not develop fully and well and we could neither throw out infiltrators from hostile neighbouring countries nor prevent invasion of our own land by China. We went on delivering speeches, making announcements, sending messages of protest and generally speaking acting in a very peaceful manner, which, our enemies rightly interpreted as a sign of national decadence, folly and cowardice. The land of a mighty race of fighters was slowly becoming a land of weak-kneed money grabbers who thought only of getting rich. The Chinese watched this development and soon made up their mind to invade India and to grab the entire Himalayan region. They had come into possession of about 20000 sq., miles of our territory by peaceful means, due to the negligence our Government, and they thought a little skirmishing will soon give them the rest of the Himalayas. Of the Himalayan States they thought nothing. They could pich them up later as and when they so desired. So began the Chinese invasion of India in October 1962 on a lar-scale and a full military basis. This caught our leaders, not only on the wrong foot, but in a prone and somnolent position.

A.C.

The Congress and the Crisis

The Congress never delays nor procrastinates when it comes to holding meetings and making speeches. Whether or not *nada* is *Brahma*, *nada*, that is, vocally made noise, is surely the very essence of *Rashtra niti*. If politicians talked less and worked more for the people's safety and benefit there would be fewer crises on the national fronts. Our majority political party has been propounding the religion of *Ahimsa* since a long time. It is even now not quite clear whether in their list of spiritual—moral priorities anything at all can gain precedence over *Ahimsa*. We can not say that it is an act of delinquency to be peace-loving and to be saturated with the milk of human kindness. But one may be permitted to say that love cannot replace gasolene, when it comes to driving motor cars. Nor can love be a substitute for food in times of famine or for arms in war. Those who are wedded to the ideal of *Ahimsa* are by nature unfit for defending the nation against ferocious enemies. They can give their lives for their ideal and become martyrs; but their martyrdom can hardly compensate those who will lose their lives, property and freedom as a result of the superior moral reactions of the non-violent defenders of the nation. So that the Indian National Congress should not at this crisis jeopardise their immortal soul by giving up their ideals. They should hand over the work of national defence to persons who are at a lower moral level and who will have no compunction about killing and crushing out enemies. Lovers of humanity have a habit of wishfully creating friends out of enemies and living in a fools' paradise. The Congress had been *bhai-bhai-ing* with the Chinese till day before yesterday, so to speak, and today we find the Chinese have killed thousands of our beloved brothers and sons in a treacherous manner. Once in 1946-47, the Congress put the Goddess of Peace and love on a high pedestal and worshipped her by sacrificing a third of our ancient land. And after that India went through a period of mass murders, rapine and desolation, the like of which never happened in India before. In India the most popular goddesses are *Durga* and *Kali* and both represent *Shakti* that is divine strength which destroys evil with ruthless courage. The most popular religious text, the *Bhagavad Geeta*, teaches us to be dispassionately courageous and to do our duty fully and well without any thoughts of brotherly love and unhampered by any scruples which may obstruct us in the path of duty. Our enemies may be our brothers, and they very often are so; but we must not forget that in the face of our supreme duty to defend the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

motherland, that Congressmen must forget *Ahimsa*, the Communists must forget their international brotherhood of communists, capitalists must forget their wealth and workers must forget their economic rights; and drive him out of our territory. Our fight is threefold. The Chinese are threatening us from the North. Enemies are also sitting on our other frontiers whom we must watch with sleepless eyes. And we have many kinds of "fifth column" within our country. The Communist fifth column, the cowards' fifth column, the fifth column of ignorance and so on and so forth. The idea that fresh blood must come into the government is sound. But the fresh blood will be really healthy and good if it is taken from the people instead of the dead and dying political parties.

We must remember that the Congress way of looking at things is useless in times of war. War effort is not flood relief nor development of cottage industries. Nor even moral regeneration in the sense of establishing a Band of Hope world of non-smokers, teetotallers, vegetarians, *Kirtan* singers and what not. All our leaders who believe in love and peace at all costs must resign and go yielding place to fiercely arrogant non-believers in the defunct ideologies of the last fifty years. Many of these leaders totally lack the ability to think realistically. They are satisfied that they are pragmatic when they are only dogmatic. Unless these people can change and shed their complexes, they will have to go sooner or later. The sooner the better. All politics as found in India have a flavour of disloyalty to the Nation. The party first, the Nation next is the motto of politicians. Some even ignore the nation and swim in extra-territorial waters. When the Congress talks about a Total Effort they of course, expect people to follow the Congress. The Communists still whine about negotiations when their spiritual overlords have already violated our frontiers. In these circumstances the people of India must reorientate their minds about politics and their political obligations. An all party Government of India will not be representatiive of the peoples of India. For all the members of all the political parties would not form even 5 per cent of our population. The vast masses must be awakened to the needs of the hour. And this can only be done by men and women who have not sullied their reputation in the eye of the greater public by belonging to political parties.

Russia, America and Others

The latest news from Russia are quite unequivocal and clear. Russia has a moral sympathy for the Chinese. Which means Russia is not supporting the Chinese physically; but is morally prepared to do so in case they feel the Chinese require such support. Russia has also said in clear terms that she is not going to deliver any weapons to India. We are thankful to Russia for her honest and truthful assertions regarding her moral position. We may expect to see full scale Russian aid being given to China, if the latter country ever has to go on the defensive. Russia would not have declared her policy if she had been sure of China's success against India. She now feels that India will fight back and may even invade the alleged Tibetan territory of China. India will now find it difficult to reliberate Tibet; for the Russians, and the Indians too, have admitted, however perjuriously, that Tibet is an integral part of China. Another reason for Russia's declaration of policy is that India is trying to obtain arms from the U.S.A. This action puts India, perhaps tacitly into the American bloc. India may say she is seeking aid from a member of the United Nations Organisation; but that will not put her back into favour with Russia. India should not depend on the U.S.A. and Great Britain for her supplies of arms. She should buy and secure arms from West Germany, Japan, Sweden, Switzerland and other countries too in order to keep clear of the Anglo-American bloc. There is a question of safety too which India must always remember. After China's treachery, India has no reasons for trusting Pakistan any more than she can be trusted on grounds of facts. Her armies are poised for action on the borders of India at all times and India should never belittle her as a potential enemy nor believe her one bit. During this time of a grave national emergency India can be stabbed in the back and should be careful that this does not happen. Our war effort therefore should include all that extra effort required to guard the Indo-Pakistan border fully and well. A part of our over all strategy *vis-a-vis* the Pakistani menace is our preparedness to do without American or British arms; for we may

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

obtain arms from these countries for use against China; but we may not get those supplies in case we have to fight Pakistan. This angle of vision should be developed and used in full detail, *before* anything happened. For the Chinese incident has proved to the people of India how negligent and careless a government managed by idealists can be. For all practical purposes idealists, fools and crooks provide the greatest breaches in our national bastions. We must not put our faith in any of such persons.

A. C.

The Evils That Must Be Resisted

Jesus Christ told his followers to avoid violent retaliation and to turn the other cheek in answer to a slap on one. Chaitanya Mahaprabhu said that even if he had been bruised by assault he would still give only love in return. Count Leo Tolstoy advised all not to resist evil. But all the above prophets and saints must have been expounding the basic principles of individual morality when they pronounced their words on the force that love had to win over personal enemies. Individuals have a habit of retaliating on the slightests provocation and this usually leads to no gain and to great loss and injury at times It is therefore of real advantage to individuals to control their passions and to maintain peace even when provoked. Many of the fights between persons in ancient and medieaval times were the outcome of individual intolerance and angry retaliation; and these fights caused loss of life quite frequently. Sometimes simple accidents progressively involved many persons and led to family feuds and even to wars. Human passions were the greatest obstacles to social progress in those days and many were the fights that devastated all lands for no particular reason, except just quarrels. Brotherhood and love therefore were greatly needed to keep the social atmosphere sweet and to prevent murders, fights and unnecessary destruction of property. In modern times people have learned to ignore others and to control their passions. They do not draw swords at the slightest provocation nor come to blows whenever there is any difference of opinion. So the ancient "shalt nots" are not so necessary nor socially useful as they had been in the past. It is therefore quite a mistaken approach to social problems to try to apply the rules of individual conduct to collective behaviour.. Entire nations neither collectively slap the cheeks of their millions; nor can the millions uphold any rational ideal by not retaliating to violations of collective national rights. The evil of a blow given to an individual is not comparable to the evil of killing a group of 10000 men, women and children. So that, while by not resisting a blow or a kick a person may help maintain social peace; the same method cannot be adopted to any advantage when a nation sends its armies into another land to burn and devastate a million homes. One man can sit down and meditate for days, weeks or years; but a nation cannot do so without starving and dying out. In short personal moral laws cannot be adopted by large groups without modifications. So that when India tried to be saintly in a collective manner, the absurdity of the moral effort caused her discomfiture at every step. And it did not inspire any saintly reactions in her enemies' hearts; at least not collectively. India lost a third of her territory to begin with and then half of Kashmir as a reward of her sainfliness. In between more than a million men, women and children died and several millions had to flee their homes. The Chinese incident is just about beginning and no one can correctly foresee how it will end. One thing, is however quite clear. It is that India has received such a rude shock at this **denouncement** of all her **bhai-bhai** foreign policy that she may even abandon the path of love and peace which she had been treading alone, with her eyes shut to counteract that loneliness. If the China incident worked out in our favour, we would have escaped the natural consequences of our folly by the barest margin. Our leaders went deliberately into the quagmire of cheap sentimentalism and nearly handed over our motherland to our enemies. We can not come out of our trouble unscathed. But we are now prepared to be wiser and practical and that will be our ticket to success.

A. C.

ar Effort

The first principle guiding and condition- a total war effort is bringing all persons into e scheme of that effort. By all persons are eant those who are true to their motherland d are prepared to forget all other considera- ns which may keep them apart from one ther in the face of this great danger to the tion's freedom. The Congress must first of forget that they are a political party as sepa- e from the people of India most of whom are members of the Congress nor adherents of Congress faith and creed. The other parties must forget their creeds and secret desires d lend whole-hearted support to the war effort. e government should publish a full list of ods and articles required for war purposes d the people of India must produce those ngs in adequate quantities, as well as conserve e supplies of the same by restricted civilian con- mption. There must be no hoarding of these ods either for profit or for private use. The en and women of India must volunteer to live d work on a war basis. Unnecessary moving out, travel and wasting time and money should cut down to the minimum. Civil defence arrange- nts should be made immediately by the people thout encumbering government with the work d local policing, fire fighting, nursing and dical treatment, etc., etc., should be arranged popular effort. Government should be proached for guidance and essential supplies ly. All persons of military age should be imme- ately mobilised and put in training for fitness d basic skill in handling instruments, imple- nts and in developing general ability, Cycling, imming, rowing, riding, carrying equipment, st aid, motor driving, cart driving, etc., etc., n be undertakekn by vast numbers of persons thout requiring any assistance from govern- nt. There are signs that the political parties e trying to take advantage of the grave emer- ncy that has arisen and to control the war ort as a whole. If this is permitted to be done, e war effort will be hampered. Non-partymen d women must be asked to form local com- ittees and volunteer bands for work of all kinds. therwise the vast majority of the masses of dia will merely, sit back and watch the politi l parties going into action, and the war effort will neither be intensive nor extensive. The leaders of India should control their party feelings and work for India.

A. C.

Defence Public Relations in India

We were a little heartened by what the Prime Minister of India had to say on the inadequacies of India's public relations which is universally asknowledged to be today a most vital arm of modern offensive or defensive weapon, in course of an address to Delhi's students a few days ago, and underlined the need to gear up the Governments' propaganda and public relations machinery to meet the current emergency without delay. The Prime Minister, obviously, was in quite a frank mood when he said this, for generally it has never been the policy or practice of himself and his Government to acknowledge their failures or to admit incompetence even where it has been the most gloringly obvious.

The machinery of propaganda and public relations is a most vital item of defence equipment not merely in their efficacy in promoting public awareness of and participation in meeting national emergencies, especially so in the event of war, but also promoting sympathy and assistance of friendly peoples abroad. This last is no less vital in the context of present day world situations and can never be overlooked or ignored without jeopardy.

And the Prime Minister is very right when he admits that our propaganda or public relations organs are not merely inadequate, they are even hopelessly incompetent. Why this should be so in the face of the very well paid organization that is being maintained at immense expenditure to the public exchequer is a pertinent question. But any one with an iota of intelligence and imagination who may have been listening in to our public relations broadcasts during the last week or ten days, must realise the depths of inanity that could at all be possible. There is no dearth of trained talent in the country which can and should be *immediately* drafted into the service and our defence public relations developed into something sensible and stimulating.

The Defence of India Ordinance

While we heartily endorse the Government of India's decision to issue an Emergency Pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

clamation by the President of India and, thereunder, to promulgate a Defence of India Ordinance endowing the Government with wide and extraordinary powers of legislation and executive action to enable them to effectively deal with the emergency situation that has arisen within the country as a result of Chinese warlike aggression, we hav been looking with keen interest into the clauses of the new Ordinance with a view to discovering what provisions, if any, have been included therein to effectively deal with a possible price-spurt that such a situation, we apprehend, would be normally bound to occassion and the consequent dislocation of civil supplies, unless effectively deterrant measures were taken to prevent such an eventuality. We have, unfortunately, been unable to procure a copy of the *Gazette of India Extraordinary*, as we go to press, in which the Ordinance is stated to have been published and have to rely mainly on summaries and news reports appearing in the deily press. In one such report before us we find that the Ordinance is said to have been promulgated to "deal effectively with three problems in the context of the situation created by Chinese aggression,—Law and Order, Defence needs and Civil Supplies."

The matter of civil supplies, we presume, includes an appropriate apprehension of the vital need, as a *necessary defence measure*, to hold the price line at an even keel and to take effective measures to deal with the matter in the requisite manner. We have not the least doubt, having regard to our past experiences of the breed, that black-marketeers, profiteers and those hoarders of anti-social racketeers in this country, who have been used, on every conceivable occasion and opportunity, to battening upon human misery and distress, must have been looking forward to the emergency situation as has now arisen within the country, as a golden opportunity for reaping a further rich harvest and must have been sharpening their claws with unholy anticipatory glee to once again tear into the entrails of the social order and thus contribute their quota of evil to chaos and disorder at a juncture when order and discipline are vital to our very national existence. This is a possible eventuality which, in our opinion; is to be dreaded with the gravest apprehension and we would like, therefore, to emphasise with all the force that we may command, the vital need to deal with this aspect of emergency social control with unswervable determination and steadfastness.

Our expreience, so far, of Government's ability to deal with this very necessary social need, even under ordinary conditions of existence, has never been happy or encouraging. Our apprehensions, therefore, as to what extent the present Government of the country may be relied upon to devise *really effective* measures to deal with the evil, should not seem to be either unreasonable or even exaggerated. In a situation like the present one it is far safer, it seems to us, to start with a reasonable measure of caution, apprehension and doubts, rather than be complacent or over-optimistic. And precedents, so far, have not done anything, we must reiterate, to remove these reasonable doubts and apprehensions from the public mind. Even before the present emergency had arisen, prices have been continually sky-rocketting. The Government, while being unable or unwilling to do aything about it, have apparently been speaking with two conflicting nuances simultaneously on the subject. While some eminent Union and State Government Ministers, including the Finance Minister himself, have been endeavouring to conjure away public apprehension in the matter by trotting forth varous excuses and extenuating explanations, not the least of which seemed to us to be the absurd claim that the price rise was an inevitable symptom of a growing economy and indicated the necessary build-up of strength for the future orderly progress of the economy, there have been others not the least among whom has been the Union Planning Minister, who read in these continually rising price-spirals affecting not merely industrial raw materials but also essential primary commodities, protents of disaster. The Union Minister for Planning has recently been most vociferous about the matter and has been promising to effectively hold the price line at any cost, even to the extent, if necessary, of reimposing price-controls. He has apparently been frank enough or honest enough, however, to have more or less publicy asknowledged that price control without control over the sources of supply or the machinery of distribution, could not be expected to be very effective. All that the mountainous labour of the Planning Minister seems to have yielded so far in this regard is the squeaking mouse of a few so-called "fair price shops," and a fiat compel-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

g every retailer in the country to display a list "permitted" prices of the commodities he may l in which, however, does not appear to have en enforced so far.

The Government of India, we have already en told a little while ago, have not yet been inking in terms of a reintroduction of ration- of essential supplies as an expedient towards ective price control. In the present state of the ulation of supplies to the actual consumer, spite of the intervening activities of the Union d States' 'State Trading Corporations,' we can- t conceive of any means of effective check on prices, atleast so far as essential primary modities are concerned, without corres- ingly effective control over the machineries retail distribution. For the seat of the disease s not so much in the machanics of supply, mand and distribution, as in the wholly in- man character of the trading community in e country and the authorities of the various cial organs entrusted and empowered to deal th it on behalf of Government. It is this crisis character that has to be dealt with effectively, ver an easy matter even under ordinary cir- mstances, but which would be bound to assume ghtening proportions at a time of emergency e the present one. What is worse, the aware- ss itself seems to be wholly absent in both cial circles as among even the victims of these nstrous racketeers, of the treasonable contents such behaviour at a time of national emer- cy like the present one when the very soverien stence of our State is being seriously allenged and threatened by an outside enemy. e are fully and even painfully conscious of the iousness and gravity of our contention in this half, but the least needs of the situation es not, we feel, admit of any mincing of words this connection. The Ordinance under erence, we find, has empowered the Govern- nt to list certain offences, during the con- nce of the present emergency, as capital es meriting capital punishment or a life tence. We have looked and looked in vain the terms of the Ordinance as published in e daily press for something that would indicate t the Government are equally determined to eat attempts to dislocate civil supplies or geleries with the price lines as treasonable ences of a like gravity and meriting similar atment at the hands of the newly promulgated emergency laws of the country. For, to us, nothing could be more destructive of public morale and confidence, which would seem to be most vital ingredients of total national effort in the present emergency, than black-marketing in the peoples' food or racketeering in other things which enter into the needs of the peoples' very physical existence. And, anything calculated to destroy public morale at a time like this, must be regarded as a most highly treasonable offence against the country and the nation and should merit the extreme penalty of the law. In any case, we are satisfied that nothing short of such extreme measures would be able to induce the community of the country's detestable racketeers and their even more detestable official friends, supportes and protectors,—we have not the least doubt that among these last could be counted even some ministers of Government—to draw in their claws. Unless this is and can be effectively done, the entire structure of our civil defence—and it is necessary to realise that this has to provide the very first base for our forward and the necessary support to our valiant fighting forces in the front line—would be bound to remain shaky and ineffective if not actually prone to crumble down into dust.

It should not have been necessary to say all this on this very simple question. The structure of national defence, it must be obvious, has to be built upon the morale and the confidence of the masses of our people, boosted and strengthened by the community of our intelligentsia who constitute our lower middle classes. But if these very people are made the victims of the situation by enabling the wholly amoral and monstrously anti-social community of racketeers in the country to carry on their nefarious activities in even larger measures than in normal times—and this would be bound to happen otherwise—without effective checks and hindrances, how could any one expect their morale and their spirit of national patriotism to survive in the circumstances? That such activities should, therefore, be frankly regarded as highly treasonable ones and dealt with as such both determinedly and without any kind of discrimination, is obvious enough. Unfortunately our Government, by their past behaviour, where they have been supposed to have failed or deliberately omitted to bring to justice persons guilty of punishable offences even under the comparatively less rigor-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ous penal laws of peace time, is not generally regarded to be strong enough to be able to effectively deal with the far more rigorous requirements of the present situation. Offences relating to black-marketing or other similar anti social racketeering have seldom been brought as far up as the courts of justice, but a large proportion of even the very few that have even been sent up for trial could not be dealt with effectively because of some lacunae or other in the wording of the law or on some similar ground or other. The Government have never been known to undertake legislation to remove the shortcomings or defects in the laws for dealing with crimes against society. It is this apparently callous attitude of indifference of the Government who seem to conjure away all unpleasant facts relating to their responsibilities of administration by simply ignoring them, that today makes them suspect. Besides, the unholy fact of the Government speaking with a divided voice cannot be ignored or overlooked in this connection.

We may not be in quite desparate straits yet, but that we are facing a situation of the gravest national danger, is entirely without question. We must have unity backed by determination and the strength to effectively and expeditiously liquidate this threat to our national existence and all support and resources must be brought to the constituted Government of the country for the purpose. Government must also be strong enough to shoulder the burdens of their present emergency responsibilities and must deal with any or all symptoms of anti-social, anti-national and treasonable activities with firmness and determination and, irrespective of the person or persons involued, mete out the extreme penalties of the law without the least fear or favour. The country will support and bless the Government for such demonstrations of strength in the national welfare. It is also necessary that the Government must speak with only 'one voice,' preferably for as long as they may remain in office, but at least, for the duration of the emergency. It would be better if no one, not even a Minister of Government except the Prime Minister alone, should utter a single word in public during the continuance of the emergency, except merely on a subject on which he may have been previously and specifically briefed. This would help to allay the sense of bewilderment that is being often caused by all kinds of loose and, sometimes, even contradictory statements from supposedly responsible officials and ministers of government that have been finding their way into the public press.

K. N.

Sanskrit Dramas

Dramas provide convenient means of propagating high thoughts and ideas in an easily intelligible and pleasant manner. In our country, specially, Nataka, Yatra, Kathakata, etc., have always been recognized as very useful means of mass education.

The Prachya Vani Sanskrit-Pali Dramatic Troupe of Dr. Jatindra Bimal Chaudhuri has in recent years, engaged itself in the laudable task of popularising Sanskrit and spreading India's cultural and religious ideals amongst the masses, through staging easily intelligible Sanskrit Dramas in different parts of India and outside. All these dramas have been composed in very simple Sanskrit by Dr. Chadhuri. They contain thoughts and ideals befitting the culture and civilization of India.

During this Puja vacation, the Prachya Vani Troupe was invited by the celebrated Navaratra Diamond Jubilee Celebrations Committee of Dwaraka. The drama staged there was appropriately Ananda-Radham on Radha-Krishna-Lila. The performance lasting till very late at night was highly appreciated by all, specially, the Sanskrit Bhajanas and Kirtans sung in the traditional tunes. The citizens of Dwaraka were so pleased with the performance that they sent the Anga-patta-Vastra of Sri Dwarakadhish by special representatives from Dwaraka to Jamnagar to be presented to Dr. J. B. Chaudhuri and Dr. Roma Chaudhuri at Jamnagar by the Jam Saheb, the Rajpramukh of Saurashtra.

Later the Prachya Vani Troupe staged the Shakti-Saradam and Mahaprabhu-Haridasam at the beautiful and spacious Hall of Ramkrishna Mission, New Delhi.

A DECADE OF DEMOCRATIC PLANNING IN INDIA

By G. N. GANDHI

story bears evidence that men from time memorial have been trying to improve ir lot with one or the other means. Adam ith and his followers suggested almost plete freedom for individuals to improve ir economic lot because they believed t the natural balance of human motives l most effectively work in economic airs. This firm belief had led Adam ith to make the celebrated statement t each individual was "led by an invisible d to promote an end which is no part his intentions." Marx, on the other hand, gested least freedom to individuals ause to him such freedom will lead to loitation and not to the well being of e people. He, therefore, suggested greater greater state control over the economy the improvement of the living conditions the people.

In India much could not be done in the st because of foreign rule and with its uidation in 1947, Indian statesmen gave ious thinking to improve the depressed ng standards of the people. Democratic nning was the result of that deliberate nking and it came into force in 1951. The ocratic planning gave the country a xed type of economy which neither con- med rigidly to the principles of Capital- of the Adam Smith type nor to the cialism of the Marxian type and thus was new experiment not only for India but the world at large. The mixed type of nomy was considered the best to safe- rd our democracy and at the same time take the economy to the take off stage.

Now when a decade of this unique periment is over, let us evaluate if the tem of mixed economy has really deli- ed the goods as efficiently as desirable d if not, whether the defect lies with the tem as such or with the working of this tem, so that necessary changes may be nsidered for the smooth and speedy owth of the economy in future.

The best way of evaluating the plans uld be to examine how far some of the common objectives of the plans have been fulfilled. Some of the most common objectives were :

i. Progressive self-sufficiency in food.
ii. Progressive reduction of unemployment.
iii. Progressive reduction of inequalities in income, etc.

Let us examine how far the plans have succeeded in achieving the above objectives.

i. **The Food Situation** : India is primarily an agricultural country with 70% of the population directly engaged on nearly 350 million acres of land. During the decade the plans are estimated to have spent nearly Rs. 1,551 crores directly on agricultural and allied developmental programmes (apart from the indirect expenditure, such as, on transport and industry, etc.). In the third plan, the estimated outlay on Agriculture, Community Development and Irrigation comes to Rs. 1,718 crores thus making the total of Rs. 3,269 crores over the 15-year period (1951-1966). But withal the tremendous input by way of manpower and material resources, the situation continues to be almost serious. This can be seen from the fact that we paid on imports of foodgrains about Rs. 660 crores in foreign exchange uptill 1957. Further the rising prices indicate that a near scarcity situation exists. Further, while we raised about 25 million tons of foodgrains over the decade, the per capita consumption almost remained stagnant as seen from the figures given below :

	1953-54	1956-57	1958-59	1960-61
1. Adult equivalent population (in millions)	330.9	350.5	363.7	376.7
2. Foodgrains available for consumption (in 'm. tons)	59.35	59.29	65.10	68.28
3. Per capita per diem (in oz.)	17.4	16.4	17.3	17.3

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thus the production has not outpaced the population and the Ford Foundation Team was probably not wrong in estimating 110 million tons as the probable requirement for India's 480 million people by the end of 1966. The target for the Third Plan, however, is the production of 100 million tons and even the achievement of this low target is subject to so many qualifications. Considering the lower target, continued food imports under PL 480 and other programmes, growing demand due to growing population and growing income, one can be convinced that the situation may remain at the margin even after 15 years of planning and 20 years of independence. With the tremendous input of manpower and material resources if the plans fail to provide sufficient quantity at a reasonable price, people may get disappointed with the plans.

ii. **Employment:** Its very existence is considered an evidence of an economy being poor and underdeveloped. In India, the gravity of the problem can be seen from the fact that almost every year the figures of the unemployed exceed that of preceding years and today after a decade of planning the problem continues to be very serious. While the Third Plan envisages creation of more employment opportunities, it admits that the problem may remain severe even after the Third Plan. Thus we find that even this second most important objective has not been fulfilled as efficiently as it should have been.

iii. **Inequalities in Income:** Coming to the third common objective of progressive reduction in the inequalities of income so that a sound socialist pattern of society can be established replacing the old pyramidal structure of incomes where at the cost of the masses few are rich, we find that much has not been done. According to one estimate the disparities have increased in the recent past and even Nehruji admits that the growing income has not been equitably distributed. The tendency of the rich becoming richer and the poor poorer still continues as evident from the fact that wherein income ratio was 1 : 150 few years back, it is nearly 1 : 300, today according to Shri Ashoka Mehta.

Thus, by and large, we can say that though the national income has gone up from Rs. 10,240 crores in 1951 to Rs. 14,500 crores and is likely to go up to Rs. 19,000 (approximately) crores in 1966, raising thereby the per capita income which is today Rs. 330 in comparison with Rs. 255 in 1951, but considering the over all situation with regard to foodgrain shortage, unemployment, inequalities, rising prices, etc., we may easily conclude that the situation is not very hopeful and deserves serious thinking to analyse what has been wrong and what, in view of that, should be done in the future.

But before we think of any improvement, we have to see first of all whether the system of economy as such is most suitable for the economic growth and, if not, if it may be possible to change over to any other system the worth of which might already have been tested by one or the other country. Secondly, in case our conclusions are for the acceptance of the present system but cause dissatisfaction with its achievements, we shall have to modify or remove the obstacles so that future growth is smooth and speedy.

System of Economy

History yields evidence of the fact that various countries adopted, at least in the beginning or during transitional periods Capitalism of the Adam Smith type or Socialism of the Marxian type. The tremendous achievements under these systems in England, America, France, Germany, etc., among Capitalist countries; and Russia, China and Poland, among of Socialist countries are before us and, therefore, while India could have adjusted to either of the above systems for the development of the economy, she decided to adopt a midway pattern of mixed economy because probably both the systems were considered anti-democratic and since we decided to value our democracy more, the choice of mixed economy was considered the best. The second reason for choosing such a type of economy might be that by choosing outright none but partially both we might extract the advantages of both but the disadvantages of none. But the system as such is not very important. It is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discipline, the way of life that that tem ensures, which should be important. all know that in the transitional stage ple must work hard, consume least, save re and invest more so that growth can e place as rapidly as possible. The above systems—Capitalism and Socialism, le poles apart from each other in ap- ach, both ensured that a disciplined life hard work, least consumption, maximum ing and investment with the result that pace of their development was far more d than we are experiencing here today.

The experiences of the Soviet economy cate that due to rigid state control, ple were forced to work upto their maxi- m capacity, were paid least for consump- with the result that production not only reased very rapidly but the cost of pro- tion also was very low due to low wages. e result of low wages was that people least purchasing power and the State g the sole producer could easily mobil- the savings and accordingly the invest- t rate was accelerated. This constant cipline, hard work and austere living ured, in short, a very high rate of capital mation and the result was that within a rt period of 2 to 3 decades, the Soviet nomy reached a very advanced stage of elopment.

While the Socialist economies through d control over consumption, over work- hours, over people and their rights, etc., ured such a progress in a short span of 3 decades, the Capitalist economies, with non-intervention of the State, allowed capitalists to exploit the situation who d the least amount for the highest amount work with almost the same results. Under s system too people not only worked y hard (16 hours a day for adult and 9 rs for a child of 9 is not unknown of the glish factories at the beginning of Indus- lisation) but were also forced to sacrifice sumption because of the low wages with result that the economy being organised few, the accumulated savings by a few pitalists) could easily be invested and circle of forced saving and investment the Socialist economies by the State and the Capitalist economies by the rich few ensured that due to the hardest possible work, not only production increased but its cost also decreased and it gave a very good effect on domestic but more so on foreign trade. (This need of maximising production and minimising cost, particularly in the marketable surplus of foreign trade has assumed all the greater importance specially in the case of India where due to the growing population, income and sluggish growth neither the surplus for foreign market is increasing nor the cost of that little surplus for foreign market is decreasing with the result that we are lossing most of our markets and in the context of the Third Plan when India needs more of Foreign Exchange, it is extremely necessary that not only production should increase but its cost should also decrease.)

Thus while both the systems ensured the hardest possible labour resulting in more production and low cost (extremely necessary for a developing economy) and the least amount of purchasing power with the result that the investment grew tremendously. But the difficulty with India is, that the present system, unlike the two quoted above, cannot ensure very hard work on the part of the people due to one or the other reason including the democratic rights to choose the Government; right to strike and organise Trade Unions; the right to enjoy his way of life in a way he likes, etc. All this have led to a situation which is absolutely contrary to the situation which we examined in the above two systems. The over all result of this system of democratic mixed economic planning are:

1. That the right to organise trade unions and to strike, etc., has enabled the workers to get their working hours reduced; to get wages increased (These two situations are mutually contradictory because increased wage is the function of an increased production); to ask for other facilities which, however progressive, may not be very necessary at this crucial stage of economic transformation. The result of all this has been that reduced working hours has reduced production which indirectly has effected rise in prices. Increased wages have directly affected increase in prices with the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

result that not only within the country there is a general confusion but even in the foreign markets our competitive position is not very strong as is evident from the loss of many traditional markets like jute, tea, textiles, etc.

2. With the further right to consume their income in whatever manner and in whatever quantity they may like, the result of this unchecked freedom is that they (the citizens) can enforce the desire for higher consumption which directly retards the rate of saving and consequently investment. This difficulty of higher rate of consumption could not arise in both the above systems because of direct checks which certainly are necessary at least during the transitional period.

3. That the growing income with unchecked consumption is also making the people luxury minded, with higher marriage and consequently reproduction rates. The situation in the other two extremes, particularly under capitalism, was that the minimum wages not only directly checked higher marriage rates but also indirectly checked the population growth due to early deaths because of insufficient conditions of living. While this argument in the enlightened 20th century would be absurd, nevertheless, the fact remains that with the ability to restrict consumption, we might have induced the people to postpone marriages and this would have yield corresponding effects at least on savings.

4. Fourthly, the higher prices, which are claimed to be a phenomenon of a developing economy, also are due to higher wages. These higher prices directly affect our saving capacity and to that extent also investment. The higher prices also have a psychological effect upon the people, more so in an illiterate country where they will question the benefits of planning when, on the one hand, the claim is preferred that production is increasing or, in other words, the supply, and the paradox that prices also are simultaneously increasing. This would appear to be an unconvincing situation to the masses and the lack of enthusiasm on their part would not be unjustified.

From the above, unmistakably, we are led to the conclusion that apart from other factors necessary for economic growth, some of which of course, are not examined, it is extremely necessary for an under-developed country striving for development to observe very strict discipline at least during the transitional period because thereafter the economy may be expected to be taking care of itself. We also note that discipline expects the people to work in the hardest possible manner, consume the least, so that more savings can be generated for investment. This type of discipline becomes all the more obligatory on the part of a country like India where the population both in the absolute term and in relative reproduction rates is extremely high.

While hard labour is extremely necessary, it can be extracted either by force or by incentives. In the above two systems, forced labour was at the cost of democracy and India has decided to value democracy more than the higher standard of living by enforced labour. The only way out is, therefore, of incentives and persuations. Persuations presuppose incentives either immedite or in the long run and are to be based on material benefits. But immediate material benefits will mean consumption of entire or may be a substantial part of the increment of income that increased investment may bring them. Therefore, all that the economy can provide, as incentives, would be in the long run by way of good food, good clothing, good housing, sufficient employment and other amenities constituting the higher and a more decent standard of living. Therefore, the economy has to persuade the people, during the transitional period to work hard, maintain consistant discipline and a measure of austere living. In other words, the dividend will come only in the future and if people can do this, knowing well that their efforts will lead to a permanent improvement of status, there is no reason why they would not find it possible for a period of 2 to 3 decades to observe that rigid discipline which will lead to tremendous construction and prosperity.

Having said that a democratic economy can afford only an indirect incentive of better living in the futrure, let us examine if Indian Planners could create those incen-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ves; and urge people to be more abstemious. When people find even today after 10 years of planning that still food imports are necessary, that greater unemployment, greater inequalities and greater difficulties persist they would pertinently question that even these indirect incentives are missing today and people have begun to have doubts about planning in view of all the above circumstances. In short, Democratic-Socialism has failed to inspire the people to work hard because the indirect incentives which are generally less effective becomes still more so with the failure of the plans to achieve some of the basic objectives of the economy.

Similar is the effect upon saving—the most important factor for development. While the above two systems could conserve saving, democratic socialism has failed to invest the maximum possible saving. The fact that people have the liberty to consume in whatever manner they like, indicates that the trend is towards more and more consumption (and this is natural also in an economy with a depressed living standard for a very long time) and higher the rate of consumption lesser will be the rate of savings which certainly is an anti-planning trend. We should be able to persuade the people to accept the motto:

"to eat for living and not to live for eating"

Our hurdles to work hard, to save more, to adhere to a strict discipline worthy of living in a poor developing country, etc., are to a great extent the result of democracy which though credited with many blessings, nevertheless sometime hinders our progress at a speed most desirable. The right to vote, the right to organise trade unions, the main function of which, in India at least, has been to get the maximum wages with minimum labour, etc., have not been unmixed good. The result of this has been that with pressures upon the Government, workers get promises and support from the top for all their acts of achieving the objectives of minimum cost by way of labour, the maximum benefits through the agency of trade unions and with weapons like strike, etc. The continued strike at Bhopal Heavy Electricals for nearly 28 days is a luxury of extreme type which even the advanced nations would not indulge in and all this is because trade unions have the democratic right to fire such an explosive weapon like a strike and that also against an Institution (Government Sector), which being of the people having pledged to do its utmost for the welfare of the people, can certainly never think of doing anything detrimental to the workers.

The type of Democratic Government, however necessary from various angles, at times is a hindrence to economic growth which, again, is very necessary for the smooth and orderly growth of democracy itself. But in this enlightened 20th Century, the talk of abandoning democracy would be absurd and equally absurd might be the introduction of early 19th century Capitalism or Socialism of the Russian type. Therefore, within the framework of democracy and within the framework of the present economic order, we shall have to adopt such devices that the two Institutions, viz., Democracy and economic growth through democratic planning, instead of clashing, shall complement the efforts of each other.

Following are a few suggestions towards this end:

1. We have to bring about some adjustment between the growth of democracy and economic planning. Men in this materialistic world do not live just for values alone but for material benefits also. Democracy has to make room for material growth even at her own cost because for her very existence and preservation, it is necessary that the economy should develop at a very speedy rate. The recent history of some of the Asian countries should be a lesson for us as to how democracy died its unnatural death due to sluggish growth and, therefore, democracy instead of coming in the way of economic progress should become so adjustable that through its institution, economic growth is accelerated.

2. Strikes in democracy carry no significance in general and particularly in the public sector. We must take it for granted that the Government of the people shall never do anything against the people. Further, when the declared aim of the Government

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is the promotion of people's welfare and all its energy is directed towards the achievement of that end, there seems little justification for unions to organise strikes, particularly in the vital industries. The recent stike at Heavy Electricals in Bhopal for 28 days must have led to tremendous loss and certainly could have been checked had not the Unions been equipped with such an explosive weapon. This requires serious consideration and if during war emergency such strikes can be forbidden, it is equally legitimate to amend trade union legislation and see that strikes shall not be resorted to at least during the transitional period.

3. Since forced labour must be rejected, sufficient incentives must be forthcoming. But a poor economy can't afford nor should afford direct and immediate incentives and, therefore, all that it can ensure is long-term incentives. But since long-term and indirect incentives are not very effective, the economy must see and infuse the people with the faith that the progress is rapid. People must not feel either the shortage of foodgrains or employment or such other deficiencies, feeling thereby that progress is uneven, because in that case people will loose faith in planning and with half-hearted efforts it shall not be possible to reach the take-off stage at an early time. The Planners may review changes in emphasis in "Choice of technique" could not be an effective means of achieving the purpose. By changing emphasis on small and medium irrigation projects, we may get immediate benefits and this may physically deliver more agricultural goods and thereby benefit prices and cost and above all faith in the process of planning. Similarly a little more emphasis on small and medium industries would ensure that people shall get more employment, more income and consequently greater capacity to save. Once they get the capacity, they can be made to save more particularly when they would have physically experienced the benefits of planning. This initial encouragement can push their spirit up to work hard, save more and invest more. Further the expansion of the small industries sector would also deliver consumer goods at a rapid rate and may cause reduction in price. This general reduction in prices due to abundance of goods will not only improve saving capacity but physically also they may feel that the plans have done something and in future planning they may more actively participate, which is extremely necessary. Today higher prices have led the people to conclude that there is a general shortage of goods and when huge amounts are being spent on plans, they fail to understand this erroneous situation of general shortage of goods. The abundance of goods at reasonable price will simultaneously create a very good psycological atmosphere which will in its turn, induce that faith that may induce the people to work more, save more, etc. This is an indirect incentive and in the absence of forced and direct incentives, that planners must provide such incentives at least.

4. Population control is extremely necessary. While it is universally accepted that growing population is a headache for capital formation, the situation continues to be serious and the nearly 2% annual addition is very much undesirable in the transitional period of economic growth. Family planning in the decade under review has done something but not enough.

To conclude, we have to adjust to a type of discipline adhered to in the above two systems, viz., Capitalism and Socialism, though through democratic means because ultimately it is the hard work, constant discipline and austere living which shall enable the economy to reach its take-off stage at an early date.

T. H. GREEN AND THE IDEA OF STATE DEFIANCE

By SISIR KANTI BHATTACHARJEE, M.A.,
Dept. of Political Science, Calcutta University.

The problem of the proper relation between the authority of the State and the liberty of the individual is as old as the time when man first began to realise that he could not live without some sort of political institution. He is by nature a political animal. For the fuller and all round development of his personaity the State is indispensible for him. Therefore, we can hardly find any example in the whole history of human civilisation where people led a life without or out side the authority of the State however rudimentary or imperfect that State might be. Someone may cite the example of the Cyclopes who had no State and who always lived in family units where, as described by Homer, each male member of the family "gives law to his children and to his wives.[1] This has been described by Arnold Toynbee as "the classic picture of an imaginary atomic individual", (*i.e.*, a self-sufficient unit), "who have (the Cyclopes) no government, nor council, nor courts of justice."[2] Even if we accept it for the sake of argument that such a people did exist we clearly notice one thing that even the Cyclopes were not isolated individuals. They had a close knit family organisation without which they could not live. Therefore, it is established that man living in isolation or unrelated (as conceived by Rousseau) is altogether impossible. We may be right in supporting the conception of Plato that man is bound to live in groups because of "the fact that no one of us is sufficient for himself, but each is in need of many things."[3] This point of view was also supported by Aristotle when he wrote that there was the necessity of the State for "bare needs of life" and that it should continue to exist "for the sake of a good life."[4] It is very difficult to imagine that human beings can live for ever like a Robinson Crusoe. That is why the State, we may conclude, is quite a natural institution for the complete development of man's personality. Though it is generally held by almost all schools of political thought, with the exception of the anarchist and to some extent the communist, that the State is essential for man there is a wide divergence among them regarding the scope of actions by the state and the nature of the State.

Some thinkers like Hobbes and Bluntschli considered the State as an organism and in their opinion the individual can have no right against the State, for he enjoys all the rights by virtue of his existence as a cell in the mighty Leviathan. Just as it is quite ridiculous and unthinkable for any part of the plant or animal body having a right against or outside the body, it is equally so in case of individuals who are composing the body politic. Because of firm belief in this theory and its analogies Herbert Spencer's arguments supporting individualism are considered illogical and inconsistent by some political scientists. Any way, this much we can say that if the State is conceived as an organism, the individual's right of State defiance would lead him to self-annihilation or, in other words, to defy the State is to commit suicide The State then if considered as an organism shall always remain undefied.

Another school of philosophers known as the idealists has got a theory of the nature of the State having strong resemblance with that of the school just described, *viz.*, the organic school. In the opinion of the idealist philosophers the State is the highest manifestation of everything good and great. By obeying it and by being its member man can realise his best moral self. For the "State", said Hegel, "is the actuality of the ethical Idea" . . . . it is absolutely rational in as much as it is the actuality of the substantial will which it possesses in the particular self-consciousness once that consciousness has been raised to consciousness of its universality. This substantial unity is an absolute unmoved end in itself in which freedom comes into its supreme right. On the other hand this final end has supreme rights against the individual, whose supreme duty is to be a member of the State."[5] Hegel further said that the State is the "actualisation of freedom" and it is "the march of God in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

world."[6] The idealist, like Kant and Hegel have glorified the State to the point of deification.

The State as described by Kant is also infallible, omni-competent and divine in its essence and it is the sacred duty of the individuals to obey its authority without any question. If we accept the Hegelian concept that the State is the objectification of reason then naturally the question of defiance of its authority does not arise at all. For defiance against a State conceived in such a way would mean reasoning against reason and hence such individuals who do not know their own mind, who are guided by self-interest may rightly be "forced to be free' to quote Rousseau, for their own good. Since the individuals can enjoy freedom by completely submerging their will in the will of the State which is nothing but the real will of all, the individuals cannot base their claim of rights on any ground apart from or against the State. For the "State", said Hegel, "is the one and only prerequisite of the attainment of particular ends and welfare."[7]

But, in my opinion, Hegel has not been properly and faithfully interpreted always. It is true that the nature of the State and its relation with the individuals as described above is largely the view of Hegel. It is not however, right to contend that "my station and its duties," to quote neo-Hegelian Bradley of England, shall be decided by the State alone as advocated by Plato and Aristotle. The individuals have in their opinion, no right to contest the claim of the State to assign the posts and duties for them. It is further argued that the idealists including Hegel contend that the individual by accepting the verdict of the State should perform faithfully whatever is given to him without any grumble, for they argue the "actual is rational" and that is the way to enjoy freedom. This, it may be submitted, is not the view of Hegel because in his book Philosophy of Right he clearly said, "In Plato's State, subjective freedom does not count, because people have their occupations assigned to them by the guardians. In many oriental States, this assignment is determined by birth. But, subjective freedom, which must be respected, demands that individuasl should have free choice in this matter."[8]

T. H. Green, the most famous of the Oxford idealists, had a concept of the State different from that of the German Idealist, except Kant. Green was an idealist, therefore, it is natural that he would glorify the State, but it should be remembered that his glorification had none of the zeal or dogmatism postulated by most of the Germans or even some of the other English idealists, *e.g.*, Bradley and Bosanquet. There is no doubt that the State is very much essential and without it the individuals can never hope to reach the perfection of their moral self. But Green was not willing to sacrifice the individual at the alter of the almighty state. He, like Kant, believed that the individual and not the State is the end. The State should create the conditions which will help man to be great. He was a Hegelian, no doubt, in the sense that he recognised and emphasised the moral value and the majesty of the State, but he did not forget to shackle the Leviathan with chains and, therefore, stipulated that the State is limited within and without. That he could not forget the individuals in spite of being an idealist can be understood from his conviction that "the life of the nation has no real existence except as the life of the individuals composing the nation." He wanted to make the human character a perfect one and to use the State for that purpose only. He, therefore, conceived the functions of the State to be essentially negative in character. The State in his opinion should act only as "hindrance of hindrances" as Dr. Bosanquet called it, to remove those barriers confronting man's moral life. The conception of social good and social consciousness is also another important point in Green's philosophy of the State.

"But it must be remembered," said Barker, "that behind his conception of the State lies the idea of an eternal self consciousness, which communicates to human consciousness the idea of the social good, and whose perfection, in turn, human consiousness is ever seeking to attain."[9] The State, therefore, is the result of this consciousness. And because of this whatever right a vitizen can enjoy shall come to him only through the recognition of the State. To Gren rights are never possible except in the State or society which aims at the establishment of the highest good. And hence the idea that if there is no law and State, people could enjoy absolute liberty, as argued by Rousseau in the Social Contract and more thoroughly in his Discourse on Inequality, is nothing but an unpractical romantic dream. For Green believed that "without a society consious of interest there can be only powers, no rights."[10] It is superfluous then to dilate on the point that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

aw is the condition of liberty." Green for these sons never supported the philosophy of ural right as described by contract writers ably Locke and Rousseau. A State, it is true, supposes various social groups where men had ts but when the State came into existence all se rights getting State recognition became l. This has been put nicely by Barker. man consciousness postulates liberty, liberty lves rights; rights demand the State."[11] When s the State is established man cannot think of ght that may shake the State to its foundations. "real rights may be conceived" to quote ker again," which are not in the State : only n they are in it do they become real rights."[12]

If the philosophy of State is based on these ciples, it is very difficult on the part of the viduals to get the right of State defiance. en has not said that the State is reason ctified and therefore, to resist the action of State is to reason against reason. Neverthe- he based the foundation of the State on the ception of common good and hence to defy State may mean logically doing something ish which is against common good. In such ase the citizens cannot be given the right to st or defy the State's commands. It may not out of place to compare here a similarity of theory of Soviet Communist State of Russia h the aspect to Green's philosophy. If we accept proposition that the U.S.S.R. is a "Socialist te of workers and peasants"[13] and that the mmunist Party of the Soviet Union "is the guard of the working people in their struggle build Communist Society"[14] it is simply ossible to propagate any philosophy however estly or sincerely a man may believe it or to blish a party apart from the Communist ty. Because anyone doing or preaching some- g against that party will be logically guilty committing acts against the workers and sants. Communist Party, it is explicitly written n, is always furthering the interest of the kers and peasants, so to defy that Party would at least logically a bourgeosie crime. The ation between the individual and Green's State ch is based on common good is also similar. It would not be doing proper justic to Green e include him in the same category as the man idealists. For "he" said Barker, "has ed the philosophy of Greece and Germany and interpreated it for Englishmen with a full measure of English caution, and with full references to that deep sense of the 'liberty of the subjects', and thir deep distrust of 'reason of State,' which marks all Englishmen."[15] Green's conception was that the force of the State is justified so long and so far as it does service to the citizens but if the State fails to perform the service than the ground of political obligation disappars. "It is one of the merits of Green," argued Dr. A. D. Lindsay, "that he both recognised that the State should and might render immense services to morality, and was also perfectly clear that it did not always render that service,—might indeed sometime do the opposite; that the citizen had, therefore, rigths against the State. If the State morally merits the citizens' obedience there are times when it is the citizens' duty to disobey the State."[16] Though it is true that Green had the freedom and strength of mind to accept the right of State defiance in clear contravention of the idealist tradition for which he deserves our praise, yet it will be seen in the following paragraphs that he made the exericise of this right almost impossible by circumscibing its operation severely. The most important problem that has got to be faced is who is to decide whether a State is or is not rendering the proper service for which it has been established?

In the opinion of Green the individuals are to decide themselves by their own moral standard whether a law is for the common good. Every individual is born with some intelligence and moral virtue and hence he for himself should judge the virtue or vice of a law by using his reason and conscience. Up to this point both Green and Laski have got similar views. But they differ sharply regarding the right of defiance. Green's idea is that in an advanced democratic State like England the problem of defiance is not a major one and he advised that a citizen "should do all he can by legal methods to get the command cancelled."[17] That means the individual shall not be justified if he disobeys a law whenever he may consider it bad before he has exhausted all the constitutional means for rendering it inoperative. But "till it is cancelled he should conform to it." For the "common good," contended Green, "'must suffer more from resistance to a law or to the ordinance of a legal authority, than from the individual's conformity

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to a particular law or ordinance that is bad, until its repeal can be obtained." But here in all fairness we should point out that Green also at some places recognised that the sovereign power is very often used against the will of the individual. He also contested the idealist notion of right that as all rights are derived from a sovereign and that the individuals have no right on any ground or occasion against the sovereign, for he believed that this idea "conflicts with the primary demands of human consciousness."[18] If this is done by the state the right of the sovereign will be reduced to naked power and hence on moral grounds allegiance to it may be withdrawn.

Before we claim our right or liberty against the State, we should properly understand the nature of liberty. Liberty, according to both Green and Hobhouse, is a social concept. Therefore it may be attached to the individual so far as he is recognised by other free agents in a society as doing something worthdoing for society. "A right," Green believed, "then, to act unsocially—to act otherwise than as belonging to a society" on the ground that he has himself not consented to any limitation imposed by society, would be impossible; and Green empowered the sovereign to make an extinction of all rights of such individuals. He further held that a right to be legal must have two qualifications. It shall be demanded by the individuals keeping in mind the idea of common good and secondly it must get social recognition. Some rights may be called natural in the sense that they are not found in a particular State though they are needed to make a man's moral personality a fuller one, "but they are not independent of social relation." It is on this ground that Green criticised the system of slavery. The slave because of his membership of a society has a claim to real right though a particular State may refuse to recognise it. To deny this right is to isolate that common human consciousness on which the entire social structure is based. On the other hand Green argued that whatever right a man may demand as a member of human society can be legal or fruitful only when recognised and supported by the State. Thus when the State recognises man's rights that existed prior to the State the State accepts these rights "under conditions and limitations which the membership of the fuller whole (State)—the reconciliation of rights arising out of one sort of social capabilities with those arising out of another—renders necessary."[19] The citizens, as we have already seen, have no right to act unsocialy and as the State is according to Green "the society of societies" they cannot demand right against the State. The State is the "reconciler and sustainer" of the rights and hence so long the State performs this duty faithfully there can be no right to disobey the laws of the State. Whenever a citizen disobeys a State he has no right to do it except in the interest of the State. But Green conceded also that the "general principle that the citizen must never act otherwise than as a citizen, does not carry with it an obligation under all conditions to conform to the law of his State, since those laws may be inconsistent with the true end of the State as the "sustainer and harmoniser of social relations."[20] What Green actually meant by all these apparently inconsistent statements is that the defiance of law defeats its purpose because it leads to anarchy and chaos. But the right of defiance may be granted to the citizens in exceptional circumstances on a "reference to an acknowledged social good." Thus he argued, "whatever counter-rights he (a citizen) has must be founded on a relation to the social well-being and that a relation of which his fellow citizens are aware."[21] That means he must be able to point to some public interest which has not been recognised by the sovereign and which impels him to defy the State with a view to redressing it. So this "common consciousness of utility shared by the person making the claim (of disobedience) and those on whom it is made" shall, in his opinion, be the acid test of defiance. Defiance may be motivated by two interests: a smuggler defies the law and secondly, Mahatma Gandhi defied the British law. In the first case behind defiance there is no consciousnes of common good, it is self-interest pure and simple. Whereas in the second case the idea of common good was more important. So Green might accept defiance of the second type but that too on rare occasions. Because defiance is always a painful duty. "If we challenge the State," said Barker, "we must challenge it in fear and trembling. The presumption is always against us."[22] Thus coming to discuss the concrete case of slavery Green believed that the system of slavery is bad no doubt but if the majority of the citizens support it and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is recognised by the State, the individual not be justified in defying it. Before defying law the citizen must first of all exhaust all sible constitutional means of redress. He will ter see the reaction of the people to his ns or ideas and if the majority feels strongly him, he will study whether they are emo- al or reasonable and he must also be pure his conscience. Green asked the citizens not ceive their conscience and he cautioned that law-breaking process once begun has no end. it is unleashed it is very difficult to check general anarchy may ensue.[23] Therefore, it dangerous weapon, to be used rarely. It may mentioned here that Green's fear was not stified in the light of the happenings in the -independence period of almost all the politi- emancipated countries of Asia. The leaders these countries used this weapon of State de- ce too often against the alien rulers and n they themselves became the rulers the ple had not been able to get out of that habit defiance though a tremendous change took e in the political set up of their country.

Green's horror of anarchy was so great that said, "As a general rule, no doubt, even bad laws representing the interests of indivi- s and classes as opposed to those of the com- ity, should be obeyed" . . . . because public rest, on which all rights are founded, is more erned in the general obedience to law than he exercise of those powers by idividuals and es which the objectionable laws unfairly hold."[24]

It is interesting to note that Socrates held st similar views regarding the right of de- e of State authority. Socrates was sentenced death by the Athenian Government. One day o, one of his disciples, came to the prison re Socrates was staying and told him to away, all the arrangements for which had ady been made by him. Though Socrates was enced to death by a corrupt government and laws, nevertheless he believed that if laws, ever, bad they might be, were not obeyed by zens the State would be destroyed for the law y say, "Tell me, Socrates, ... do you think t a city may exist and not be overturned, re sentence given has no force but is made l by private persons and destroyed ?"[25] crates in his conversation with Crito further elaborated this point and denied all rights to defy the law of the State. He argued, "you must honour and obey and conciliate your country when angry, more than a father; you must either persuade her or do whatever she commands; you must bear in quiet anything she bids you bear, be it stripes or prisons or if she leads you to war to be wounded or to die, this you must do, and this is your right . . . . in war, in court and everywhere you must do whatever city and country command."[26] Finally Socrates refused to comply with the request of his devoted pupils and the world lost the wisest man prematurely. From the arguments of Socrates it is clear that he upheld the right of criticism or the right of freedom of expression but he denied the right to revolt almost in the same way as Green did. This also reminds us of Kant's famous advice to citizens, "Grumble, but obey."

As against this idea Prof. Laski has expressed himself strongly. When Green conceded that if the majority of a State are supporting a law however bad (*e.g.*, system of slavery) the dissenter should obey it till public opinion changes; he placed duty to State on a higher plane than duty to humanity. Laski's opinion is that if even a single man thinks that a system supported by the law of the State is detrimental to the moral well-being of even a section of the people, he must protest and raise the banner of defiance against it despite the fact that the majority of the citizens support this bad law. Truth can never be sacrificed to authority. History tells of countless examples where a good government degenerated into an arbitrary one once the people had lost their habit of resistance. So Laski believed that "liberty is an inescapable doctrine of contingent anarchy."[27] Laski was more radical than Green. He believed that loyalty to an ideal is more important than loyalty to a law of the State. "Prescriptions of the State," he argued, "are never . . . . final prescriptions"' Because in his opinion "State action is action by government," that "means a body of men and women in possession of actual power."[27a] Therefore, it is foolish to argue that those people who happen to be at the helm of affairs of the State at a particular time know the absolute truth and are infallible. A true citizen must always discharge his duty by not simply following the dictates of the State like an automaton but by revolting when-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ever or wherever he finds denial of rights needed for ocmmon good. It does not matter whether he is a lone fighter. "I may", said Laski, "provoke hopeless defeat, or a victory which is purchased only at a terrible price. I must yet make the choice, in and of myself, of the conduct that citizenship implies".[28] Therefore, a true citizen need not be defeatist in his fight for true liberty because as Aristotle said a good man may not always be a good citizen.[29] If the laws are bad a good man's duty should above all be not allegiance to an imperfect State or unjust laws, but to truth and conscience. "There are, then, circumstances," said Laski," in which resistance to the State becomes an obligation if claims to right are to be given validity".[30] Up to this point, perhaps, more people will accept Laski's philosophy of State defiance. But he was too much of a radical to be satisfied with this only. For he went to the extreme point of this right when he demanded that the citizens "may demand its (State's) overthrow by armed revolution" and what may appear quite fantastic to a student of political science is that in so overthrowing the State by armed revolution Laski claimed the protection of the State. For he argued, "to be able to do any or all of these things, with the full protection of the State in so doing, is a right that lies at the basis of freedom".[31]

Prof. Ernest Barker held more or less the same opinion as expressed by Laski, though he did not support the extremes of Laski. If a writer's works are condemned by the State as anti-State the writer may plead that there may be something higher than mere political obligation to a law, *viz.*, truth, beauty, etc., and when the claims of political obligation conflicts with them, the obligation may cease. Barker made a distinction between the ordinary law and the laws of Constitution and in his opinion the citizens may defy a law which is against the Constitution and justice but they must obey "unconditionally" the law of the Constitution.

There are various grounds on which right to defy the State has been supported by different schools of thought. As we have already seen it has been supported on the ground of natural law. The point they put forward in defying the law of the sovereign in the name of natural right is that, "law may be disobeyed firstly, and that it is possible in the name of justice, to disobey a chief of resistance law which does not express, as all law should, the idea of justice".[32] This was the point of view of those Americans and specially Jefferson who wrote the Declaration of Independence of the American Federation. Thus, the Declaration which bears great influence of Locke's philosophy states that God has given men "Certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. That whenever any form of government becomes destructive of these ends, it is the Right of the people to alter and to abolish it, and to institute a new Government."[33] The Declaration further stipulates that when a particular government tries to abuse powers given them "it is the right, it is their (citizens) duty to throw off such Government." This point of view was also supported by Blackstone when he wrote that the main aim of society is to protect the individuals in the enjoyment of those absolute rights which were vested in them by the immutable law of nature."[33a]

It should be mentioned that in the Declaration of the Rights of Man of 1789 in France four rights were enumerated, liberty, property, security, resistance to oppression. But the French did not include the last right, *viz.*, resistance to oppression in the Declaration of the Rights of Man and Citizen of 1795. They had enough of this right during all the six years, *i.e.*, from 1789 to 1794-5. Their enthusiasm cooled and ultimately subsided seeing their own creation. The vicious civil war, reign of terror and others achieved nothing but jealousy, hatred and lack of confidence and respect for law and organised government. It gives very nearly a picture of Hobbes' state of nature and in such conditions the other three rights could not be enjoyed. The French being wise by their experience of the civil war and bloodshed dropped this dangerous right in the Declaration of 1795.

The second theory by which defiance has been supported is the theory of utilitarianism. It is argued by them that government or law are there to increase the happiness of the citizens and hence when a government has failed to provide this to the people the latter have a right to defy the laws of such a government. Thus, Bentham argued it was "allowable to, if not incumbent on every man . . . to enter into measures of resistance . . . when the probable miseries appear less to him than the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

probable mischief of obedience.[36] Laski also believed that utility should be the test of right. He however was no hedonist like Bentham.

A third ground has been provided by the anarchist thinkers like Tolstoy, Gandhi and Thoreau. In their opinion the conscience of individuals should be the supreme guide in any action. So when the conscience asks a man to defy a law of the State the man should act accordingly without considering this or that. Thoreau asks the question, "why has every man a conscience ? . . . The only obligation which I have a right to assume is to do at any time what I think right." He also believed that all "men recognise the right of revolution, that is the right to refuse allegiance to and to resist a government when its tyranny or inefficiency becomes unendurable. This view is similar to the view of Laski as expressed earlier but it is different from that of Green. It was also supported by St. Thomas Aquinas when he asserted that in the court of conscience there is no obligation to obey an unjust law".[37]

It is then very difficult to give a clear and positive answer to the question, "Has the individual right of defiance of the State?" In general we may say that the people should obey the laws of the sovereign in his daily life. If we accept the contention of those thinkers who believe that man's obedience to a particular law shall depend on the dictate of his conscience alone, we are not sure whether every man will be able to hear the voice of conscience properly. Men as they are and in a majority of cases are generally guided by immediate personal interests and it is not possible for most of them to rise above this selfishness and think about the laws of the State completely disinterestedly. Nevertheless, we believe, at least in the final analysis, not only philosophically but politically men should be given the right to defy the State. From our experience of human nature and their psychological behaviour as is found in politics we can say that most of the people are not very much interested in their rights and, what is more important, they prefer peaceful and orderly life to a life of revolt and anarchy. In a majority of the cases needful changes can be brought about by a vigillant and an organised public opinion by properly using the right of criticism which is conceded by all civilised democratic governments to the citizens of the country. But there may be cases when the government of the country has become so rotten that there is no possibility of its betterment in a legal way (which is very unlikely because in an advanced State an organised and alert pubilc opinion is presumed to exist), the citizens should be given the right to defy the law of the Sovereign. The State then should accept that it is generally right but not always right. It should accept its fallibility in the final analysis. But whatever resistance a citizen or a group of them may give must always be peaceful. Otherwise the moral ground of resistance will be lost. For as MacIver pointed out, force invokes force and it can alienate itself with truth as easily as it aligns with falsehood.[37] To us the view of Socrates regarding disobedience of State laws appears a bit conservatives. For he one no condition could allow dfiance. We may say that "citizenship is not the only duty of man" (MacIver). The call of social justice and international morality may demand from a man an obligation which is not merely political. It is *supra* political and in its name and for its sake the individual should have the right, as a last resort (and this is very important), to defy the laws of the State if these are against social justice and international morality. In these cases defiance may be condemned politically but not morally because man's supreme aim and purpose should be to be a perfect being morally. It will be unjust if we fail to recognise that Green also accepted the right of defiance on the part of the common man when the common man according to his limited intelligence understands that some wrong is being done by the State. "There may be cases," he argued", in which the public interest—not merely according to some philosopher's view of it, but according to conceptions which the people are able to assimilate—is best served by a violation of some actual law".[38]

——:O:——

THE FARAKKA BARRAGE: INTERNATIONAL LAW ASPECTS

J. S. BAINS
Reader in Political Science, University of Delhi.

Hardly has the Indo-Pakistan dispute over the Indus waters been settled than another one between the same neighbours seems to be in the making. This may concern India's largest river, the Ganges. In early 1961 on the prodding of the Pakistan Government, a large number of Pakistani newspapers whipped up public frenzy and resentment against India's plan to build a barrage across the Ganges.[1] The construction of this barrage has been necessitated so that with the help of additional water the Calcutta port may be kept free from silt and commerce through this port may not come to a standstill. The Government of Pakisan, however, has characterized this act as a threat to her security and has argued that such an action would jeopardize the irrigation projects of East Pakistan and that under international law India is not entitled to proceed with its construction unilaterally. It is proposed here to examine the Pakistan objections in the light of the rules of international law.[2]

Historical & Geographical Considerations

The river Ganges, besides its significance in Indian mythology, is the largest river in India and has served as a boon to agriculture in the Gangetic plains. Its importance, however, has assumed tremendous proportions because in the last two hundred years or so, Calcutta, where it empties into the Bay of Bengal, has become the commercial centre of India and of the whole of Asia. The city also owes its prosperity to its being the natural port of north-east India. Its importance may be realised from the fact that more than 50 per cent of the total export of India are shipped from this port.[3] But as the Ganges empties out into the Bay of Bengal through innumerable streams, the Calcutta Port has for a long time faced the problem of silting. The Bhagirathi, which lower down is known as the Hooghly has in the past flushed out the silt and kept the Calcutta port in good order. In the past

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

many years, however, the Hooghly has received less water, that is only for about three months and that too during the flood season which is not enough to flush out to sea the hundred million cubic feet of mud and sand that flows past Calcutta annually. Moreover as the tides from the sea push this silt upstream, it is firmly deposited in the bed of the river. This has made the Hooghly shallow.[4] The silt makes it impossible for the ships to come upto Calcutta throughout the year. That is why there has been fast deterioration of drafts as well as sailing opportunities. In January 1957 the maximum drafts were 27 feet and in January 1959 he maximum drafts fell to 24 feet. The number of sailing opportunities has also been seriously affected. For instance, in November, 1957 there were 15 days when deep laden vessels of 12 knots or over could sail but during November, 1959, there were only two such days. Moreover silting has affected the drinking water supply of the city and the tap water in Calcutta has an unmistakable brackish taste.

In order to do away with this danger to the Calcutta port and hence to India's commerce and economy, the Indian government on expert advice has decided to build a barrage across the Ganges at Farakka a few miles above where the Ganga branches into Bhagirathi. A canal 26 miles long will take off from the barrage in order to supplement the waters of the Bhagirathi at a lower point. This will make the current of water strong enough to flush off the dirt and keep the port clear. It will also reduce the frequency and intensity of great tidal waves which move up the Hooghly and affect ships going up to and down from Calcutta, reduce the content of salt in the water at Calcutta and thus improve it for drinking and use in factories and it will improve navigation up the Ganga and reduce flood hazards in the catchment areas of the river.[5]

The Pakistan government has taken exception to this scheme. She has argued that the barrage will seriously affect the supply of water to East Pakistan through Padma which branches off the Ganga at a lower point and that it will seriously upset East Pakistan's economy by causing water shortage in the lower Ganges delta covering six million acres of land served by the Ganges; it will jeopardize the irrigational projects of East Pakistan which have alredy been taken in hand and those to be taken in hand in future like the huge Ganges-Kobadak and Teesta multipurpose project which is designed to provide irrigational facilities to more than two million acres of land. Pakistan has argued that the Indian action would be a violation of the rules of international law especially of the Barcelona Convention according to which an upper riparian state is not entitled to take action which would be detrimental to the lower riparian; that the sovereign rights of the upper riparian are not absolute and that its exercise is permissible only if the "legitimate" and "ressonable" rights of the lower riparian do not thereby suffer.[6]

International Law Practice

In international law, an upper riparian state is eittled to divert the flow of an international river at its own discretion. A clear statement of this principle which has been accepted by the various states had been made by Attorney General Harmon justifying the right of the United States to divert the waters of the Rio Grande which flowed into Mexico. Arguing on the basis of the territorial jurisdiction which a sovereign state enjoys, he reached the conclusion that the "rules, principles and precedents of international law impose no liability or obligation on the United States" to conform to Mexico's wishes. The Harmon doctrine is still considered as a part of international jurisprudence in spite of the fact that a number of interested states have concluded treaties on the matter.[7]

It is instructive to note that we have now a very clear and categorical judgement of an international tribunal which supports India's position. In a case very similar to the present controversy between France and Spain involving the waters of the Lake Lanoux, the Arbitral Tribunal did not agree with the demands of Spain

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as the lower riparian state that France as an upper riparian state had no right to divert water without the former's concurrence. After discussing the arguments of Spain that the execution of this project would be injurious to her interests and rights and alter the natural conditions of the lake basin, the Tribunal said :[8]

> We do not find either in the Treaty and the Additional Act of 26th May, 1866, **or in customary international law,** any rule that prohibits one State, acting to safeguard its legitimate interests, to put itself in a situation that would permit it in effect, in violation of its international pledges, to injure a neighbouring State even seriously.

It also indirectly accepted the validity of the Harmon doctrine when after referring to the relevant Treaty and Additional Act it said :[9]

> Territorial sovereignty plays the part of a presumption. It must bend before all international obligations, whatever their origin, but only before such obligations.

Eminent international lawyers like Briggs, Bousek, Berber, Heffter, Kluber, Simsarian and many others who have made a special study of the problem agree with Professor Fenwick who says :[10]

> It is doubtful whether international law can be said to have recognized any servitude corresponding to that existing in civil and common law in the form of a right to the uninterrupted flow of streams and rivers. Conscious of the possessions of the traditional rights of sovereignty, states in possession of the upper waters of a river have not recognized any general obligation to refrain from diverting its waters and thereby denying to the States in possession of the lower waters the benefit of the full flow. Such restrictions as have been recognized have been in every case the result of treaty stipulation.

It is clear, therefore, that the decision of the Indian government in building the Farakka barrage is not contrary to the rules of international law. The saving of the Calcutta port is a matter of vital urgency for India and the diversion of water in order to flush the silt off from the port is the only way to achieve that legitimate objective.

The argument of Pakistan that India is not entitled to proceed with the project without any prior agreement with the former is, therefore, not acceptable. It is based on a misunderstanding of the law of treaties. If the Indian government is entitled under international law to use its discretion in the matter, it is up to her whether she should conclude a treaty on the matter or not. The Tribunal in the Lake Lanoux case had a similar point in mind when it said : "To admit that jurisdiction in a certain field can no longer be exercised except on the condition of or by an agreement between two States is to place an essential restriction on the sovereignty of a State, and such restriction could only be admitted in the presence of clear and convincing evidence."[11] Pointing out that such obligation will impair the territorial sovereignty of the state concerned, the Tribunal added :[12]

> In effect, in order to appreciate in its essence the necessity for prior agreement, one must envisage the hypothesis in which the interested States cannot reach agreement. In this case, it must be admitted that the State which is normally competent has lost its right to act singly as a result of the unconditional and arbitrary opposition of another State. This is the same as admitting a "right of assent," a "right of veto," that paralyzes the exercise of territorial competence of one State at the discretion of another State.

The Tribunal did not agree with the argument of Spain that there is a rule of international custom or a principle of international law that states must negotiate before undertaking projects on waters wholly within their territorial limits when such waters flow into the territory of a neighbouring State. It is pointed out that while such negotiations may be desirable "Customary international law, like the Pyrenean traditions, does not supply evidence of a kind to orient the interpretation of the Treaty and of the Additional Act of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

66 in the direction of favouring the cessity of prior agreement, and even less permit us to conclude that there exists general principle of law or a custom to is effect."[13] This establishes beyond any ubt that the argument of Pakistan is tenable in international law.

Pakistan has also proposed that both dia and Pakistan should study the pro- em jointly; that India should keep in ew the legitimate needs of Pakistan and at the matter in case of a disagreement ould be submitted to arbitration.[14] It ust be pointed out that India's approach l along has been based on negotiation in der that as far as possible the needs of kistan may be kept in view. The Indian rime Minister said in the Lok Sabha that e are keeping in view, as naturally as e should, the essential needs of Pakistan. e do not wish to deprive them of any- ing. It is only what we have to do for e preservation of the Calcutta port that e must do."[15] According to Indian esti- ates even after the use of water from e Farakka barrage, about 40,000 to 50,000 secs will be available to Pakistan which ould be adequate for any reasonable and acticable irrigation projects contem- lated by Pakistan.[16] But this water cannot e procured by Pakistan under any seem- g right. It is upto the upper riparian ate to decide finally as to the **needs** and terests of the lower state. In the Lake anoux case, the Tribunal mentioned very early.[17]

> It is up to each State to appreciate in a reasonable manner and in good faith the situations and the rules which will involve it in controversies; the evaluation may be in contradiction with that of another State; in this case, a dispute arises which the Parties normally seek to resolve by negotiation or in the alternative by submitting to the authority of a third party; **but one of them is never obliged to suspend the exercise of its jurisdiction because of the dispute except when it assumes an obligation to do so.**

Referring to the Spanish claim which was very similar to that made by Pakistan, the Tribunal said:[18]

> Pushed to the extreme, the Spanish thesis would imply either the general paralysis of the exercise of State jurisdiction in the presence of a dispute, or the submission of all disputes, of whatever nature, to the authority of a third party; international practice does not support either the one or the other of these consequences.

Pointing to the initiative which would be that of the upper riparian state, it said:[19]

> As a matter of form, the upstream State has, procedurally a right of initiative; it is not obliged to associate the downstream State in the elaboration of its projects. If in the course of discussions, the downstream State submits projects to it, the upstream State must examine them, but it has the right to give preference to the solution contained in its own project, provided it takes into consideration in a reasonable manner the interests of the downstream State.

It is clear, therefore, that all the waters, stagnant or running, whether they belong to the public or private domain are subjected to the sovereignty of the state where they are found and consequently to its laws, except for the changes agreed upon by the governments concerned. On this basis it is proved that India is entitled under international law to proceed with the building of the Farakka barrage. But in conformity with her policy of good neighbourliness and prompted by moral and humane considerations she has been ever ready to negotiate on the matter in order that at least the existing use in Pakistan may not be substantially affected.[20] That is why she has directed her engineers to exchange "salient basic data" with her counterparts on the Pakistan side with a view to study it on a co-operative basis.[21]

This must be made clear to Pakistan, however, that India being an upper riparian state is in a favourable position to bargain on the matter. As pointed out by Professor Berber "a treaty like every other legislative act is always a compromise

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between different interests and diplomacy is the art whereby this compromise is achieved. He who has little to offer will receive little in return. That is the truth of every international treaty and the case of water treaties is in principle no different."[22] It is, therefore, in the fitness of things that while, India should, if possible, meet the minimal needs of East Pakistan, the latter must also concede something to India in return. The present writer is of the firm opinion that India should have done the same in the case of the Indus waters. For example, he should have insisted that India would be willing to consider Pakistan's water needs favourably only on condition that the latter would agree to the simultaneous settlement of the Kashmir issue also. It seems we were taken away by moral considerations and to that extent the Indian government betrayed an understanding of realism in international diplomacy.[23] The result has been that far from being grateful to India for her generosity, Pakistan cleared the decks for a show-down on Kashmir and has made declarations that the water given to her under the Indus Treaty of 1960 was always hers under international law.[24] Let us hope that in the case of the Farakka barrage the Indian government will press this point and be vigilant in handling this affair. She should also serve notice on Pakistan that her willingness to negotiate is not the product of the weakness of her case but is the offspring of altrusitic motives.

7. For a more detailed study of this principle from many angles, see J. S. Bains, "The Diversion of International Rivers," *The Indian Journal of International Law*, Vol. I (July 1960), pp. 38-52. The following conclusions are listed: (1) It is a customary rule of international law that a State has the exclusive jurisdiction and control over waters of international rivers which pass through its territory; (2) Due to political, economic, strategic and humanitarian considerations the upper riparian States have not rigidly adhered to this rule. Keeping in view their own national self-interests, they have voluntarily conferred some benefits on the lower riparian states; (3) This has been done by the conclusion of treaties on a bilateral or multilatrral basis. The existing rights and duties regarding the waters of a particular river must, therefore, be determined on the basis of existing treaties; (4) The practice of the U.S. Supreme Court and national tribunals in other countries is an insufficient warrant to doubt the efficacy of rule number 1. General principles of law and analogies of private law do not form a part of international jurisprudence and hence must not be considered in the determination of such principles. *Ibid.*, p. 46.

———:O:———

LIFE WITH AN ARTIST

By Mrs. D. P. ROY CHOWDHURY

IV

It is not usually to be expected that an artist who is versed in one branch of art, should be equally dexterous in the other branches as well. A master painter need not necessarily have a taste for music or sculpture and vice versa. But there are a few exceptional cases where this sort of versatality is noticed in profusion. I do not suppose there could be any dispute if Sri Devi Prasad Roy Chowdhury, the artist of our discussion, is put under the latter category. In painting, he is considered to be as deft in one medium as in the others. He has been called the wizard of water colour by some well-known art-critics. I do not wish to trespass on a subject where my knowledge is very limited and, therefore, deem it best to depend on the opinion of experts. I have heard people with considerable experience in art say that the touch of Devi Prasad's brush work is felt in no less a degree in oils and tempara than in water colours. Like his medium, his mode of painting also varies according to the choice of his subjects. One finds it difficult to believe that the dainty pictures done in the decorative style with its minutest details came from the brushes of the same artist who has given the boldest touches to produce mass effect in some of the works done in pure western style.

Devi Prasad's search in this line did not terminate with the graphic art alone. His thirst for knowledge was not satisfied till he could assimilate the science of plastic art as well. If he has achieved what he desired, it is after years of relentless practice. The works of this Sculptor are now hailed with admination in all parts of the world. These are produced and reproduced in many of the journals in India and abroad.

However uncommon it may seem to find so many different talents in one artist, we cannot deny the fact that the graphic and plastic arts are allied and Devi Prasad had systamatic training in them both. His natural aptitude, added to his assiduous application, enabled him to reach his goal. But there is one branch of the fine arts in which he had no scientific training and which has nothing in common with those that he had already learnt. He is born with a ear for music which developed with the aid of the environment in the midst of which he was brought up.

Consciously or unconsciously the art of music received appreciation and encouragement from his family. At every function at Tajhat as well as in his paternal home at Bhawanipore the best classical Hindustani musicians were invited to demonstrate their talents. Consequently the love of music became ingrained in the heart of Devi Prasad from a very tender age. In later years, I have often heard him say that he was not sure which of those were more dear to him —the art of his choice or music.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Devi Prasad's love of classical music is as intense as his dislike for music of the lighter strain. He unmercifully criticises what is known as the Tagore music. In his opinion it is dragging down art from its high pedestal to the mire. In spite of the great esteem with which he regards the works of the Poet, he could never forgive the great Bard for lowering the standards of our music just for the satisfaction of hearing his own inimitable verses in musical tune. This he considered an unpardonable offence in one who had reached such a height and understood the value of music.

When the artist is tired and seeks diversion he loves to hear good music of the North Indian style for which he has a strong partiality. But our present home in the distant South seldom gives us this opportunity. Under the circumstances Sri Devi Prasad has no other alternative but to acquire what joy he could either by throwing his own voluminous voice in the air or taking up his flute to bring out the tune that struggles for an expression in the depth of his heart. This instrument which he learnt to manipulate without outside aid, played an important role in the romance of his younger days.

Before I narrate a few of the incidents which came to my knowledge it would not be out of place perhaps if I give an idea of the unique relationship that existed between the artist and his father and what reactions it had on the former as an artist and as a man. It was a case of filial affection combined with a deep friendship. There was no secret which they could not confide in each other.

The artist's father belonged to the old school of thought among whom smoking before superiors was not only not practised, but was considered an offence. If any young man made smoking a habit in those days, he had to do so surreptitiously. According to this theory, Devi Prasad's father should have been very angry when he came to learn that his young son had acquired that bad habit. He, of course, did nothing of the sort. He realized that his son had attained an age when assertion of that type of superiority would not have helped. On the contrary it might have produced an evil effect instead of improving the situation. He, therefore, finished by giving the soundest advice that he could under the circumstances and said to his son: "If you have to smoke at all, smoke the best cigarettes available."

It seems curious, however, that this same man failed to comprehend that a youth who could take up the responsibility of a married life, was competent enough to take care of himself. I remember one occasion when after our marriage we were invited to a dinner party. As soon as the clock struck a certain hour, I found my husband getting restless and absent-minded. Then all of a sudden he said he must phone to his father and at once, otherwise there was every possibility of his going out in search of his lost son! Nobody took the artist seriously. My husband was pacified with the assurance that his father would be informed of the delay. Evidently this had not been done for as we reached our house, we found the old gentleman ready to start on his quest!

Having been treated in this manner, even at that advanced age, this artist could never quite outgrow his childhood. I hold the father responsible for this, but alas! it is of no avail. He had by then gone to a sphere where our complaint could not trouble him. Whatever charge I may bring against the artist's father, I feel it would not be quite fair to the dear old gentleman, if I did not cite some instances to justify his nervousness regarding his adventurous son.

Devi Prasad had an inveterate dislike for the Tommies on account of their uncivil behaviour. One day, while returning from his uncle's place at Chowringhee (Calcutta), he came across a party of about a dozen white-skinned soldiers who expected him to make way for them. This was during the British regime, of course. Devi Prasad did nothing of the kind. He went straight ahead and thus came in touch with one of them who was pushed aside by sheer strength. The protest came in the form of some discourteous remarks which our young gentleman was not prepared to bear meekly. He retraced a few steps and gave the man a kick from the back. The Tommies were not used to such treatment from a "native." When they got over their surprise, one among them hit the artist on the forehead with his ammunition boot. This caused a deep cut, the mark of which he still bears. Devi Prasad discerned he was no match for so many. His presence of mind prompted him to make one of the Tommies the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of his defence. He caught him by his legs and whirled him over his head. The soldiers had no other alternative than to accept defeat and disperse from the scene, leaving their comrade who was still in the clutches of the native, to his fate. When the young artist found his line was clear, he tossed in the air, the person whom he had held in his strong grip, and then took to his heels without waiting to see the result of his action.

Shortly after his arrival in Madras as an official once more, he had the misfortune of encountering two such hot-headed persons at a picture house. The only difference was that in this case his opponents, were sailors. More or less, the same story was repeated. The artist did not waste time in exchanging words. He overpowered them by using one of his wrestling holds and rubbed the nose of one against the other till they started bleeding. Before the spectators, who were enjoying the fun without taking part in the conflict or coming to his aid, could realise what had happened, he left the scene of this unpleasant occurrence.

Later, when he very proudly repeated this story to one of his superior officers, who had taken a fancy to him, the gentleman advised the artist to act less rashly in future since his position did not allow him to take the law into his own hands. In his efforts to follow this advice and behave like a gentleman he has strangled the adventurous spirit of his youth.

Before this change came into him, Devi Prasad knew not what fear was. Once while he was standing near the race course in Calcutta, he saw a horse coming towards him at a terrible speed. He knew at once that the animal had bolted. As soon as the horse reached the place where our artist was standing, without thinking of the consequences the daring youth jumped, caught hold of the reins, brough the beast under control and saved the rider—a European lady—from a terrific crash. She got down to thank the gallant youth and gave him her address with a request to see her at her residence. Perhaps she wished to reward him for his brave deed. But he was not interested in this sort of recompense and did not comply with her request. The pleasure that he derived from the act was the only reward that he cared for.

One more concerete example I shall give here to justify the constant anxiety of the father for the son. A demonstration of acrobatic feats was arranged at the residence of Devi Prasad's uncle at Rungpur. A heavy club, more than one maund in weight and not less than six feet in length with sharp blades attached all round it, was lying in the centre of the arena. The champion acrobat challenged any one to come forward, lift the club with one hand and swing it round. For a few minutes there was absolute silence. Then up rose our artist. The father was present at the function. He knew the impossibility of the feat and his face became ashen pale. Yet he dared not stop his son after he had accepted the challenge. All he could do was to keep his eyes averted expecting every moment to hear the worst. His joy and relief can hardly be imagined when the place resounded with the claps of applause of the aspectators.

Devi Prasad's grandfather was fond of homemade sweets which were specially prepared for him every day. No one had the privilege of sharing those with him. Unfortunately, the grandson, who was then ten or twelve years of age, inherited the grandfather's taste regarding the particular sweets, but they were so well-protected from his attacks that he had no access to them. One day the keepers were careless. Freshly-made sweets were left unguarded for a while. They were still very hot and that ensured their safety. But they were too enticing for Devi Prasad to resist the temptation. He soaked them in water to remove the heat and then swallowed as many of the forbidden sweets as time and chance allowed him to do. Very soon, however, the thief was caught in action and his punishment was severe. He was imprisoned in a room which had only one window at a considerable height and barricaded by iron rods. His hands were tied with a piece of cloth to the leg of a heavy table. Devi Prasad smarted under the injustice of this punishment, rubbed his hands on the floor tilll the cloth gave way. Once his hands were free, he scaled the wall till he reached the window. Then by strength added to determination he managed to bend one of the rods sufficiently to enable him to glide through it. In the heat of his anger he went straight to the place where sweets were concealed and without a moment's hesitation took them and threw them into a drain. But before he could reach a place of refuge after doing the mischief his action was detected and the servants were ordered to catch

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

him for further punishment. Devi Prasad was not unprepared for such an eventuality. He had a long wooden rod in his hand which he whirled over his head. In the scuffle that ensued, one of the servants was badly injured. Everyone's attention was turned towards him. Devi Prasad made the best use of this opportunity by making good his escape.

All this happened during the absence of the father. When he arrived, a complaint was lodged against his son. Devi Prasad had to appear before him to explain his conduct. He confessed everything and then added he did not mean to hurt anybody. What he did was entirely for self-defence. He could not allow himself to be insulted by servants. The artist's father remained silent and pensive for a while in his characteristic pose, portrayed later by the son in his head-study of the father and then let the boy go with a warning to be careful in future.

But this attitude on the part of the father does not mean that he could not be severe when severity was essential. Once while still in this boyhood, Devi Prasad was playing with his air-gun and pretending to shoot tigers. When he was in this mood he saw a man passing at a short distance from him with a small tear in his garment through which his dark skin was visible. The boy acted on impulse by treating this black spot as his target and pulled the trigger of his gun. The result was as could be expected. The man fell down with the shock and was so dazed that he was unable to stand up for some time. Devi Prasad's father was furious. He spoke not a word but broke a horse wip on the back of his son. Instances of this sort are, of course, rare in his life.

Despite the bond of love that existed between the two, the artist had a great grievance against his parent and that was he neither understood nor appreciated the cultural side of his son.

Whatever success the artist might have attained in the cultural sphere it was entirely by his own efforts. For the development of his physique his thanks are due to his good father. He was very particular that his son should grow up to be a strong man and gave him all the facilities necessary for the purpose. Expert wrestlers were engaged to teach him the science of wrestling. Ji-jutsu he learnt under the guidance of a Japanese master. Besides, he had to keep regular hours for physical exercise. The result was that he developed a body which was unlike the ordinary conception of an artist.

Deriving inspiration from a few more persons like our artist, other young men came forward with a desire to build a body beautiful and several Akharas (wrestling grounds) were made. Devi Prasad used to visit these with the intention of training others as well as to have the pleasure of a wrestling bout for himself. After the bout the artist would throw a thin cloth over his mud-stained body, his flowing wavy hair brushed back, take his flute in his hand and then march home-ward playing a tune befitting the time.

Even at that early hour the call of the flute was heard by many an expectant ear. Some admiring youthful faces of the fairer sex were seen to adorn the balconies of the houses on streets through which our artist happened to pass.

On one occasion he was called in by the owner of a big house and asked to play on his flute. He must have taken him for a vagabond who earned his livelihood by this method. They were so pleased that at the end of the performance they handed him a five rupee note. The artist hesitated for a moment and then accepted it with a sardonic smile. The generous giver must have had a shock when he observed the flute-player go over to the shop opposite and buy an expensive tin of cigarettes with the money that he had earned!

The flute is still there but it does not play the same tune. Age and experience have changed the romantic artist into a dreamy philosopher with a little touch of the cynic.

CONSTITUENT POWER IN THE INDIAN CONSTITUTION AN APPRAISAL

By MAHMMAD GHOUSE, B.A., LL.M.

troduction :

A Federal Constitution, observed Mr. stice Douglas in New York Vs. U. S.[1] is ompact between sovereigns. It contains ariety of terms which have been agreed after prolonged discussions and mature iberations. It establishes the general d regional governments and distributes wers between them. So, the terms of the mpact dividing the powers between the neral Government and the regional overnments, must not be changed lightly wantonly. They must be sacrosanct. They ust not be altered arbitrarily either by e general Government or by the regional overnments. If the power to alter the nstitution is confided exclusively to the neral Government there is then the nger of that Government acting like a gantic sponge sucking the freedom and tiative possessed by the regional Governents. It may, by altering the Constitution ecome a leviathan and swallow provincial ivileges, emasculate provincial freedom d reduce all the units to the deadly and earisome level of the county councils. e regional Governments would then generate into humble suppliants before e centre. Conversely, if that power were be vested in the units exclusively, the neral Government would be reduced to e level of "a half-starved limping Govnment always upon crutches, and totter- at every step."[2]

Does it, therefore, mean that the comct should be frozen in the terms of a rigid onstitution so that the balance of power etween the general Government and the aming of the Constitution, may be preerved? But, unfortunately this is not ossible, because, as Lord Brougham said :

"Constitutions must grow if they are to be of any value, they have roots, they ripen they endure.* Those that are fashioned resemble painted sticks planted in the ground....they strike no root they bear no fruit, swiftly decay and ere long perish."[3]

This is because Constitutions, when they are framed and adopted, tend to reflect and protect the dominant beliefs and interests, or some compromise between conflicting beliefs and interests, which are characteristic of the society at that time. A Constitution is, therefore, the resultant of a parallelogram of forces—political, economic and social—which operate at the time of its adoption.[4] It is, in fact, the product of its times, but it is also a fact that times change, and that a Constitution, as pointed out by Jennings,[5] has to work not only in the environment in which it was adopted, but it continues later. It must therefore, be capable of adaptation to new conditions as they arise. A constitution, though an heir of the past, is also a testator of the future.[6] It must, therefore, be susceptible of change, since the ideas upon which a Constitution is based in one generation may be spurned as old-fashioned in the next. So, flexibility is regarded as a merit and rigidity as a defect because it is impossible for the framers of a Constitution to foresee the conditions in which it would apply and the problems that will arise.

Recognising the supreme need to amend the Constitution to adapt it to the changing times, Jefferson said :

"Some men look at Constitutions with sanctimonious reverence, and deem them like an arc of the covenant too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human and suppose what they did to be beyond amendment."[7]

And he went on the extreme length of advocating the periodical revision of the whole Constitution itself, as, according to him, each generation had the right to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'choose for itself the form of Government it believes most promotive of its happiness."[8]

Mr. Justice Benjamin Cordozo also stressed the need for the revision of the Constitution when he said that if the Constitution, true to its character, gives "not rules for the passing hour, but principles for an expanding future," it maintains, "its power of adaptation, its suppleness, its play."[9]

The framers of our Constitution were fully alive to the fact that a Constitution, being the vehicle of a nation's life, should not be a rigid and frozen document, as it was beyond the power of human mind to visualize the myriad problems that will airse in future. Pandit Nehru, in his concluding speech on the celebrated Objectives Resolution, deprecated the superstitious reverence that Constitutions have come to command and stressed the necessity and desirability of making the Constitution not unduly rigid, but flexible:

> "Does any one in this House imagine that when a free India emerges it will be bound down by anything that this House might lay down for it? A Free India will see the bursting forth of the energy of a mighty nation..... Some people imagine that what we do now may not be touched for another ten or twenty years. If we do not do it today we wont be able to do it tomorrow. That seems to me a complete misapprehension.—We are on the eve of revolutionary changes. The Constitution that this Assembly may frame may not satisfy free India."

Analysis of the Amending Process in the Indian Constitution

Unlike many written Constitutions which have one uniform procedure for effecting "any change of any kind in any part of the Constitution,"[10] the Constitution of India provides for a variety in the amending process—a feature which has been commended by Professor Wheare, who says: "In this respect the Constitution of India strikes a good balance," and that "this variety in the amending process is wise but rarely found,"[11] for the reason that uniformity in the amending process imposes "quite unnecessary restrictions" upon the amendment of parts of the Constitution. Explaining and commending the scheme of the amending provisions, Dr. Ambedkar observed in the Constituent Assembly:[12]

> "It is only for amendments of specific matters—and they are only few—that ratification of the State Legislatures is required. All other articles are left to be amended by Parliament. The only limitation is that it shall be done by a majority of not less than two-thirds of the members of each House present and voting and the majority of the total membership of each House. It is difficult to conceive a simple method of amending process."

The Constitution provides for three categories of amending process: First, those that can be effected by Parliament by a simple majority such as that required for the enactment of any ordinary law—the amendments contemplated in Articles 4, 169, para 7 (2) of Schedule V and 21 (2) of Schedule VI come within this category, and are specially excluded from the purview of Art. 368, the specific provision in the Constitution laying down the procedure for the amendment of the Constitution, secondly those that can be effected by a prescribed special majority in the Parliament, thirdly those that require ratification by one half of the State Legislatures, besides the special majority. The matters falling under the third category, which have a bearing upon the Federal structure of the Constitution, are:

(i) The manner of election of the President (Arts. 54-5).
(ii) Extent of the Executive Power of the Union and the States (Arts. 73-162).
(iii) The Supdeme Courts and the High Courts (Art. 241, Ch. IV of Part V, Ch. V of Part VI).
(iv) Representation of States in Parliament (Ch. I of Part XI, 7th Sch).

In this connection it may be pointed out here that, as observed by Dr. Ambedkar,[13] there are "innumerable articles in the Constitution," which leave the matter subject to law made by Parliament. By

merely enacting ordinary laws, Parliament may, in effect, modify or annul the operation of certain provisions of the Constitution. But, as such laws do not make any change in the letter of the Constitution, they can not be regarded as amendments of the Constitution.

This amending process has however, been criticised by that renowned English jurist, Sir Ivor Jennings. He says :[14]

"What makes the Indian Constitution so rigid is that, in addition to a somewhat complicated process of amendment, it is so detailed and covers so vast a field of law that the problem of Constitutional validity must often arise."

These remarks, it is needless to say, are, at best, uncharitable in view of the fact that the Constitution has been amended ten times within ten years. This process has however been commended by Professor Gledhill :[15]

"The Indian Constitution assigns different degrees of rigidity to its different parts, but any part of it can be more easily amended than the American Constitution....The Indian founding fathers were less determined than were their American predecessors to impose rigidity on their Constitution."

Supreme Court's Elucidation of the Amending Process :

The nature of the amending process came up for consideration before the Supreme Court in Shankari Prasad's case.[16] In this case the Constitutional validity of the First Amendement passed by the Provisional Parliament was challenged.

It was contended by the counsel for the petitioner that Parliament was not competent to amend the Constitution by exercising its power under Article 379 as the power of amending the Constitution was conferred not on Parliament but on the two Houses of Parliament as a body designated. The Supreme Court rejected this contention and held that under Art. 379 the Provisional Parliament could amend the Constitution.

For a Bill of Amendment to be psased, as envisaged in Art. 368, it should be passed in each House of Parliament with the prescribed majority. The Provisional Parliament consisted of only one House. The Supreme Court, therefore, held that the President, under Art. 392, could make adaptations in Art. 368 and enable the Provisional Parliament to amend the Constitution. If it were not so, the Supreme Court observed, there would be no machinery to amend the Constitution during the period the Provisional Parliament functions. In the opinion of the court such a situation was inconceivable and could not exist.

It is difficult to agree with this opinion of the Court. The contention of the petitioner, in effect, was that the President could adapt any provision of the Constitution to the existing circumstances except Art. 368. The Australian, American and the South African Constitutions forbid amendments to certain articles for a perscribed period. Indeed, as observed by a learned writer,[17] why should the history of the Decimvirs remaining in power after their work was done be repeated ?

Amending Process Part of Legislative Process.

Secondly, it was argued by the Counsel for the petitioner that the process of amending the Constitution was not a legislative process. But the Supreme Court did not accept this argument and held that it was part of the legislative process.

Before proceeding to examine the implications of this opinion it may be noted here that the Supreme Court of America held in Hawke Vs. Smith[18] that ratification by the States of an amendment proposed by Congress was not a legislative act. In Hollingsworth Vs. Virginia[19] the same Court held that as proposal of an amendment by Congress was not an ordinary legislative act, the assent of the President was not necessary.

As the ruling given by our Supreme Court departs from the decisions of the American Supreme Court and as its consequences are far-reaching, it may be examined in detail.

Inaugurating the All India Bar Conference on April 2, 1960, Dr. Rajendra Prasad observed that our Parliament is not sovere-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ign in the sense in which the British Parliament is sovereign and that the power of Parliament to amend the Constitution can not be taken as the power vested in it qua Parliament, but it is the power of the Constituent Assembly for the time being exercised by the Parliament in accordance with the procedure prescribed by the Constitution. In amending the Constitution, he went on to say, Parliament becomes the Constituent Assembly and having discharged that function, again resumes its normal power of law-making.

This is undoubtedly an eminently reasonable approach. In a Federation, if the Federation set up is to be protected and preserved, the law-making and the Constitution-making functions should be distinct and different. If it is otherwise, the Federal structure may, in all probability, be disrupted.

So, it would have been better if the Supreme Court, following the American precedents had accepted the contention of the petitioner, while at the same time upholding the Constitutional validity of the First Amendment Act. The implications of the ruling that the amending process is part of the legislative process are far-reaching. In Hollingsworth Vs. Virginia it was held that as proposal of an amendment by Congress was not an ordinary legislative Act, the assent of the President was not necessary. As the amending process in India is alleged to be part of the legislative process, a Bill of Amendment must necessarily be sent to the President for his assent. And the President may, if he so desires, send the Bill of Amendment back to the House for considering the amendments suggested by him. Again, this ruling of the Supreme Court enlarges, in effect, the Ordinance-making powers of the President. As the power of the President to promulgate an Ordinance is co-extensive with the legislative power of the Parliament, can he then, amend the Constitution by promulgating an Ordinance ? If this is so, can the President, asks a learned professor,[20] amend Art. 123 (2) and make the Ordinance perpetual by duration ?

As the consequences of this decision of the Supreme Court are far-reaching and frightening, it is diffifult to agree to this proposition.

Amendment of Fundamental Rights.

Thirdly, the First Amendment was attacked as unconstitutional, having regard to Art. 132 (2) which states thaat the "State may not make any law taking away or abridging Fundamental Rights," and that any law in violation of this is void. This Amendment, it may be stated here, inserted Articles 31-A and 31-B in the Constitution to withdraw Estates from the purview of the fundamental right of property guaranteed by Art. 31.

Rejecting this argument the Supreme Court held that Art. 368 does not exclude Part III of the Constitution from the scope of amending power. In the opinion of the Court there was a conflict between Art. 13 and Art. 368. To avoid the conflict the rule of harmonious construction was adopted and the word 'law' in Art. 13 was given a restricted meaning.

Professor Subba Rao has very ingeniously criticized this decision. He says :[21]

> ".....the superstructure of the argument thus constructed (by the Court) rests on a pin point of fallacy. The conflict between Art. 368 and Art. 13 (2) rendering it imperative to construe 'law' as excluding Constitutional Law is more imaginary than real. It is not necessary to hold that Part III is immune from Constitutional Amendment, even if law is given its ordinary meaning. What Art. 13 inhibits is only a law, "taking away or abridging" fundamental rights. If Fundamental Rights of Part III are added to or widened by amendment of the provisions of Part III, amendment would be perfectly valid."

This decision has stultified the very nature of the Fundamental Rights, as it is now open to Parliament by the prescribed majority to expunge Part III from the Constitution. This is indeed a complete contradiction of the principle that Fundamental Rights are meant to protect individuals and minorities against the tyranny of majority power.

In the paper he read at the symposium

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ld during the Ninth Madras State Law-ers' Conference on 29th December, 1954, r. Justice Jagan Mohan Reddy observe :[22]

"The framers of the Constitution, as a matter of compromise of conflicting ideas and ideals and by way of assurance to all, who may be apprehensive of their rights being trampled by transient majorities, have in solemn concord decided to guarantee those Fundamental Rights and wrote them into the Constitution..... A guarantee is generally an assurance to a person who fears the taking away of his right. In Constitutional and legal parlance such guarantees are given to every individual who has those birth-rights, and any device in a Constitution which can easily facilitate the taking away of those rights or of nulifying the rights whether of individuals or of class, which can not have its voice felt in the Legislature, would not be based on sound Constitutional morality."

He also said that it was not the question preferring the judiciary or of not trusting e legislature, "but that the legislature h a transient majority elected on various mentary issues should not take advan-e of that majority in altering easily the damental Law."

The ex-Chief Justice Patanjali Sastry, ivering the Convocation Address of the hi University in 1954, deprecated the quent amendments to the Constitution suggested that "amendments of great ortance to the community should not passed without placing the matter before people and obtaining their verdict. s is so prticularly in a young Federal ocracy where politicians, the peopl's re-entatives, have yet to be seasoned into rvour of sustaining and sober views."

It is, therefore, highly desirable to alter amending process in our Constitution in such a way as to make it essential to seek and secure the mandate of the people before deflating and denigrating the Fundamental Rights by amendment. If this is not done the rights enshrined in Part III of the Constitution will be neither fundamental nor rights since they exist at the courtesy of Parliament, or, in other words, at the mercy of the political party in power.

INDIAN HOCKEY—PAST AND PRESENT

P. S. SHARMA

Indian hockey is today in the doldrums. The magic halo that was the hallmark of Indian hockey was obliterated by Pakistan at Rome and we had to be content with but 2nd honours. The International Hockey Festival concluded at Ahmedabad has spotlighted the great decline in our scoring ability. Nor have the National Hockey Championships thrown out a sharp-shooter of the class of Dhyan Chand or even Balbir Singh. Darshan Singh who held out great promise has done precious little to enhance his reputation.

The progress of Indian hockey ever since the first Indian hockey team, led by Jaipal Singh, went in quest of Olympic honours in 1928, would make fascinating reading. It is said that when this team left the Bombay Docks, there were just 3 men to see them off. The players did not specialise in positions and could play in any position required of them. As against nearly 45 goals they slammed against foreign teams in 6 encounters, they did not allow even a single goal to be scored against them. A magnificent performance by all standards—Two of the players comprising this team—Dhyan Chand and Allen—represented the country at the 1932 and 1936 Olympics as well.

In assessing the true wizardry of Dhyan Chand, we must give full credit to the contributory role played by other stalwarts, especially Penniger. Penniger was always right behind Dhyan Chand continuously feeding him with the ball. They had together evolved a magnificent pattern of play and their forward and back passes were a nerve-shattering experience for the opponents. Keshev Dutt also played this role in later years with distinction but we do not have a player of their calibre in the ranks of modern Indian hockey.

The 1932 Olympic side is regarded as the best of all times. Not only did it have a goal average of 17.5 goals per match in the Olympic series, but the players were all past masters and combined perfectly well. The standard of hockey played in States was quite high and some of the State teams had the distinction of lowering the colours of the Olympic teams. India could those days field at least half a dozen sides of world beaters. This glorious reputation was splendidly maintained when we gave Germany an 8-1 drubbing in the finals of the Berlin Olympics in 1936.

What was the secret of this all-round superiority? The Indians had perfected the short passing game and their pattern of play utterly confused the defence, because two players were always there to beat one at any one time. Each of these two was capable of beating a host of defenders. It was an elusive combination of dribble and pass, with the defenders left guessing. Theirs was an artistic display, a neat placement of the ball being preferred to a rasping drive. They delighted in having fun with the goalkeeper before outwitting him completely. They played with complete understanding and were too nimble for the burly flat-footed foreigners. That was hockey, par excellence!

There has since been vast improvement in the standard of hockey the world over. Many countries have studied and improved upon our technique. The 12-year period from 1936 to 1948 was a period of lethergy for Indian hockey. The old stalwarts had laid aside the stick and the new ones lacked sufficient match practice of a high order. The partition of India in 1947, with some of the more reputed players in Pakistan, caused a grievous blow to Indian hockey. To make matters worse, the hockey authorities introduced physical exercises for the players so that they might develop brawn and urged the adoption of robust Continental standards in preference to the traditional mode of artistic display.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

These so-called reforms took the edge out of Indian hockey and our superiority started being rightfully questioned. We have scraped through 3 subsequent Olympics mainly because of the individual brilliance of stick experts like Kishenlal, Babu, Balbir, Udham and Bhola.

When Kishenlal and his man sailed for Wembley in 1948, it was widely doubted whether we would be able to hold his own in International hockey. After two easy encounters, India were hard pressed to beat Spain by 2-0. Pakistan surprisingly lost to Britain in the semi-final. With Kishenlal excelling in stickwork and earning bouquets for his leadership, India crashed through to the final by beating Holland 2-1. In the final, despite wretched playing conditions, Balbir seared in the 3rd minute followed by Jantsen. Balbir and Trilochan added 2 more goals after the breather. But for a lion-hearted display by the British goalkeeper Brodie, the tally of goals would have been much higher. The "Times" paid a glowing tribute to Indian hockey and remarked that India's passing and interpassing quite bewildered the British players.

K. D. Singh 'Babu' was a most worried man when he had to skipper the Indian side at the Olympic hockey tournament at Helsinki in 1952. Selection of players was not unanimous and the exhibition matches were most uninspiring. In the first match, the Onlympic team went down to a Madras eleven by a solitary goal. Wily Susainathen created history when—beating a crowded defence with beautiful stickwork, braving a hit on the face and unmindful of the loss of 2 front teeth, he was there at the right spot to receive a reverse pass and slam the all-imporrtant goal.

Once, however, the team left the Indian shores, they became an inspired lot. They beat Austria 4-0 and Britain 3-1. In the final against Holland, who had earlier knocked Pakistan, the Indian team functioned like a well-oiled machine and trounced their opponents by 6-0, 5 of the goals coming off Balbir's stick. The 6th goal was scored by Babu.

The final between India and Pakistan at Melbourne in 1956 was a war of attrition and nerves and India romped home to victory by the narrowest of margins. Balbir's magic was shorn of its glorious resplendence and India did not have any other player of class to become the spearhead of the attack. The title was saved but the rumblings of Tokyo and Rome were already heard. The days of India's unquestioned supremacy were now over. Balbir, the captain, was a veritable Hamlet before the final. To play or not to play was the question for him. He had an injured finger and the doctors had advised rest. Ultimately, he decided to play. It was a stroke of sheer wisdom. Psychologically, Balbir's presence inspired the Indian players and struck fear into the Pakistani ranks.

At Tokyo, in the Asian games, although we did not lose a game, yet Pakistan edged us out on the basis of a better goal average. At Rome they toppled India from off the hockey throne.

Today we sigh for Dhyan Chand, Roop Singh, Penniger, Dara and other stalwarts of the game. Elusive running with the ball blueing to the stick, boomerang passes, right-handed left side play, sure marksmanship, gathering of ball coming from any direction and in the most awkward manner, are now a thing of the past. The finer points of the game have been forgotten in the welter of robust tactics. It is high time these tactics are changed and players allowed to play their natural game. Only then can Indian hockey once again reach the pinnacle of glory. Indians have a genius for hockey and if their potentialities are exploited in the right manner they can again dazzle the world with their artistic and superb display which in the past earned for them the title of hockey wizards.

THE CASE OF COTTAGE INDUSTRIES

Can They Deliver the Goods ?

By R. K. BARI,

(*Research Officer, Experimental Workshop cum Research Institute for Cottage Industries, Baruipur*)

IRVING's immortal hero, Rip Van Winkle slept for twenty years and found on waking that the world had changed beyond his recognition. So is perhaps the case of our cottage industries and handicrafts, with the only difference that the decades are to be counted by centuries in their case. For generations past everyone, excepting a few crazy idealists here and there, had tried their best to forget their existence; and now after centuries of neglect and isolation, these industries have been called upon to shoulder burdens, the magnitude of which would have caused even a Hercules to miss a few beats of his heart. The Planning Commission has been insistently advocating the development of this 'vital sector of our economy'; and the three successive Five Year Plans bears the imprint of the principle that the task of finding out alternative employment for the vast mass of unemployed and under-employed rural population be left to the care of this 'decentralised sector' —the cottage and village industries and handicrafts.

PUBLIC OPINION—FOR AND AGAINST

But the issues at stake or the implications involved, seldom receive the attention they deserve. Amongst the members of the public in general, two distinct shades of opinion are commonly met with. There is a school of thinkers who treat the matter with a derisive causualness verging upon apathy. They ascribe the origin of the scheme to the utopian fancy of some crazy faddists. The idea itself is to them nothing less than trying to put the wheels on the reverse gear and would ultimately prove suicidal in its consequences.

A comparatively small, but no less vociferous, section of the people views it from an altogether different angle. To them everything that smacks of sylvan antiquity is secred and should be preserved at all costs. The primitive character of these industries and their glorious records of the past have thrown a spell of romantic enchantment upon their vision and their fastidious sense of propriety would not allow even the forces of economics to have any say in the matter.

These two are the extremes, no doubt; but they fairly represent the most active and vocal section of public opinion. It goes without saying that both these dogmatic assertions are more visionary than what stands to reason. The former ignores the difficulties inherent in planning for industrialisation of an underd-developed economy —that of chronic dearth of capital and huge unemployed man-power; while the latter fails to realise that spoon-feeding might initially help their porteges to stand on their own, but its continuance beyond reasonable limit would only impair their health irrevocably. While the former wants to give a big leap forward and thus catch up with the West, without caring to attain their maturity in strength and skill or their abundance; the latter is loath to come down to brass tracks and let in rational judgement in their romantic sphere of enchantment.

The cause of cottage idustries has been advocated not only for its capital-sparing mode of production or its promise of greater employment facilities created per rupee of investment, but also for effecting a more equitable distribution of national income and for creating an atmosphere free from the inherent evils of large scale production.

But if we seriously want to do justice to ourselves as also to these age-old industries, we must take up their case as a purely economic proposition, shorn of all prejudices and pristine glories, and consider whether the aged limbs of the decrepit old man are strong enough to bear the burden, superimposed on his shoulders.

THE PRESENT STATE OF THESE INDUSTRIES

The present state of these industries does not hold out a very promising picture. During the few hundred years of their existence, their tools or technique of production had never undergone any significant or substantial change and the artisans engaged in the trade have been faithfully following the steps of their forefathers. Their empirical skill and attainments have earned quite a mame for them, but the lessons of amazing technological development in course of these centuries has been completely lost upon them. For hundreds of years their products had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ever experienced any significant change and ave miserably failed to keep pace with changing times and strestes. As a result their products e being gradually ousted from the market by heap mill-made substitutes. To day, in spite of l his efforts and skill, the artisan cannot earn ven enough to feed himself, let alone his family d dependants. Disease and poverty, dirt and qualor have become his boon companions and is bliged to lead a life which, it would be an ggeration, to call substandard. Then again, e amount of labour put forth by these ill-fed d diseased workers is naturally much below e standard and this causes the already high st of production to go up further, creating ereby a vicious circle from which the artisan nnot hope to extricate himself.

Quite a few other factors have also lent our to this sordid picture. The artisan is no ger the monarch of his establishment as he is pposed to be. Circumstances, over which he d little control, have reduced his position to st of a mere wage-earner. In an overwhelming jority of cases, he is bound, hand and foot, to e financier or middleman, who advances the cessary capital, and looks after the marketing raw materials and finished products. Naturally e profits of the trade goes to him, while the san has to remain satisfied with his meagre ges. The spirit of co-operation or co-ordination, which hight have substituted the ctions in a better way, is still dormat or lly absent. On the marketing side again, lack any form of standardisation and the ignorance the artisans about the ever-changing market tion are responsible to a great degree for gradually—diminishing demand of the product these industries.

VELOPMENTAL NEEDS AND THEIR IMPLICATIONS

All these shortcomings and drawbacks would e to be taken into careful consideration for scheme of re-organisation and rehabilitation these industries. These long-neglected problems of such nature that they need have to be cked' from all sides and at the same time. delay would but lead to disastrous consecs. Yet, the two outstanding problems, which for immediate attention, are the development modernisation' of tools and technique of duction and a close-knit organisation for keting of raw materials and finished products.

During the last few years some state-sponsored marketing organisations have been floated and are doing some excellent work in exploring home and foreign markets. Though much remains to be done, the beginning shows a step towards the right direction.

But the crux of the problem is the technical development or modernisation of production-technique. The idea of technical or technological development of industries is nothing new. Almost all the amazing development of technology that we see to day owe their origin to the urge of the producer to produce more and at less cost. Attempts have been made all through the ages to improve the tools, technique or raw materials of production so as to effect a betterment either in quality or in quantity of production. The term 'development' or modernisation in respect of cottage industries and handicrafts also bears the same connotation; but in their case some extraneous considerations, totally foreign to the economics of production, determine to a great extent the mode and character of such development. These considerations are: (i) economic, (ii) sociological and even (iii) psychological.

By the very nature of these industries as is sought to be maintained, the economic side of their development should not be viewed in the light of economy of production alone. The much bigger question of economic interests of the artisans and the needs and standards of the country as a whole has a decisive voice on the issue. Introduction of suitable machineries to the job of the artisan more thoroughly and efficiently would present little difficulty. But that would nullify the very purpose of such improvement. It would disemploy the artisan himself, though it is mainly his interests that has been sought to be promoted by such development. It would be worth while to remember in this connection that the skill of the artisan is mainly derived from his empirical knowledge of the subject and he never had any experience of handling these machines.

Moreover, introduction of machinery in production tends towards automation and brings technological unemployment in its trail. But the economic reasons behind the move for revival of our cottage crafts are: enlargement of employment opportunities, specially in rural areas and a more equitable distribution of national income. These objectives clearly enjoin the principle that any suggested improvement in tools or technique

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of production should not result in technological unemployment to any great scale.

Then again, there comes the question of capital requirement for such improvement. The new capital required must have to be within the easy reach of the artisans, without which he wont be able to reap any benefit and would be obliged to play the second fiddle to the middleman or the financier. But the artisan who is placed in the lowermost starta of the socio-economic structure of society and all whose energies are being taxed to the extreme for keeping his bones together can hardly save enough to warrant any investment for improvement.

Secondly these industries are scattered over widely diffused rural areas. The rural character of these industries should be maintained not only for the fact that it is the only source of alternative employment to the rural people, who, it has been said, would have the largest share of benefit accruing from such development, but also for the reason that this sector of our industry, at least, may remain immune from the social evils that appear in the trail of large-scale localisation of big industries. Moreover, in an essentially decentralised society, which is our accepted ultimate goal, the industrial sector the major factor of national economy, must have to be decentralised, as far practicable; and the cottage and small industries provide the basis for such a structure. But the benefits of localisation—cheap power, transport facilities, specialised agencies for servicing, high standard of technical know-how,—are not commonly met with in villages. The development programme of village industries must take cognisance of these difficulties and limitations and must proceed in such a way, that the technical and scientific knowledge available in rural areas might be utilised to the fullest extent, and the technological innovations, proposed to be introduced..... might be within the range of competence of such available knowledge.

Thirdly there is the human element of the problem—the artisan, with his psychological complexes and inhibitions, and queer judgements. It is a common experience that in any attempt to introduce new tools or technique in his trade, the artisan's response is very unhelpful, if not totally hostile. The reason underlying such strange behavious is not very far to seek. Perhaps he bears a paternal love for his tools, which had been handed down to him by old masters. It might be that his mind is closed against the reception of any new ideas; but the reason that weighs with his judgement is, perhaps, that consciously or unconsciously, he has an apprehension in his mind of losing his job. He is aware of the fact that his empirical skill and knowledge, though sufficient in itself, might prove to be too inadequate to cope with the intricacies of complicated machinery. Lessons of history, past and present, have only helped to strengthen his belief that introduction of machinery in production almost invariably culminates in robbing the artisan of his profession. Therefore he clings to his tools, which earn a living for him, with an almost devotional love, and a hundred and one advantageous points crop up to his mind in favour of his own implements and this leads him to look down upon these 'new-fangled things' with derision and disfavour.

Prejudices, good or bad, are very hard to kill and it would certainly be a futile attempt to rid the artisan's mind of all his false notions and presentiments by heaping up developmental programmes on his unreceptive mind. At the same time, the artisan being the primary beneficiary of any such development programme, his reaction to such programmes is a decisive factor in determining its suitability. Therefore, to win his favour and enlist his active support and co-operation, the improvements suggested must not deviate to any great extent, either in form or in technique, from his present tools and implements, at least for some time to come.

These are the restraining features or limitations, that have made the developmental problem of cottage and allied industries amenable to no easy solution. Herein is presented an element of conflict between economy of production on the one hand and promotion of employment and economic interests of the artisan on the other. Viewed from the point of technological improvement, these different aspects of the problem seem to be almost irreconcilable factors; and this makes the matter more complicated and difficult. But what the aim should be is to bring about a harmony—to achieve the maximum of both ends.

No doubt, the situation is intriguing and calls for patient and careful attention. The only silver lining in this otherwise cloudy horizon is the growing awareness amongst the people at large of the importance of these industries in our national economy, and that itself is something to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nd upon. But real power can only come from ner strength and vitality, in which these indus- ies are most deficient and of which, the infusion eatment from outside poses an intriguing roblem. On the successful solution of this puzzle hangs the future of these industries and there and there alone lies the last chance of survival of these industries as also the least chance of realisation of all the high hopes, entertained over their future.

THOREAU'S DISCOVERY OF INDIA

By SUKUMAR AZHICODE, M.A. (San.), M.A. (Mal.), B.COM., B.T.

HILE the East and its philosophy were resigned non-recognition and even denigration by the est during the last century, a few master-minds ceeded in ensuring for themselves a clear view the essential Orient. They hailed from that sitive group designated by Romain Rolland in foreword to Dr. Coomaraswamy's 'Dance of va', as "the dissatisfied children of Europe" ose watchword was, "we look forward to Asia". ith a reversal, as it were, of the old familiar cry the mariners, those sailors of thought ventured cry out "Eastward ho !" Not a few of those cted to set their eyes on the land of India for e promise of light. One so posited, sympathetically and expectantly, was Henry David Thoreau, e delightful and provocative author of that ique book 'Walden or Life in the Woods', hose death-centenary comes about this year.

Thoreau had the distinction to be contemporaneous with Emerson, the celebrated American edantist of the last century. They were, indeed, ins of the spirit. Their visions almost dovetailed. e latter's sway over Thoreau was abiding. ence, it behoves us not to be amazed to find him lover of India that he was. He took to the chan- ls of living, mundane and divine alike, marked the Indian seers of yore, as a duck would take water. His soul was immersed in it. His dis- very of India was wellnigh intuitious. His exe- sis of the Indian way of life is typified by so uch of intimacy, spontaneity and forthrightness at have inalienably come to be associated with uitive or spiritual awareness. His attempt at alization of the Indian spirit was not verbal, t ideal. It was quite unlike the sorry spectacle typical of some recent American tendencies— confining oneself to the easy task of springing scourses on India with such airy words as rahma, Indra, Gita and Ganges, in order to bolster the spurious pretensions of an unsubstantial dianism. Thoreau's Indianism was of another kind. True, he made citations, sometimes mildly garbled, from the *Vedas*, the *Upanishads* and the *Puranas*. But those were venial sins. Even those failings, in his case "leaned to virtue's side", for he could yet impart to his writings the rare vintage of first-hand experience. There was nothing vicarious about them all. He carried the world before him, singlehanded and undaunted, by his striving to live the ascetic of the Indian type. A challenge, it was galling to the smug nineteenth century modernism, expressed through America —America, of all the nations !

Thoreau pitched the haven for conducting his experiment in essential living amidst the sylvan retreat on the banks of the Walden pond in Concord, Massachusetts. He had to lay out only a paltry sum—about $28—to erect a house to shelter him during his stay of two and odd years in the woods. Of course, his abode, "ten feet wide by fifteen long," with its garret and closet, its window and door, could hardly take pride in the claim of identity with the hoary hermitage, made of twigs and leaves, of the ancient Indian sages. A poor reproduction it turned out to be ! Even at that, it was a glorious attempt at approximation by an aspirant to an antique and exotic philosophy of life which was in his time aloof from and only half revealed to the civilized world. There, "far from the madding crowd's ignoble strife" and "along the cool sequestered vale of life" he emboldened himself to lead the hermit's life, bare in its animal comforts and shorn of all superficialities, but withal rich in meditation and idealistic transcendence. Wonderingly Emerson wrote of him : "He was a protestant *a outrance*, and few lives contain so many renunciations. He was bred to no profession, he never married ; he lived alone ; he never went to church ; he never voted ; he refused to pay a tax to the State ; he ate no flesh ; he drank no wine ; he never knew the use of tobacco; and though a naturalist, he used neither trap nor gun. He chose, wisely, to be the bachelor of thought and nature".

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He loved India to distraction. Therefore, he lived her life that was spiritual. We do get a frank confession in his sketch-book that he "loved so well the philosophy of India". In deference to that superb sentiment, he would stick to rice-eating; he would shun all gorgeous furniture; he would lead a bachelor's life; he would remain indigent outwardly and abundant inwardly. With a commendable insight into the genius of India, seldom operative in one so far away, the hall-mark of Indian Philosophy was located by him in the *Bhagavad-Gita*. Perusing it, he burst out in hallelujahs. He vouched for the superlative permanence of the *Gita*. "How much more admirable the *Bhagavad Gita* than all the ruins of the East!" The supreme esteem he has for that Sacred Book of the East is found registered in many an endearing sentence in 'Walden', as, for instance, herein:

"In the morning I bathe my intellect in the stupendous and cosmogonal philosophy of the *Bhagavad-Gita*, since whose composition years of the gods have elapsed, and in comparison with which our modern world and its literature seem puny and trivial; and I doubt if that philosophy is not to be referred to a previous state of experience, so remote is its sublimity from our conceptions. I lay down the book and go to my well for water, and lo! there I met the servant of the Brahmin, priest of Brahma and Vishnu and Indra, who still sits in his temple on the Ganges reading the *Vedas* or dwells at the root of a tree with his crust and water jug. I meet his servant come to draw water for his master, and our buckets as it were grate together in the well. The pure Walden water is mingled with the sacred water of the Ganges".

The *Gita* at heart and the woods around, Thoreau drank deep at the exuberant and unfailing fountain of contemplation. Contemplation is the Indian way. Thoreau's heart throbbed in unison with the foot-steps which centuries had heard in silence along that ageless way. He could thus evolve a practical approach to the understanding of *Karma Sannayasa*, the kernel of the Hindu *Dharma*. In this bold practicality of approach, he stands unrivalled. Even Emerson, I am sure, would be compelled to pay homage to Thoreau in this respect. In his stupendous experiment with life, he went the whole hog lonely and fearlessly. There was no half-way for him. His was a mode of full life saturated with serenity, intensity and austerity that solitude is ever pregnant with. A true paragon of asceticism he aspired to be. A sight indeed for the ancient Rishis to see! Oft-quoted are his words written in this connection: "I love to be alone. I never found the companion that was so companionable as solitude". How contemplation suffuses life with the tranquillizing strains of transcendental bliss is filmed by him graphically in the words folowing:

"I realised what the Orientals mean by contemplation and the forsaking of work. For the most part, I minded not how the hours went. The day advanced as if to light some work of mine; it was morning, and lo, now it is evening and nothing memorable is accomplished. . . . . This was sheer idleness to my fellow-townsmen, no doubt; but if the birds and flowers had tried me by their standard, I should not have been found wanting. A man must find occasions in himself, it is true."

He found occasions, grand and incomparable, in himself. In time-honoured Indian fashion he turned his back upon the deciduous appurtenances and the ginger-bread ware that clutter up human life. His invective against luxuries and the so-called comforts of life was that they were not only not indispensable to life, but positive impediments to the elevation of mankind. The wisest of all lands has ever lived a life simpler and more meagre than the poorest. Says he, in good faith: "The ancient philosophers, Chinese, Hindu, Persian and Greek, were a class than which none has been poorer in outward riches, none so rich in inward."

Contrast this splendidly colourful picture with his virulent caricature of an ordinary English Gentleman, as a traveller tottering under the burden of accumulated trumpery fit to be burned, such as bag, hand-box, trunk and bundle, which looked like "an enormous over which had grown out of the nape of his neck." All the force of his rugged wit and rebust wisdom is lavished upon this none-too-ravishing caricature, which breathes a hot stricture upon the materialistic principles that have cast a spell on modern life. The plethora of American material progress was set at naught by this frail man who was a philosopher, though hardly a professor of philosophy. In his mission he was heartened by his vision of India, denied to many of his soil, then and since. The main texts for his preaching were just these two aphorisms: "Simplify" and 'explore thyself'.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

texts these are that revise, with a ring of challenge, the subdued ecoes of ancient wisdom.

It is this unambiguous Indianism that is Thoreau's enduring chime. While, in fact, many of the wise Americans signally failed to fit in such of his statements as "men have become the tool of their tools" in their proper place, an Indian of the cast of Gandhiji has sought to interpret them in terms of modern conditions. American biographers like Stuart Sewel testify to this fact which is quite significant. It is said that the first work published by Thoreau in 1849, "A week on the Concord and Merrimack Rivers", gained scant notice and the second, "Walden", which appeared in 1854, fared little better. His numerous articles and addresses published in magazines, among which was the now-famous tract on "Civil Disobedience", too, were cries in the wilderness. When, however, in the dawn of the twentieth century, Mahatma Gandhi saved the ideas of Thoreau which were jettisoned by America in the last century, the world regained a rich legacy which was more Indian than American. Thus Thoreau got rehabilitated as the spiritual son of India. Indeed, sensitive readers of 'Walden' will be struck with a haunting feeling that its author was at times fighting shy of a sense of nostalgia in being in America. Somewhere, in its pages is lurking an elusive innuendo that he was sick for a home that was elsewhere.

"The pure Walden water is mingled with the sacred water of the Ganges"—Thoreau is confident.

———:O:———

WELFARE STATE IN INDIA : "WHY AND HOW"

By Dr. K. M. RASTOGI, M.A., B.Com., L.S.G.D., Ph.D.

In the Avadi Congress Session held in 1954, a resolution on the Socialistic Pattern of Society in respect of the country's future economic policy was adopted. But the idea dates back to the 26th January, 1950, the red letter day in our political, social and economic history when our Socialistic Constitution came into force. In 1954, the Government took the first step to translate into practice the directive principles of the Constitution to establish a Socialistic Pattern of Society in India. Our Constitution expressly lays down, "The state shall in particular direct its policy towards securing, (a) that the citizens, men and women, equally have the right to an adequate means of livelihood, (b) that the ownership and control of material resources of the community are so distributed as best to sub-serve the common good, (c) that the operation of the economic system does not result in the concentration of the wealth and means of production to the common detriment."

No exact definition of the term Welfare State can be given. It is a relative term and varies from country to country according to its economic, social and politioal conditions. In simple terms it may be defined as a state which provides economic security to its citizens and certain social services relating to education, health, employment and the like. The concept of the Welfare State in India is quite different from the one prevalent in the West because of the vast difference in political, social and economic conditions of the East and the West. In the Western countries the excessive availability of luxurious commodities is a basis for determining the standard of living. A beautiful car, a bungalow, wine and the use of cosmatics may be listed as the essentials of life in the West, but not in the underdeveloped countries of Asia and Africa which are plagued with poverty. We have cut the shackles of slavery after a long and arduous struggle carried on with indomitable courage and unfailing faith, but we have yet to achieve economic freedom and create a Welfare State. The successful completion of our two Five-Year Plans have failed to bring smiles on the faces of the people. The economic security of the masses is the cry of the hour. The creation of a salubrious atmosphere of living and the provision of the essentials of life to the teeming millions, who are ill-clothed and ill-housed, are the things we sorely need. We have rightly adopted the democratic process of economic planning for the social and economic reconstruction of India. It is the duty of our Government to ensure

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

adequate food, housing, and clothing to the masses.

Central Government Socialism vs. Local Government Socialism

The appointment of the Mahalonobis Committee by the Central Government last year to locate the whereabouts of ten year's developed economy, as demanded by the Parliament, is an evidence of failure of the Government to get for the masses good requisities of their well being. Rising prices, (though inevitable in a developing economy) decreasing of real income, food adulteration, character crises, and cheep politics, all these have agonised the people, especially, those in the have-not class. I do not question the propriety of the Socialistic Pattern of Society in letter and spirit, but the building of a new India seems like a pilgrims' painful progress rather than an exciting journey. The economic scream of the people cannot be ignored anymore. The prevailing confusion about the Socialistic Pattern of Society has adversely affected the technique of economic growth, the future of democratic planning and the survival of individual economic and political freedom in India. The ruling party has not hasitated in admitting the Snail's pace of socialism and has taken the lead in forming a "forum for labour, planning and socialistic growth." The forum is commonly known as the forum for socialistic action. This may be taken as a tangible evidence of the restlessness within the country about the Socialistic Pattern of Society leading to the establishment of a Welfare State. The forum is pledged to create 'a climate favourable to the acceptance of socialistic policies and programmes.' It is a step in the right direction, but at this late stage the attempt to create the climate is a sad commentary on the actions of the Government. It will be in the fitness of things to investigate into the causes for such a state of affairs in India. The main reason is that, during the first and second plan periods the formation and execution of big projects have led to their normal consequences. They take years—sometimes many years—to complete. The period of waiting is a period of strain and for a poor country like India, it is highly taxing. Incomes were being distributed all this time to the workers engaged in the construction and as these incomes were spent the new incomes were generated, but nothing could be done to enlarge the production of goods on which these incomes could be spent. An artificial parity was maintained between incomes and the flow of goods during this period by heavy imports of goods from foreign countries, which created its own problems. Deficit financing, shortage of food supply, shaky morale and spiritual pauperism, further aggravated the situation. Above all, Central Government Socialism ignored the most important thing, Local Government Socialism. In this way, socialism appears to have been imposed from above, and so it failed to give the people their own socialism. This killed all enthusiasm and individual initiative of the people and gave birth to authoritarianism.

The other important aspect of socialism, i.e., social services relating to education, health, employment, and salubrious conditions of living, which are a vital social need; could not be properly attended to. Of late the concept of decentralisation of administration through Panchayat Raj has been accepted. But the citizens supplied with adequate food, clothing and shelter will not be happy unless adequate facilities for education, protection of health, (curative and preventive), employment, better roads, pure drinking-water and the like are assured.

True socialism in a country like India, which is vast in area, huge in population and largely inhabited in villages, plagued with poverty, can be brought about only through local bodies. The economic activity of local bodies seems to be the best way in which people can participate in an organisation meant for their own development. This has some economic advantages which cannot be lightly ignored. A good proportion of small works, the kinds of projects that are suitable for being undertaken by local bodies, are a distinct economic advantage in a development plan. In reality Local Self-Government is the nursery of democracy; it promotes public spirit and civic sense among the people and teaches the people lessons of self-help, self-respect and self-reliance.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Decentralisation is the key-note of a government wedded to the policy of Socialist Pattern of Society. In a Welfare State the duties and responsibilities of a local government will continue to be multiplied. In the developing economy the size of the public sector will expand and many of the functions of Central or State Governments may be delegated to the local bodies. Mahatma Gandhi repeatedly emphasised that, if the local administration is run with efficiency, the efficiency of Central and State administration would also grow up. It is obvious that local administration and local problems cannot receive that attention of the National Government in a country like India as is essential; this can only be attended to through local institutions. Moreover, our country has an ancient tradition of solving local problems through Panchayats.

Role of Local Finance

Local finance is of a vital importance in bringing about real socialism in the country. The primary object of local finance is not profit, but service. In an organised society individual efforts are too weak, ignorant, unsteady and intermittant to be entrusted with social services like the provision of roads, public safety, education, health protection and other human needs; they can only be secured by co-operative efforts. Apart from the vital urgency of the above-mentioned services, economies are obtainable by group and quasi-monopolistic activities. Moreover, an element of of compulsion enters through the exercise of political power by the majority section of society—the poor and the comparatively poor. Here the general motive of equalising material welfare and social opportunities through local taxation, local expenditure, has a direct bearing on social conditions and is the most effective means of bringing about social reforms. Social services of the local bodies though equally open to all members of the civic community are actually availed of in different proportions by the poorer section of society. If the local bodies follow an enlightened policy of public interest, the benefit received by the 'have-not class' would be greater than the burden imposed upon or borne by them and in consequence of the benefit received they will be better able to bear the strain for the struggle for existence in our individualistic society. The increase and multiplication of services rendered by a local body would improve the ability and energy of all the sections, but particularly of those who would in the absence of such collective efforts be unable to provide for themselves that degree of human comfort which every human being ought to be eniitled to as a matter of his civic birth right. Moreover, by such an increase of services rendered to the community by its collective organisation (the local body) as well as emphasis on service as distinguished from gain or profit (which is a hallmark of the individualistic organisation) the local body would be effecting an imperceptible but immense change in the very outlook of the people and so silently educating them out of individualism into collectivism. It is an established fact that local expenditure can, to a great extent, bring a true socialism in India.

A local body serves the citizens from the cradle to the grave. It may improve living conditions in a dynamic manner. It may bring about educational and sanitational development. By rendering important services of immediate need, it contributes its unique share to the socio-economic development of a country which goes a long way towards establishing a Welfare State. By increasing the real income of the less fortunate members of society and by creating a salubrious atmosphere for living; which are necessary for civilized existence, a local body lessens the evil of economic disparity and puts the people in a better psychological position to work better and save more.

Financial Decentralisation

The welfare of the people depends on the degree of efficiency with which local bodies discharge their responsibilities. The success of the local bodies is judged by the smooth working of the local government in the country; and the successful and efficient functioning of the local government in its turn depends on the availability of adequate funds to be spent for the promotion

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the welfare of the inhabitants. Adequacy of income is of fundamental importance for national reconstruction and for the achievement of the goal of the Socialistic Pattern of Society or the Welfare State. Local revenue is like the blood of the body, because its circulation means life. Similarly, continuous adequate revenue is a justification for the existence of the local body. The existing economic disparity cannot be done away with by redistributing the wealth of the local inhabitants in accordance with the "Maximum Social Advantage" doctrine but by the local body by substantially taxing those articles which are considered disasterous to the public health and moral.

Financial Problems of the Local Bodies

No administration is possible without money. Revenue is the first essential of the Government. With the expansion of the area of operation of the local bodies and finally, with administrative decentralisation, the importance of financial operations has tremendously grown up. The old functions of the local bodies are expanding and new functions are being added. The local bodies in India have been shoudered with the heavy resposibility of providing human necessities, but unfortunately they have been deprived of their legitimate sources of income. The financial condition of local bodies in India is not satisfactory and paucity of funds is a greatt hindrance in fulfilling their elementary obligations. They are not only in dire financial strait but are also facing a number of financial problems such as the problems of taxation, financial, administration, collection and assessment.

A sound system of local finance rests on the stable and strong foundation of local taxation. Taxation is the main source of the income of local bodies throughout the world. But the local bodies are reluctant to exploit even those taxes (which are permitted to them under the various Acts) on account of various political and economic reasons. There is also an encroachment on the local taxation either by State Government or by Central Government, such as entertainment tax, passenger tax, the terminal tax on goods, bator tax, and others which logically belong to local bodies. The political parties serve their own narrow ends and poison the minds of tax payers. The only role of the political parties is to dole out opium to the people by making all kinds of promises. But these parties in the Councils of the local bodies act like those undutiful mothers who, instead of feeding their babies, get busy in their own make-up. The political parties clamour for power rather than strive for welfare work. The public keeps pressing for more and better services, but each party boss demands economy and insists that taxes be kept down. It is very interesting to note that during these days of populations and demonstrations; one deputation of the citizens led by some political party will call upon the local authority and urge for better and efficient services and for more public conveniences. Its arguments are convincing. This deputation is quickly followed by another deputation headed by the rival political party of the city tax payer's association. Its members, in an equally convincing way, are against new taxes or higher taxes of any kind. This clearly shows how people undermine the very roots of democracy to gain cheap popularity. An excessive interference of the leaders in the day-to-day administration and execution has slacknened the executive.

The yield from taxes not only depends on multiplicity of taxes but also on their proper assessment. The assessment of taxes or the valutation of the properties is a highly skilled job and requires specialised training and experience of a high order on the part of the assessor. The local bodies have failed to employ well qualified and highly paid assessors, which has caused a considerable loss of revenue. The financial position of the local authorities in India has been also jeopardised on account of loose financial administration which has resulted in the mounting up of uncollected arrears. The meagre salary of the staff, undesirable interference by the political parties in the executive work and lack of character may be included among the various causes leading to such a state of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

airs. Everybody wants to supplement income by corrupt means.

The history of the last one decade is l of attempts to alleviate or eradicate ss poverty in widely differing conditions economic, political and social develop- nt. Quicker progress is needed on all es if we want to avoid loss of faith in mocratic Socialism. India is the largest mocracy of the world and is a hope for nascent democracies of Asia and Africa. e decision of the Congress Executive to effect that the Panchayat elections will be contested on a non-party basis is a healthy step towards socialism. It is suggested that the financial policy of the Government be reoriented for this purpose. List II of the Constitution should be suitably amended. A more rational and decentralised financial policy should also be adopted. The productive and legitimate sources of income of the local bodies should be transferred to them from Central or State revenues. This will create enthusiasm among the people, a sense of financial responsibility and local initiative.

———:O:———

LOVE IN CLASSICAL SANSKRIT POETRY

By P. S. SHARMA

ve or eroticism—the divinely inspired ssion—has always been one of the domi- nt themes of literature. And the flower of otic poetry has always bloomed in its ful- ss around woman. The classical Sanskrit etry is no exception.

There is comparatively a dearth of love- ems in early Sanskrit literature. Ashwa- osh, the earliest known writer in Kavya le, generally wrote quasi-religious poems t in one of his works figures a courtesan d a rogue as chief characters. These aracters could not have been introduced erely for religious edification. In the thor of the Nanda-Sundari, the ascetic ways gets the better of the romanticist d begins to sermonise :

"Passionate women cause intoxication ; men without passion cause fear. Since ey bring only fear and trouble, why uld one resort to them."

He goes on to administer a warning :

"In the words of women there is honey. their hearts, there is deadly poison."

He would not, however, go as far as artrihari who repeated the above half se and suggested its practical application the other half :

"Hence doth one drink from those lips
And strikes at that heart with the fist."

The classical Sanskrit have adored impersonalised love describing its various phases in self-standing stanzas. They have drawn miniature pictures not of Laure or Beatrice but of young and beautiful women in general. Thus they do not achieve an all-absorbing ecstasy but always retain a balanced frame of mind and break forth into exquisite blossoms of fancy. Besides that, they are adept at giving refreshing touches of sparkling wit and humour.

This poetry flourished under the patronage of courts and appreciation of Nagaraks or Rasiks.

Phases of emotion or erotic situations were captured in well knit stanzas and given daintily finished forms. Love was rarely described in long narratives, the honourable exceptions being Meghdoot of Kalidas and Geet Govindam of Jaidev.

Haal Shatavahan in his Saptashati fascinates with the naturalness and bon homie of the little elegant cameos of thought and feeling.

The simple pathos of a young girl's pangs of separation from her lover is vividly captured in the following couplet :

"The poor girl wept as long as she was able to weep ; she thinned as far as her body would be thin ; she sighed as long as her sighs prevailed."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The charm of association of an object with the beloved is well depicted by Amaru, "Let alone the attainment of her impetuous embrace, even wandering about the road on the outskirts of her house brings infinite delight."

Fine touches like the one given below are profuse in Sanskrit poetry :

"On whichever part of her body one's eyes fall they remained fixed there. No one has seen the beauty of her whole person."

Sanskrit poets are well known for their sly humour, gay abandon and playful banter. Their heroine pretends to be bitten by a scorpion and thus manages to visit the Vaidyaraj she has illicit relations with. The youthful wife is offended at the disloyalty of the husband who falls at her feet and seeks to be forgiven. Meanwhile the little boy spoils the effect by riding on papa's back and making our heroine burst into laughter. At another place, the witty maiden chastises her fickle lover, "From her face to your face, from your face to my feet, the **tilak** has come to a sorry plight in its travel from place to place!" A woman resorting to her rendezvous is warned not to go out on a dark night as her beauty would then shine all the more brilliantly.

Our ancient heroines were ready to make delicate addresses even to passing strangers. One such damsel addresses a traveller invitingly, "The night is dark, my husband is away from home, the house is empty; pray come, O traveller, to guard me from robbers."

Amaru has less range than Haal but strikes deeper and more poignant notes. Anandvardhan speaks of his verses as "containing the veritable ambrosia of poetry." He heralds in his Shatak a new era of "fineness of conception, depth of expression and delicacy of thought."

He has drawn a graceful and true picture of a Mughda Nayika—adolescent and artless maiden—who is rebuked by her companions for being too agreeable to her lover. She replies with simple naivette, "Speak low, lest my lover who abides in my heart should hear what you say."

The reaction of a newly wedded wife to her husband's addresses is expressed in the following words :

"When he touches her garment, she bends her head in shyness, when he seeks a sudden embrace, she moves away her limbs in modesty ; when her eyes fall on her laughing companions she is unable to speak ; at the first jest, the heart of the newly wedded wife is oppressed with bashfulness."

Bhartrihari gives an honest picture of a genuine emotion "When we see not our beloved, our one longing is for sight ; when seen, our one desire is the joy of embrace ; embraced, our one prayer is that our bodies may be made one."

For Bhartrihari, either the life of an ascetic or that of pleasure. For him there is no **via media.**

"Either the beautiful woman or the cave of the mountains ! Either youth, or the forest ! An abode either on the sacred banks of the Ganges or in the delightful embrace of a young woman."

Nonetheless, he regards woman as a hindrance in the journey of life. "The path across the ocean of life would not be long, were it not that women, these mighty unfordable streams, hinder the passage."

He depicts Love God as a fisherman, men as fishes, women as bait, line of rod as lips and says that we are being constantly baked on the fire of desire."

There can possibly be no greater denunciation of woman than that contained in the following rendering of a Sanskrit stanza :

". . . woman is the whirlpool of doubt, the universe of indiscipline, the abode of all daring, the receptacle of all evil, the deceitful soil of manifold distrust, the box trickery and illusion, a poison coated with ambrosia, a hindrance to heaven and a way to the depths of hell."

Sanskrit poets do not feign Platonic love, for them passion has its own excuse for being. They do not indulge in pleasing abstractions and ideal glamour, they idolise reality and have given exasperatingly authentic accounts of the natural yearning for flesh and intoxication of the senses. Kalidas in his Kumarsambhav has not spared even Parvati, the divine consort of Lord Shiva, from a glorious description of her body beautiful. Shridhar in his Damayanti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shadh devoted a full canto edifying love sex appeal. The Sanskritists do not like woman. They prefer a girlish, slim, yet l-developed figure.

Kalidas goes in raptures over the hair young maidens, "In the hair of young sels, unbrained, perfumed and still with water and decorated with even- Jasmine, the God of Love regained his ngth which had been diminished by the rture of the spring."

In Kshamatilak, the miniature picture love huntress is well-painted. "Truly maid is a huntress ; her brows the bow, ces darts, and my heart the deer they upon."

Kalidas finds it difficult to describe ptivating smile, "If a flower were con- ed in a fresh twig, or a pearl in a sparent coral, then they might have ated her fair smile spreading halfway her red lips."

Kalidas, like other classical poets, fers a full-orbed bosom supported on der limbs. He compares them to a pair drums. "In my mind, the belief is firm t the Love God after conquering the 3 worlds placed his pair of drums upside down."

The Sanskrit poets have a weakness for heavy hips and buttocks though they are not an essential ingredient of beauty.

Bhavabhuti has given a very down to earth description of Sita in Ram's words, "The touch of Sita's embrace, pleasing and cool as yellow sandal, moon and dew, hinders me by stealing my consciousness, ever and anon."

Jaidev climaxes the art and technique of love by creating a picturesque and musical effect. His poetry approximates to erotic mysticism.

Women poets did not lag behind in erotic descriptions. For instance, one Vikatnitamba says, "When he touched my garment, it dissolved of its own accord, the chord for a while lay on the loosened girdle, and slipped on to my buttocks."

One Lakshmanacharya in his Chandikuchpanchashika has written 50 amorous stanzas on Chandi's breats. In classical Sanskrit poetry, we come across many such dubious amorous situations which defy all mystic or spiritual interpretation.

IMPACT OF THE FIVE-YEAR PLANS ON PARLIAMENTARY DEMOCRACY IN INDIA

By V. LINGAMURTI,
Head of the Department of Political Science, Maharaja's College, Vizianagaram

ia in the second half of the 20th Cen- y is distinguished by the building up of emocratic republic through the method planning. Neither democracy nor plan- g is new to the world. But the unique- s in India's effort lies in her attempt to elate the two. Is this a rope-trick for ch India is noted in the West ? Can ocracy and planning be reconciled ? e new Constitution of India stands not y for parliamentary democracy but also planning. The two cardinal principles parliamentary democracy are the emacy of parliament and the exist- e of a cabinet "guiding parliament and at the same guided by parliament."[1] The most significant feature of the parliamentary system, in the words of Bagehot, lies in "the action and reaction between the ministry and the parliament."[2] These vital principles are embodied in our constitution. In the very opening sentence of the Constitution it is clearly stated that India is to be a democracy and in Article 74 (1) and (3) it is further clarified that India is to be a parliamentary democracy. Item 20 in the Concurrent List, viz., "Economic and Social Planning" signifies India's faith in the method of planning. The progress of parliamentary democracy through the Five-Year Plans is thus in accordance with the letter and spirit of our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

constitution. The ideal . democratic planning is expressed in no uncertain terms in the First Five-Year Plan. In Chapter VIII, it is stated, "the concept of planning has hitherto been associated largely with conditions in which a group has gathered in its hands, all the power to control and regiment the life of a community and to command and direct its material and man-power resources. The people become partners in the Plan and are associated closely with its formulation as well as its implementation from stage to stage."[3] The Five-Year Plans are closely associated with our parliamentary democracy and it is this association that is agitating the minds of some people. Are the Plans strengthening our democracy or undermining it?

There is a section of people who hold the view that planning and democracy are incompatible, for a highly centralised administration is the **sine qua non** of planning. It is for this reason that large-scale planning was hitherto adopted only in dictatorships. The Five-Year Plans were first conceived and worked in the U.S.S.R. Plans give rise to such technical and complicated problems both in industry and administration that the representative assemblies can hardly deal with them. This will, it is said, develop among the people a psychosis of dependence on experts and contempt and hatred towards the popular assemblies. "Parliaments come to be regarded as ineffective talking shops unable or incompetent to carry out the tasks for which they have been chosen."[4] Further, planning widens the sphere of the Government to such a great extent that the State will become a Leviathan exercising rigid control over every aspect of the people's life. Economic liberty and freedom of enterprise become significant by their absence. "The all embracing plan must be enforced by arbitrary administrative decision, so the rule of law will disappear. Consumers' sovereignty the free choice of occupation and the right to independent moral judgments must all be sacrificed."[5] Such line of thinking leads to the inevitable conclusion that economic planning, however, indicates that it is not synonymous with dictatorship. As long as a complete budget of production laying down the output of every commodity for years ahead is not imposed on the community and as long as the central authority is under the ultimate control of the people, planning does not endanger democracy. "We use the term economic planning to indicate a principle of administration and not an inflexible budget of production."[6]

In the modern industrialised society, planning far from being inimical to democracy is essential to its growth. Economic inequalities, monopoly and unemployment, the concomitants of the Machine Age, are the most formidable enemies of democracy and they can be overcome by no other method than planning." Planning has in fact become necessary because of the size of society and the complexity of the new techniques which are perpetually appearing.—Planning is necessary whenever technique goes beyond the human scale."[7] It is for this reason that even defenders of traditional liberalism like Walter Lippman and Prof. Fisher have conceded state control over certain fields. In fact in the modern society where Liassez Faire economy has become outmoded, 'we are all planners now." There is no country in the world to-day which adheres totallly to private enterprise. During the period between the two World Wars while the U.S.S.R. adopted planning on a large-scale, the U.S.A. adopted it on a limited scale. In the latter certain enterprises like Hydro-electric power, Atomic Energy and manufacture of fertilisers are nationalised. During 1945 to 1951 the Labour Party in Britain adopted planning on a considerable scale and "about 20 per cent of the economy was nationalised."[8]

Planning by a Central authority has proved advantageous in several ways. Under an unplanned and cometitive arrangement of industry the individual persons take into account only a fraction of the output and investment and so will not be able to forsee the results which a central authority can. So "the decisions taken in an unplanned economy must be short sighted, irrational, self-frustrating

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

d socially disastrous."[9] Individual enter-se leads to "blind scrambling." It is y a Central Planning Authority that establish proper relation between ance and production. In a run away akish economy subject to the pulls of the rket, speculations and manipulations, the edom of the common man is next to possible in the absence of state planning. is well remarked that freedom under e enterprise "is the freedom of the weeds t grow wild a neglected garden; it is freedom of the whale that swallows the aller fish around."[10] What is lost under nning is the freedom of certain indivi-als to exploit and to make vast sums of ney.

It is sheer madness to contend that parliamentary democracy can be built a strong and stable foundation without nning. This view has been expressed hout any reservation by all sections of inion in India. In the matter of plann-the Socialist, the Praja-Socialist and mmunist parties want to go a step fur-er than the Congress party. Even the atantra Party which is vehemently acking the Five-Year Plans as the greatest anace to parliamentary democracy, admits at "in regard to the need for some measure planning of our economic affairs there be no dispute."[11]

It is feared that our Five-Year Plans are e greatest threat to our democracy, for ey are supposed to have some their roots Moscow. It is sarcastically remarked that r Five-Year Plans are like a Russian child nceived in the Indian womb. They are sulting in a "Command Economy" and atism. Highly cenralised statist planning d parliamentary democracy cannot co-ist. Even Prof. Galbraith, a champion of anned economy expressed his opposition the centralised nature of our plans. He erred to the frustration and resentment t by competent executives in the state ned steel plants over "the centralisation purchasing personnel and financial deci-ns in New Delhi."[12] Political and eco-mic freedom is gradually eclipsed by the er widening sphere of the state. "No per safeguards or courts of law can pre-nt the surrender of this political and economic freedom when there is only one employer, viz., the state, only one trader, the State Trading Corporation and only one trade union, the Goverment's Labour Front."[13] In the name of the plans the freedom of the factory labourer, of the peasant and of the consumer is growing narrower. The various ordinances that are issued from time to time, the continued re-enactment of the Preventive Detention Act and the creation of more and more special courts are some instances to illustrate how our parliamentary democracy is threatened by the Five-Year Plans.

Such arguments appear to be theoritically sound. But we have to consider the odds against which India is struggling. Judged against the historical background it becomes clear that the Five-Year Plans are greatly helpful in building up our parliamentary democracy. In the European countries like Britain, indusrial revolution preceded democracy. Moreover, they had no competition from highly dustrialised states and so most countries could progress under free enterprise. But India has to fight against odds in both internal and external fields. In the internal field she has to deal with the devastating poverty, ill-health and ignorance of millions of people and in the external field she has to compete with nations that have made phenomenal progress in science and technology. Such compelling circumstances show that the public sector plays a vital role in the implementation of the Five-Year Plans. They do not endanger our parliamentary democracy for the necessary safeguards are taken to check the growth of statism, such as adult suffrage, free elections, independent judiciary and an independent audit system.

One of the essential elements of parliamentary democracy is that the people must have the power and authority to decide from time to time their own affairs. It is contended in some quarters that the Five-Year Plans are such long term plans involving huge expenditure that the party in power today is imposing a number of serious commitments on posterity so that the future generation can hardly enjoy any democratic freedom. The right of the people to determine important matters through free

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discussion and debate which is the essence of parliamentary democracy will not be enjoyed by posterity. "The votes of future generations of adults and their elected representatives are necessarily extinguished or so overladen with previous commitments as in effect to amount to their disfranchisement."[14] It must, however, be said that it is neither possible nor desirable for any parliament to legislate for the present only without affecting the future. In fact wisdom lies in the realisation that there is a tomorrow and one must work for it. The first two Five-Year Plans were intended to prepare the necessary ground for the Third Five-Year Plan during which period India is expetced to enter the "take off" stage. The nature of the two succeeding plans will depend upon the success of the Third Plan. In the life of a nation twenty-five years do not form too long a period. In view of the tragic poverty of the people and the rapid growth of population it cannot be said that our plans are unduly large in their size and magnitude. Dr. V. K. R. V, Rao well observed at Ooty Seminar on the Third Five-Year Plan that looked at from the employment needs, the rate of increase in per capita income and the rate of increase in certain individual items, our plans must be said to be moderate. It is only by achieving the targets fixed in our plans that strong and sure foundations can be laid for our democracy. Parliamentary democracy can never thrive amidst poverty, starvation and unemployment.

The Five-Year Plans are said to be reducing our parliamentary democracy to a formality. Under any system of large-scale planning there is absolute need for a planning committee to assist the Cabinet and there is the danger of such a committee becoming an "inner cabinet" or "super cabinet." "If there were such a development the essential nature of the democratic system would be affected, because the full responsibility of the whole cabinet to parliament and ultimately to the electorate would be affected."[15] The Swatantra Party whose programme constitutes the spear head of the attack on the Five-Year Plans is highly critical of the part played by the Planning Commission. The Party Manifesto says, "the party will seek to restore the real and effective supremacy of parliament and the people by abolishing the much boosted Planning Commission which has tended in effect to bring into being a non-responsible super-government."[16] Sri K. M. Munshi forcefully upholds that "parliament, in fact, does not govern the country. The nominated super-cabinet, the Planning Commission, does the supervision, control and direction of the government of India and owes no responsibility to parliament." This danger to parliamentary democracy is expressed not only by party leaders but also by non-party men. Mr. Asok Chanda described the "Planning Commission as an "Economic Cabinet" both for the union and for the states and makes the observation that the scope of its activities tends to "embrace functions and responsibilities which must both traditionally and otherwise belong to the constituted government."[17] Such a position is considered to be inconsistent with the cabinet form of government. The composition of the Planning Commission as well as its position in the administrative setup clearly indicates that the danger to our parliamentary demorcracy from the Planning Commission is quite exaggerated. The Members of the Planning Commission are no other than promient members of the parliament and the cabinet. The chairman of the Planning Commission is the Prime Minister himself and such a body can never be a threat to democracy. Moreover, during the last decade several measures were taken to uphold the supremacy of parliament. The parliament has developed its own rules of procedure and appointed committees which play the role of the opposition party in checking the executive. "The whole structure of parliamentary committees reflects and at the same time reinforces this mood of watchfulness over the government."[18] Recently the Lok Sabha proposed to set up a fifteen member joint committee of both houses of parliament to exercise effective control and supervision over public undertakings."[19] Such developments clearly indicate that our parliament is not superseded by the Planning Commission. In fact the real danger to our parliamentary democracy lies not in the presence of the Planning

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Commission but in the absence of a vigorous opposition party.

Another danger which planning is supposed to produce is the ascendency of bureaucracy. In every modern state the civil servants are playing a vital role. As Finer observed, "the civil servant is in short, policy adviser, policy promoter and legislator." The importance of the civil servant in the Indian polity has become immense with the implementation of the Five-Year Plans. The dominant role assigned to the public sector in both the industrial and non-industrial fields has left the Minister at the mercy of the civil servant. The rapid increase in the enterprises undertaken by the Government has necessitated an army of officers. Due to the absence of the required number of experienced personnel, civil servants having hardly five or six years of service are promoted and placed in key positions. This factor partly explains the inefficiency found in the administrative machinery to-day. Coupled with administrative inefficiency are corruption and red tapism—all the outcome of large-scale planning. These evils are shaking the faith of the common man in parliamentary democracy. Though in an underdeveloped economy a certain amount of corruption is inevitable, stern action has to be taken to put down all cases of corruption with the help of men of integrity like Sri C. D. Deshmukh. It may also be noted that corruption attributed to the civil servants pales into insignificance when compared with the corruption which is rampant in the political circles. A corrupt democracy can never survive for long. The Five-Year Plans which have given rise to wide spread corruption may at the same time provide the remedy by improving the economic standard of the people and by awakening social consciousness among them.

Does economic planning inevitably lead the country in the direction of "Orwell's 1984"? Is the "Brave New World" of Huxley the inevitable corollary of our plans? Planning no doubt accelerates the tempo of centralisation and increases the power of the State. But this need not imperil democracy. As Huxley himself observed, planning turns into dictatorship only when it is carried to excess. In fact any thing in excess will prove dangerous. India's plans are not of the monolithic type and they are based on the principle of coexistence of public and private sectors. There is no inherent contradiction between planning and freedom. As Mrs. Barbara Wooton argues, a happy and fruitful marriage can be arranged between freedom and planning. In fact the progress of our society depends on our ability to reconcile democracy with planning and this can be achieved through decentralisation. During the first two plan periods the Central Planning Commission occupied a highly dominant position and the local bodies had little share in planning. Such a system, as Mr. Asoke Mehta rightly observed, "showed the danger of apoplexy at the centre and anaemia at the extremes."[20] This danger is overcome to a large extent under the Third Five-Year Plan due to the introduction of Panchayati Raj. In the preparation and implementation of the Five-Year Plans the village and panchayat is assigned an important share. It must prepare a village plan based upon the local needs and resources and mobilise public support for the plan."[21] With the extension of Panchayati Raj throughout India, the plans will truly become people's plans. Planning through democratic decentralisation no doubt requires great interest, enlightenment and co-operation among the people. At present these conditions are largely absent in our country. But as people gain experience in the working of democratic institutions, the obstacles that lie in the way of our parliamentary democracy can be overcome.

To sustain the faith of the people in our parliamentary democracy a few modifications may be effected in the priorities fixed in the Third Plan. In a dictatorship the planners can afford to give top priority to heavy industries at the expense of consumption goods, for the people do not have the freedom to overthrow the government. But in a democracy if the people are not provided with food and clothing, they may lose faith in democracy itself. Hence it is essential to give greater priority to agriculture. The small-scale industries also require greater encouragement than what is allotted

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the Third Plan. At present a little more than one-fifth of the investment on large-scale industry is devoted to the small-scale industries. Rural unemployment can be solved to a great extent only by the improvement of small-scale industries.[22] Starvation and unemployment are the greatest enemies of democracy and they can be overcome by the improvement of agriculture and small-scale industries.

Both our plans and parliamentary democracy require for their success the building up of "human capital." As Pandit Nehru remarked, "in the final analysis in any country the only basic resource is the trained human being. Almost everything follows from that—The most important thing becomes education at all grades and stages." Yet it is regrettable to note that education is not given a fair deal in the Third Five-Year Plan.

While it is necessary to have a re-appraisal of the plan priorities, it is equally necessary to have a proper understanding of the meaning and nature of parliamentary democracy. A stage has been reached when it has become crystal clear that democracy is doomed to fail unless it solves the economic problems of the modern times. Hence, planning has become a significant feature of modern democracy. In this age of science and technology the Benthamite concept of democracy has to give place to a new theory of democracy which is in the nature of "half science" and "half democracy." As modern administration has become highly complex and technical, the traditional ideas of parliamentary democracy have to be revised. The supremacy of parliament which was considered as the touch-stone of parliamentary democracy is now neither desirable nor possible. The parliament should not be peevish in its relations with the executive. The multifarious problems created by modern science and the technical legislation of the modern state require the assistance of the civil service. So the increasing part played by the Civil servants far from being a danger to democracy is essential to it.[23] The Civil servant should no more be looked at with suspicion and prejudice, for he is as much a patriotic son of India as any elected member of Parliament. Though Parliament should remain supreme its powers and functions should be confined only to policy making. Such an understanding of modern democracy leads us to the conclusion that the Five-Year Plans are not at all a menace to our parliamentary democracy, nay, they alone can contribute to its success.

THE LATE SCULPTOR ROY CHOUDHURY

By M. R. SEN

In the death of Mr. Hironmoy Roy Choudhury which melancholy event took place at Lucknow recently, India has lost a great sculpter. Mr. Roy Choudhury was an example of a perfect artistic balance and his grasp of the details of his art was complete. As a sculpter he had something to say and looking at most of his works, we find he said it with all the vigour, honesty and forcefulness of a vital personality. Indeed, he had the knack of getting down to essentials.

It is a pity that Mr. Roy Choudhury, during his life, could not make a studio of his own. The reason was poverty. I met him at his Lucknow residence many times and in the course of talks, he told me that his life was incomplete. He once said: "My work is incomplete. I could do better if I had a studio of my own, or if I received some encouragement from the people and the Government. I know bronze casting but I am unable to practise it without a foundry." Another thing that grieved Mr. Roy Choudhury was when he was asked to retire without pension when he was still full of energy and creative potentiality.

Mr. Roy Choudhury was born in 1884 in a village in Khulna. His father, the late Krishna Bhuson Roy Choudhry, was also an artist. Krishna Bhuson had no specialised training yet he showed exceptional merit in painting, engraving, wood workmanship and ivory work. He also made a new type of loom which the weavers still possess in his village. Besides, Krishna Bhuson was a great craftsman and his work was exhibited in those days in village melas.

After passing the matriculation examination, Mr. Roy Choudhury joined the Calcutta Art School in 1905. In those days very few boys joined the Art School, but shortly after him came Ashit Kumar Haldar, the well-known artist. At this time Mr. E. B. Havell A.R.C,A,, and Abanindra Nath Tagore were the Principal and Vice-Principal of the institution respectively. In order to give a new orientation to Indian art, a special class was opened by Abanindra Nath Tagore consisting of Nanda Lal Bose, Ashit Kumar Haldar and Surendra Nath Ganguli, etc. There was no arrangement for teaching sculpture at the Art School, but at the suggestion of young Roy Choudhury, Mr. Havell made necessary arrangements for it. Mr. Havell who had a high opinion of Hironmoy watched his progress as a student and was pleased with his "artistic ability." At this time, the famous sculptor L. Jennings came to Calcutta at the invitation of the Government of India. Jennings who was in search of a suitable assistant for modelling sought the help of Hironmoy. Hironmoy worked with Jennings for about a year and the latter was highly impressed with the quality of the former's work. During this period the then Lt. Governor of Bengal, Sir E. Baker, was pleased to grant Hironmoy a special scholarship in recognition of his work. With this scolarship Hinronmoy went to England in 1910 and joined the Royal College of Arts. He was the first Indian student the College had. He was also the first Indian to become an Associate of the Royal College of Arts, London. The Principal of the College Mr. Augustus Spencer appreciated his merit and remarked: "While bringing freshness to Eastern themes, he was in enough sympathy with its traditions and aims to preserve its character." During his sojourn in England, Mr. Kedar Nath Chatterjee, the present Editor of "Modern Review," a great friend of Roy Choudhury, was his constant companion.

Learns Bronze-Casting

After obtaining his associateship, Roy Choudhury desired to learn the technique of bronze-casting. This is a specialised art and can only be learnt in bronze casting firms. No firm in England was willing to divulge the secret of the art to an Indian and Roy Choudhury experienced a great deal of difficulty. At last through Prof. Lanteri he approached one firm which, however, demanded £10,000 for the lessons. This was an impossible amount for Roy Choudhury to pay. Happily Roy Choudhury came in contact with an Italian genius—the great sculptor Parlentti who was perhaps the greatest exponent of the art of bronze-castings of his times and who developed a special technique of what is known as the "Cire Perdue" process, or the process of the lost wax. Prof. Parlentti took Hironmoy as an apprentice into his own studio for a nominal premium and personally taught him all that he knew of his art and treated him more like a son than a mere professional student. After completing his studies under Prof. Parlentti, Roy Choudhury went to Paris to study under the famous French sculptor Rudin.

Roy chowdhury with a Model

ut he returned to England sometime ter.

Roy Choudhury's complete knowledge bronze-castings was a valuable acquisi- n as very few sculptors were able to st their own work. Roy Choudhury turned to India in 1915 during the First orld War. For many years he sat idle cause the technique he had learnt in gland required a regular studio which did not have. During this time he velled extensively throughout India. ter he accepted an appointment in shmir. He left this job and returned to lcutta where Raja Profulla Nath Tagore ho was the sculptor's own brother-in- w) was good enough to open a studio in s house for Roy Choudhury, but it was ither adequately equipped nor had a vourable atmosphere to work in with mfort.

In 1925, Roy Choudhury was appointed incipal of the Jaipur Art School which st he held with distinction till 1929. ater he joined the Lucknow Art School Vice-Principal. While at the Lucknow rt School his ability as craftsman was mply demonstrated when he executed in iniature a model of the Sarda Canal Barrage. This work was sent to India House as a present from the U.P. Government. Sir Barnard Darley of the U.P. Government, the originator of the idea having failed to get it executed elsewhere appreciated the work which was done in an excellent manner with the minutest details within a total area of 4 ft.

Statue of Mahatma Gandhi

Late Roy Choudhury had made some remarkable life studies in bronze, besides some special studies in marble. While it is true he acquired his skill in modelling in the West, yet he did not allow himself to be bound by any rigid standards. This is why he was able to enter into the spirit of the oriental designs he had executed for nearly 36 years. He has several statues to his credit of which special mention may be made of the King George V Memorials at Lucknow and Allahabad. His last work was the huge marble statue of Mahatma Gandhi, the first of its kind in India, which was erected at Gonda (U.P.) several years back. The statue is nine and a half feet high and stands on a 12-feet pedastal. It took about two years for Roy Choudhury to complete.

EDUCATION FOR THE SPACE AGE

By MARION and ALI BULENT CAMBEL

THROUGHOUT the history of man, certain events and movements have changed the destiny of the human race. When historians of the future analyze the twentieth century, they will note that during this period there was an intense seeking for improvement of the entire human community. Three great movements can be cited: one is the widespread emergence of many peoples from social and economic bondage; another is the growth of compasisson; and the most obvious and exciting is the entrance of man into space and perhaps on to other planets. Historians probably will indicate that the conquest of space differed from previous revolutionary human achievements because it required an unusually sophisticated background in education.

Several decades ago, it was possible to differentiate between science and technology because, as a rule, science led the way by many years. Furthermore, science was generally pursued to satisfy intellectual curiosity whereas technology was developed to produce a certain piece of hardware.

Today, the line of demarcation between science and technology has become almost imperceptible. In fact, the impetus for much modern scientific research is found in the need to develop the underlying knowledge in order to create certain technologies. Thus, today's engineer follows closely on the heels of the scientist and at times becomes a scientist himself. This close alliance is demonstrated in the successful American companies which maintain large research departments because their technology would become sterile and would fail eventually without the benefit of research.

American schools, too, have had to change their curricula, and are continuing to do so daily. The principal change has been to minimize and to even delete the skill or handbook courses and to emphasize, instead, a profound understanding of fundamental physical concepts coupled with an appreciation of mathematical dexterity.

The reason for this change is that the rapid advances in science and technology make obsolete the skills and the information contained in handbook. The modern scientist-engineer can continue to contribute to his profession only if he knows thoroughly the implications of the laws of nature. Knowing these, he can constantly meet the challenge of developing heretofore unknown devices and processes. One might observe that the discoverers of new laws and the designers of unconventional devices rarely have studied in school what they conceived.

The young student who decides to enter the field of space technology, commonly called astronautics, should therefore plan his education very carefully. During his undergraduate years —in any part of the world—emphasis should be placed on receiving as broad and as rigorous an education as possible, with little if any specialization. The choice of a school is a difficult process even for those in the academic field because the reputation of a school can linger, long after the school has lost its most inspiring faculty members. After all, neither massive buildings nor impressive course titles make a school great, but rather the quality of its faculty. Not even centuries of tradition guarantee scholarly excellence because knowledge, too, becomes obsolete.

The student should then seek to learn mathematics at least through vector and tensor analysis; physics through modern physics; and chemistry through reaction kinetics. Among the engineering courses, the undergraduate student would do well to study electricity through field theory and electronics; thermodynamics through statistical mechanics; fluid machanics through compressible flow and transport phenomena; mechanics through continuum theory; and materials through soild state physics. He should then study astrodynamics and should be initiated into astrophysics. Finally, he should study the biological sciences, because the findings of the space sciences will revolutionize medicine.

A person following such a program will not be a specialist in astronautics but will have obtained a body of knowledge which would

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized By Arya Samaj Foundation Chennai and eGangotri

able him to speak intelligently about events ppening in the space age. He will also be ready embark on a career in graduate school ding to the Ph.D or Sc.D degrees.

The increasing complexity of the space ences is tending to make graduate study prequisite for work on its interesting and stimulat- projects. In graduate school, the student should continue to maintain his wide intellectual scope. However, this is also the period of specialization. To paraphrase the great philosopher-mathematician, Alfred North Whitehead, the scientist-engineer of the space age should be good in everything and excel in at least one field.

For those students wishing to do under-

Ali Cambel with plasma jet at North-Western University, Evanston, Illinois

Digitized by Arya Samaj Foundation Chennai and eGangotri

graduate work or graduate study in the United States, *all* accredited colleges, by and large, provide adequate educational programs. (A list of the accredited curricula leading to first degrees in engineering in the United States may be obtained from the American Society for Engineering Education, University of Illinois, Urbana, Illinois). The most capable scientists do not always come from the most famous schools. Although there is a large choice of colleges on the undergraduate level, on the graduate level there are fewer schools which provide advanced instruction. In turn, among the schools providing graduate instruction, there are not as many offering a doctorate degree as those awarding master's degree.

A special program for prospective astronautical engineers is the co-operative or *co-op* plan of engineering education, now offered by many schools. (A list of such *co-op* programs may be obtained from the booklet "List of Co-operative Educational Programms" from the Examining Division, United States Civil Service, Washington, D.C.). Under this program, the student alternates between school and an industrial job each quarter or semester. The advantage or disadvantage of choosing a *co-op* education depends, of course, on an individual's professional plans.

Admission requirements vary from school to school. Descriptive booklets may be ordered from the College Entrance Examination Board, c/o. Educational Testing Service, Box 592, Princeton, New Jersey, or Box 27896, Los Angeles 27, California. Admission to graduate school is primarily based on the undergraduate record, but if an applicant attended an unaccredited school or feels that his record does not show his true abilities, the Graduate Record Examination is recommended, or sometimes required. Information about this examination may also be obtained from Educational Testing Service.

A wide variety of financial aid is available to both undergraduates and graduates in any field of space science. Individual colleges and universities can provide detailed information upon request, both in general catalogs and separate brochures. A summary of financial aid for graduate study in engineering is published by the Tau Beta Pi Association. "A Compilation of Financial Aid for Graduate Study in Engineering," *The Council Bulletin of the Beta Pi Association*, (published by the George Banta Company, Inc., Curtis Reed Plaza, Menasha, Wisconsin.)

The student should remember that his college and postgraduate years constitute a tremendous investment, and therefore he should take care in choosing a school. One should differentiate, for example, between non-academic research laboratories operated by schools and academic research laboratories. The student will find greater opportunity to do research in the academic laboratories of schools.

Particularly during the graduate years, besides seeking outstanding instruction, the budding scientist should be associated with a "great teacher" to whom he can apprentice himself to soak in knowledge and wisdom by means of "intellectual osmosis." In relationship, the role of the elder man is, to paraphrase the Indian Poet-Philosopher Rabindranath Tagore; "Let my guidance like sunlight surround you, yet give you illumined freedom." The student so nourished will, upon graduation, score his own accomplishments and make his mark in the world.

A question may arise concerning whether a student from an emerging nation should concentrate on a field of study which is pertinent to his nation's immediate need, or whether he should study in a field that will answer a future need. Although the emerging nations are beset with problems presently involving basic technology and economics, they are nevertheless subject to the same technological complexities that abound in the older established countries. It seems reasonable that their young people should study not only for the present but also for the future.

Finally, the student who specializes in some branch of the space sciences, whether he is from an older established nation or from an emerging nation, will be amazed and inspired by the unusually close co-operation of his peers at the international level. Inevitably he will comprehend that he is a functionary of not only one, but of all the movements in this century which contribute to the betterment of the entire human community.*

quently he studied chemical engineering at the iversity of Istanbul; mechanical engineering d naval architecture at Massachusetts Institute Technology; machanical engineering and echanics at California Institute of Technology; echanical engineering and mathematics at the ate University of Iowa. He holds B.S., M.S., d Ph.D. degrees.

Dr. Cambel has served on the staffs of the iversity of Iowa and the University of Toronto. esently he is Walter P. Murphy Distinguished ofessor of Mechanical Engineering at North-estern University, Evanston Illinois. He is also Chairman of the Mechanical Engineering culty and the Director of the Gas Dynamics boratory.

Professor Cambel is the author or editor of e books and has written numerous scientific icles. In 1959, Dr. Cambel received the G. Edward Pendray Award from the American Rocket Society for his outstanding contributions to the scientific literature in astronautics and jet propulsion. In 1960 the American Society for Engineering Education awarded him its Curtis W. McGraw Award for his outstanding research achievements at an early age. In 1962 he was elected National Lecturer of Sigma Xi, honorary scientific society.

Marion Cambel was born in New York City, spent her early childhood in Waterloo, Iowa, and her school years in Pasadena, California. In 1944 she graduated from the University of California after which she worked for a year with the American Friends Service Committee in a remote village in Mexico. She met her husband in 1946 when both were members of an international group on the California Institute of Technology campus.

LABOUR WELFARE IN INDIA

By S. N. MEHROTRA
Gauhati University

Labour Welfare is one of the major terminants of industrial relations as it is ected towards bettering the lot of labour d creating a life and work-environment of cent comfort for this class of population. is concept of labour welfare is aptly sum-d up by the Royal Commission on Labour India, when it defined 'Welfare' as one hich must necessarily be elastic, bearing omewhat different interpretation in one untry from another, according to the ferent social customs, the degree of dustrialisation and the educational deve-ment of the worker."[1] According to an .O. publication, it includes "such services, cilities and amenities as may be establish-in; or in the vicinity of undertakings to able the persons employed therein to form their work in healthy and congenial roundings."[2] The term includes, as used the Recommendation No. 102, concerning lfare facilities for workers, adopted at Session of I.L.O. held in June 1956, (i) ding facilities in or near the undertaking, Rest and recreation facilities, and (iii) transportation to and from work where ordinary public transport is inadequate.

Proud defined welfare work as the "efforts on the part of employers to improve, within the existing industrial system, the conditions of employment in their own factories."[3] According to Prof. Richardson, it inculdes any arrangement of working conditions, organization of social and sports club and establishment of funds by a firm, which contributes to the workers' health and safety, comfort, efficiency, economic security, education and recreation."[4] On the other hand, Dr. Pandandikar held the view that it may be defined as "work for improving the health, safety and general well-being, and the industrial efficiency of the workers beyond the minimum standards laid down by labour legislation."[5] Thus, under welfare activities anything done for the intellectual, physical, moral and economic betterment of the workers through different agencies may be included.

With the achievement of Independence and emergence of the country as a Republic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wedded to the ideal of a welfare state and a socialist pattern of society, the need for special efforts for promotion of welfare services to the large number of workers in the industries has automatically been realised. The success of a vast programme of industrialisation in fact depends upon a contented labour force employed for the purpose. Inspite of the remarkable efforts at industrialisation, the country as a whole is in the process of transition from a predomainantly agricultural to that of modern industrial economy.

It may be noted that a substantial proportion of the industrial labour force still retain their rural nexus and a permanently committed work force is yet to be achieved even now. A large number of workers, especially in certain industries like mines and plantations, are immigrants in the sense that they do not belong to their place of work. In such circumstances there is need for special welfare measures. For instance, in regard to plantations, the workers who are recruited from other States to work in tea estates, say, in Assam, require assistance to move and they are to be fed on the way, accommodated and established on arrival. Similarly there is need for asistance on repatriation. Besides, because of the rural nexus workers find it very difficult to adjust themselves to the urban and factory environment and to the new modes of city life. It is here that welfare facilities soften the transition and enable him to adjust himself to industrial conditions.

Secondly, "the existence of certain special categories of workers, mainly those employed in small undertakings and workshops, or plantations located in out-of-the way and isolated places creates special welfare needs, such as transport" facilities, etc.[6]

Thirdly, trade unionism has not shown satisfactory progress in the different industries. They are not in a sound position to stand for collective action for amelioration of working conditions and improvement in wages. The lacunae has brought to the fore the need for alternative methods of promoting welfare measures for the workers.

Welfare work in India, as in the U.K. and U.S.A. was mainly a product of the stresses and strains that developed during the First World War. During the Second World War, the Government of India started taking active interest in labour welfare when they introduced certain schemes of labour welfare in their ordnance, ammunition and other factories engaged in production of war materials. It was done to increase their productivity. In 1946, the Central Government initiated an experimental scheme to finance welfare activities in industrial undertakeings owned and controlled by them. Thus, labour welfare funds were constituted in the industrial establishments, running in the States. The establishments under Central Railway Board and major ports were excluded from it, as they were having a separate administrative set-up. Besides, the Factories Act of 1934, amended in 1947 and known as the Act of 1948, contains a separate chapter on Welfare. The State Governments are also empowered to make rules requiring the representatives of workers in any factory to be associated with the management in regard to welfare schemes for workers.[8]

There are two other Central Government's Acts providing for welfare services to the workers in the mines and plantations. In recognition of the hazardous nature of work in the mines, the Government of India promulgated in 1944 the Coal Mines Labour Welfare Fund Ordinance which was replaced by the Act of 1947, amended subsequently in 1952. The principal activities financed by the Fund may be divided into (a) General Welfare and (b) Housing. The former comprises activities of medical facilities under different conditions; recreational and educational facilities. The Miners' Institutes are the nucleus of these welfare activities. Moreover, the Mica Mines Labour Welfare Fund is also set up under the Mica Mines Welfare Fund Act 1946. It provides medical, educational and recreational facilities for mica mine workers. Similarly, under the Plantation Labour Act, 1951, all employers are required to make effective arrangements for a sufficient supply of wholesome drinking water and the provision of medical and other sorts of welfare

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cilities provided under other Acts. It also quires employers to provide housing commodation to their workers.

The Central Government has been incing considerable interest in labour elfare since the beginning of the First lan period as it is evident from the finan- al allocations made in the Plans.[9] Actual xpenditure is estimated to be equal to two- irds of the planned outlay for the Second lan period.

So far as the State Governments are con- rned, U.P. occupies the formost important sition at present from the point of view financial allotment made under Third lan, which is equal to 16.4 per cent of total ovision under States' Plans.[10] On the other nd, from the point of view of estimated tlay for Second Plan period as well, U. P. nds first amongst all States (excluding aharashtra and Gujrat).[11] The State of P. is followed by West Bengal, Maha- shtra and Bihar, having provision of s. 3.46 crores, 3.02 crores, and 2.80 crores spectively, for the current Plan period.[12]

The welfare programme of U. P. overnment, started in 1937 through setting of 4 Welfare Centres at Kanpur, with a odest budget provision of Rs. 10,000 con- ed to welfare measures outside the place work and serves as a model in that way the employers and other interested in the lift of labour in the State. The main acti- ies of such Centres whose number have creased to 6713 in 1961, comprise of out- or and indoor games, kirtan, inter-mill d inter-centre tournaments, provision of edical assistance and advice, maternity ork, educational facilities, literary, cul- ral activities, etc. The Centres have been ssified into four classes, viz., A. B. C and asonal, according to the basis of their tivities and thus their present strength is 33, 6 and 2, respectively. With a view to vise the Government on the organization welfare scheme, a State Labour Welfare dvisory Committee and 19 District L.W.A. mmittees are functioning in the State.[13] ring 1959, it was decided to decentralise administration in certain zones and, erefore, a Regional Office has been set up Lucknow recently.

A brief mention may also be made about the U.P. Sugar & Power Alcohol Industries Labour Welfare & Development Act, 1951, enacted on the lines of Central Coal Mines Labour Welfare Act, referred earlier, for the purpose of financing measures for promoting the welfare of labour employed in sugar and power alcohol industries.

Similarly, the Assam Tea Plantations' Employees' Welfare Fund Act has been enacted by Government of Assam in 1959 to provide for the construction of Fund to finance and conduct activities aimed at promoting the welfare of tea garden workers in the State. It has been proposed to set up this Fund out of the large amounts of unpaid money by employers due to workers. Another important feature about Assam's welfare schemes to be noted is that they are executed by non-official organizations like Kasturba Gandhi Memorial Trust, Hindustan Mazdoor Sevak Sangha and the Assam Seva Samity, but under the general guidance and supervision of the Assam Labour Welfare Board and through the Government's grant-in-aid from time to time. Moreover, the programme has been appropriately divided under three heads, viz., (1) State Level Scheme, (2) District Level Scheme and (3) the Village Level Scheme. The first is concerned with establishment of Training Centres, the second includes Technical Training Schemes and the third comprises of establishment of Community Centres for plantation labour and of Centres for urban labour.

The pattern of welfare that is provided by employers is that of generally a broad-based policy of providing recreational, educational facilities in large units, while the smaller units content themselves with conforming to those facilities prescribed by law. In the case of some large-scale and well-organised industries like jute and tea, welfare activities have been taken up on a joint basis. The Indian Jute Mills' Association, Calcutta, has undertaken direct responsibility for its member units." It may be noted that standards of amenities provided by some employers are high and above legal requirements.

Not many instances are there regarding welfare work by Workers' Organizations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The most important amongst these is the Textile Labour Association, Ahmedabad, which has organised a number of social and welfare activities for the benefit of its members through a number of Centres scattered over the working class areas.

Conclusion

There is an urgent need to realise the fact that the success of welfare schemes depends as much on the manner in which they are administered and introduced to the workers as on the nature and quality of facilities offered. So far as the former aspect is concerned, the role played by the Welfare Officer is significant, as he is often to act as a liason between the management and labour. He is to secure also the whole-hearted co-operation of the workers and the executive heads. An equally important point is to build up welfare work logically by slow stages. Thus, welfare work, if carried out in a spirit of sympathy, fairness, mutual compromise and respect, will weld[14] the employer-employee relations into a potential and peaceful entity. So far as the nature and quality of facilities are concerned, the need is to lay down statutorily some sort of social minimum standards indicating the responsibility for carrying them out.

SWAMI VIVEKANANDA ON RELIGION

By MANGALMAY DATTA, M.A.

We find in Swami Vivekananda a man o was not content merely to preach a stem of philosophy in an academic fashion put before the people his own life and t of his Master Sri Ramakrishna as the stration of religion in practice.

Religion—a Constitutional Necessity With Man

But, there are some people who want dispense with religion on the ground t it has done us more harm than good. ey contend that religion has been the ne of the world and that man would be ppier without it. But it is based on a se view of religion. To dispense with ligion on the above account would be like mmitting suicide because life is not free m misery. Against this view of religion would quote the words of Swami Vivenanda: "It is my belief that religious ought is in man's very constitution, so ch so that it is impossible for him to e up religion until he can give up his nd and body, until he can give up ought and life. As long as a man thinks, s struggle must go on, and so long man st have some form of religion." What amiji meant to say is that the instinct of ligion is in-born in man. Man cannot rid of religion. Religion will cling to n whether he will or not. Consciously or consciously he must live in it. His heart nours for it. His nature clings to it. e would appear intolerable without it.

What Religion is

Next comes the question—What is religion? Swami Vivekananda defined religion as "the manifestation of the divinity ready in man." Man is divine by nature. d exists in us as potentia and possibility. The aim of religion is to awaken us to the goal of human life—manifestation of divinity already in us. Love, charity, sympathy, courage, honesty, truthfulness—qualities of a pure heart—conduce to the gradual unfoldment of the divinity in man, whereas hatred, ill-will, selfishness, anger, etc.,—diseases of the human heart,—obstruct it. Just as the breach of hygienic principles entails the loss of physical health and physical wellbeing, the breach of the cardinal principles of religion entails the loss of spiritual health and spiritual strength. In other words it may be said that virtue is the law of our growth and vice obstructs it. An action is bad or evil that imposes a veil upon our divine nature; and an action is good or moral that helps us to rediscover this hidden divinity. The realisation of this principle is the bed-rock of religion. What remains to a man, if religion is banished from human society! As Swami Vivekananda rightly said, "Take religion from human society and what will remain. Nothing but a forest of brutes."

Again, religion, as it aims at the manifestation of divinity already in man, makes no distinction between man and man, between the high and low, the rich and the poor, the strong and the weak. All are equal in the eye of religion. It looks upon the whole of humanity as an organic whole in which every individual has his proper place, in which every individual is great in his own place, in which the king on his throne is no better than the scavenger in the street, for both are spiritually equal for the common good of the organism. The Brahmin is by profession a teacher but the Sudra a servant. Both are spiritually equal. The Brahmin is no nearer to heaven than the Sudra. 'Dharmavyadha' was a butcher by profession. But he had very few spiritual superiors even among the Brahmins. Swami

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Vivekananda believed that all men are basically equal and the difference between man and man lies in the degree of divine manifestation.

We know that there are two important faculties in man, viz., the heart and the intellect. Each of these must be developed but not the one at the expense of the other. They are placed together that each may help and guide the other, like a pair of horses drawing a carriage. The business of the heart is to feel and to love, but it often makes mistakes; then reason comes to its help and corrects it. Similarly, it is the business of reason to discriminate, to argue and to judge, and left to itself it also makes mistakes, which the heart corrects.

The perfect man is a beautiful combination of the head and the heart, and he has no quarrel with either, for, he knows the place and sphere of each. Individuals make up the society and, roughly speaking, it is their heart portion that reveals itself in religion and the head-portion that takes shape as civilisation. As in the individual, the heart and the head mutually correct and develop each other, so in society also, religion and material advancement faith and science ought to be the companion and guide of each other. It will be a mistake to cry down science and hold up blind irrational religion as the be-all and end-all of existence; and it will be equally absurd to extol the former and cry down the latter. The end of existence is not blind irrational religion nor is it barren intellectual science. It is the harmonius blending of the head and the heart, of love and light, of faith and knowledge. As Swami Vivekananda said, "Intellect has been cultured; result, hundreds of sciences have been discovered, and their effect has been that the few have made slaves of the many.....Through the intellect is not the way to solve the problem of misery but through the heart. If all this vast amount of effort had been spent in making men purer, gentler, more forbearing, this world would have a thousand-fold more happiness than it has today." Swamiji's above observations are as true today as they were during his lifetime.

Harmony of Religions

But, painfully enough, we have enough religions to hate one another, but not enough religious spirit to love one another. One's heart sinks in despair at the sight of so much intolerance and oppression, all in the name of religion which prescribes for its adherents universal love and understanding. To such a bigotry-ridden world, Swami Vivekananda pointed out that each great ancient religion has rituals, mythology and philosophy. The first two are the externals of religion, and philosophy is the essence. There can never be uniformity in rituals and mythologies. These are the abstract ideas of philosophy made concrete for the grasp of ordinary minds. These are to be given up when the soul, through its purity and discipline, is able to comprehend the essence of religion. Religious quarrels arise when we insist that the externals of religion are to be kept alive for ever. We quarrel over the husk and not over the kernel of religion. There is only one Eternal religion or the universal religion of which different religions are but different manifestations to suit different temperaments. Different religions are not antagonistic but complementary. Like the different photographs of a building taken from different angles, different religions give us the picture of one truth from different standpoints. Variety and Multiplicity evolving from unity is the fundamental principle underlying the ongoing of the world. Wherever there is great religious zeal and religious thought, there is bound to be diversity of religion. But to make diversity the cause of enmity indicates not thoughtfulness but thoughtlessness. Diversity has been the product of thoughtfulness and thoughtlessness has made it a weapon of hatred.

To conclude, Swami Vivekananda's teachings act like a powerful searchlight by which one can see through the externals of religion and discern its innermost essence. He unmistakably pointed out that the Eternal religion by proclaiming that the unity of existence and the divinity of the soul will reconcile all discords, hasten the dawn of peace and establish good-will among men.

CONDITIONS FOR STUDYING AS PART TIME STUDENTS AT YUGOSLAV UNIVERSITIES

In the course of the last few years adult ucation at university level has become a ry popular method for improving and rfecting skills, for the acquisition of eater knowledge, and far creating better nditions for obtaining higher earnings. is has a twofold advantage to the commu- y as a whole, special students most often dy without leaving their working places, d simultaneously, through their prac- e, become highly skilled experts, o are so urgently needed in the Yugoslav nomy. This is the reason why the com- nity allocates considerable funds for the ncing of this kind of advanced schooling.

During the 1961-61 school year, part me students enjoyed nearly identical nditions as those granted to regular full me students.

On the basis of the needs and real erests shown by students, communes, nomic enterprises and university colleges, rt time students developed in various ys through their practice. This is why ere are many forms of assistance—depend- g upon the organization, the sponsor, and e method of finance and management. r that purpose special institutions—educa- nal centres—have been formed.

Special educational centres for part me students with compulsory education d training are mainly organized outside e existing university colleges, in areas here there are no colleges, but occasionally ey are also found in places in which there e university colleges, too. These centres e set up by the commune, economic enter- ses or individuals concerned, while the ching staff is supplied by the nearest iversity boards.

The very existence of educational tres has rendered it possible to introduce lt education university colleges which e connected with experimental studies, ecially for non-resident students. For at reason educational centres won the putation as an extremely efficient device r helping part time students.

On the other hand, with the establishment of educational centres, mutual links between the uiversity and enterprises and institutions which give them financial aid and often ensure the teaching staff recruited from the trained personnel in the economy, have been strengthened.

During the 1960-61 school year, there were 93 educational centres under university guidance. Of this total number, 19 educational centres have been formed in places with regular university colleges, while 74 centres were set up elsewhere. Educational centres exist at 29 university colleges, that is every third college in our country has an educational centre, or every other college where adult education has been introduced. There are 19 centres within agricultural colleges, 11 within the schools of law, 14 within the colleges of machine construction engineering, 18 within the schools of the economics, and so forth. The number of students attending lectures in these centres is approximately 6,000.

In dependence of the kind of aid given to students, these centres, as educational institutions, mainly organize lectures, classes and laboratory work on a regular basis. These lectures mainly comply with educational programmes for all or certain subjects studied at the chosen college, or at educational centres where the regular study programme relates to the most important and the most difficult leasons in a subject during special review lectures. Occasionally, they are also consultative centres.

Judging by their organization, educational centres are either linked with a given college as one of its separate departments, irrespective of the fact that the founders are sometimes the commune or economic enterprises or workers' universities, or they may be set up as independent institutions, completely separated from the university, and exist as an establishment of various economic enterprises, communes, social organizations of workers' universities. Some centres are founded under a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contract concluded between the commune or an enterprise on the one hand, and the university on the other, while others are formed following a decision of an enterprise or the commune and consent given by the college concerned beforehand. There are some joint centres formed by two similar colleges, such as the colleges of machine construction engineering and electric engineering.

Apart from centres of a so-called open type to which all part time university students are admitted if they are enrolled at the main college in a determined territory, there also exist educational centres of a so-called semi-open type, and centres with restricted enrolment. All part time students at the main college in whose territory a centre of this kind exists, are admitted to centres of open enrolment. To semi-open centres which are set up in certain economic enterprises, those students alone are admitted who come from particular enterprises, while centres with restricted enrolment are formed and financed by individual enterprises, and their workers alone can be admitted to those centres as students.

The financing of these various centres is also different. Enterprises, communes or students themselves pay either completely or partly for their maintenance costs. For instance, the commune finds a place or premises for lectures, the students pay for financial expenses, or their institution or enterprise where they are employed, while the lecturers are paid by the college Some centres on the other hand are sustained by workers' universities or colleges themselves. Financially, a majority of these centres are completely independent from the colleges.

In addition to educational centres for part time students, special afternoon or evening classes exist known as "concentrated" education, "parallel" studies, evening classes, correspondence courses, etc., depending on the methods of organization.

Brief seminars are also organized one or more times annually for part time university students who are not enrolled in courses of adult education at colleges or educational centres.

At many university colleges lectures are held throughout the year on Sunday afternoons for part time students when the most difficult sessions on various subject-matters are reviewed. During the summer vacation, summer terms of one or two months duration are also organised by the colleges concerned.

At workers' universities as well as within the associations of engineers, physicians, economists, jurists, etc., lectures are held for part time university students, but they are optional.

About three-fourths of special students attending higher schools of applied sciences have systematic parallel lectures or classes, either at the colleges or at the educational centres.

In view of the broad scope of full time and part time studies at a majority of universities and a series of measures which university colleges had to introduce to help part time students, special services have been established in many colleges for part time adult education at university level. The task of these services consists of organizing studies at educational centres, of preparing special educational programmes and plans, of issuing special lecture note books, of organizing correspondence courses, etc.

At universities and colleges various services have also been formed to inform part time students on examination terms, to supply lecture note books and other materials required for examinations. Thus, part time students need not travel so often from their places of residence to the colleges which they attend for such information.

As a result of all these opportunities, during the 1960-61 school year, the number of special students enrolled at universities rose to 27.46 per cent as compared with 16.33 per cent in 1959-60 of the total number of students enrolled as regular or part time.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

Reviews and notices of books in Gujrati :

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review*. should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

BHARATIYA JATIYATA 'O' ANTA-RAJATIKATA EBONG RABINDRANATH (*Evolution of Nationalism and Internationalism in India and Rabindranath*) : *By Nepal Mapumdar, D/Demy 8vo Pp. 553, Vidyodyaya Library, Calcutta, Price Rs. 10.*

This is the first of a projected two-volume compendium by the author intended to historically and chrnologically record the evolution of the spirit of nationalism in India, its eventual trends towards a broader international outlook and, in these perspectives, to trace the development and evolution of these ideas in Rabindranath. The period covered by the volume under review begins with the consolidation of British power over India during the early decades of the nineteenth century, until the close of the First World War.

The importance and value of such a work recording essential material for the future historian of the country to work upon can never be sufficiently emphasized. The relation of the Tagore family generally, and especially of Rabindranath with the gradual evolution and growth of nationalistic India into an important and significant international entity and force is deep and abiding, a fact which although generally known and appreciated, has never before been scientifically analysed and assessed. The efforts of the present author towards such an end is not merely praiseworthy but is of especially valuable moment at this particular juncture in our national history when the whole country and her people visibly seem to have been increasingly trending towards internecine separatisms and fissiparousness and the existence of the nation itself would seem to be at stake and likely to founder upon the shoals of parochialism, communalism and other narrowing forces of disintegration and dissolution.

The significance of such a study would also seem to have valuable lessons for the world at large. The nacsent internationalism to which the lessons of the First World War gave its birth and which, through the wider affiliations of the United Nations organization should legitimately have found increasingly robust nourishment since the end of the last great War, would seem to be increasingly proceeding at a fast pace towards the precipitious brinks of annihilation by a violent but obviously suicidal ideological cleavage dividing the whole world into two warring and irreconcilable camps. But a sense of internationalism alone may not be enough to save the world from its own suicidal follies unless it may find ultimate consummation in the universal. It is this spirit of universalism, not merely the somewhat negative aspects of internationalism which enabled the poet to visualize the whole human race as an integrated whole. It is such a vision that the world needs today to save itself from the follies of cutting its own throat.

Man, nor ideas, are not just an accident in point of time but is the product of aeons of preparation and evolution. Rabindranath, likewise, was essentially a product of not merely the heritage of this forbears but also, to a certain extent of his times. It is, perhaps, true of all men and for all times, but it is given only to a select few to not merely take out of his forbears and of his own times the essentials of his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

spiritual and material sustenance as all of us do, but also give back a hundredfold to his compeers and to posterity. Such men are the true makers of history and of these Rabindranath was undoubtedly one of the most outstanding ones of all times in recorded history. He was born with a spirit of self-respecting sense of nationalism, a heritage from his parents and his elders in the family. It found vigorous expression, although significantly distinctive in character and composition, during his youth when the country was passing through the birth pangs of nascent nationalism. For his nattionalism, even in those early days of the evolution of the idea in this country was not the familiar negative concept in common acceptation, that of, first association of Indians in the rule of his own country alongside of their British masters and, later, of the wholesale liquidation and independence of British political domination over the country. His was the far more robust and stronger sense of nationalism which seeks fulfilment within itself in self-growth, self-reliance and self-determination, not confined to a particular strata or section of the community alone, but permeanting the entire people irrespective of rank or condition of life and living. The concept of Rabindranath's *Swadeshi Samaj*, perhaps one of the causes ot his eventual estrangement from the school of active politicians in the country of those times, was a vigorously creative one and which, in a sense, provides the jumping off ground for his many later constructive experiments.

A creative genius like the poet could never keep himself within the confining bounds of what, for lack of a more adequately expressive vocabulary one might describe as 'territorial nationalism.' Thus even before 1910, when Lord Morley in his celebrated *Recollections* declared that patriotism was the last word in human political evolution, the glimmerings of a vision transceding all national borders and racial boundaries were already apparent in the Poet and began to find expression in his writings and statements. These were, perhaps, the early beginnings of that broad universalism embracing within its ambit the entire human race, which later found such vigorous and fearless expression in his later writings and work.

It is not possible to confine within the narrow confines of a review all that signify in this connection just as it was obviously not easy for the auther to deal as far adequately as, perhaps, he would have liked to have done, with this vast subject matter of his study. He has attempted to be as far objective as one possibly could in the circumstances and the result has been not merely been a pleasing one, but also a disinctly profitable one. One wishes however, that the chronoliogical arrangement of his materials were done a little more consistently than, apparently, it has been done which would distinctly add to the value and the evolutionary qualities of the discussion he has undertaken in the volume.

I wish also that the author were a little more careful in the compilation of his opening chapter (Purbavash). Although a great deal of very valuable and so far rather widely dispersed and difficult-to-get-at material has been packed into this chapter, their collation leave a great deal to be desired. Especially, the author's reading of the history of the birth and evolution of the neo-industrial civilization in the West has not, always, been quite accurate and, especially where he has endeavoured to put down his own interpretations on events in this connection, the result has not always been very happy. His rather hurried review of the early nineteenth century renaissance in India, especially Bengal, appears also to have been too summary and to have ignored vital factors of our later growth.

But, as already indicated, the book is a happy composition of immensely significant material to the serious student of the history of our own national growth and evolution and may provide valuable guidance for eking out our legitimate future paths of progress.

KARUNA K. NANDI

A YANKEE AND THE SWAMIS: *By John Yale. Published by George Allen & Unwin Ld., Museum Street, London. First published in 1961. Price 25s. net.*

The author has been essaying to be a monk at the Hollywood branch of the Ramkrishna Order of India for the last ten years. He has another name beside the one printed on the title page of the book under review and that name is *Brahmachari Prem Chaitanya.*

Before he came in contact with the Vedanta Society of Southern California, he was living a satisfying and comfortable "worldly" life. After college John Allen went into the publishing business in Chicago and made quite a good professional and financial success which allowed him to taste many of the so-called good things of life. But when he entered his thirties, Allen began to feel inside himself some crippling lack. A sadness occupied him. He asked himself "Is this all?" After some 'inner' searches—he found out that what he really wanted and longed for was to be religious. But he did not know where to find the "religion" and faith which would be compatible to his needs. The religion of his early years seemed childish now.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Allen was in New York in 1947-48, on a business trip. The interior crisis had far advanced. He went to a bookstore and bought an English translation of the *Gita*, made by Swami Prabhavananda assisted by Christoper Isherwood and Aldom Huxley. He finished the book without putting it down. In a curious way he felt as though the message of the *Gita* were capable of awakening the happy condition of pure faith he had formerly enjoyed as a child ; hence healing the psychic breach which the emergence of discrimination had caused.

And then the miracle happend. Allen sold his share of business and moved to California and met the translator of the *Gita* at the Vedanta Society in Hollywood. He told Swami Prabhavananda his troubles and his hope for a new pattern of behaviour that would satisfy his heart and head. In the spring of 1950, Allen was allowed to enter the organisation as a monastic probationer.

Allen visited India in 1952-53, with the idea of taking a critical look at renascent Hinduism. On his way to India, he visited all the Vedanta Societies in the United States, England and France.

In India he had been to many Ramkrishna Maths and met scores of Swamis and Brahmacharis. He had made the acquaintance of juniors who were struggling to get established in a life of religion. He had touched the feet and talked with seniors of the Order, men of high levels of spiritual attainment. As a pilgrim he gained the *darshan* of many of India's sacred spots and temples. He had walked in the footsteps, had stood on the stages where their *lilas* occured—of many saints. Gradually he felt an acquaintance growing in him Ramkrishna and Holy Mother and Ramkrishna's disciples. 'Dakhineshwar' turned him into a *bhakta*, a serious spiritual seeker.

The book is a graphic record of the American Brahmachari's pilgrimage to the age-old holy places of India and his special study of the Ramkrishna Order and movement. Since the outlook and practices of the Ramkrishna Order deeply reflect its India Origin, Allen as a member of the Order, felt 'it very essential to see Ramkrishna's land of birth. India, first hand and hence his pilgrimage to India. In India he lived in various Maths of the order sharing the daily life of the Vedanta Swami's. All these have been vividly recorded in the book.

The travel story of the Yankee has been told with reverence, humour and candour. The book is something more. It is an interesting souvenir which adds a great deal to the contemporary knowledge of an important work and trend. The book will be found interesting to all readers, specially the Western ones, who will gain a fair knowledge of Vedanta's spirit and the Ramkrishna Order and its working, which has been given in minute details. The description of the home of the Ramkrishna Order—the Belur Math and the birth place of Ramkrishna—Kamarpukur, will be found specially interesting. Some rare and beautiful plates have added to the value of this book.

Flunkeyism Or Emotional Integration ?

Writing in the *Indian Libertarian* of October, 1, 1952, under the above caption Shri M. N. Tholal observes :

It is a sign of our slavish mentality and undemocratic spirit that we accept unquestioningly the most foolish of dogmas from our leaders who have by hook of crook—generally the latter—succeeded in making a name for themselves. We all know how Gandhi became a magician by fasting and wearing the loin cloth, and faith in Gandhi became an article of faith with most Congressmen. Even cynics like me who had been scoffing at the Mahatma's powers as a magician for decades had to admit them when he produced Pakistan, out of his hat, as it were, for I had never heard of a magician producing anything more than a rabbit out of his hat.

Pakistan was really born of emotional integration, the means being advocacy of the Khilafat movement, which was a sort of flattery of the Muslims. At the bottom of it was the conviction that flattery can achieve anything. The Mahatma went all out to flatter the Mussalmans. At almost every meeting that he addressed he reminded them that they were eighty millions, impyling thereby the ease with which they could fulfil their desires. And they started fulfilling the same soon enough with the Moplah rebellion.

We all know the great emotional integration that the country witnessed between the Ali Brothers on the one hand and the Mahatma, on the other. It was a marriage between Muslim fanaticism and Hindu tolerance, and we know the result. The Ali Brothers at least demanded that disputes between Muslims and Hindus in the Frontier Province should be settled according to the Shariat (Muslim law). And did it lie in the mouth of an advocate of the Khilafat to say "No" ? But Gandhi said 'No' and the more intelligent of the Ali Brothers, Maulana Mohammad Ali, forthwith began talking of the need of a Fourth Battle of Panipat to decide the fate of the Country and who was to rule over it—Hindus or Muslims.

Saprus and Sastris and Jinnahs who condemned the Khilafat movement in private—for who could in those days condemn it publicly ? —became traitors to their country almost overnight. And Congressmen themselves felt to ashamed of the Khilafat movement after supporting it for all they were worth, that they never mentioned it in their speeches or writings even in private talk, although it was the most successful movement started by their wonderful leader. Chancing to meet the compiler of a book on the savings and writings of Mahatma Gandhi, I asked him why he omitted all that Gandhi said or wrote on the Khilafat issue. He said the leader who wrote the foreword had asked him to omit all references to the Khilafat. The foreword was written by Dr. Rajendra Prasad. The emotional integration of the time reminded one of the proverb : "Marry in haste, repent at leisure."

Mahatma Gandhi practised emotional integration for long before he became known as a Mahatma, and that emotional integration had a good deal to do with the title that his countrymen conferred on him. The first victim was no less a person than Gopal Krishna Gokhale, who referred to Gandhi at the Lahore Congress in 1914 as one who gave evidence of 'the highest watermark of Indian humanity" When Gokhale was a guest of Gandhi in South Africa, the latter used to clean himself the pots of Gokhale's lavatory. The crowd at the Lahore Congress rose to its feet and gave Gandhi a standing ovation. When Gandhi met the Viceroy after the start of the Second World War he literally broke down (hysterically or histriically ?) at the thought of London being bombed and the Viceroy had to support him. That was also emotional integration of a sort, though it did not prevent him from starting the "Quit India" movement three years later. Gandhi did not seem to have realised that the Viceroy had practically no hand in the shaping of British Government policy towards India.

Jawharlal Nehru, as a close associate of Gandhi, saw the latter's emotional integration at work and also knew from personal experience, as the only son of a flourishing lawyer, how emotional integration all round him, practised unwittingly by the members of the family as well as by all those who came in contact with him worked on his emotional soul. The foibles of the great become dogmas of uncritical or selfish minds. Not long ago we saw how a mere suggestion of "zonal councils" by him began to be repeated all over the country until he had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

himself to ask, "what if they gang up against one another ?" Emotion is indeed a poor guide, as every one knows, and none knows it better than the emotional man or woman for no other type is fooled more easily. But he has been brought up in the school of emotion, although his own father was a hard-headed man who knew how to keep his emotions under control. Indeed, it can be said of the highly emotional that they never live and learn, and to this type belongs our great Prime Minister ! We are seeing it now and we shall see more and more of it hereafter.

In his own writings, particularly the books, Nehru gives us some examples of emotional integration. Compare, for example, the references in *Autobiography* and *The Discovery of India* to the fanatics, Maulana Mohammed Ali and Sir Mohammad Iqbal, and the slighting references to that noble patriot, Srinivas Sastri, when the only problem in India was and has been the communal problem. I shall be suprised if in literature anywhere else there is such incitement to bigotry as in Iqbal's poems and yet that man is referred to by Nehru in his *Discovery of India*, as turning "more and more towards Socialism during his last years". It is true that Iqbal had praised Nehru highly once. But is mutual praise the basis of emotional integration ? Can it work in politics ? Has it worked in India or anywhere else on a national scale ?

Our Prime Minister has tried the mantram of emotional integration on the Chinese Premier Chou En-lai. At the Bandung Conference he did every thing he could to please the Chinese Premier and made no secret of his pleasure at Chou's success. In India also he was at his courting best towards the Chinese Premier and once publicly hoped Chou would agree to talk. With what resuit ? He forgot like Gandhi that Chou En-lai does not frame China's policies and even if he is willing to oblige Mr. Nehru he would find himself helpless. Gandhi danced attendance on Jinnah for 14 days twice a day . To what end ? Only to upgrade Jinnah. There is no generosity in politics. And it is this proved political maxim that Mr. Nehru is out to disprove with his emotional integration. He can go on trying at the country's cost.

Cart Before the Horse

Emotional integration boils down in practice to ingratiation. It does not always succeed even in personal relations. In political relations where policies are thought out by a number of persons, the likelihood of its success is nil. In no country except India do policies depend on the moods and fancies of one man, not even in Soviet Russia. Nehru's attempt at emotional integration with Soviet Russia has brought forth no results so far. It was being said that Russia had advised China not to advance in the NEFA area. That also has been proved to be false or fruitless, and our hopes have been belied. But hope springs eternal in the human breast and the Communist Party in India continues receiving funds from the Russian employees in Russian projects in India falsifying the Indian Government's claim that it does not receive aid with strings.

Turning to the country, we find that the same foolish integration is sought to be foisted on the country without anyone understanding what it is and how it will work. It is some sort of mysterious process whose working even psychologists cannot understand. It has been taken for granted that emotional integration will work, because it has been discovered by Jawaharlal Nehru, just as it was taken for granted that non-violence will work, because it was discovered by Gandhi. "Are you wiser than Gandhi ?" Was the question when he was alive. The question now is, "Are you wiser than Nehru ?"—with addition : "There must be something in it when a man of the stature of Nehru approves of it". Of course, there is. Disaster for the country lies embedded in it, just as it lay in non-violence. Nehru in his *Autobiography* accused Gandhi of reducing others to mental pulp. What is he doing himself ? Gandhi had at least men of intellect like C. R. and Sardar Patel to advise him to the end. Who is there to dare advise Nehru ? Not a soul. So the Mantram of emotional integration is being chanted from one end of the country to the other and even an Emotional Integration Committee was appointed to devise ways and means of developing emotional integration. When the cart is thus put before the horse, what can horse do, even if he is Sampurnanand or an Asoke Mehta ?

It is not being suggested that emotion has no place in politics. But it is the bud, not the flower, and seldom is it of any value until it expands into a flower. More truly, it is the soil in which thought is steeped and which lends to thought its tone and power. Emotion turning back on itself has an element of madness; leading to thought it provides the basis of morality. Our constitution provides the quintessence for emotional and national integration, with its emphasis on justice which demands equality. Emotional integration is there in the Preamble in which the people of India solemnly resolved to constitute India into a sovereign democratic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repubic to secure to all its citizens justice, social, economic and political, liberty of thought expression, belief, faith and worship, equality of status and of opportunity, and to promote among them all fraternity, assuring the dignity of the individual and the unity of the nation.

But when the Prime Minister himself forgets the Preamble to the Constitution, particularly its clause relating to equality of status and of opportunity, enabling many a Kashmiri Pandit to declare in private that he belongs to the ruling race, the result may be more emotional integration so far as the Kashmiri Pandits are concerned, but is likely to lead to emotional disintegration so far as the rest of the population is concerned. A revealing piece of research for anyone to undertake would be the number of Kashmiri Pandits appointed as High Court Judges in U.P., the percentage among them paying income-tax on their earnings before their appointment as High Court Judges and their percentage among advocates in the State. Of course their fair complexion is an additional qualification for appointment outside India in embassies. But what about equality of opportunity guaranteed in the Constitution? A few thousand Kashmiri Pandits in Kashmir may be said to be determining the foreign policy of the land and endangering its democratic existence, but over a million Tamils in Ceylon can be brushed aside as irrelevant. The need to talk of emotional integration is indeed great.

It all depends on what you want. If you want the lap-dog variety, you are bound to see emotional integration in practice, and if you are a literary man, you are likely to know what it is and give it a name. But the democratic Constitution of India does not envisage a lap-dog breed, and Mr. Nehru should know that he is not quite loyal to the Constitution in his desires and practices. There was a time when Nehru was the one man in India on whose lips the word "ideological" was found more frequently tnah any other word. He was then found saying: "I'll be damned for ever if I do anything to help the Axis cause" and "I'll fight Japan sword in hand". There was a good deal of sense in it, though his quest for leadership did not prevent him from joining the Quit India" movement tand betraying his cause. But what sense is there is emotional integration, the tphemeral nature of whose basis—emotion—is well-known? All that is needed is the preaching and practice of the Preamble to our Constituion, which rules out Hindi as the national official language because it will be manifestly unfair to non-Hindi-speaking people who will never be able to compete with Hindi-speaking people in proficiency in the language.

Surely, Mr. Nehru knows that the people of India do not appreciate the beauty of the principles embodied in the Preamble to our Constitution and knows too that they did find place there haphardly. Why then has no attempt been made to popularize them? That is the only sort of education the people need, including their leaders like Nehru and it should not be beyond the means of the Government of India to provide it. His great father, Motial Nehru, belonged to an age when democracy was neither really sought nor understood in India. But he was a true democrat in his life. When he was addressing a meeting once in U.P. a man cried "Question!" "Who dare question me?" roared the odl lion. "I do," said his son, raising his hand, and there was a burst of laughter. (He had only one son, who is now our Prime Minister.) Had the son been the father and the father the son, that one word "question" would have done irreparable damage to the relations between the two. Knowing both I have no doubt about it. But it had no effect on Motilal even as my sallies at Gandhi during my talks with him made no difference to our relationship or his admiration for me which started with my career on his daily, "The Independent". Indeed, I have a shrewd suspicion that he liked me all the more for those sallies.

Patriotism, it has been said, is the vital condition of national permanence. To the public good, Milton said, private respects must yield. Where they do not and where patriotism is lacking, national existence is in danger and the facade of emotional integration commodities cannot safeguard it. To quote Jawaharlal Nehru himself from his *Autobiography*: "We cannot take refuge in vague and emotional phrases, but must face . . . . facts and adapt ourselves to them, so that we may become the subjects of history, instead of being its helpless objects."

Aims of Nasser

Writing in the *U.A.R.* News of September, 962, President Gamel Abdel Nasser speaks of s aims thus :

Perhaps ten years (since the Egyptian re-olution) is a good milestone at which to look ck along the road we have travelled and to nsider the way forward. *All the basic aims and liefs that I set out in my "Philosophy of the volution" remain the same. In many cases, how-er, there is no point in trying to rush them.*

In my short book I told of the three circles which we were involved—*Pan-Arabism, Muslim -operation and African solidarity.* There is clash here of any kind. First and foremost, are an Arab nation and, therefore, Arab ity is uppermost in our minds. The vast jority of the population are Muslim, so any-ing affecting the Muslim world automatically comes our concern. Even if we wished, it is possible for us to escape from Africa. We part of the African continent and the Nile, very essence of our being, rises in the heart that continent.

This natural interest in these three different rlds does not mean that we are seeking poli-al integration. It does mean that we are king close co-operation.

Arab unity is our prime concern. It is vious that complete political unity or even deration of the Arab States will not be achieved the immediate future. What we are seeking st is a unity of thought among all the Arab ples, so that eventually unity can be brought out by the spontaneous will of the people.

Intense Pressures

Each country—and they range from the dal society to the modern Socialist State—st be allowed to find its own pace for deve-ment. The frequent turbulence and upsets in Middle East, however, are all traceable to fact that this development cannot come wly over centuries as it did in Western rope. Today the ideological pressure are ense. Television and radio battle continu-ly for the control of man's minds across a tinent. *In Egypt, we have had to do in ten rs what has only been accomplished in ain in more than 300.*

Complete unity between countries at such erent stages of development is not only ficult, it is impossible. The political unity ween Egypt and Syria, which has been bro-n for the moment, was effected in 1958 against ge difficulties.

When I was approached by representatives the Syrian Army, I said quite frankly that did not believe we were ready for unity. I gested that we should spend five years pre-paring for full political unity; we should start economic and social co-operation and integrate the two States completely only when they had both reached the same stage of development. They insisted that there was no time for this. Unity had to be put into effect immediately or the country would be in danger.

In the event, I was proved right. Too many things were against us. Reactionary interests brought all their power into play and this, combined with the geographical barrier, proved decisive.

Some of our enemies have acclaimed the break-up as a defeat for our regime and a complete failure. I do not agree. Although the political union broke up, much was accomplished. *Today there is considerable unity of thought between the peoples of the two countries, as was shown from the recent revolt.*

In the Arab world we have one language and one history. It is inconceivable that, one day, we shall not be united.

Our interest in Africa and in the whole Muslim world does not mean that we are interested in political unity in these cases. I do not believe that integration with any of the African nations is that easy. *We are particularly anxious, however, to co-operate with those nations on the African continent with whom we have so much in common. Geographically we stand at the gateway to Africa. We cannot escape our destiny.*

I have often been asked whether I believe that a totalitarian Government is necessary in the formative period of independence of under-developed countries. It depends what you mean by a "totalitarian." Certainly the normal Western idea of democracy is not immediately applicable in countires where the freedom to vote, although one of the most important and basic freedoms, has little meaning for a large proportion of the population. The vote means little or nothing to a hugry man.

This was certainly the case in Egypt in 1952. If a Western-style democracy had been set up immediately after the coup in July 1952, exactly the same kind of decadent and corrupt Government that we had removed would have been elected. All the power rested in the hands of one privileged class.

The first essential was to break down the class barriers, redistribute the wealth of the country in a more equitable way, and restore to the average Egyptian such basic freedoms as the freedom to work, to eat, and to own his own land. Freedom to protection for himself and his family, and a right to participate in the wealth and control of the nation, are all freedoms that helped restore to him the pride and personal dignity which is every human being's right.

Political parties are banned in Egypt at the moment, because I was determined that our measures to improve the lot of the great mass of the people should be put through without opposition or sabotage. I do not know when they will again have a place in the life of the nation. We are in the process of creating a new constitution which will eventually lay the foundation for a fully elected Parliament, on a constituency basis, I am determined that everyone shall have a voice, and be able to judge every national issue on its own merits. No one will be tied at this stage to the narrow confines of party doctrine.

I have an open mind about the future, but I am determined that there shall be no dictatorship of any kind. We have destroyed the former dictatorship of the upper classes. I am just as determined that the country shall not fall victim to a dictatorship of the proletariat.

Population Rise

Our land reform policies, which have changed the face of Egypt, have frequently been made to appear vindictive and grasping in the overseas Press. The truth of the matter is rather different. We have reduced the maximum holding of any one person to 100 feddans (103.8 acres), which has enable thousands of fellahs to own their own land, whereas before they existed in economic servitude. Such was the size of the old estates that only 2,100 people in all have been affected by the reforms.

This does not mean that our problems are solved. Those that remain are immense. And while it is one thing to introduce the sweeping measures that we have done, it is quite another to make them work.

We are faced with a continuing rise in population, which is one of our most serious worries. Yet last year the population rose by 2.5 per cent, while the total national revenue rose by nearly 8 per cent. New methods have to be adopted for agricultural production, and the fellahs must be persuaded to combine their efforts for maximum efficiency. Enormous sums of money are required for the industrialisation of the country.

We have many problems, but I believe we are tackling them realistically. There is a sense of purpose now in a nation that is on the move and taking a pride in its achievements almost for the first time.

Our position in international affairs is, I believe, much more clearly understood now in the West. For many years both Britain and America were inclined to take the attitude that if you were not prepared to enter the Western bloc, then you must be a Communist sympathiser. For several years they found it difficult to believe there could be such a thing as a genuine neutral.

I believe that attitude has changed today, and the sincerity and genuine value of uncommitted nations in a world divided into two camps is appreciated. I believe that not only can we remain uncommitted to either East or West but that it is essential that we should do so.

Genuine neutrality does not mean remaining neutral on every important issue that comes up. It is impossible to kill a nation's conscience. It does mean judging each issue on its merits and speaking out without the restaints of commitments or pacts.

One problem remains outstanding not only for us but for all the countries of the Arab world, and that is the completely unacceptable position of Israel. *We cannot withdraw our demands that Israelis recognise in full the rights of their Arab citizens and restore their homes to the one million Arabs whom they have made homeless refugees in the aza strip. In these circumstances there can be no question of a negotiated peace with the Israelis, even if they were prepared to make some form of financil compensation. You cannot buy a man's home, you cannot purchase his soul or his basic human rights.*

Full Justice

One day the account will have to be settled and in full. I believe to achieve this we must build up the economy of the Arab world and the living standards of our people until we have reached a stage at which we can put such pressure on the Israelis as to make them understand the full justice of our stand.

The first ten years are now behind us. We are reaching a new stage of internal political development. Under the new constitution I intend that the people shall have the power to vote for their President. *I do not intend to be a life president.* Every world leader should have to answer to the people of his country.

In spite of world tensions I do not believe there will be a major world war. I am sure, through my conversations with Khrushchev, that the Russians do not want it.

We want to take the leadership of the Arab world not by military pressure or by threats, but by our example. I intend to prove that our ideas work for the benefit of the people.

I intend to continue to work, too, for a removal of suspicion and distrust in our relationships with all nations. I believe we shall succeed, we cannot afford to fail.

LET HIS INEXHAUSTIBLE ENERGY ACT AS AN IMPETUS TO US

If an example were needed to show what can be achieved through persistent application of hard work and patient research, I would point out the case of Sulekha Works Limited. From a very humble beginning, the concern has grown until it is now a big factory equipped with modern machinery. The ink produced by it is not inferior in quality to the best that foreign countries have to offer. The company has enabled us to save a considerable sum in foreign exchange. I have, therefore, great pleasure in sending my best wishes on the occasion of its Silver Jubilee for its continued prosperity.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place.....Like Tagore's the late Mr. Chatterjee's genius was essentially constructive....By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country.... No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students." —*Hindusthan Standard*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya.....The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated." —*Amrita Bazar Patrika*

THE MODERN REVIEW

DECEMBER 1962

VOL. CXII, No. 6 WHOLE No. 672

NOTES

The World

To us Indians the most crucial test in the sphere of world politics is that which is in the process of being tried out on the edges of the roof of the world at Ladakh in the North-West of India and at the North-Eastern Frontier Agency (NEFA) in the North-East. But to the rest of the world it was but a minor flare-up, which might or might not develop into a major conflagration—such is the effect of the cold war climate on the world. But the reaction of the Indian people to the treacherous stab in the back by China, and the nation-wide pulsation of patriotic fervour coupled with the stern resolution to fight and drive-out the aggressor from the Indian soil, cost what it may, has had its effect on the world.

There is a tense atmosphere now prevailing in South-East Asia as the issues of the present conflict may vitally affect many countries that are adjacent to the borders of the Chinese sphere of influence. China has realized that many of these countries have become apprehensive and, therefore, Mao Tse-tung and Chou En-Lai have mounted a peace offensive amongst all the non-aligned nations of Africa and Asia. There is a very cleverly masked attempt to antagonise these nations against India and agreements based on unmitigated lies and highly embellished half-truths are being forwarded to all the heads of the governments of these countries. This attempt has two clear objectives, firstly, to isolate India from the rest of the non-aligned Afro-Asian countries, secondly, to throw the weight of their opinion against India, regarding the question of acceptance of Chinese terms for cease-fire and the bilateral negotiations between China and India regarding a settlement of the frontiers.

Our Government has woken-up and has sent out two missions to Africa and South-East Asia, and is contemplating sending some more, in order to place the facts regarding the Chinese terms etc., in a proper light before the world. There is as yet a great deal of indecision in these non-aligned circles and Ceylon has called for a conference, at Colombo, of Afro-Asian countries.

The Chinese have taken a further 3,000 sq. miles of Indian territory in Ladakh, in addition to the 12,000 sq. miles they have taken piece-meal since 1957. The unprovoked and massive campaign of aggression launched by them on October 20 last has also gained for them about 3,000 sq. miles in the rugged areas of the NEFA. There has been a lull in the hostilities since November 21, when the Chinese unilaterally imposed a cease-fire on both fronts. There is a proposal for the withdrawal of the Chinese forces to some 20 kilometers behind what the Chinese term as the actual line of control on November 7, 1959, which our authorities consider as being indeterminate and illusory in view of the qualifying clauses that are put into the same proposals.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In any case it is an uneasy lull as now it is clear that no reliance whatsoever can be put on Chinese terms, assurances and talks. The main question now is when would the Chinese launch another offensive and what are their objectives? The view that prevailed in New Delhi previously was that the Chinese objective—for the time being—was Ladakh and that they would be prepared for bargaining on that basis. But there are doubts being expressed whether the limits of Chinese expansionist moves were limited to only Ladakh. The Chinese have been building roads from Western Tibet on to their main bases in Sinkiang, which is a Chinese province, and they wanted Ladakh in order to consolidate their hold over the conquered territory of Tibet.

We have to prepare for a long struggle. It is almost certain that if we weaken in our resolve, then there would be another—and a far more powerful—assault on our territories at a later time. Putting off the evil day would only mean asking for more humiliation and, perhaps, loss of freedom for a long period of time for large sections of our country and its peoples. The tempo of preparation must increase and not flag. There has been a lot of wishful thinking in some influential quarters here regarding the attitude of Moscow on this Indo-Chinese conflict. Pandit Nehru went so far as to say that the Soviets would fulfil all contracts regarding supplies of war materials made prior to the present Chinese aggression. There has also been a lot of speculation regarding the possible effects on Peking of the rifts between the two major Communist powers and its consequences. Indeed, some have seen evidences of these differences in the sudden unilateral pronouncement of a cease fire on the Indian Frontier, which the Chinese said would take effect—as would the withdrawal of their forces from the advanced positions from December 1—whether India agreed to the proposals or not.

In this connection the summing up of all visible effects of the "Rifts" and the conclusions drawn therefrom, as published in the international edition of the New York Times for November 11, are very cogent and we append below a long extract from the concluding portion:

To both Premier Khrushchev and Mao Tse-tung the situation each finds himself in appears to be a struggle on two fronts, one against his communist rival and the other against the capitalist world headed by the United States. Each fears the day may come when he will need the other for help in a general war between the Communist and Western capitalist nations.

However weak the ideological bond linking Moscow and Peking has become, it is still important because each side feels that an open break would cause serious damage to the naive faith of millions in each country. It would be very difficult for Mao Tse-tung, for example, to explain to his people that the Soviet Union, the home of Lenin and Stalin, is now actually anti-Marxist as Mao believes. Similarly, Premier Khrushchev is chary of administering the shock to the Soviet people that would result if he were to declare openly that the "brotherly Chinese people" are led by a group of anti-Marxist warmongers.

Finally, there are many countries where continued Soviet-Chinese political co-operation still serves the interests of both sides. This was true in Cuba before the recent crisis, and is still to be observed in many of the underdeveloped countries, particularly the newest African nations. In these countries it is mutually helpful to co-operate in projecting an image of Marxist friendship, strength, and desire to help.

For Premier Khrushchev the key foreign policy objective—now that the Cuba situation has eased—is still the conversion of West Berlin into a free city. He has hesitated for four years about bringing this issue to a showdown, but he is under intense pressure not only from the Chinese but also from the East Germans and perhaps also from some others in Czecho-slovakia and Rumania.

For Mr. Mao the primary conflicts with the West arise from the current fighting on the Indian border and from his continued inability to incorporate Taiwan into the China he rules. Less important, but not in-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

consequential, is Communist China's continued exclusion from the United Nations.

The Soviet Union endorses both Peking's right to rule Taiwan and its replacement of Nationalist China in the United Nations. On the Indo-Chinese conflict, Moscow has been caught in a very uncomfortable squeze because of its large investments in wooing India this past decade. Premier Khrushchev is trying to ride the latter storm by assuming a public posture of pro-Chinese neutrality, while pressing for a cease fire such as Peking would now like.

As would be gathered from the above, there would be little beyond remonstrances from the Soviets against the aggression, if the observations of the New York Times are correct.

Here in India there are only a few persons, outside the "indoctrinated" perverts with extra-territorial loyalties, who now believe in the possibility of the schism in the World's International Communism offesting the present struggle in any way that would be favourable to India, or that anything but the force of circumstances and the build-up of India's fighting strength would bring to a halt the forces of Chinese expansionism. The position was thus seen through the eyes of the observers of the **New York Times** about tree weeks after the Chinese assault began :

"India was being transformed to an extent the Chinese may have not anticipated when they struck. Illusions of years about China were shed —and Indians were looking with new eyes at Moscow ad the West as well."

"In relations with China, Mr. Nehru had leaned over backwards trying to settle Peking's border claims. To his own people he played down the extent of the Chinese incursions into the disputed areas long after they assumed threatening proporitons. But last week Mr. Nehru accused China of using the Hitlerite technique of the 'big lie.' Under the 'terrible shock' of the invasion, he said, 'the soul of India has awakened again."

"As for relations with Russia, India's view of their value was being adjusted—downward. For all their wooing of India, the Russians in India's desperate hour did not go beyond an unhappy neutrality. Mr. Nehru was keeping contacts with Moscow open last week. The Russians, he said yesterday, are living up to their commitments to sell India a dozen or so MIG jet fighters. But in Indian public opinion Moscow never stood lower."

"As for the West, its stock was never higher. The United States, in speedy response to an Indian request, was flying in small arms to help stem the invaders in the mountain passes of the north. A broad coordinated program of military aid to India was under discussion in Washington by the U.S., Britain and Canada. India was still a non-aligned country last week, but her emotions were turning West."

The view quoted above, which is substantially true now, began with the realization of the intelligentsia that this massive assault on our northern frontiers had totally altered the perpective in which our eyes were being oriented where Welt-Politik was concerned. We were now looking at the World from a totally different angle. Uptil now we were asked to take sides in quarrels started by others or to align ourselves with one or the other of the two groups of powers that were ranged on opposite sides in the cold war. We could pick and choose our stand in such matters and, placed as we were in the need of massive help for the rebuilding of our country's economy and to set the nation on the main track for welfare, progress and self-sufficiency, the choice of our leaders of the path of 'Peace and good will to all' which is another name for non-alignment, seemed to be correct—and adequate. It brought us not only long-term loans and substantial aid in technical know-how and machinery but allowed us to upgrade our economy without the drag of power politics with its consequent heavy drain on tine, energy and resources. Those who scoff at the progress made during the past 15 years forget the depths of economic and moral chaos into which we were plunged—willy nilly—during World War II. The poor were impoverished further while a large number of rapacious and unscrupulous adverturers, who were totally devoid of any humane instincts, came in possession of the major portion of the country's industry, commerce and economic power. The corruption that has permeated to the highest places today has come from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

those very sources of contamination and they are largely responsible for the serious shortcomings that have appeared in the working of our Plans.

But, of course, this should have been merely a pre-occupation and it can no longer be put forward as an excuse for the total neglect of our defences. The lapses and errors of omission and commission that are now being highlighted by the defeats in the present struggle are also throwing into prominent relief the aberrations and weaknesses of those whom we have. To put ill-clad and poorly armed soldiers to face an enemy whose might in numbers and warlike equipment was known to the World was not only an act of stupidity but was also neglect, heinous and inexcusable. But then, this is not the time for the reckoning of culpabilities.

Let us revert to the main theme. The perspective has changed now that we are involved in a mortal struggle that threatens all that we hold dear in our way of life. We have been caught unprepared by a powerful and ruthless foe whose rapacity and treachery know no limits where lust for power nad territory are concened. We are now in need of substantial aid in the form of armaments and materials essential for warfare and also in need of support and sympathy from all with whom we have been friends. It is now the time to test friendships and the test has been revealing in more way than one. We are plunged into the actual stream of adversity and perhaps a trained inlooker on the spot can analyse and assemble the facts of the situation better. This is how A. M. Rosenthal, the highly trained and skilled observor of the **New York Times** put it a few days before the cease-fire. After reviewing the background of Pandit Nehru's "combination of political morality and diplomatic back-room pragmatism" with skill, he summed up the reactions of, the attacked—that is ourselves—and that of the World that we called our friends. He sums up the results of the shock of this treacherous aggression by the Chinese to Pandit Nehru's philosophy and policies by saying that he still holds on to them. Then he goes on to say:

"But the belief of Nehru and of many around him that non-alignment remains India's best course is considerably less important than the fact that they also now realize that non-alignment of itself cannot protect India's freedom."

"To the Western mind, there may be a total inconsistency in India's refusal to give up non-alignment and her desperate attempts to arm herself, with the aid of the West, against one of the leaders of the Communist world. The fact is that more and more Indians see this inconsistency, too."

"But for the time being, all this seems to matter less than the fact that day by day Nehru is being forced, through public pressure and his own patriotism, to build up India against Communist China. For the West this, and not India's pledge of political allegiance, has been the real goal."

"Diplomatically, India remains non-aligned. But emotionally her people regard those countries that help India as allies and those that do not, not as enemies or, at best, turncoats. Nehru cannot deny his own past and his own philosophy. Communism is not the question, he says almost desperately ; Communism can be good and Communism can be bad."

"It would be comforting to believe that India's example had galvanized the rest of the non-aligned nations into appreciation of the reality of Communist power politics—comforting, but illusory.

"The Chinese Communists shattered the smugness of the non-aligned world. Tito reacted to Nehru's peril by weeks of silence ; Sukarno by permitting Indonesia's Communist Party to champion Peking ; Nasser by rushing about in search of a negotiating formula ; Nkrumah by brazenly castigating Britain for daring to come to the aid of a fellow member of the Commonwealth in time of danger."

"But the non-aligned world's confidence in itself—again, as seen from New Delhi—is gone now, drowned in non-aligned fearfulness stretching from Indonesia to Egypt, from Ghana to Yugoslavia.

"It is still the first chapter, but even now it can be foreseen that India's economy and military posture will be affected by the attack for years. The full impact on the minds, habits and treasury will naturally depend on whether India,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as she and her friends hope, can achieve a peace with honor relatively quickly.

"Perhaps the most important single fact is that the invasion has created the overpowering realization that it could happen again. Immunity has died."

"There is also some faint hope that the Chinese Communists will have succeeded in shaking India and Pakistan out of the state of political warfare that has sapped the energies and resources of both countries for a decade and a half."

"It is possible, even probable, that although the Chinese Communists chose to begin the confrontation, they have no desire to see it through to a climax now. It seems obvious that they would prefer to continue in stages, each to begin when Peking decides. Nor do the Indians have any desire for a final test for which they are not prepared.

"But neither Communist China nor India has powers of political magic. There is no army strong enough, no politician powerful enough, to wipe out an event of historical importance or its effect on the minds of nations and men."

The mind of the Indian nation is now set in a resolve to drive the enemy out, whatever the cost. And this resolve has been strngthened and our hearts comforted to a great extent by the genuine and generous offers of aid and sympathy from a number of friends, who have proved true in these tests, Britain and the U.S.A. being the most notable, though the response from many others have been no less warm in quality.

The rest of the World: There is not much to report since the tension has lifted from Cuba, after Premier Fidel Castro of Cuba agreed to return the jet bombers that the Soviets had given him. The naval blockade imposed by the U.S. around Cuba has been lifted as a consequence. The fear of air-strikes against Cuba air-fields and anti-air-craft batteries, that was threatened by the U.S. State Department if more reconnaissance planes were shot down—as was the U-2 on October 27—has also passed. The tension remains, of course, but it is not strained to the limit as before.

The U.N. General Assembly passed a resolution at the beginning of November against the Union of South Africa which might lead to its expulsion. The resolution was backed by the Afro-Asian bloc and it was passed by 67 votes for and 16 against with 23 absentious. It called upon U.N. members to apply economic sanctions and break off diplomatic relations with South Africa. The 16 nations that voted against the resolution were all Western nations who were of importance in international trade and they are not likely to abide by the call for economic sanctions. But all the same the resolution is of importance as expressing the U.N. General Assembly's condemnation of the "Apartherd" policy followed by the South African Government.

In Algeria the Communist Party has been banned. No reasons were given by the authorities, but it is known that it is a probable consequence of that party not accepting Premier Ben Bella's directive to merge itself in the F.L.N. The Communist group is a small one in Algeria and it did not play any significant part in Algeria's struggle for freedom—as can he easily surmised. But Mr. Ben Bella's main objective is said to be the establishment of one-Party rule in Algeria which, if true, would indicate a deviation from the democratic path.

The Cease-fire

There is an unilateral "cease-fire" in the Sino-Indian war on our northern areas. The reasons behind this cessation of the Chinese offensive are unknown to us—or rather a matter for speculation or conjecture, not only to us, but to the rest of the truly democratic world. The Chinese themselves have made the three-point proposal formulated by them and forwarded to us for acceptance, a three-pronged weapon for mounting a diplomatic offensive. These seemingly generous and peaceful proposals have been so artfully worded that they have made an impression on some countries and governments in Asia and Africa, particularly those who have been wooed by China and are more than inclined to be deceived by her guile. This diplomatic offensive has been substantially aided by the poor quality of our own diplomatic representatives, ambassadors, charge-des-affaires and counsels posted in these areas. As a result, special missions headed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by ministers assisted by high officials of the External Affairs Department have had to be sent to the U.A.R., and Ghana in Africa and to Burma, Indonesia, Cambodia and Ceylon in South-East Asia.

In passing it might be remarked that the "affairs" at the Ministry of External Affairs seem to have been almost as haphazardly carried on as in the Ministry of Defence—not by the officials but by those who are in supreme control. *The Statesman* carried the following news in regard to the Chinese manoeuvres in this field :

Apart from Mr. Chou En-lai's recent letter to 24 Afro-Asian Heads of State explaining the Chinese stand, the Chinese Government has written further letters to selected Afro-Asian Heads of State.

These sources said the Chinese Government had shown no inclination to accept any of the mediation proposals put forward by several of these Governments, but appeared detrmined to stick to its own position, hoping they would accept it.

In addition to writing to the Indonesian President, Mr. Chou En-lai has written another letter to President Nasser requesting him to continue his mediation efforts.

The Cairo weekly, *Rosal Youssef*, wrote on Monday : "Peking desires President Nasser to convince New Delhi to first accept China's cease-fire proposals and then hold talks over India's demands concerning the withdrawal of Chinese forces to their former positions."

A Chinese cultural delegation is arriving in Cairo shortly to start an extensive tour of some Arab and African countries and will presumably

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

attempt to propagate the Chinese version of the border dispute.

The delegation plans to wind up at Dar-es-Salaam (Tanganyika), where about 80 Afro-Asian delegations will be meeting for the third Afro-Asian Solidarity Conference from January 7 to 21.

A spokesman of the External Affairs Ministry told the Press at New Delhi on Nov. 25, that the Chinese proposal to withdraw to the "actual line of control as on November 7, 1959", instead of being "more just and fair than the Indian suggestion of withdrawal to the line held prior to September 8, 1962," was in reality a snare to deceive the unwary, as while using the expression "the line in actual control as on November 7,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1959" they also say that by this line of actual control they mean "the traditional customary line in the western and middle sectors" which again they interpret as the line they claimed in the 1960 maps, which is now in their occupation. The spokesman said :—

"A certain amount of confusion has been caused by the deceptive Chinese propaganda on the question of withdrawals of Chinese and Indian troops to what the Chinese call a line of actual control as on November 7, 1959. This is in contrast with the Government of India's position that if the Chinese professions of peace and peaceful settlement of differences are really genuine, let at least the *status quo* which obtained before September 8, 1962 when the Chinese committed fresh aggression in NEFA, be restored first.

"Those who do not understand the full significance of the Chinese proposal naturally ask why we cannot accept the earlier position as on November 7, 1959.

"The Chinese also say that the line of actual control as on November 7, 1959 is the same as they call the traditional and customary line in the western and middle sector. By a clever manipulation, the Chinese are attempting to project the line that they claim for the first time in the official meeting between the two sides in 1960, to be identical with the line of actual control which they have now established by massive attack.

"If in 1959 the Chinese had really wanted to go back to the position as it existed on November 7 1959, we would naturally have welcomed it.

"*But all this is mentioned by the Chinese Government for propaganda purposes, for the line of actual control today, is not the same line that existed on November 7, 1959.*

"If the position on November 7, was the same as today, why was it necessary for the Chinese to mount massive attacks to gain further Indian territory ? Actually if November 7, 1959, is taken as the date with reference to which the line of actual control is to be settled the position will be as stated by the Prime Minister in his letter of November 14, in which it was stated that,

"If the Chinese Government really mean what they say regarding the restoration of Nov. 7, 1959, positions of their forces in all sectors of the boundary, their withdrawals to those positions and the restoration of the positions of the Indian forces as they were prior to September 8, 1962, would by and large meet the problem of disengagement as there will be enough distances between the positions of the forces of the two sides to prevent risk of a clash. To put it concretely, in the Eastern Sector the Chinese forces will go back to the positions they held on November 7, 1959, that is they will be on the other side of the boundary along the Himalayan watershed which they first crossed on September 8, 1962. In the Central Sector the position will be the same, that is they will be to the north of the highest watershed ridge. In the Western Sector, the Chinese forces will go back to the positions they held on November 7, 1959, as given in the attached note, that is, along the line connecting their Spangur post, Khurnak Fort and Kongka La and then northwards to join the main Aksai Chin Road.

"In other words, this is the Peking government's usual method of causing confusion by perverting the meaning of words and by making statements which bear no relation to realities.

It was further stated by the spokesman that further clarification of certain portions of the proposals had been asked for from Peking and as soon as they arrived a full consideration of the proposal will be made then.

At the time of writing the reply to the letter asking for clarifications had been received in New Delhi.

But the why and wherefore of the proposals are as yet a mystery, as few outside the circle of Nations that have been beguiled by China's blandishments are inclined to accept it at its face value or to believe that China was motivated purely by peaceful and humane considerations in making these proposals.

There are speculations galore, as we have said before, and any guess is as good as any other at the present juncture, on the causes and objectives of this move.

Some think that this is part of a well-laid plan, in accordance with the strategy of piecemeal acquisition by aggression and peaceful absorption and consolidation of the fruits of aggression. According to this theory—which now prevails in New Delhi—a powerful thrust will come as soon as the Chinese forces are ready for starting another offensive. It is expected that the assaults will be over a larger front and on a major scale but, of course, no one outside the Chinese

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

command knows when and where. The ambiguities in the peace proposals are regarded as being part of the plan for extension of time.

Others are inclined to think that some hitches have occurred in the progress of the well-planned aggression, particularly with regard to the action of the fifth column inside India. It was known to all well-informed people that vast sums were being spent by the Chinese diplomats in India, through their agents in the major cities and the frontier areas of India and that they were keeping in close touch with the pro-Chinese group in the C.P.I. and some minor splinter groups of the so-called Leftists. Indeed, we thought that the well-planned and well-executed conflagration in Calcutta a shortwhile back, in which thirteen pairs of tram cars were set on fire in the twinking of an eye so to say, and burnt to ashes, was an exercise in the disruption of transport facilities by well-trained and well-equipped saboteurs of that very fifth column.

But despite all that, New Delhi remained unperturbed for, of course, they knew better !

Other hitches are also being speculated upon, such as those on transport across the Tibetan highlands, 32 of whose passes to and from China are snow-bound for winter ; disagreement with the Soviet authorities who are said to have taken a dim view of the Chinese aggression, etc. But even these speculations do not at all preclude a resumption of aggression on a massive scale at a later date.

Some support is being provided by the rage and fury of the Pakistanis over the turn of affairs after major offers of large-scale aid, in weapons, equipment and other essentials of warfare contingencies that have come from Britain, the U.S.A., and some other countries. There can be no doubt that Pakistan expected to get large pieces of Indian territory through this aggression of China on an India that was totally unprepared for aggression on such a scale—thanks to the aberrations of its Chief Executive—and that would be rendered totally helpless and an easy prey to the rapacity of a belligerent Pakistan, if no aid were forthcoming from the Western Powers. A secret pact over the division of Indian territory between China and Pakistan cannot be ruled out, if we closely analyse the action of the Pakistani authorities in trying to prevent any aid coming to India from outside. The Pakistani Press, which is under the thumb of the dictator's executive, has been on the rampage ever since China launched her campaign of aggression and it is difficult to believe—as Pandit Nehru and Sri Lalbahadur Shastri did—that all these paens of hate were being circulated against the wishes of President Ayub Khan, though it may be that the reaction of the Press exceeded instructions.

The *Canard* put forward by Pakistan's Minister for External Affairs, Mr. Mohammad Ali, in the Pakistan National Assembly on Nov. 23, and the resultant uproar, well illustrates our point. *The Statesman's* correspondent gave the following report :—

Opposition groups in the National Assembly today almost unanimously demanded immediate abrogation by Pakistan of her foreign defence treaties and an exit from the Commonwealth "because the West has betrayed the confidence reposed in her allies by Pakistan."

"The Government benches felt quite embarrassed at so unanimous a demand and found it difficult to make members understand the implications of such drastic action at this stage. The Treasury Benches' plan to proceed with the debate on the Sino-Indian conflict and the arms aid by Britain and the USA crumbled in the face of the Opposition attack. Numerically weak, it came out with a massive onslaught and successfully rendered futile all efforts of the Government to transact business.

Today's entire three-hour session was held in camera as the Ministerial Benches did not find it convenient to throw the galleries open to the Press, diplomats and the public. When the House adjourned for the day, Opposition members looked jubilant, while a feeling of disappointment and dejection could be read on the faces of the Ministers and their supporters.

"Yesterday the Treasury Benches made a good start but soon lost the initiative due to a lack of direction as to how the proceedings could be conducted to their advantage. As the House met this morning, Mr. Mohammad Ali, Minister for External Affairs, read out long texts of treaties with the Western bloc, including SEATO and CENTO and the treaty of mutual defence assistance allegedly negotiated between India and America 11 years ago. He had hardly finished reading the last mentioned document, when the House went into an uproar.

"According to the National Assembly members, most of whom volunteered information to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

impatient correspondents waiting outside, Mr. Abul Quasem, the Deputy Speaker, was the first to charge negligence and inefficiency on the part of the Foreign Office. He said Pakistan's foreign service officials in America did not even bother to buy a booklet containing the "secret" treaties which according to him was avaliable for a paltry sum of 10 cents. This was the beginning of the trouble. From then onward orderly discussion became impossible.

As the noisy scenes subsided for a while, Mr. Ali sought the House's consideration of the motion moved yesterday inviting a general debate on the situation arising out of the Sino-Indian conflict and arms supplies to India by Western countries."

"Sardar Bahadur Khan, leader of the Opposition group Muslim League, opposed consideration of the motion as it was not specific. He asserted that the Government should table a concrete motion so that the debate could serve a useful purpose. This again caused an uproar in the House, but finally the Government had to concede to the opposition with a promise to reconsider the motion and table a fresh one tomorrow.

The statement made by Mohammad Ali has been refuted by our External Affairs Ministry, but even without that refutation the fabrication was patent on the face of it. If here was a pact, why were our troops so ill-equipped with modern weapons? Of course, no mob—least of all a Pakistani mob—stops to think and the reaction evidently got out of hand as later processions, etc., were forbidden in Rawalpindi and at Karachi.

The Pakistani Press is still going all out in its campaign of lies and half-truths, in the proper rabble-raising style that is so characteristic of it. The latest fabrication is that of a tremendous concentration of Indian forces on—of all places —the East-Pak—Tripura border !

THE EDITOR

Military Unpreparedness

One can easily see that India's military unpreparedness had two clear-cut aspects. One was psychological and a direct product of the cult of non-violence and, therefore, disarmament, which the Congress adopted when they came into political power by peacefully accepting the British Plan of Partition of India in 1947. Ever since that day India had been carrying on a campaign which was anti-war and the Indian Government had been lending itself to be used by the world as an instrument for establishing peace between nations. With this outlook and the background of Gandhian non-violence, India's political leaders bsgan to forget the needs of national defence and the Indian Army, Navy and Air Force were allowed to deteriorate in man-power, equipment and that upto the last ounce fitness for meeting emergencies, which gave the forces their true might and ability to defend the country against any attacks from any quarters. The British Indian Army used to be in the dry and dreary North-Western Frontier of India all the time in ample numbers and kept up their ability to fight back the tribesmen who were ferocious and the children of the soil. No one ever thought that the tribesmen could by-pass the British Indian Army and capture Rawalpindi or Quetta, for, the soldiers who defended that frontier were just as tough and as well-acquainted with the terrain as were the tribesmen, *and they were better armed.* In the case of the North-Eastern frontier of India under the independent Congress managed Government, the soldiers of India were neither as fit and as well-informed about the terrain as the Chinese invaders of India; nor were they equally well armed and equipped. So, the Chinese came through almost to the plains of India and might have occupied one or two border towns in the plains if they had so desired. This was sure evidence of the deterioration that had set in our defence arrangements under the non-violent and peace-loving Congress *raj*. We do not know whether Pandit Nehru has set in motion the probe that he promised he would have carried out to discover "who done it." Even without a probe one can say in a general sort of way that the Congress outlok on defence had done it. Who now were the custodians and the repositories of that outlook? The answer is too well-known to be reproduced here.

The Government of India are now going abegging all over the world to obtain military aid and assistance. They are also getting some military alms from Britain and the U.S.A. This is the other and the material aspect of our military unpreparedness. How far this is wise and in keeping with our national self-respect is better known to our leaders than to ourselves. We feel small everytime, our Government goes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri
76371

out with the beggar's bowl. But, then, we are ordinary people with no diplomatic training or experience of high-level politics. Our economic planning has been partly carried out by begging and we are now well on the way to borrow from other nations to defend our territory. That these have been found necessary could not be cited as a proof of able management of the affairs of the nation. Yet, we do not see any signs of self-reproach among our leaders. They have landed the people of India in a grave situation by their negligence, inefficiency and lack of wisdom, but they are no whit abashed and continue to blow their own trumpets as if nothing condemnatory had happened. Only V. K. Krishna Menon has resigned. But there must have been many others whose common effort brought about this shameful state of affairs. The others continue in their various places repeating a newly concocted set of war cries of which they hardly know the dimensions and the true meaning. Certain types of people are the products of their own fundamental nature and character. No one can, for instance, teach a timidly surrendering type of person to become a ferocious fighter over-night. Most of the people who rule our destinies now are soft and timid by nature. They are not the sort of people who can help India to win in a life and death struggle. They will always try to get out of difficulties the easy way. Which is the way of dishonour and disgrace. We want men and women in our various councils, committees, etc., etc., who will know the real meaning of a war to the finish. Otherwise, we shall have yet another Kashmir in the NEFA. Negative approach by removing one or two persons or by arresting a few traitors is not the right way to win. Where are the men and women who are fighters to the bitter end by nature, by faith and by up bringing?

A. C.

Avoid Party Names

All political parties of India should make a supreme effort to win back our lost territory and self-respect. But they must not antagonise each other by declaring their effort and work as emanating from the Congress, the PSP, the Jan Sangh or the Swatantra Party as the case may be. War effort and war work must be non-party and purely national for two reasons. The first reason is that the Indian people, as such, do not belong to political parties in very large numbers. If all party members are counted they would total upto a very small percentage of the population of India. This percentage will not exceed 5 per cent. The other 95 per cent of the people are non-party, though many of them agree from time to time to believe this partymen or that for election purposes. We have been noticing that the political parties, particularly the Congress, are trying to take a lead, *as parties*, to make a war effort. This is wrong, as it might lead to squabbles and defeat the national purpose of our war effort. So that the Government should prohibit by law the use of political party names in connection with the more important branches of the war effort. These will includes Civil Defence by means of ARP and First Aid training, formation of Home Guard Units and organisations for raising funds. Indian people have responded quite well to the call of the motherland; but the Rs. 10 crores or 6,000 tolas of gold cannot be called all out giving. The number of persons appointed for ARP, First Aid, etc., are as yet insignificant. The general public have not come out in their millions to help in the work. This is due to the preponderance of Government servants, political partymen and their stooges in the various committees. Some political partymen and Government agents even speak slightingly of any efforts made by the general public, if such efforts have the nature of bringing together larger numbers of persons in different areas for an all out war effort. Actually such men slow down the war effort. The Nation as such must rise to a man and work for winning the war. This cannot happen if policemen, Government officers and political party leaders together with their supporters try to keep out members of the public from all recognised organisations for war work. Netaji Subhas Chandra Bose once said that if certain political parties tried to make a monopoly of winning freedom, that freedom would never be won. So that if the war is to be won on the basis of a total mobilisation of man-power and resources, the idea must be given up that this or that political party must be in the top positions everywhere. This is more true in view of the fact that political leaders are, generally speaking, not at all useful in making things effective, efficient and strong. If the officers in the Army, Navy and Air Force were taken from the ranks of political leaders the situation would have been far

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

worse. For bad leaders make their followers useless even if they were initially good. Good leaders on the other hand change weak men into heroes. It is, therefore, an unfortunate fact that just as the defencs arrangements have gone from bad to worse over the fifteen years of independence leading to the Chinese invasion of India due to bad leadership, now that the war has come to India, the war effort of India also is likely to be weakened by the selfish activities of the same leaders. This situation can improve only by removing political partymen from important positions and replacing them by non-partymen of outstanding ability and undoubted integrity. If this is done then the war-like peoples of India will soon send the Chinese back to China.

A. C.

Mortgaging National Assets

During the British Period of Indian history the natural resources of India in the shape of forests, forest products, minerals and wide tracts of land for raising cash crops like jute, tea and sugarcane were handed over to British concerns for commercial exploitation. This virtual gift of the nation's assets enabled the British to multiply their capital in India a thousand fold over a period of decades and much of the so-called British capital investments in India were merely the earnings of Britishers in India made by use of economic rights and privileges obtained through political connections. British political overlordship in India was by and large a facade for economic exploitation and the poverty of Indians towards the end of British period was only the reverse side of British affluence at home. When India became independent the lesson of political power being turned to cash was not forgotten and we got the permit, quota, licence *raj* which slowly began to create a new capitalism in India in which trades people and money-lenders dominated the landed aristocracy, Maharajas and superior landlords had to join hands with shop-keepers in order to live and all had to curry favour at *Durbars* in the manner of British Traders at the Court of Jehangir or Warren Hastings. Great fortunes were made by individuals within and outside the law and many foreigners joined in this "gold" rush in the role of suppliers, contractors, designers and erectors of the great plants and factories that sprouted all over India like mushrooms. All this has been going on without any increase of power as far as foreigners were concerned till the Chinese invasion of India set in. This exposed the vital weaknesses that had crept into the nation's life and shook the political leaders out of their attitude of complacency in the field of foreign relations and national defence. India had to look for help outside and she found it almost simultaneously with her discomfiture in her relations with the Chinese. Mighty foreign powers rushed into help India and poured their assistance into the empty arsenals of India. They did not ask to fix terms nor to gain any advantages. But they did come in and were received by India as friends. We all appreciate their generous gesture and are grateful for it. We only want to warn our leaders against depending too much on foreigners. Our economic plans have been very expensive on account of our dependance on foreigners and our military expenses will also mount up for the same reason. Our leaders are making it a habit to beg and borrow from foreigners and this is tantamount to pledging the country and it's resources *morally* if not factually to foreigners. History often repeats itself. Our past history of receiving foreign aid has never been of advantage to us. Rather we trace our two hundred years of bondage to foreigners to this easy going habit of allowing foreigners to help us. Let us not forget this and learn to be wise in foreign relations.

A. C.

Purges

The arrest of the pro-Chinese Communists under the Defence of India Rules has the nature of a social purge made necessary by the anti-social and treacherous activities of the pro-Chinese Communists of India. An examination of the lists published in newspapers will make it clear that the number of such persons has not been very large. But the fact that most of these persons are well educated and come from good families makes one feel surprised that such treachery towards the motherland can be harboured in minds that have been taught to think clearly and logically. A twisted outlook or, perhaps, hopes of personal political gain through change of regime, may explain why apparently idealistic persons can behave as enemies of their own people and side with foreign marauders. This sort of treachery has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been found to exist in many lands in different periods of history and religion has very often played a part in it. In India too in 1946-47 large masses of Indians acted in a totally treacherous manner towards their motherland and, eventually, forced its partition into two different States. Basic patriotism is often absent from Indian political thinking and parties have quite often acted in a manner prejudicial to the interests of the nation as a whole and of advantage only to the party. Castes, tribes, families, communities, etc., have also acted in this manner in which they have been peculiarly inspired by their limited loyalties rather than particularly in the wider and national sense of the term. The States of India, which had been created for the appeasement of linguistic, racial or other sectional interests, have also been a source of disunity and a cause of disintegration of true nationalism. All these forces, cliques, coteries, local interests and regional party loyalties have to be taken into consideration and dealt with fairly and firmly, if there is to be a single integrated India which will attract the loyalties of all groups and factions. This will require purges everywhere of those elements which will oppose the liquidation of their cliques. There are also large groups of enemy agents within the ranks of the various organised bodies that the governments of the States and the Centre have set up. One will have to consider very carefully whether all members of the different police forces, the administrative services and the mliitary personnel are totally free from the infection. In short, Pandit Nehru has allowed various dangerous cracks to develop in the walls of the great edifice that is India and he will have to work fast and unerringly **right now** to put things right. If he tries to muddle through this, he may not succeed.

A. C.

Civil Defences

Although the Chinese have declared a unilateral cease-fire and have agreed, unilaterally again, to go back to some vaguely demarcated position, for no logical reason, as from the 1st of December, the invasion of India by the Chinese remains a fact. This peculiar development has for the time being put the Indians in a position, in which they cannot fight nor agree to the fantastic proposals which the Chinese are making. In fact, as far as one can see what the Chinese are aiming at, one feels sure that the Chinese are trying to occupy a further stretch of Indian territory and eventually include that in Tibet by reason of past claims or present conquest. India, no doubt, will not agree to this and fighting will break out again after the Chinese intentions are clearly understood by all concerned. When that happens, India's civil defences, viz., Air Raid Precautions, Precautions against sabotage, false propaganda, sporadic risings by infiltrators or enemy agents, maintenance of law and order, protection of railways, bridges and important installations, arrangements for evacuation of women and children from danger zones, treatment of persons injured, fire fighting, etc., etc., will have to be fully organised. Upto now the governments of the Centre and the States are taking action in a none too vigorous fashion and the people of India are taking things easy. The general atmosphere pervading India is one of slow awakening to realities which are not very clearly understood. The idea that Government will arrange everything for the people and the people themselves will not be in any serious danger at any time or place is also present in some minds. What is really required is a much more vigorous response to the needs of the hour. Every man, woman and child will have to be made to understand the true meaning of a total war. The Home Guards or the State-arranged A.R.P. measures will not be able to cope with the situation, if war is brought into India's homes in all its ferocity and violence. It is, therefore, necessary to form area committees of men and women to which **all** must belong; and to teach everyone what he or she has to do in case of emergencies of different kinds. All householders, for instance, must learn to arrange to black out, to make glass windows and glass

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

attachments to furniture splinter-proof, to put up baffle wals or sand bag protection to ground-floor doors and windows, to take shelter in ground-floor rooms thus protested in the absence of anything safer, to have extra water tanks, buckets with water and earth, ladders, lengths of rope, fire extinguishers if possible, first aid kits, kerosene lamps, emergency rations and all other such equipments, as they are advised to have with them by the local authorities. Arrangements for evacuation of women, children, the aged and the sick should be made in time and keeping in mind the questions of transportation, routes and accommodation at the destinations. This work may become as difficult as organising a hundred **Kumbh Melas** all at once and the few officials who have been deputed to carry out the work may find the job too big for them. One will understand why we say that the entire populations of the probable target areas should be organised without any delay. The other towns and large villages which will perhaps not be the targets for air raids but will have to line up nevertheless for other needs should also be organised straight away. In any case what Major General Sardanand Singh said the other day about civil defence being a **national** effort rather than a limited official plan of action, should be understood by all clearly and to the remotest implication. We are all very glad the Government are setting up training centres for first aid, fire-fighting and rifle shooting; but we think some organisation is required to be set up which will be much more widespread and will include all Indians.

Regarding the industrial areas in India, the workers must be organised in a manner which will keep their morale intact and grant safety to their family members who may be now staying with them at their places of work. **Lateral evacuation** of workers' families, i.e., taking them to safer camps within 15 to 20 miles of the places of work of their bread winners, should be the right thing. For, if the workers' families went to far away places, the workers too, in many cases, will try to go with their families. The factories should arrange to black out, camouflage and build shelters for the safety of the persons actually at work. After working hours the shift men should be able to go to their families who will be within an hour's journey or so from the factories.

The whole nation should go in for physical training. A healthier and tougher nation will give a much better account of itself than masses of unfit and sickly people. This plan will improve attendance in factories and other places of work and soon provide a very large pool from which soldiers, transport workers, nurses, etc., etc., can be recruited. In short, the idea that the people can continue as before and the Government will win the war, is a totally wrong idea. Everybody must do as much as he or she can in order to **prepare the whole nation to march forward to victory.**

NEW YEAR'S SUBSCRIPTION TO "THE MODERN REVIEW"

Subscribers, whose subscriptions expire with the current December number, are requested to send the next year's subscription quoting their respective serial subscribing numbers early, by postal order or by money-order. Otherwise, unless countermanded, the January number will be sent to them by V.P.P.

Those who may happen to have sent their subscriptions immediately before the arrivval of the V.P.P., should refuse the V.P. packet, as fresh packets will be sent to them by ordinary book-post as soon as the money-order reaches this office.

Manager, "The Modern Review."

llocations for National Defence

Although it is not very surprising that the inion Government, in placing their supplemen-ry budget for additional allocations for defence xpediture, were unable to give any precise esti-nate of the expenditure that the country will be ventually called upon to provide for in this be-alf, there might have been a more careful asses-ent of developing needs and their approximate easure than is apparent. It is understandable at, immediately, the needs of defence, so far as ey are expected to be related to the urgent task f vacating Chinese aggression from Indian soil, ould have to very substantially depend upon number of imponderables.

It was not surprizing, therefore, that as mething of a first instalment of allocations to-ards these immediate needs, the Union Govern-ent should have asked for a supplementary ant of Rs. 100.4 crores comprising Rs. 95 crores account of additional defence expenditure and further Rs. 5.4 crores for other miscellaneous penditure on this account which, of course, e Lok Sabha has accorded without demur. Of ese Rs. 75 crores will be under "revenue" and s. 20 crores under "capital" raising the sub-tals for the current fiscal year to Rs. 418.37 ores and Rs. 52.63 crores respectively, and inging up the total defence expenditure during e year to Rs. 471 crores in all. This will raise e over-all budget deficit for the current year, iginally estimated at Rs. 88.84 crores to Rs. 9.24 crores. This, as already observed, is only rough first estimate and the possibility cannot e ruled out that the exigencies of a still fluid d potentially developing situation may cause fence expenditure during the present fiscal ar eventually to further substantially exceed esent assumptions.

In fact, the basic lessons of the currently ounted massive Chinese offensive against India ould tend, it would be reasonable to assume, to monstrate the sorry state of our defence orga-ation and the need to reinforce its basic ength to successfully deter and resist future ther aggressive designs upon the country from e present or other unpredictable directions. It ould, therefore, not be unreasonable to hope at the immediate needs of the present hour will ve set our Government to think as to the cessary extent and measure in which our de-ce potential should need to be organically ngthened so that it may be ready and able to adequately cover and meet the basic needs of the country's defences in all possible manner and means and against all possible eventualities. The time for implementing the possible results of such thinking may not be yet in the midst of our present preoccupations against the Chinese, but that a beginning should be made to ensure that the country's integrity will not be seriously threatened from any direction in the future, would seem to be an inescapable lesson of our present experiences.

Reverting to the immediately allocated supplementary grants for additional defence expenditure, it has already been seen that these will have the effect of raising over-all budget deficits for the current fiscal year to Rs. 189.24 crores. The Government, however, have not proposed any countervailing measures of new taxation to cover this additional burden upon their resources. It is possible that in view of the emergency need for the additional provision in this behalf, the Government had not yet had time to think out appropriate measures for raising necessary resources to cover the gap. It is also possible that not to have come forward yet with countervailing measures of taxation indicated the Government's anxiety to avoid hasty decisions in this matter with their possible further effects upon an already visibly demoralized stock-market in the country and their possible reactions, on the one hand, upon the capital market and, an equally sensitive factor, upon an already spiralling price level. A heavy deficit of the order of some Rs. 190 crores in the budget may, in itself, prove an intractable inflationary factor and further undermine an already not too stable prize pattern. But the fact that Government have already mobilized considerable resources for meeting additional war expenditure both by way of voluntary contributions to the National Defence Fund as well as by way of a new series of savings certificates, defence loans, premium prize bonds and gold bonds, may, in the measure they are able to mobilize the requisite funds, have the effect of reducing the deficit-gap if not wholly covering it. Moreover, the Union Government have already undertaken to reduce their expenditure on staff by 5 per cent immediately and by 10 to 20 per cent eventually and the State Governments advised to take like measures. Additionally, there is the fact of under-estimation of Central revenues of which we have had considerable experience during the two preceding budget years; but signs have not been wanting that the growth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of revenue during the current fiscal year had already been evincing tendencies of a somewhat reduced bouyancy and it may be unwise to depend on this factor as a reductant of deficits. There is, however, a somewhat substantial margin of favourable adjustments by way of slowing down outlays on some Plan Projects as well as economies on non-Plan expenditure of the Central Government, but it may be foolish to place too great a reliance on this factor as, while it may be quite possible to slow down outlays on some Plan Projects, outlays on some others calculated to have an immediate and urgent bearing upon defence production may even have to be immediately and more than correspondingly stepped up.

A factor with a measure of high potential of dislocation of current conditions is the apprehension that it may not be possible to hold the price level even at its present rather high altitude. Concerted attempts are, it has been claimed, being made by the Government and the business community together to avoid possible rocketting in this behalf and to assuage the apprehension that the high potential of deficit financing in the budget already indicated earlier may have the effect of further pressures on the price pattern. The Reserve Bank, it has been claimed, is maintaining a vigilant watch upon commercial banking with a view to prevent diversion of credit facilities to speculative and hoarding activities. It has been further asserted that if the people co-operate by substantial abstemiousness in non-essential expenditure and liberal contributions to defence savings, no great harm may eventuate to the economy as a result of the uncovered budget deficit.

An initiative by the country's business community, already widely commended, is the offer, made through the Federation of Indian Chambers of Commerce and Industry, that all Companies will continue to make certain specified contributions to the National Defence Fund comprising certain percentages of their profits or income and which is estimated, in the gross, to aggregate some Rs. 15 crores per annum. Commendable as this voluntary offer by the business community is, its gross value in terms of possible conrtibutions to the Defence Fund is only a pittance compared to even immediate needs and may not, it is feared, obviate the need for fresh and countervailing taxation measures. The most sensitive factor in the whole argument is the price level and, despite all the official and unofficial measures already taken, evidence is not lacking that prices of essential and primary consumer commodities have already been evincing a steady and relentless upward pressure. In the metropolis of Calcutta, where facilities for official vigilance and non-official pressures are naturally far greater than in the outlying districts, the price of rice during the last two to three weeks has already considerably gone up, not all of which can be conjured away by the complacent self-delusion that it is merely the normal price-rise usually experienced immediately preceding a new harvest.

Additional measures of taxation, therefore, would seem to be the inescapable demand of the present situation, not merely for covering the immediate deficit—large enough in itself—in the Budget, but also to cover further widening gaps that may eventuate with the progressive need for further future allocations for defence expenditure that, in view of our present low defence potentials and in spite of very generous measures of outside assistance, may have to be provided. A measure of somewhat long-term thinking on this question would seem to be an inevitably vital need and extreme caution and circumspection would be needed to devise the pattern upon which the possible new measures of taxation must be posited. The tendency of the Union Finance Ministry, which has been all too disastrously evident during the last several years now, to find short cuts to needed resources by way of excise imposts upon essential primary consumer commodities,—and which must be held to have been, in very large measure, responsible for bringing price levels up to their present high altitude out of all reasonable relation to the progress in the growth of the national product,—must be looked upon with the gravest apprehension and disfavour. Taxation measures must take into account not merely the ability of the sector of the tax-payer concerned to bear the additional burden without jeopardy to himself, but also that it does not offer invitations to the predatory profiteer to batten himself upon at the expense of the tax-payer, thus imposing correspondingly additional burdens upon him in excess of the Government's revenue demands. With our present taxation structure in the condition to which it has already been reduced, this will be no easy task and will, presumably, tax the ingenuity of the public finance experts to their uttermost. But the need to avoid the obvious pitfalls offered by easy short-cuts like the ones already described would seem to be equally inescapable.

RAILWAY ACCIDENTS IN INDIA

By S. K. DAS

The public have become nervous at the larger number of railway accidents that are occuring every year involving considerable loss of valuable human life and national property. The frequency with which one accident is found to follow the other may only lead one to the inescapable conclusion that the preventive measures taken so far are too inadequate and lack the dynamic imperative for achieving success. The failure to bring down the number of accidents remains a standing scandal which not only blights the railway administration, but the entire government machinery as well. The malaise has become too endemic to warrant any reasonable hope for a brighter future.

This problem which confronts the country as a standing challenge is admittedly a complicated one and is beset with various issues and difficulties. Whether the government of the country and the people possess the necessary ingenuity and foresight and are bold enough to muster sufficient courage to face the ordeal and come out with flying colours is difficult to foretell. Here is the anvil on which it would be tested how far the ideals of democracy have permeated the government and the people of the country and produced that irresistible urge and ardent spirit imperative for spurring the nation to fervid activity for the successful working of a democracy.

The proverbial explanation of sabotage advanced by the railway administration in a very large number of cases to wash their hands of the unsavoury business and shift the responsibility on to anti-social elements, and the requiescats thick with cliches that follow, provide poor consolation to the public, not to speak of those directly or indirectly affected. It is strange that the railways do not hesitate to stick to their pet theory of sabotage even where the report of the Forensic Laboratory and that of the police indicate otherwise. The public observe with regret that it is only where accidents occur as a result of head-on collision, or where one train telescopes into a stationery one, an engine hits a buffer at a railway terminus, or where an accident occurs during shunting, that the authorities admit delinquency. If one would only judge these accidents from a scientific angle,—that of probability,— one would wonder how an administration, if it were really rational, could put forward sabotage as the cause of accidents in so many cases. One cannot blame the public if, in the circumstances, they lose faith in the administration's ability to improve matters. Restoration of lost confidence is a "sine qua non" for successfully running a democracy. And this can be achieved only when the measures undertaken show positive results and not by explainning away 1,100 accidents in 7 months nor by jugglery in statistics. It is high time the administration shed this 'idee fixe' and ceased to ladle out sabotage as the 'piece de resistance.' The authorities must get rid of paranoia and regain mental health and balance imperative for successfully conducting a probe with a view to finding out how far the accidents might be due to inefficiency, irresponsibility and other undesirable factors which undermine the administration, and how far to widespread existence of anti-social elements. The fact should not be lost sight of that effective action to remedy the defects is possible only after the defects have been revealed in such probes.

Unfortunately, the toll of misfortunes does not end here ; to fill the cup of misery,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the country is, moreover, having accidents galore at the innumerable unmanned level crossings, as though the other accidents provide too inadequate a fare to satisfy the Moloch that knows no God.

Now, as regards the problem of widespread existence of a large number of alleged saboteurs possessing scant respect for valuable human lives and national property, the first question that would naturally disturb one's conscience is why in a country with a democratic set up and a popular government, where the governing class comes predominantly from a band of selfless workers with a tradition of relentless fight against foreign imperialism, imbued wih the high ideal of creating a happier India, there should still persist such a large number of anti-social elements bent on sabotaging all attempts designed to make the country richer and thereby raise the standard of living of the common man; what are the seminal causes which provide a breeding ground for such anti-social elements and what allows them to thrive and merrily carry on their nefarious activities? When one ponders over such a problem, it would not be unfair for one to come to the conclusion that the social, political and economic structure of the society which the leaders propose to set up or preserve must contain some cardinal defects which give scope for the growth and survival of such anti-social elements. It is difficult to challenge the above premises and say how far they deviate from the true position; but, nevertheless, one cannot expect the answer to be so easy as may be readily available in a dossier. It would not, therefore, be unrealistic to carry out an inquiry with a view to finding out how far the problem lies entangled in a maze of complicated human relations. In this connection, it would be pertinent to demand an explanation why the government having at their disposal such a large police force with an array of subdivisions, viz., I.B., C.I.D., etc., meant for apprehending criminals, cannot lay hand on the miscreants and swoop down upon their secret dens.

In spite of vehement public protests and indignation at the alarming rise in accidents at unmanned railway level crossings, the railways have advanced the plea that it is not possible to man all the innumerable level crossings. Such an attitude shows a callousness least expected of a democratic government. Recently, the Railway Board has asked the different State Governments to post policemen at all such level crossings as a safeguard. It is not desirable that correspondence between the Railway Board and the different State Governments over the feasibility of the scheme, and unending conferences should continue 'ad infinitum' while accidents go on piling up from day to day. It must also be realised that divided responsibility can never work satisfactorily. When precious human lives and national property are at stake, the railways must rise to the occasion and immediately man all the level crossings irrespective of the cost involved; any such crossing which might not be deemed feasible to man for want of sufficient manpower must be sealed, notwithstanding any inconvenience which might be caused thereby, and alternative arrangements made without undue delay. It brooks no delay. In this connection it should be remembered that if the works which normally take years to complete could have been done within the short spell of a few months during the war emergency, there is little justification why these and other works which might be deemed emergent cannot be completed within a short period. It must be remembered that emergency knows no excuse; all resources must be pooled to carry out the emergency safety measures at a lightning speed.

Mr. Lakshman Pai's observation that the causes of accidents are more deep-rooted—"overworked men running worn out engines on weakened tracks supported by rotting sleepers"—may be rhetorical but none the less is a scathing criticism exposing the reeking scandals of the railway administration. It is, therefore, necessary to delve into these defects and take urgent action for their removal. It must be realised that the people have had too many Messianic delusions to have any confidence in nostrums. The appointment of enquiry committees to go into these allegations and produce voluminous reports only to get

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lost in the melanage of findings would only delay overdue reforms and urgent renovation works. The purpose would be amply served if experts belonging to one zonal region are appointed to probe into the conditions subsisting in a different zone by surprise checks if necessary, and prompt action taken to remedy the defects. Much of the defects may be eliminated or brought under control if a strict supervision is maintained over the work of the troubleshooters and remedial measures taken against moral and material atrophy. In order to attain success, employees at all levels must be made to realise their responsibilities and the fact that it is not merely cash nexus that binds them to their jobs. Moral blessings of freedom must supervene where unregenerate irresponsibility leads to chaos; the railway system is, after all, no Charon's ferry for carrying across the Styx. Furthermore, a mere comparison with the hours of work put in by employees in other countries, as many hold, cannot conclusively prove whether the employees are overworked. This is so for more than one reason: (i) capacity to stand physical strain, (ii) climatic conditions, (iii) employment conditions, (iv) amenities available for rest, recreation, regaining euphoria, etc. A sample survey conducted to determine the fatigue factors will abundantly show whether the employees are overworked and how far the accidents might be atributed to such fatigue factors.

When the country has been caught in such a predicament, it is high time the authorities shake off complacency, realise the stark reality and face the situation boldly. They must be fully alive to the responsibilities and obligations which a parliamentary democracy requires of its elected representatives,—and through them, of the employees. It must be understood that so long as the authorities prefer to live in olympic heights far away from the common people, happily buttressed and cushioned against shocks enjoying near-ambrosia 'ad lib', the dynamic measures imperative for preventing loss of human lives and national property would prove as elusive as the Holy Grail. Any plea for deferring such measures on account of lack of funds can not be entertained, nor tolerated, simply because, a civilized society considers human lives and national property more precious and cannot countenance any attitude that smacks of disparagement of human dignity. Should impecuniosity stand in the way of improving matters and implementing the required safety measures, it would not be too much to expect of government to make necessary cuts in the salaries and other amenities enjoyed by officials, viz., special trains, saloons (where single sleeping berths would serve the purpose), air-conditioned trains and coaches, retinues, etc., irrespective of the position they hold or the department to which they belong, and curtail all extravagant and gaudy functions. Stringent measures should also be taken with a view to stop all wastage, infructuous expenditure, extravagance, etc. The question of taking necessary measures for equating the incomes of the government employees with those in commercial establishments as a result of the above policy must, as well, engage active consideration of government, as otherwise, the imbalance would complicate the economy.

Moreover, it is imperative that a vigilant eye should constantly be kept to ensure that the administrative machineries' handling of the situation yield the results envisaged in the policies laid down by government. Should any failure or deficiency come to notice, the administrators and the legislature who constitute the entire government machinery must combine in conducting a continuous and unrelentingly searching inquiry and fight to extirpate, lock, stock, and barrel, the evils and the drawbacks that stand in the way of implementing the policies.

It is pertinent to note here that a satisfactory solution cannot be expected to be arrived at in obstreperous political meetings, the bear-garden of different party caucuses where mutual recriminations rule supreme. One must go deep into the problems if one were anxious to find a way out of this imbroglio; and, for this purpose, what is essential is a searching of hearts, an introspection in a calm, cool and sober atmosphere unruffled by the din and bustle of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the everyday world torn asunder by political, economic and commercial jealousies and conflicting interests. It would then be possible for the authorities to devise means and carry on an unrelenting and determined drive to set right the defects which might be found to have been causing loss of human lives and national property. It is high time the authorities realise that empty statements, declarations and promises made everyday go to create an atmosphere of distrust; antagonism gets the upper hand when people get disillusioned and find their difficulties and inconveniences remain unresolved and continue year after year with even an accelerated tempo in some cases. What more surprise and disappointments to shake their faith in the administration as a whole can the unhappy people of India expect to have in store for them than the fact that the nearest lamp-post meant for the black-marketeers has proved as elusive as ever even in independent India! While the people are getting crushed by the rocketing high commodity prices, the black-marketeers are going on merrily with their anti-social activities. Will the authorities, therefore, get down to real business with all sincerity and alacrity with a view to rehabilitate the administration which has fallen badly into disrepute and thus save and conserve the human and material resources, the 'sine qua non' for making the country prosperous?

———:O:———

GOVERNMENT ORGANISATION —METHODS AND RESULTS

By STRATEGIST

The System of public administration in India is founded on "Hollow Expedients." The merit of such an administration lay in designing elaborate machinery tied up with strings for performing some piece of trivial ingenuity. All projects are complicated without any advantage to the holder of Government machinery and also to the people. Such hit and miss methods of administration can never solve our gigantic problems.

The Government of Mysore has 65 departments employing about 1,59,244 persons. Out of nearly one hundred crores of receipts per year, about 25 crores is spent on establishment alone. We analyse causes and also suggest specific remedies in the interest of this great state.

As per Government Order No. FD. 50-srp-(1)-1961 dated 23--6-61 revised pay scales have been given effect to form 1-1-61. The result of this order is most confusing. At present there are hundreds of scales and cadres of appointments, ranging from a basic pay of Rs. 50 to Rs. 1800 per month. We shall verify the organisation, methods, and rhythm of Rs. 25 crores of expenditure on establishment. The pay scales are complicated and confusing. All Rules and orders should be simple and easy to enforce within the capacity of the State Exchequer. If a survey of accumulated establishment files is conducted, we could easily trace out two lakhs of files without decisions. It is calculated that Rs. 6 (average cost per handling of one paper) is a nor-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nal cost per paper per day. At a modest estimate, two lakhs of establishment files per year would cost about Rs. 2 crores.

What are the facts of our financial strength? It cannot be strength. It is strength based on weakness. During 1962-63, the expenditure of State has been estimated at Rs. 103 crores, while receipts would aggregate Rs. 99.71 crores. The deficiet during the current year is Rs. 3.29 crores. Total loans of the Government of Mysore as on date aggregate nearly Rs. 144 crores, excess of assets over liabilities is 7.33 crores—sinking fund accumulations come to Rs. 23.21 crores, interest and redemption charges Rs. 4.06 crores for the current year. Consider the cost of Rs. 2 crores on accumulated files of establishment per year. Organisation and methods division and our finance department have to explain our successive failures and disappointments in the field of constructive administration. The State wants to know, whether, these two key wings of the administration have discharged this task with skill and loyalty? Isolation between this section and Government has created an administrative crisis. The result is an "Himalayan Mountain of Accumulated Files."

Therefore, one is greatly concerned about the state of administration and the effectiveness of our machinery for the central direction of administration on proper and constructive lines. At present, we can detect a wide-spread sense of frustration and discontent among all classes of State employees. The facts of accumulation of establishment files at different levels of administration show briefly, what happens at different levels and in what order. We could solve the problems only by daring sagacity and power of quick and constructive decisions. Our solutions should be healthy and permanent. The question which we must ask ourselves, is not whether we like it or do not like what is going on, but what are we going to do about it? An arrangement should be made, so that accumulated files move in a direct unbroken chain of lawful decisions in moral and national interest. The table number 1 enclosed reveals a tragedy of errors and omissions. The table shows only a cross section of hundreds of confusing and complex pay scales. The facts of the system are founded on justice based on injustice, order based on disorder. The entire Government machinery in India is based on the filing system and not on a decision system. We should rather have a system of injustice based on justice, disorder based on order. Every Government servant is well trained to offer a million objections for not doing a thing. We should have a system, whereby, we can see our way as to how a thing can be done. We do not want to know how a thing cannot be done. Take the case of our finance department (the rushed hub of our administrative machinery): it has no positive attitude in practical administration. It lives in an ivory tower of definitions, clauses, appendix, clarifications, etc. It never gives decisions and is always busy taking precautions. One clear cut decision is worth more than a million wise precautions. If not, auditing and accounting problems increase. The result is accumulations.

The book on state employees' pay scales contains 180 pages of Mysore Acts, Ordinances, Orders, etc., under the Constitution by the Governor of Mysore. The Government of Mysore have spent lakhs of rupees for the preparation of his impossible document. The defects of the present scales are briefly stated as follows. They are not uniform for all classes of appointments. Percentage of increment varies from cadre to cadre. The difference between minimum to maximum is not proportionate. Stagnation of pay at maximum point varies from scale to scale. There is difference between D.A. and H.R.A. Is there a limit to these defects? We can write a big book on this subject. Is it possible to change this system? Table 2 shows the way of tackling the problem on a reasonable basis.

Details showing the type of present scales of pay of Mysore Government Employees:

Table :—No. "2"—Proposed New scales of pay for the Government employees in India from 1-1-62 or 1-1-63.

(1) IV class Employees :—(1) Rs. 50-1-80 (2) 60-1-90 (3) Rs. 70-1-100.

(2) Non-Gazetted staff :—(1) Rs. 50-2.5-125 (2) 60-3-150 (3) 70-3.5-175 (4) 80-4-200 (5) 90-4.5-225 (6) 100-5-250 (7) 110-5.5-275 (8) 120-6-300 (9) 130-6.5-325 (10) 140-7-350 (11) 150-7.5-375 (12) 160-8-400 (13) 170-8.5-425 (14) 180-9-450 (15) 190-9.5-475 (16) 200-10-500 (17) 210-10.5-525 (18) 220-11-550 (19) 230-11.5-575 (20) 240-12-600.

3) (1) Taluq level Officers :—

(2) Sub-Division level Officers Rs. 300-15-750

(3) District level Officers 500-25-1250

(4) Division level Officers 600-30-1500

(5) State level Officers 700-35-1750

(6) Special super posts 800-40-2000

Now, we shall analyse the important actors of the modified scales of pay.

(1) Proposed scales of pay of all civi-an employees in India are uniform, simple d easy to enforce and maintain without ge cost of establishment charges.

(2) We shall take the case of Mysore. e following areas are merged into New ysore. (1) Old Mysore (2) Bombay arnatak (3) Coorg (4) Madras Karnatak) Hyderabad Karnatak. Many of the overnment employees coming from these parts are allowed to continue in their old ales of pay, resulting in a fine financial ss. The new scales should be made mpulsory to all employees in India (Ex-pt all India cadres) in the interest of diting problems and justice of the cause.

(3) IV class employees, Non-Gazetted aff and Gazetted Staff are seperately uped.

(4) The number of pay scales are re-ced to 29 only.

(5) The minimum pay of the post is 50, while the maximum is Rs. 2000. The tio between minimum to maximum 1:40.

(6) The minimum should be gradually raised in proportion to economic prosperity of the state or the country in general. The maximum should be kept constant for another 30 years.

(7) Except for IV class employees, all others are eligible to get only 5% of the basic pay of the post per year. National per capita rise is only 3.5% during the current year. 5% rise suggested is only of starting pay of the post and thus equal to national per capita increase of 3.5% during the current year.

(8) Government servants usually serve about 30 years, joining at the age of 25 and retiring at the age of 55. During 30 years of service there is only gradual and steady rise (5% of the starting pay) for all cadres of appointments.

(9) Whenever a promotion is made from one cadre to another cadre, the next stage in the new cadre+one increment has to be provided.

(10) The revised scales can be given effect to from 1-1-62 or 1-1-63.

(11) There should not be disparity of scales, D.A. etc., from Villages to towns, towns to district Hqs., Districts Hqs. to cities, and cities to corporations. In small villages and towns, etc., Government servants have no facilities of higher education, medical, housing and water supply etc. Therefore, if any consideration has to be shown, Government has to be kind towords officials, who live and serve in villages and towns.

(12) Dearness allowance, compensatory-cum-house rent allowance, special pay, personal and charge allowance, duty allowance, construction allowance, dress and ration allowance, rural allowance, stagnation increments, special pay, etc., have created one million problems and caused accumulation of files. These should be abolished in full and uniformity enforced.

(13) Just to avoid hardship to employees, all these allowances may be treated as personal pay and absorbable in future increments.

(14) When, fitting all these employees in the modified scales, some of them may lose their present range of increments and such of them may be given one additional

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

increment in the new scale, so that all of them will be compelled to opt for new scales.

(15) Whenever housing facilities are provided, 10% of the pay drawn should be recovered without fail.

(16) No weightage should be given, as many confusing revisions have already taken place.

(17) These scales can be easily applied in accordance with the financial strength of each provincial and central government. Or we could slide the scales to conform to available financial strength.

(18) These are only guiding factors for decision. We can vary them according to future requirements and needs.

What is the pressure of these pay scales on the State exchequer? Immediate pressure will not exceed Rs. one crore for the current year. Future pressure shall be only gradual and we can take care of that. Measure this cost with accumulated files costing nearly Rs. 2 crores per year. There are files, the range of their life being-one year minimum to maximum of 10 years. I have taken Mysore pay scales as a cross section to reveal the peculiar type of defects in the administration of Government Departments in general. Now, we come to the facts of public administration in India. The figures reveal the position as on March 31st, 1957:

(1) Total Employees of Central Government	5.03 lakhs.
(2) Total Employees of States Governments	14.26 lakhs.
(3) Employees of District boards etc.	2.24 lakhs.
(4) Ralway Employees	10.60 lakhs.
(5) Postal Employees	3.02 lakhs.
(6) Mis. Organisations and recent increases up-to-date. (Approximately)	14.85 lakhs.
Total No. of employees (Approximately)	50.00 lakhs.

A cross section of five million employees' pay scales reveals the same mighty tragedy of errors and omissions. Only a "Master Brain" can achieve such a miserable chaos. I am of opinion, that there are nearly 7 million establishment files pending at all levels of the entire civilian administration in India. How shall we isolate and assail this huge army of accumulated files? In planning the gigantic administrative reforms during 1963, it is not possible to lay aside other duties. Our first and main obligation is to defend India from Chinese and Pakistanee invasion. This task bears a decisive relation to the war of administrative reforms. We should prepare for the event. Out of total receipts of Rs. 1473.97 crores during 1958-59, nearly Rs. 483.38 crores was the cost of civilian administration in India. In my estimate, nearly Rs. 70 crores is spent on solving impossible and out-dated establishment problems. A grand tragedy of bottle-necks on the verge of an economic disaster! (Pension-Provident fund-leave rules will be separately dealt with. Accumulation refers to all establishment problems). Thus, our administration is at sea. At present, they cannot solve their problems, nor allow others to solve them. The tyres of public administration in India, are wearing thin, and they will be soon useless. Whether our administrators know it or not they have had a last chance to save this great and proud country.

The Moral of this article: "Catch hold of the nervous system of disorder and confusion—isolate it and assail it on all sides so that we reach constructive administration in national interest."

PROBLEM AND PROSPECTS OF DEMOCRATIC DECENTRALISATION IN INDIA

An Appraisal

By Dr. RAMESH NARAIN MATHUR,

Head of the Department of Political Science, Khalsa College, Delhi.

The scheme of Democratic Decentralisation or the Panchayati Raj system in India has evolved out of the Community Development programme. It was realised that to achieve success in development activities launched by official agencies, association of people in the formulation and implementation of programme is necessary. A study team on community Development and National Extension Services, headed by Balwant Rai Mehta was appointed by the Planing Commission Committee on plan Project to suggest the organizational structure and methods of work for greater speed in the execution of work. The study team submitted a report in 1957 recommending the setting up of a three-tired structure at the village, block and district level, and entrusting all planing and development work to these bodies. These were Gram Panchyats at the village level, Panchayat Samitis at the block level and Zilla Parishad at the district level. The object of setting up of these non-official democratic bodies organically linked up was not only devolution of economic and political power to village institutions but also the building of democrary from its grass roots which is lacking in this country.[1]

The recommendations of the Balwant Rai Mehta Committee were accepted by the National Development Council in 1958. The Central Council of Local self-Government in its meeting held at Hyderabad in 1959 suggested that the evolution of the pattern of this transfer of power to the people may be left to the State Governments. Accordingly State Governments in almost all states have launched this scheme keeping in view the basic objectives of Democratic decentralisation. The units of Panchyayati Raj are (1) Gram Sabha which is the general body of the village Panchayats and Gram Panchayat which is elected by the Gram Sabha and is an Executive body, charged with development functions. There are 2,03,049 Panchayats in the country, covering 94 per cent of the villages in India and representing 95 per cent of the rural population. (2) The Panchayat Samiti which constitutes the intermediate tier in the Panchayati Raj system is in the block level in all states except in Gujerat, Maharashtra and Mysore where it is at the taluk level. The Panchayat Samiti consists of the Sarpanches of the panchayat and are directly responsible for the implementation of the Community Development programme. (3) The Zilla Parishad consists of the representatives of Panchayat Samitis. Besides M.P's M.L.A's, Presidents of Panchayati Samitis are also members of the Zilla Parishads. The Zilla Parishad at the district level is the co-ordinating body and exercises general supervision over the work of the Panchayats.

Rajasthan and Andhra are the two pioneering States in introducing this experiment. It is too early to pass judgment on the working of Panchayats in these States. However, two study teams hare recently made a fairly representative sample study of the working of Panchayati Raj in these States. One was organisd by the Congress Party in Parliament with Sri Raghubir Sahai as its leader and other study was made by the Association of voluntry Agencies for Rural Development, New Delhi.[2]

1. Dr. B. R. Ambedkar in the Constituent Assembly observed, Democracy in India is only a top dressing on Indian soil which is essentially undemocratic.—C.A.D. Vol. 13, p. 38.

2. Panchayati Raj in Rajasthan and Andra: reports of a study teams by Congress Party in Parliament, New Delhi, October-December 1960. Democratic Decentralisation in Rajasthan, Report of a study team by the Association of Voluntary Agencies for Rural Development, New Delhi 1961.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The Congress Party Team was impressed with the great interest taken by people in development programmes in Rajasthan. Many Panchayat Samities had prepared their own five-year plans and almost all Panchayats had taken special pains to improve the lot of Harijans and other weaker sections of society. The team was also impressed with the co-operative attitude of officials at all levels which would make Panchayati Raj a success there. The team also noticed some defects such as party factions between different groups of people in Panchayati Raj bodies. Some conflicts were noticed between the Pradhans and the Vikas Adhikaris. The Pramukhs and members of the Zilla Parishads invariably made a demand for increase of their powers. The Team noticed full measure of co-operation between the Collector who was a non-voting member of the Zilla Parishad and the elected President.

The Committee was equally impressed with the cordial relations subsisting between the elected representatives and the officials and with general awareness of the people's representatives. The team noticed that both in Andhra and Rajasthan 60 per cent economically and socially strong population got 85 per cent representation in the village Panchayats and 40 per cent of weaker sections of the population got little representation in village Panchayats. The team found acute party factions in Panchayats in Andhra which virtually led to complete stoppage of all departmental activities.[3] It suggested the feasibility of the supression of Panchayati Samities in such cases. The Committee expressed surprise at the lack of provision for training of non-official members of Samities and Parishads in Andhra and it also wondered why disciplinary action was not taken against defaulters except by one Panchayati Samiti.

The study team of Association of voluntary Agencies for Rural Development observed that there was a tussle for power between the Pradhan as representing the people and the Vikas Adhikary (B.D.O.) and the staff under him in Rajasthan. The team also noticed party factions and grouping in Panchayati institutions. However the team felt that the introduction of Panchayati Raj had roused local interest and local initiative in the state.

The study groups and individuals and teams in their survey of Panchayati Raj have noted some emerging problems which demand close attention of all interested in the successful functioning of Democratic Decentralisation in India.

The first problem is the presence of acute party factions in Panchayati institutions. In Baoh Panchayat of Meerut district in Uttar Pradesh one of the main causes of large arrears in Panchayat dues was attributed to party factions. In States like Rajasthan, Punjab, Uttar Pradesh and Orissa party factions and groupings have greatly influenced Panchayat elections, since the system of elections is bound to have adverse effect on the healthy growth of Panchayats, it is necessary to have a non-official agency for bringing about unanimous decisions by the village people, especially in elections. In some States members of legislatures have been allowed effective say in Panchayati Raj administration. This will retard healthy growth of Panchayats. The success of the entire experiment of Democratic Decentralisation depends upon M.L.A's not meddling with Panchayati Raj. These persons utilise the Panchayati Raj institutions for partisan purposes, which have little relation to the real needs of the people. The association of lagislators with Panchayati institutions is therefore not desirable.

Another problem is the friction between officials and non-officials. There exists a gulf in the Panchayati Raj institutions between the paid permanent servants and the non-officials which will impede the smooth working of the system. At the Parishad level, the Chairman and the Secretary have to function harmoniously for development work to be implemented. It is also necessary for all the key officials such as the executive officer, the Block Development officer or the Secretary to maintain good relations with all the members of Panchayat, Samiti and the Parishad. A frequent criticism made by the Presidents of Panchayati Samitis and Chairmen of Zilla Parishads is that some of the officials have been unable to adjust themselves to the new pattern of administration and that they are not sufficiently

3. According to the Report of the Evaluation Organization of the Government of Rajasthan, 1961-62, some Pradhans interferred in the day-to-day work of the Block Development office. B.D.O's wanted to take disciplinary action against the staff, but the Pradhan prevented them from doing so. Pradhans also did not allow B.D.O's to exercise their statutory right of exercise of discretion in certain matters.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

alive to popular aspirations. However, it can also be said against non-officials participating in the Panchayati Raj bodies that they show unabashed partisanship in doling out favours to their groups in the administration. Another complaint is that they unduly interfere with the day-to-day work of the administration. In such cases the position of the Block-Development officer at the Samiti level and of the Secretary at the Zilla Parishad level becomes embarrasing. It is necessary in the harmonious and successful functioning of Panchayati Raj to develop friendly relations between officials and non-officials at all levels. Both sides should make reasonable adjustments, without sacrifice of vital principles.

Another problem is that of proper coordination between Panchayats and Panchayat Samitis. The Association of Voluntary Agencies for Rural Development Study Team pointed out that one of the causes of ineffectiveness of the village panchayats was this lack of coordination between the different units. Democratic decentralisation visualises partnership between the village Panchayats and Panchayat Samitis. The relationship between the different levels of the Government, the Panchayat, the Panchayati Samitis and Zilla Parishad should be developed more in terms of collabration and mutual dependence than in terms of control and supervision exercised by the higher over the lower level of Government. The jurisdiction of various electivebodies should, as far as possible, be clearly demarcated so that they do not cut each other's course and cause friction between them.

The problem of training of non-officials and Secretaries is of no less significance. Not only officials but a large number of non-officials require specialised training in order to enable them to fulfil their respective responsibilities in the work of Community Development. The National Institute at Mussorie offers facilities for such training. It is necessary to start such institutions. Joint training courses of officials and non-officials in Panchayati Raj may also be organised. The purpose of such education and training is to change the mental outlook of the persons to enable them to adjust themselves to changing social and economic conditions and to develop in them awareness of new problems which they will have to face.

Another related problem is that of supervision, guidance and influence needed for Panchayati Raj units. There should be independent audit and inspection of Panchayati Raj units. There should also be technical supervision undertaken by the technical officer of Panchayati Raj bodies. Each tier of the Panchayati Raj body should be responsible for guidance, influence, persuasion and offering advice to the lower tier of Panchayati Raj body. The head may visit the lower bodies for appraising their work and for offering guidance in such a way as not to undermine their autonomy and initiative. Inspection should be not for fault-finding only but for offering counsel to ensure that work is done better. The Collector has yet to play an important role. He is to act as a guide, philosopher and friend of the Panchayati Raj institutions. During the transitional period of time the Collector still needs greater powers for immediate action in the district. His work in course of time may be reduced from that of active intervention to that of friendly guidance and cooperation.

The vital problem facing Panchayats is that of finance. The basic principle of Panchayts is not only that genuine power should be transferred to democratic bodies but also that they should be given adequate finances. The Raghubir Sahai Study Team observes that Panchayats are hesitant to impose taxes in Rajasthan for fear of displeasing the electorate. The Panchayats should try to educate the electorate that if they want to attain progress they should be prepared for more taxes. In addition to ordinary sources of taxation such as profession tax, taxes on animals, property tax, surcharge on land revenue or land tax, Panchayats are entitled to get a share from certain taxes levied by the State Government. To review the financial position of Panchayati Raj institutions periodically an independent Finance Commission may be set-up in each State.

Another problem of no less importance is the problem of staff. To ensure success of Panchayati Raj there is need of an administrative machinery which is efficient, impartial and responsive to people. The staff of the Panchayati Raj should not be treated as second-rate. On the other hand they should be of the highst calibre and integrity. An independent and non-political body, such as Panchayati Raj Service Commission should be entrusted to recruit the staff. The staff should enjoy security of tenure and they should render obedience and loyalty to the local authority.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The above problems have to be tackled with vision, imagination and fore-sight. A sober and realistic assessment of the difficulties and problems facing Panchayati Raj is necessary. The official reports waxing eloquent with the notable achievements of Panchayati Raj are misleading. The success or failure of Panchayati Raj in India depends on four factors., (i) the ability of people in villages to get rid of factionalism, groupism, casteism which is their besetting weakness, (2) the extent to which political parties refrain from participating in Panchayati elections, (3) the degree of financial and administrative decentralisation which the State Government are prepared to carry out and (4) to the nature and control exercised by the Government over the Panchayat. There is no doubt that today the working of the Panchayats in most States is being marred by party feuds and group rivalries. There is, again, a confusion regarding the role which the Panchayat is to play—whether it is a unit of local administration or a real self-governing unit with clearly defined functions mainly related to the local community. Again, no effort is to be made to hasten the process of devolution of powers at break-neck speed, which may be beyond the capacity of the people to manage. The government and the public have to work hard in preparing for the Panchayati Raj, in nursing this new infant and helping it to overcome the obstacles in the path of progress. A great deal depends on local leadership, political consciousness and on good political traditions. There is no reason to be pessimistic but it is desirable to have evaluation of the Panchayati Raj system from year to year so that loopholes may be plugged well in time. The introduction of democratic decentralisation in India has made a real impact on the people and it is a great achievement, but there is need for care and effort.

———:O:———

AKBAR'S AIN ON EDUCATION

S. N. QANUNGO

Akbar, whose genius was of epic grandeur was a reactionary against his own background. He was the only Mughal Emperor who realised the vital importance of education and its potent influence in moulding the course of the history of a country. In medieval India we find little change in educational ideas and institutions. Neither primary nor adult education was carried on in a systematic way. There were no ideals of education. The teacher in the elementary school (Kuttab), called muallim occupied a low status in society. A favourite adage of Al Jahiz often quoted at that time was—"Seek no advice from teachers, shepherds and those who sit much among women." The higher grade of teachers and the private tutors (Muaddib) of the children of the wealthy were however highly respected. The elementary and higher education was mainly religious, philosophical and literary in content. In theory, Islamic Government was military rule and the Sultans did not recognise the promotion of education among their subjects as any part of their duty or concern. But while this was generally true, it would be incorrect to state that they never patronized education. Akbar alone among the Mughals of India wanted to initiate a new policy in the field of education and "legislate with prophetic insight and mould the life and thought of unborn generations in advance."

The feature of contemporary education which impressed Akbar was waste. As he made a sagacious and penetrating remark in his Ain on Education—"A great portion of the life of the students is wasted by making them read many books." He wanted to bring the problem of education into organic relation with society. Like Al-Ghazzali he believed that the imparting of knowledge was not the only object of education; it should stimulate the moral consciousness of the student. Unlike his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

predecessors and contemporaries he wanted to follow a policy of laissez faire towards the students. The child should be guided rather than spoonfed. As he says, "care is to be taken that he learns to understand everything himself but the teacher may assist him a little." However primary education as envisaged by him was rather crude in its conception. It consisted in mastery of alphabets, learning some good prose and poetry by heart, moral sentences or verses in praise of God. Throughout the whole curriculum memory work was especially emphasized. Akbar though far in advance of his times had no clear idea of primary education or the psychology of children. He thought that in two days the boys should be able to learn to write letters of the alphabet. Having acquired the practice of writing simpler alphabets the boys ought to proceed to write joined letters which might be practised for a week Akbar's Ain on Education makes a tall claim as a progressive system of primary education. It says, "If this method of teaching be adopted a boy will learn in a month or even in a day, what it took years to understand so much so the people will get quite astonished."

Akbar attempted to give his subjects the nucleus of a rationalized secondary educational system. His cast of mind was positive, practical and active. He wanted the boys in the secondary stage to take more interest in those subjects which would prove useful in their practical life. The subjects which he prescribed for secondary education were arithmatic, geometry, agriculture, astrology, household economy, logic, physiognomy and public administration. Akbar attached primary importance to the science of morals and social behaviour. Every force which tended to assist social cohesion found in him a champion. It is to be noted in the list of prescribed subjects the absence of theology which was befitting his idea of a secular state and a common nationality. It was also necessary because for the first time the Hindu and Muslim boys were to receive their education in common schools and read the same books.

It was Akbar's task to reconcile the new India with the old. The logical corollary was an intellectual and religious revolt and the birth of Indian Nationalism in politics as well as in Literature and Fine Arts. Though Akbar had made Persian compulsory for the state officials he took keen and magnificence of the Sanskrit literature He had been much impressed by the beauty and magnificence of of Sanskrit literature and was eager to attract the Muslim scholars to the study of Sanskrit. Akbar came into close contact with distinguished Sanskrit scholars like Devi, Purushottam, Bhagirath Bhattacharya and had the Ramayana, the Mahabharata, Atharvaveda, Harivamsa, Lilavati and Nal- Damayanti translated into Persian. He prescribed Sanskrit as a subject in his Ain on Education, and particularly emphasised the importance of the study of Sanskrit grammar, logic, philology, Vedanta and Patanjali. Obviously more importance was attached to the development of the critical faculty of the students rather than merely their aesthetic taste.

Abul Fazl remarks, "These regulations shed a new light on schools and cast a lustre over Madrasas." (Ain-i-Akbari Vol. I p. 288). Smith holds that it is a tall claim and Akbar's Ain on Education has no relation to facts. This opinion has recently come under serious criticism. It has been pointed out that had there been no such regulations there could not possibly have been the intellectual revival that marked Akbar's Age. The criticism itself is based on a dubious foundation of facts. The Ain would have been more comprehensive and detailed had it been enforced in a wider area and for a longer period. If the real spirit of the Ain was maintained how do we explain the rise of muslim orthodoxy after the death of Akbar ? It is true that Akbar was the sponsor of a creative age which produced an output of art, music, scholarship and literature such as the world had rarely seen since the glory of Ancient Athens. But it would be incorrect to hold that great literary figures of this period like Abul Fazl, Nizamuddin Ahmad, Faizi, Badayuni, Abdur Rahim Khan Kharan and others were products of Akbar's Ain on Education.

The importance of the Ain lies not in its success but in its noble attempt. It

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was far from perfect. In it there is no philosophy of education. Akbar treated the children not as children but as miniature adults. In spite of all the defects, the Ain on Education was important because it dealt with life and it was a plea for a progressive and rationalized educational system. It is indeed an unique piece of legislation in our country. The problem of the educational curriculum ceased to be a matter of purely academic dispute with him. It took on a practical significance. For the first time some uniformity was attempted in the educational curriculum and treat the students not as individuals aspiring for individual distinction but as useful members of society. Akbar made a bold attempt to set a fresh pattern of an educational system which would produce useful citizens and not merely academic philosophers. In medieval India, Akbar's Ain on Education is like a winter sun illuminating a gloomy atmosphere.

———:O:———

SMALL-SCALE INDUSTRY IN INDIAN ECONOMIC DEVELOPMENT

By DR. R. K. JAIN, M.Com., Ph.D.,
Professor, G. S. College of Commerce and Economics, Nagpur.

The national economy being short of capital and abundant in manpower, special attention has been given to small-scale industry in the programmes of industrialisation.

Meaning

Indian national income statistics define the small-scale industrial sector as comprising undertakings with less than 20 workers. It includes, at the one end, the traditional types of household or cottage industries which are generally primitive and largely inefficient in character and produce articles of daily necessity to satisfy the local demand and are carried on in rural areas in or near their homes mainly by family labour, either as a whole or a part-time occupation; while, at the other end, it includes the urban, modrenised and decentralised small factories which are operated mainly with hired labour usually not exceeding 50 workers per shift in any establishment or unit when using any motive power in any operation, or less than 100 workers per shift in an establishment or unit when not using such power and which are usually engaged in the manufacture of consumer goods either independently or in processes complementary to large-scale manufacture,[1] often for national or world markets. The capital investment in such small factories is usually less than Rs. 5 lakhs per unit. In general, small-scale industry includes all "small" enterprises whether traditional or modern and, whether the word "small" applies to the number of persons employed in each undertaking, the invested capital, the workshop area, the turnover, the size of the firm's market, or a combination of these factors.

Chief Determinant Factors

The real basis of a separate approach to small-scale industries, however, lies in the functional differences which are at the root of these industries. The chief determinant factors of small-scale industry are that: (i) there is lack of specialisation in management and labour; (ii) the owner of the undertaking owns it in person and is responsible for its administrative, economic, technical and financial aspects and takes a direct part in its work. Generally, the head of a small undertaking is its founder, the provider of its capital and its technical manager as well; (iii) there is close personal contact of owner or manager with workers, customers and suppliers; (iv) very

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

often small-scale undertakings work to orders received directly from the customers or middlemen or the other large undertakings and sell their products directly to them; (v) generally, these undertakings do not enjoy the facility of access to the organised capital market; (vi) the individual character of the goods, these small undertakings produce is usually the main attraction for the customers; and (vii) the bargaining strength of these undertakings is generally weak in respect of both the purchases as well as sales.

Factors Favouring Small-Scale Industrialisation

Many considerations weigh heavily in favour of the small-scale industries, both in advanced as well as in under-developed economies. A properly guided and adequately assisted development of small undertakings can secure a better distribution of income and purchasing power and the balanced spread of employment. It can stop surplus labour from drifting to the cities and settling in shanty towns thus averting the danger arising from the new wants which industry would be unable to meet in growing urban centres. A decentralised spread of industry over wide areas provides the country people with opportunities of learning how to use modern machinery and thus developing their productivity and employment in their own localities. In addition, there are many factors, such as the shortage of transport facilities, the shortage of power supplies, the inadequacy of the home market mainly due to poverty, the backward state of education, the lack or inefficiency of the administrative machinery and trained supervisory staff and the shortage of capital, which restrict the size of undertakings. Small-scale industries have a number of real economic advantages to offer in such a situation. They provide jobs for larger number of workers in the vicinity of their homes, they require little initial capital outlay, which puts them within reach of developing countries, and they do not create a large demand for supervisory staff, because they can draw on centuries of accumulated experience and handicraft traditions. Moreover, with the steady improvement in the standards of living and rise of incomes in all levels of society small-scale industry provides a pool of new jobs by creating demand for many services and thus proves a valuable asset to combat unemployment. The cost of setting up a plant on small-scale being relatively less, it offers interesting fields of work for persons otherwise economically redundant. It can also start a process of expansion with less risk and more flexibility. Small-scale industrialisation while following traditional methods with suitable technical improvements at small investment provides for industrial decentralisation and diversification and thus facilitates regional economic development plans as a means of relieving congestion in the large towns and bringing new vitality to economically depressed regions. Beside providing large number of jobs for the local labour force and producing a wide range of consumer and capital goods, the small-scale undertakings carry on activities of a nature complementary or subsidiary to that of the large firms and thus ensure economic and social development in a balanced manner. This form of integrated development of the large and small sectors establishes a proper division of work between the two sectors and thus the large-scale sector can concentrate on basic industries and can also avoid the uneconomic operations inherent in the concept of "self-sufficiency." Through the mobilisation of savings from small industrialists and their relatives or friends and through the utilisation of indigenous raw materials in rural and remote areas, the small-scale establishments help the industrialising countries to tap some resources which would otherwise remain idle. The foreign exchange component of investment in cottage and small-scale industries is also usually small. Further, modern small-scale industries can perform an important function of pilot plants and as a training ground for developing entrepreneurship and skilled manpower, a valuable asset in countries where these are still scarce factors of production and take time to train. In short, "from the economic as well as from the social point of view, the establishment of small undertak-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ings is often more valuable than the over hasty establishment of huge industrial complexes, which no doubt look more impressive but draw off the labour force from the rural areas and give rise to serious imbalance".[2]

Objectives in Indian Setting:

In India, the role of the village and small-scale industries as set out in the Policy and as envisaged during the last decade of planned economy has been to make significant contributions in realising the objectives of :[3]

(a) Creating immediate and permanent employment on a large-scale at relatively small capital cost;
(b) Meeting a subtantial part of the increased demand for consumer goods and simple producer goods;
(c) Facilitating adequate mobilisation and utilisation of dormant resources of capital and skill;
(d) Bringing about integration between rural economy and large-scale industry through various developmental devices.
(e) Ensuring more equitable distribution of the national income and avoiding some of the problems that unplanned urbanisation tends to create, and
(f) Developing these industries into an efficient and progressive decentralised sector of the economy by means of providing assistance in the adoption of improved techniques and more efficient forms of organisation.

Progress Registered by Small-Scale Industry:

In the light of the objectives as set out above, significant contributions have been made by the village and small industries, especially in realising the objectives of expanded employment, larger production and more equitable distribution. The following table reveals the achievements in some of the notable small-scale sector industries:

(See Table on next page)

As is clear, village and small-scale industries have registered an impressive progress during the last two plan periods. The estimated expenditure incurred in the First and Second Plan periods has been recorded as Rs. 43 crores and Rs. 180 crores respectively. In the Third Plan, a total outlay of Rs. 264 crores has been proposed for programmes of village and small industries. Exports of products in the small-scale sector have been valued at an annual average of about Rs. 21 crores.

However, the percentage share of income generated by this sector to the portion of national income contributed by mining, factory enterprises and small enterprises has been constantly decreasing, as has been shown below:

Year	Income %	Year	Income %
1948-49	58.8	1954-55	53.3
1949-50	60.0	1955-56	52.4
1950-51	59.5	1956-57	49.2
1951-52	56.5	1957-58	47.3
1952-53	57.1	1958-59	47.5
1953-54	55.4	1959-60	45.2

It is clear that, until 1955-56, cottage and small industries accounted for more than a half of the total industrial output. However, their share has declined almost without interruption since 1949-50 and in 1956-57 it fell below 50 per cent. In the aggregate national income of the country, the share of small-scale sector enterprises declined from 10.1 per cent in 1948-49 to 8.1 per cent in 1959-60. The value of output of small undertakings remained almost stable during this period. Under the First Five Year Plan, 17 percent of the total development outlay on industry and mining was allocated to small-scale enterprises. This ratio was increased to 22 per cent under the Second Five-Year Plan; but it has fallen down to 15 per cent for the Third Five-Year Plan. In terms of the percentages of total expenditure under the three plans the ratio has been reckoned as 1:3 and 1:4 respectively.

The Role of the Government in the Development of the Small Sector

In formulating a programme for the development of village and small industries, the Government directed its line of action mainly in three directions in the first two plan periods. The first step was to strengthen the administrative and organisational machinery by the establishment of All India Boards to advise and assist in the formulation of programmes of development for various small industries. A three-tier organisation was developed for the purpose—the Ministry of Commerce and Industry at the Centre, the All India Boards and the State Departments of Industries and State Boards. In addition, industries' officers were appointed at the district and block levels. Steps were also taken for the co-ordination committees, both at the Centre as well as the State level.

Secondly, an essential feature of the Government's approach, in the last two plan periods, to the development programmes was to make provision of assistance in different forms such as credit, training facilities, technical advice, supply of improved tools and equipment on easy terms and establishment of sales depots. About sixty industrial estates were set up for the promotion of small-scale industries.

Thirdly, apart from various programmes of assistance, measures were taken to provide a more assured market for the products of some of the small-scale industries. For instance, production of certain varieties of cloth was reserved for the handloom industry and of certain types of agricultural implements for small-scale industry. Likewise, further expansion of under-utilised capacity of some of the large-scale industries (such as vegetable oils, rice milling, leather footwear, match, etc.;) was stopped. Separate targets of production were laid down for the small-scale and the large-scale sectors of certain industries like bicycles and sewing machines.

Obviously, small-scale industries will continue to play an important part in industrialising the national economy. It should be noted, however, that the production in small-scale sector has been growing at a diminishing rate, although its contribution to total industrial output is still fairly large. The share of small-scale industry in the national output declined from 9.6 percent in 1950-51 to 8.1 percent in 1959-60, while share of large-scale factory establishments in national output rose from 5.8 percent to 8.7 percent during the same period. It appears that the centre of gravity in the process of development is tending to swing over towards large-scale production. This raises the fundamental question as to what should be the future policy in regard to small industries so that they are not condemned to stagnation and, at the same time, the central objective of fostering small industries is justified on sound considerations and significant contributions.

Basic Considerations Directing the Development of Small Industries in the Present Condition

As has already been said, in a country like India, where unemployment and underemployment are widespread and can not readily be eliminated by other means and where volume of available capital is insufficient to support industrialisation on large-scale, the importance of a public policy of developing and promoting cottage and small-scale industries cannot be overemphasised. Small-scale undertakings, however, can win a permanent place in the industrial structure only if they improve their efficiency—technical, financial and commercial—enough to withstand the competition from large-scale enterprises. This requires a clear statement of those complex considerations that dictate the development of small industries in conditions as prevailing in India.

In the first place, the choice of public investment as between large-scale and small-scale production has been predominantly guided so far by the public policy tending to achieve social and political objectives rather than purely economic considerations. According to the Second Five-Year Plan, "within the limits set by the needs to avoid shortage of goods on the one hand, and the extent to which production in small units can be organised effectively to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take advantage of a larger market, in any individual case, on the other, the balance of public advantage will determine whether and at what level the capacity of a large-scale industry should be limited."[4] Evidently, the policy in relation to small industries is subject to the likely trends of future demand and the alteration in the light of changing circumstances.

Secondly, in industrialising the country, the cottage and small-scale enterprises do not possess the advantage of yielding a relatively high rate of output growth in the long-run. ".....the long-term rate of output growth is largely determined by the future increase in net investment made possible by present investment, and this is highest in large-scale industries. Investment in cottage and small-scale enterprises does not generate enough surplus or savings for re-investment to permit of an increase in the rate of growth of output in future. The share of wages in total costs is high in those industries; nearly all the wages are immediately spent on daily necessities, and thus low levels of technology and efficiency tend to be self-perpetuating, especially in the case of cottage industries."[5]

Thirdly, as a result of technical and economic progress, some of the old crafts such as clockmaking, handweaving, etc., are bound to die out or to struggle hard to survive so as to reward those for whom they provide a livelihood. With the progressive mechanisation of agriculture and development of industrial giganticism it is not always possible for the small-scale industries to replace persons after retirement or leave, because there is a universal tendency of the young generation, once they have reached a certain standard of living, to try "to break away from the past and turn towards more modern and better-paid activities which carry with them all the prestige of the latest techniques. This is a universal and irreversible trend."[6]

Scope for Future Development

Obviously, from a purely economic point of view, it must be conceded that any further encouragement of small-scale industries depends, in the last analysis, on two considerations; first, the choosing of specific fields which often more scope for the small-scale industry than for the large-scale industry and, second, the exploitation of technical possibilities and scale-economies of large-scale production." On the whole, however, unless the market for the product is limited and localised, or unless imperfections of competition are irremovable, small-scale enterprises cannot survive in the struggle with large-scale business".[7]

There are two specific fields which offer more scope for the small-scale industry than for the large-scale industry: First, when the satisfaction is related to local and highly specific demands and individual wants corresponding to personal tastes and preferences, small-scale industries tend to enjoy a favourable position with all the adaptability and attention desired, even when competing directly with a large-scale industry. Secondly, where mass production is generally impossible and the workmanship requires not only the individual care and attention but also the maintainance of high artistic quality and finish in manufacturing process, the small-scale industry, with the experience of centuries behind it, is likely to predominate in production.

There are also two more fields in which production is shared by large-scale and small-scale industry on a supplementary-complementary basis. Firstly, there are certain specific services, such as installation, maintenance and repair work, which are left to small firms by large firms because investment requirements are very modest on small-scale rather than on large-scale. Secondly, there are certain specialised jobs which are performed more efficiently by small undertakings rather than lagre-scale industry such as manufacture of parts subsidiary to agriculture or complementary to large-scale manufacture, or assembly and fitting of machinery, or the goods that are important foreign exchange earners, etc.

The Question of Dynamism in Small Industry

The village and small-scale industries, however, can realise the full potential of decentralised sector of the economy only if

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

they are dynamic and efficient, adapting, renewing and developing themselves to changed circumstances and needs. This can be done in three ways: first, there should be gradual increase in the average size of industrial undertaking—of course, giving due consideration to the provision of the specific services which consumers require because, in future, the activities of small-scale industrial undertakings are bound to be such that would require larger numbers of workers with higher skills; second, small-scale industries must be able to mass-produce on a scale commensurate with the need to maintain a very flixible optimum output within a specified time and at the same time maintain sufficiently high standards of production. This can be accomplished if the small-scale industries become, to an increasing extent, complementary to and dependent on large-scale industries on an equal partnership basis and thus concentrate on the production of a small number of carefully designed items of a high standard providing certain specialised services to large-scale undertakings. An I.L.O. study has recently rightly remarked that "if small-scale industry appears, broadly speaking, to maintain its relative importance in national economies as economic growth proceeds, it does so not through sheer inertia but rather through a process of adaptation of evolution and natural selection..... To a large extent the process of adaptation that is required would seem to be a process of shifting the centre of gravity of small-scale industry from activities that compete with large-scale industry to activities that are complementary to it."[8] Finally, small-scale industries must develop proper marketing services and their managers must have the necessary knowledge of the basic rules of industrial and commercial accounting. Today, the commercial frontiers are expanding and markets are growing, competition is becoming fiercer and, therefore, sound commercial management is absolutely essential. This involves the investigation of home and foreign markets, regular calls on customers, the collection of precise and accurate information on output, the accurate calculation of various costs, prices and profit margins, etc.

Difficulties Facing Small-Scale Industrial Sector

In any scheme of the development of small-scale industries the problem is not merely one of creating new activities for the surplus labour; above all production and sales methods must be improved and designs adapted to the requirements of the market. Viewed from this angle, it would be clear that, in the process of economic growth, the potential contribution of small industries, more specically the traditional crafts, has been very much limited to industrial advancement mainly because of the following reasons:

1. These industries are a relatively inefficient method of production because they do not have advantage of making sufficient use of modern machinery and equipment and general advance in science and technology. With rudimentary technique high-quality and low-cost production in adequate volume is practically impossible. "Where individual small industries, including village industries, have failed to adopt improved techniques or to achieve economies of scale and organisation through co-operation, production costs have remained relatively high and problems of unsold stocks and of decline in production and employment have arisen."[9]

2. These are subject to abuses in the form of extremely low earnings, long hours of work and sometimes child labour and their demand being gradually replaced by the products of domestic large and medium-scale industries.

3. Credit facilities were not organised on a large-scale and were not made available on reasonable terms. The channelling of credit to the artisans was obstructed by procedural delays. While the provision for loans in the Plans was limited in relation to the minimum requirements, the availability of credit facilities from normal banking and financial institutions and other institutional agencies has been small to meet the various kinds of capital requirements.

4. Progress has been somewhat retarded by the shortage of technical personnel, skilled and able, to operate machinery and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

equipment and to manage the undertakings properly.

5. These industries have experienced difficulties in obtaining supplies of certain basic raw materals and where these have been obtained, often they have proved to be of poor quality.

6. Progress has been generally slow owing to organisational deficiencies of co-operatives and other occupational organisations.

7. Competition from substitutes in foreign countries and fiscal restrictions imposed in certain traditional export markets have rendered the task of production programme very difficult.

8. These industries have experienced marketing difficulties arising mainly from an almost complete ignorance among producers of the possibilities and state of markets.

9. A major limiting factor in the development of efficient small-scale industries has, so far, been the lack of certain basic facilities such as supply of electric power and improvement in means of transport and communications. By the end of the Second Plan the total number of towns and villages electrified in the country is reckoned at 23,000 as against 7,400 at the end of the First Plan. By the end of the Third Plan this number is likely to increase by about 20,000 to about 43,000 and all towns and villages with a population exceeding 5000 may be expected to be electrified. As regards villages with a population range of 2000 to 5000, it is envisaged that nearly 50 percent that is 10,000 villages will receive the benefits of electricity. By the end of the Second Plan, the percentage of all towns and villages electrified was about 4.1 which is expected to increase to about 8 percent by the end of the Third Plan.

LIFE WITH AN ARTIST

By Mrs. D. P. ROY CHOWDHURY

V

Breathes there the man with soul so dead
Who never to himself hath said,
This is my own, my native land,
Whose heart never within him burned
As home his footsteps he hath turned.

The truth of these lines which I read in my school days was never revealed to me in its fullest sense till I came a thousand miles away from the land of my birth. My husband, Sri Deviprosad Roy Chowdhury, having been appointed to the post of the Principal of the Government School of Arts, Madras, we had to leave our old home for the new. Novelty has a charm no doubt but upto a certain extent and so long as it does not mean severing all connection with the dear old past. In our case we knew it was to be a long separation and therefore could not help feeling the pangs of parting.

For the first few years Bengal seemed to draw us towards her like a magnet before every vacation. The longest one was of course in summer, full two months and a shorter one during Christmas. Such throbbing of the heart we felt each time before the closing of the school, such bustle to get things packed and be ready to start. Preparation itself had a joy of its own. And then when the actual day arrived, my husband was as excited as a child! We were at the station much before the scheduled time for the departure of the train. If I pointed that out to him, I was curtly told it was much better to be early than late. I sensed the tense feeling of a child in the grown up man and thought it prudent to observe silence.

In those days there were no airways to curtail the hours of journey and to make a long distance appear short. Consequently when we entrained for our homeward journey we had to settle down in our small compartment with the idea of making it our temporary home for two full nights and a day and a half.

The first time when we started on this long trip our son was nine months old. It was December, the winter season in Calcuta. We had to protect ourselves well against cold. Besides, we had to make all arrangements for the food and comfort of the baby. Our luggage therefore was much more than it would have been. It was left under the care of the servants who had instructions from my husband to arrange it in our compartment. I was full of anxiety for its safety but dared not express it for fear of getting another curt reply. You can imagine my relief when I found it all intact.

The journey on the whole was uneventful. I therefore did not learn much from my first experience of travelling with an artist. My husband knew the secret of making the waiters stand on attention whenever he needed their service; consequently there was not much room for complaint. The cigarette stumps and the match sticks scattered all over the compartment caused me some discomfort.

What heart-beat we felt when we reached the border of Bangal! The paddy fields, the small pond where the village wife fills her pitcher, the bony and fagged out farmer plodding his way home after the day's toil, the dwarfed barns made specially for betel leaves, all seemed to cry out "This is Bengal." It is not the beauty but the familiarity which was so appealing to us. At a certain station we heard the members of the station staff talk in our own language. My husband was all excitement. He told me, "Look, they are Bengalis, we have reached Bengal." My excitement was no less but to keep it under control I just nodded my head while the heart within me whispered incessantly, "this is my own, my native land."

Excepting my mother and my little sister who were present during the arrival of the baby none had seen the little fellow. The platform was therefore filled with eager faces of our dear ones as the train steamed in. There was a regular bustle to reach the new man while the one who was so much in demand clung fast to his ayah and rebuffed each person with the same reply "no go." The joy of that first home-coming will ever remain green in my memory. So many changes have taken place since then. Years have rolled by. New interests have taken the place of the old. We have learnt to love our foster mother who has sustained and sheltered us for this long period. No feeling of strangeness is there now. By a slow

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but steady process she has entirely made us a part and parcel of her soil. While in our own land the ball which brooks no question has tossed many of our loved ones from the field. The urge to visit our home has become less imperious to us today. Yet do we not respond to her call? We do but not with the same enthusiasm and seldom unless necessity gives us the impetus.

I shall narrate here a few instances of my plight while travelling with the artist on some such occasions.

Let me state at the outset that Sri Deviprosad is very independent in spirit and equally dependent in the field of action, excepting where art is concerned. During a return journey from Calcutta he wanted a four-berth compartment to be reserved for us from Howrah. A friend offered to do the bit for him. Immediately a broad smile brightened up his face as if he had been rescued from an insuperable difficulty. All went well till we arrived at the station. At Howrah we were searching for our compartment in vain when to our great relief the friend cropped up from somewhere and led us to our place. It was a spacious compartment consisting of eight berths where four berths had been reserved for us.

The artist's face fell. I could see from his expression that he was very much annoyed, He paid for extra tickets specially because he wanted the compartment to be left entirely to ourselves. Evidently the friend did not see his point. Instead of reserving a four-berth compartment he had asked to reserve four berths, hence this mess. Deviprosad was determined to have what he wanted, whether by bullying or flattering did not matter. He went on nagging the railway authorities in such a way that just to pacify him they gave an assurance that none would enter our compartment upto to Waltair. This did not satisfy our artist. What about the distance from Waltair to Madras? He went on bullying the railway staff at every big stop for giving us a coupe if they were unable to provide a full compartment.

To the great relief of my husband at Waltair we were informed the first class coupe next to us was vacant and we could occupy it if we liked. I was in a fix. Things were scattered all over the place. They had to be collected and taken to the coupe. There was no time for packing. A number of porters were engaged. One of them caused some delay by unnecessary jabber. He felt the weight of the wrestler's strong palm at his neck and corrected his manners. The reward that they received compensated for all that they had to go through. I, with the help of the ayah, was dumping the things as they arrived witout the slightest knowledge of how many were left behind. I thanked my stars when I found all were safe and my husband was free from his worries.

The next memorable train journey with the artist was when I want to Calcutta for my sister's wedding. This time also a friend intervened and volunteered to reserve a compartment through Thomas Cook & Sons. My husband expressed his grateful thanks but he had learnt the lesson from his previous experience not to depend on others in these matters. He therefore took extra caution and made his own arrangements for reservation in spite of the friend's assurance to take up the responsibility. Now this friend happened to be a young air pilot. While flying low over the city, he got involved in an accident just a day or two before our departure. The news was published in all the papers. My husband enquired and found that though the aircraft was burnt, the friend was safe in bed with minor injuries.

It never occurred to us for a moment that this could affect our journey in any way. On the day we were to leave, the artist was as usual at the station long before the scheduled time, and for once atleast this was to our advantage. I and my son did not accompany him but followed a little later. On my arrival I found a great commotion at the station and my husband was the pivot on which the wheels turned. What happened was this. Since our compartment was reserved by two persons in the name of one and one of them was disabled by accident, the management took it for granted that the other person would not travel and cancelled our reservation. As matters stood, it was not possible for them to give us a full compartment but they could provide us with berths in different bogies. The artist was completely upset. There was one first class coupe attached to the train next to which there was a compartment with four berths one of which was vacant. My husband demanded that coupe for his son, his wife and the ayah whereas he said he would occupy the berth in the next compartment. But the coupe had already been taken possession of by an English military officer of high rank. He refused to budge from there though he was shown a berth in a bigger carriage. His idea was to have the benefit of travelling alone. He was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

quite sure that if he occupied one of the berths the entire coupe would automatically be under his disposal. That was the time when every white man was next in importance to the King, more so if he happened to be a military official. The station staff did all it could to persuade him to go to the bigger compartment but it was of no avail. When they failed in their efforts my husband tried to appeal to the chivalry of a gentleman by asking for a favour explaining our difficulties. Evidently that white officer failed to understand why an Indian should be so particular about the comfort of his wife and child and turned a deaf ear. Moreover, he was vulgar enough to make an impolite remark which was meant to be an insult to the womanhood of India.

Deviprosad's patience was tried to the limit. He realised that his civility was not appreciated. It was taken as a weakness. In pursuance of which he had to change his method of approach. He grasped the officer's wrist with his strong hand. The pressure of the wrestler's grip produced the desired effect. Probably it made the official realise that self-respect was not the monopoly of any particular race and he left the coupe without any more fuss. We then settled down in the little compartment with all sorts of instructions from my husband as to how to travel when the country was in a state of war. I am talking about the time when Britain was at war with Germany (World War II) and India was still an integral part of the British Empire.

Nothing untoward happened till the next evening when we arrived at the station where we were to have dinner. No restaurant car was attached to the train during those days. One had to go to the station refreshment room for meals. Owing to the black-out system the station was very dimly lighted. I do not know the reason why our train did not touch the platform. We were expected to cross the line and go over to the platform if we desired to have our dinner at the station. My husband could not approve of this idea. He got down from the compartment, stood on the railway line with his arms akimbo in a "my will be done" sort of attitude and ordered one of the passing waiters to bring dinner to our carriage. The waiter replied that he had no instructions to serve meals in the compartments and went his way. A fellow passenger a military officer from Bengal, was going to the refreshment room. He very kindly offered to help us. A little while later however he came back unsuccessful and confirmed what the waiter had said. Two European gentlemen were travelling with the artist. He requested them to look after his luggage and then marched off aggressively towards the refreshment room. I apprehended trouble. A few minutes later the artist was with us with two waiters carrying dinner trays. Having performed what seemed an impossible task, he sat down to his repast with a significant 'hum.'

On our way back from Calcutta we had to encounter the same problem, whether to go to the refreshment room or have the lunch brought to us. Since it was broad daylight and the train was standing next to the platform, I suggested that we leave our luggage in charge of the ayah and walk up to the refreshment room. But that was not to be. Once more the martial spirit of the artist was roused. He was in his travelling dress which consisted of a khaki pyjama and a sleeveless upper garment of the same texture and a wooden sandal. Without the least hesitation he got down as he was, making the platform resound with the noise of his sandals which worked as a drum to announce his approach.

I noticed from the window of my carriage a gentleman from the first class compartment next to us gallivanting on the platform in fruitless attempt to get his food brought to his place. I therefore had no hope of my husband succeeding. But he did, and when I asked him how he managed where others failed, this is the description he gave me of his conquest : he went straight inside and asked the manager of the meals department in a most imperative tone to send food for two persons to his compartment immediately. The place was then crowded with European military men who were sitting at their lunch. They were taken aback by the sudden apprence of this strange figure and remained staring at him. The manager must have been deceived by the artist's Khaki dress and commanding attitude, for he was all eagerness to oblige him. Before any of the inmates could come back to their senses our friend had accomplished his job and returned to us.

You must be wondering by now how I could survive the shocks of such idiosyncrasies. All I can say is that though I am frail in body, no match for my strong husband, my nerves are undoubtedly gifted with abnormal strength.

NATIONAL DEFENCE AND DEVELOPMENT PLANNING

By KARUNA K. NANDI

We have already, in a recent issue of this Journal, discussed at some considerable length, the achievements and failings of the first two Plans, their impact on national income incidences, and the progress so far made in this connection, towards a self-generating and self-sustaining national economy. The Third Plan was claimed to have been formulated with an obviously overwhelming industrial bias with this end in view, that is with the objective of taking the country as rapidly as possible on to a stage of offtake at which it would be possible to induce the desired self-generating dynamics in the national economy. But the actual and potential environment in which this current Plan was expected to be implemented has, in the meanwhile, very materially altered in view of the grave national crisis posed by the present open and unprovoked armed invasion of the country by Chinese expansionists. The Plan, therefore, has to be not merely reoriented, as suggested by the National Development Council, to meet the present emergency, but it would also, it is obvious, have to be substantially recast both with regard to its objectives as well as its priorities, in the present altered circumstances of the country. Planning, it is obvious, will now have to cover a far more comprehensive field and its implementation inspired by an urgency and the need for far greater measures of effectiveness, efforts in this connection being directed towards meeting the overwhelming priority that the defence of the country has now made essential. Development and defence are, it is clearly understood, neither contradictory to each other nor contradictory as regards their objectives. It is obvious that no country which has not the strength to defend effectively its integrity against enemy invasion can either be expected to have the strength to develop effectively its economic potentials towards greater and developing national prosperity. Nor can the need for sustained defence efforts be considered to create a climate which would be regarded as being uncongenial for development planning. What is really needed is to so dovetail the two into each other in such a manner that the one may sustain the other, so that Planning may effectively cover the essential and immediate requirements of defence needs and, in the process, continue to sustain the dynamics of development at the same time.

Third Plan Industrial Targets

With a view to arrive at a correct assessment of the actualities of the present situation and immediate defence needs, it should be helpful to study the targets and priorities that have been allocated to industry under the Third Plan. The Third Plan envisages fresh investments of the order of Rs. 2,993 crores towards the achievement of the physical targets set in the Plan programme for industries and minerals. The estimated foreign exchange component of this investment is calculated to comprise approximately Rs. 1,338 crores. The estimate of investment thus formulated envisages the ultimate objectives of the Plan in this behalf, but the actual allocations in the public and private sectors respectively representing resources expected to be immediately available, aggregate Rs. 2,570 crores,—Rs. 1,470 crores (excluding Rs. 50 crores to be transferred to the private sector) for the public sector and Rs. 1,100 crores for the private sector. The breakdown of the estimates are detailed in the following table :—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Table I

Estimate of Investment in Industries and Minerals in the Third Plan.

(In Rs. Crores)

Item.	Public Sector		Private Sector		Total: Public and Private Sectors	
	Total	Foreign Ex.	Total	Foreign Ex.	Total	Foreign Ex.
A. New Investments—						
(i) Mineral Development	478	200	60	28	538	228
(ii) Industries' Development	1,330	660	1,125	450	2,455	1,110
Total	1,808	860	1,185	478	2,993	1,338
B. Replacements	...	...	150	50	150	50

The sources of supply of investable funds for financing fixed assets development in the private sector to provide the resources as estimated above and the proportion of contribution expected to be available from difference sources are detailed as under:

Table II

Sources of Funds for Industrial and Mineral Development

(In Rs. Crores)

Sources.	Estimated Funds
1. Institutional agencies ..	130
2. Direct Loan participation by Central & State Governments and other assistance ..	20
3. News Issues	200
4. Internal Resources (net, after accounting for repayment liabilities)	600
5. Direct Foreign Credit participation in Capital ..	300
Total	1,250

The above table discloses a gap of Rs. 100 crores between the estimate of investments and resources expected to be available in the private sector programme comprising a total investment of Rs. 1,350 during the Plan.

Metallurgical Industries

Especial emphasis has, very pertinently, been laid upon the development of metallurgical industries and very high priorities allocated thereto. In the steel industry, for instance, the targets proposed have been placed at a gross 10.2 million tons ingot steel capacity and 1.5 million tons additional pig iron capacity. The gross steel capacity in the country already developed comprises 6.2 million tons, 3 millions in the private sector and 3.2 millions in the public sector. The Third Plan programme, therefore, envisages raising of this capacity by a further 4 million tons. One of the important requirements of the Third Plan programme in this behalf was, naturally, the assumption that rapid achievement of production potentials to conform to laid down capacity would be effected as a basic take-off towards the further expansion of capacity envisaged in the Third Plan. This would be considered essential not merely for fulfilling the basic objectives of the Second Plan, but for the further expansion

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of capacity based upon the already established public sector projects, but also those new plants projected to be erected at Bokaro in Bihar and, possibly, also a lignite-based one in Neyvelli in Madras.

As already stated above, the capacity already laid down aggregates 6.2 million tons,—3 millions in the private and 3.2 million tons in the public sector. The estimate of requirements of steel during the Third Plan to implement the targets envisaged in industrial and mineral development, it has been estimated, would call for a minimum supply of 28.9 million tons in terms of ingot production. Having regard to the already existing capacity in the country, it should have been possible for the indigenous producers to cover this demand in full, but cautiously estimating prospects, the Planning Commission had laid down total availability of steel in the country from indigenous sources at a gross 24.1 million tons over the entire Plan period. Later reassessments have, however, led the Planning Commission to revise these estimates, and the current expectations are represented in the following table:

Table III.

Estimates of Requirements and Production of Steel during the Third Plan

(In million ingot tons)

Year	Requirements	Production	Gap
1961-62	4.3	2.9n	1.4
1962-63	5.4	4.0	1.4
1963-64	5.8	4.4	1.4
1964-65	6.6	5.0	1.6
1965-66	7.2	5.8	1.4
Total	28.9	22.1	6.8

It would, thus be seen that as a result of the current reassessment of prospects of steel production in the country as arrived at by the Planning Commission experts, leaves a gap of something like 30 per cent between existing officially laid down capacity and actual production expectations. The load of short falls in steel carry almost disastrous implications. Some measure of the burden of this short-fall would be evident from the fact that for less than a million tons of steel imports in 1961-62, foreign exchange bills to cover them aggregated very nearly Rs. 80 crores. To cover the gap between actual requirements of steel for implementing the targets of the Third Plan and estimated actual indigenous production during the period by imports alone would call for a foreign exchange outlay of more or less Rs. 550 crores. There was some talk, earlier, in the context of these later assessments, that the Third Plan programmes would have to be re-drawn to correspond with the actual indigenous supplies of the requisite quantum of steel, especially having regard to the mounting foreign exchange difficulties during the period corresponding with the commencement of the Third Plan.

The national emergency since occasioned by large-scale Chinese invasion of the country has made it necessary to do a certain measure of rethinking in this connection. The need for gearing development programmes to immediate and overwhelming defence needs would seem to make the need for supply of steel even more urgent than before. The obvious remedy would seem to be to sufficiently energize our existing steel plants to reach capacity production as early as possible. The various steel plants in the country, in both the private and the public sectors have, no doubt, pledged their all-out endeavour to achieve this, but results woud seem to be still doubtful as to the extent to which this may be depended upon to be fulfilled. The ability, however, to reach capacity production level in conformity with the potentials already developed in this behalf, would seem to be of the most vital moment, especially at this juncture when steel has to be provided in requisite quantities to meet the immediate and inescapable needs of defence production for which it is a basic producer-material, and to otherwise procure which it would call for a heavy outlay in foreign exchange which the country, simply, is not able to afford at the present moment. Already, our resources in this behalf are being

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

necessarily burdened by the need for procurement of arms and other modern fighting equipments from abroad and, although, the U.S.A. and Britain are generously providing all the aid and assistance we could reasonably hope for without prior settlement of the terms of payment, the eventual need to cover this obligation would be bound to place heavy additional strains upon our national resources. The need to conserve our foreign exchange resources and, as an essential element in the process to eliminate further avoidable foreign exchange commitments by all-out development of production potentials in respect of already laid-down national potentials would, in the circumstances, seem to be of extremely urgent moment. Steel and other vital producer-resources which enter so urgently into defence-production needs are, obviously, pivotal in this connection. The capacity which has already been laid down at such heavy expense of resources and effort must, therefore, be utilized to the fullest extent of its poentials for the purpose.

Further Expansion of Steel Capacity

One of the necessary conditions justifying construction of further steel plants as projected in the Third Plan and in addition to the 6.2 million tons already laid down, as observed earlier in this context, was considered by an important school of economists in the country, to be the development of actual production potentials to conform with the laid down capacity and, in this view of the question, a great deal of doubt seemed to prevail in certain quarters, as to the wisdom of further expansion of capacity in the Third Plan until this condition had been fully met. In the altered conditions of the national climate, and the reassessments of the country's needs for defence reinforcement, etc., although doubts as regards the wisdom of expanding steel capacity by the projected further 4 million tons per year would seem to have been removed, that it can and should be done only upon the basis of immediate exploitation of production dynamics to the level of the already available capacity, has become all the more urgent to fully ensure. Not merely to effectively fight and liquidate the currently mounted armed offensive against the country by an enemy aggressor, which is no doubt immediate and urgent, but also, at the same time to take timely measures against apprehensions of future such eventualities from potential enemies, we must have the resources to produce more steel than the already available capacity would enable us to provide. This would be needed not merely for what is loosely termed as "defence production." The varied needs of modern defensive preparation calls for a corresponding variety of supply needs not merely on the actual lines of armed defence-reinforcements, but also of civilian use in large measures, all of which will need large quantities of steel to provide.

This need is not merely urgent and calls for large quantities of what is known as ordinary steels, but also for a variety of alloy and special steels which enter vitally into the production of armaments and other defence needs. Their use in modern industrial construction and equipment building is also extensive and of a varied nature. It was estimated in the Third Plan, that for the programmes of industrial and mineral development in the Plan, the country would need, by the end of the Plan period steels of these categories of an aggregate quantum of some 200,000 tons per annum, comprising tool steels, construction sheets, stainless steels and die and other alloy steels, which would progressively increase to some 389,000 tons by about the end of 1970. The Third Plan put down development of capacity in the public sector for these kinds of steels at the Durgapur Alloy Steel Project, which envisages a gross 48,000 capacity at the present moment and which would be capable of being doubled at the very next stage. Some capacity in this behalf is also being developed in the private sector, notably by the Tatas at their Jamshedpur Steel Works, which is expected to have an initial capacity of some 50,000 tons. As already observed, the estimate of needs for special and alloy steels at 200,000 tons by 1965 and 389,000 tons by 1970, did not obvi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ously take into account the urgent needs of defence production which have obtruded in the meanwhile upon these estimates and it is understood that investigations are already under way for meeting this suddenly developed additional but vital need as far as possible by corresponding expansion of originally projected capacity in this behalf in the Third Plan. While the Tatas are expected to provide their own resources and procure the necessary foreign collaboration for covering the foreign exchange element in the investment which they have, of course, already successfully done, the Durgapure Alloy Steel Plant (already the capacity is said to have been decided to be raised from the initially projected 48,000 tons to 57,000 tons) will call for an outlay of Rs. 50 crores with a Rs. 20 crores foreign exchange component. This will be further supplemented, it has been projected, by the Ordnance Factories, mainly in the category of construction sheets and spring steels, by another 50,000 tons by the end of the Plan period. The projects for Alloy and Special steels thus included in the Third Plan programmes are represented in the following table:

Table IV

Eestimated Demand and Indigenous Output of Alloy and Special Steels

Category	Estimated Demand		Output Capacity in Public & Private Sectors		
	1965 tons	1970 tons	Durgapur tons	Ordance tons	Private Sector tons
Tool Steels	42,000	70,000	13,000	..	..
Construction Sheets	100,000	241,000	17,500	..	..
Stainless Steels	50,000	60,000	17,500	..	..
Die & Other Alloy Steels	8,000	10,000	500	..	..
Total	200,000	389,000	48,000	50,000	50,000

Gross Total Estimated Cacacity : All Categories : 148,000 by 1965

Non-ferrous Metals

Non-ferrous metals also constitute an important arm of development in the mineral industries with a high ptoential of defence requirements. An important place has been assigned to Aluminum, with a projected expansion of capacity to 87,500 tons at the end of the Plan period, and Electrolytic Copper production is to be undertaken for the first time and account for a total annual capacity of 11,500 tons. Zinc capacity has been projected at a level of 15,000 tons.

Coal

In the vital industry of coal mining Third Plan projects have been formulated and revised several times, until now they have been geared to a target of 107 million tons annually by the end of the Third Plan period. The coal industry has been suffering from a measure of indifference which would seem to have been amazingly complacent in terms of the measure of development planning envisaged in the First two Plans. It was not really until the second year of the Second Plan that some attention was accorded to this vital sector of the country's basic producer industry and development measures for expansion projected, mainly in the newly organized public sector under the aegis of the National Coal Development Corporation, with a certain measure of additional responsibility

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

assigned to the already operating private sector. By 1961-62, although the private sector has almost fully met its obligations in this behalf, the public sector was unable to reach within a reasonable measure of its targets. In the Third Plan the private sector's assignments in the almost doubled targets of the Plan although very substantial in terms of its resources and, especially, in the negligible measure of assistance expected to be provided to it, the role of the public sector remains overwhelmingly more important in terms of new developments, although its ability, having regard to performances during the first year of the Third Plan, to fulfil its obligations would seem to be in grave doubt. The responsibilities, respectively, of the private and public sectors, for coal output during the Third Plan, have been placed at approximately 38.8 and 68.2 million tons. In the Second Plan programmes it was placed at 16.15 million tons which included 2.6 million tons, for the Government's Singareni group but actual production in 1960-61 aggregated only 10.16 million tons, while it fell further to just over 8.50 million tons in the following year. In comparison, the private sector performance was commendably adequate; against a target of 45 million tons it turned over 44.49 million tons in 1960-61 and 45.62 million tons in the following year. The performance in the first 4 months of the year 1962-63, which are now available, pose an even more dismal picture against the overwhelmingly increased assignments of the public sector of 38 million tons, and appeared to be 3.34 million tons, against the private sector output of 16.34 million tons during the same period, which compares immensely more favourably to its assignment for developing outpuot to the level of 68 million tons by the end of the Third Plan.

The vital role of the coal industry in the especial context of the country's defence requirements would be obvious from the fact that even apart from the additional burdens that would be bound to be placed upon the industry in the context of our present national emergency, the ordinary burdens laid upon it by the Third Plan programmes would, in themselves, be fairly heavy. The railways, for instance, somewhat inadequate in terms of projected Third Plan developments as their capacity would be bound to prove, would be expected to consume approximately 21 million tons of coal by the end of the Plan period. The expanded steel industry would consume another 25 million tons annually, and the demands of the Power industry are estimated to rise to 12 million tons annually. The demands of other industries in both the producer and the consumer sectors, as well as for domestic consumption, are also expected to rise correspondingly, and the total burdens on the coal industry would cover every ounce of the 107 million tons of annual production projected in the Plan to cover their basic minimum needs.

Especial consideration needs to be accorded to immediately develop our transport potentials in this connection, not merely to cover the developing burdens of economic and indusrial development, but in the urgent context of the overwhelming needs of defence which have now so suddenly obtruded upon our means of survival and which, it appears, we are not at all fully prepared to meet. The importance of development of coal output becomes all the more urgently important in the far wider contexts of defence production, transport of arms, equipments, supplies and personnel etc. The increased tempo of the dynamics as well increased capacity of transport is a vital requirement of national defence and cannot be neglected under any circumstances. The need, therefore, would seem to be overwhelming for increasing the tempo of expansion in coal output and, if necessary, to meet urgent and immediate needs of the emergency that has now arisen, the Government's present dependence on the obviously less dynamic public sector eliminated by correspondingly increased assignments to the more vigorous private sector. The private sector, it has been estimated, will already have needed new investments of the order of some Rs. 88 to 90 crores to cover its original assignments in the Third Plan, which may have to be further raised at that immediate defence needs may place additionally upon it. Obviously, it would need a measure of assistance from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government which must be placed at its disposal.

Engineering Industries

In the engineering industries' sector, the Third Plan programmes envisage concentration of public sector resources upon the manufacture of heavy machinery, mining machinery and equipments manufacture, heavy machine building, etc. while to the private sector is left the responsibility for developing an extensive range of manufactures including tractors, diesel engines, constructional equipments, power distribution and measurement equipmments (transformers upto a capacity of 33 kV), cables and wires, locomotives, freight wagons, passenger coaches, commercial vehicles, new plants for setting up new units of sugar, cement, paper, textile and other industries, boilers and small machine tools, consumable stores, durable consumer goods etc. The respective roles of the private and public sectors in this field of industrial development are estimated to be complementary to each other and an extensive range of basic industries developed to cover developing needs of industry.

An important project is the diversification of the capacity of the public sector Chittaranjan Locomotive Works to enable it to go into Electric Locomotives manufacture to conform with the developing needs of electrification of rail traction. The traction motors for the purpse would be manufactured and supplied by the public sector Bhopal Heavy Electricals and the capacity for manufacturing diesel-electric and diesel-hydraulic locomotives is expected to be developed at the Chittaranjan Works. The capacity of the diesel-electric locomotive project estimated at 140 units per annum would be expected to provide an annual turn-over of Rs. 10 crores.

Ship Building

Significant developments have also been envisaged in the country's ship building capacity, and the Hindusthan Shipyard at Vishakapattanam has been under expansion to enable it to produce ships in the range of 50,000 to 60,000 d.w.t., per annum. A dry dock at Vishakapattanam and an additional shipyard at Coachin, and capacity for manufacturing marine diesel engines are among the additional projects in the Plan in this field of development.

The extension of the country's shipbuiding capacity and ancillory facilities and equipments to conform would, especially at this time of national emergency, seem to be of the greatest moment, and would seem to call for immediate and urgent concentration of effort.

Further developments projected in the Plan include expansion of capacity for structural fabrication, manufacture of pressure vessels and heat exchangers for the chemical industries, precision instruments, compressors and pumps, ball and roller bearings and a variety of other items.

Adjustment of Industrial Plan to Defence Needs

The projects in the field of engineering industries, almost as much as in the basic producer industries like steel, coal and power, have an immediate and vital bearing upon present emergency national defence needs. These can and must be adjusted to conform to urgent defence needs and it is important to press the services of the constitutionally more vigorous and faster-moving private sector to these requirements in, perhaps, even larger measure than the reliance placed upon the public sector alone. Thus, the immediate and urgent need for the manufacture of tanks and armoured cars, of which our present resources are ridiculously inadequate, could be very largely and rapidly met by adjusting the resources and experience of the builders of railway wagons and coaches to this field of manufacture. Very little additional equipments and practically no important measure of reorganization should be needed to enable the factories used to manufacturing wagons and coaches to successfully divert their manufacturing pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gramme to meet this immediate defence need. In the field of manufacture of other defence equipments also as, for instance, jeeps and other motorized military road transport etc., the services of the engineering industries in both the private and the public sectors could be of immense assistance, especially in the speeding up of the tempo of production for vitally needed equipments and supplies.

The necessary adjustments needed to speed this up, should not call for any very large measure of reorganization of equipments, flow sheets or assembly lines, or for a great deal of additional capital investment. Even if this were needed, the urgency of action in this behalf would still seem to be inescapable. What is really needed immediately and urgently is the appropriate reorientation of both purpose and outlook in official and non-official quarters alike, and the necessary determination to bring this about without the least avoidable delay. Any further comment should be entirely superfluous to emphasize the needs of the hour.

Consumer Industries

The strategy of modern defence preparedness is such that it becomes as vitally essential that the lines of civil supplies, especially in the primary consumer sectors, are left unbroken and their flow unhampered, as it is to keep the front lines of fighting formations kept adequately supplied with armaments, equipments and the host of other items of requirements that have to be provided to keep the army, able, alert and capable of instant mobility as may be demanded by circumstances. The needs of active armed defence in the face of enemy invasion would, naturally, place the severest strains upon these lines and the unbroken flow of goods and services, especially in the matter of co-ordnating various branches of industry and commerce and the appropriate allocation of products to active defence and essential civil supply needs.

The creation of the recent new Ministry of Economic and Defence Co-ordination at the Centre is, perhaps, designed to fulfil this vital need. The responsibilities and, necessarily also the powers of the new Ministry of Co-ordination, would have inevitably to cut across several ministries in the Union Government like, for instance, the Ministry of Heavy Industries, Commerce and Industry, Ministry of food and Agriculture, the Ministry of Commuications and Transport and several other ministries of the Government. There seems to be a school of opinion even among members of Parliament who appear to have been viewing this new creation with a certain measure of disfavour and apprehend possibilities of conflict and cleavage when the decisions of the new Ministry of Co-ordination may impinge upon the prerogatives of these various other ministries of the Government. They seem to favour more the age-worn method of Co-ordination of essential economic functions and production and supplies through sub-committees and consultative committees etc. They have, however, proved always to be rather slow-moving and presumably unsuited to the needs of snap decision and fast action in times of a fighting war like the one the country has been compelled to face now from our Chinese invadors. Besides, it is expected that the constitutional responsibilities of individual ministries which may, in normal times, produce occasional controversies would, in present circumstances, produce larger measures of aggrement instead. It is not clear yet as to the specific allocation of subjects to the new Ministry which, it may be presumed, would gradually emerge with the developing exigencies of the present situation. Experience under the British Parliamentary system might provide a valuable guide as to the range of responsibilities that this Ministry might be called upon to undertake.

The experiment of co-ordinating the functions of different. ministries can be said to have commenced in Britain as far back as 1936, when a new Ministry of Defence Co-ordination was appointed. It functioned for a comparatively short while, as did the later Secretary of State for Co-ordination of Transport, Fuel and Power,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the effort to co-ordinate the Food and Agricultural Policy of the Government under the Lord President of the Council. All these efforts at Co-ordination which functioned between the years 1936 and 1940 proved controversial and comparatively short-lived. But the later exigencies of the Second World War which made it necessary to co-ordinate the functions of several ministries in the War Cabinet through a Minister of Production and which functioned between the years 1942 and 1945, proved an outstanding success especially when Mr. Oliver Lyttelton assumer charge of the office after Lord Beaverbrook's resignation. Mr. Lyttelton's responsibilities were never very precisely defined, presumably to provide scope for a measure of flexibility to meet varying and developing exigencies of the War as circumstances would portend. There is no substantial reason why the new portfolio assigned to Mr. T. T. Krishnamachari cannot function as successfully in a like manner, although necessarily the British analogy may not wholly apply in this case. In any case, the new Minister of Economic and Defence Co-ordination would presumably function under the direct authority of the Prime Minister and should, therefore, prove adequately effective. There is undoubtedly scope for a large measure of Co-ordination between the functions of the different ministries of the Government for meeting immediate and urgent defence needs and to adjust and harmonize development projects, potentials and processes to this overriding emergency of the hour.

Food And Agriculture

In any consideration of our immediate defence needs, the importance of reinforcing the food and agricultural sectors of the national economy is obviously of vital urgency. The Third Plan targets of food production have been placed at the level of 100 million tons of cereals and pulses which, according to the estimates of the Planning Commission, would provide a daily per capita ration of 17 ounces. The Second Plan targets in this behalf were 80 million tons, but actual achievements were in the region of a little less than 70 million tons. Considerable doubts have been entertained, having especial regard to the shortfalls of the Second Plan in supply of irrigation water and production of fertilizers, that the Third Plan targets in this behalf could at all be reached. In fact, even achievement of the target of 100 million tons would leave a considerable gap between demand and supply and a reassessment of Plan targets in this behalf already undertaken has been endeavouring to place this target at an even higher level by a further 15 per cent. The need to step up employment of resources and effort to this vital sector of the economy is both urgent and inescapable. Equally urgent would seem to be to step up production of those ranges of agricultural raw materials as would be calculated to enter into immediate defefnce production and supply needs. The new Ministry of Economic and Defence Co-ordination in its Department of Supply could play a vital and urgently needed effective role in this field.

Of especial importance would seem to be the need of co-ordinating and reinforcing supply not merely to meet requisite active defence needs to an adequate extent, but also to maintain essential civil supplies at a level of at least basic minimum need and, what would seem to be equally urgent and vital, to keep these latter supplies beyond the scope of operations of profiteers and black-marketeers. Here the new Ministry of Co-ordination as a most vital and effective role to play and the country's active defence potentials would be bound to be very largely conditioned by the measure of success that it may achieve in this behalf.

Plan and National Defence

A picture has been sought to be drawn, inadequate in details as it necessarily must be, of the scope and processes of our current development planning in its relations to the immediate national defence needs of the country. It shsould be obvious

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from the little that could be presented here, that it would be suicidal to drop the Third Plan at this stage. As this article has already been prefaced, the Plan cannot be dropped without vitally affecting our national defence potentials, but it is equally urgent that the programmes and targets of the Plan will have to be reoriented and, possibly also recast, in respect of its objectives and priorities to cover a more comprehensive field of endeavour and effort and must be inspired by far greater measures of urgency towards increasingly larger measures of effectiveness. Plan priorities and targets will necessarily have to be adjusted and diverted to immediate defence production and supply needs. But it has also to be realised with an equal sense of urgency that civil supply needs have to be as urgently met for reinforcing the national defence potentials.

The Plan, therefore, has to be proceeded with, although it may be necessary to reorient it to cover the more extensive grounds mentioned above. What is most urgently needed is the awareness that the first two Plans in the processes of their implementation have led to a great deal of avoidable wastage of resources and material and to an undue concentration of wealth, income, power and prerogative. This must be obviated and necessary precautions adopted to prevent further concentration. The emergencies of war in the modern times call for long and sustained engagement over almost indefinite periods of time and adequate safeguards have to be provided to enable the country to meet its exigencies without demoralization and attenuation of strength not merely at the fighting front lines, but behind the lines as well among the civilian population of the country. The process of development towards developing economic strength and industrial progress, is an essential condition of national survival.

THE ESSENTIAL UNITY OF INDIA LANGUAGES AND LITERATURES

By SUDHIR BRAHMO

There is no hard and fast lines of demarcation between any two Indian languages specially those of Northern India. Each one often intrudes imperceptibly upon the other. It is often impossible to say exactly where the one ends and the other begins. It is complicated by immigration and emigration,—casual, periodic, temporary and permanent,—as also by the shifting dates of census and the change-over from the **de facto** to the **de jure** region. Immigration of speakers of one of the two competing languages and emigration of the other from a particular region complicates the problem. The problem is not absent in South India. Andhra lost the city of Madras because the percentage of Telugu Speakers had been decreasing, while that of Tamil speakers increasing during the last 70 years.

No area in India can be said to be purely uni-lingual. The highest that can be said is that in some districts the percentage of speakers of a particular language is over 90 or 95. In other areas it is much less. The dominant language is often confined to a minority of the population. Within the same district one language is spoken in the eastern part and another in the western part. Sometimes the minority speaks and writes two or three languages or more local and tribal dialects, each different from the other. The matter is further complicated by varying densities of population. There are other difficulties too.

The difficulties are there. But to think of them in terms of simple linguistic majority on minority even when the two neighbouring languages do not imperceptibly merge into each other, would be an over-simplification of the matter and a wrong approach to the problem. The ideal solution would have been to leave no linguistic monorities in either A or B state and to try to make these areas as nearly equal to each other as far as possible, i.e., to make the number of speakers and writers of A left in state B equal to the number of speakers of B left in State A. For there is no reason why one language should lose more than the other. This would ordinarily be the principale applicable to all languages. In a conflict between Tamil and Telugu, between Malayalam and Kanarese, between Marathi and Gujarati, the above principle would help to establish justice and equity. In a conflict between Hindi and other languages, speakers and writers of other languages have got to learn Hindi which is now regarded as the national language of India. Hindi to be the national language, will have to continue to be written in Devanagari. The fact stated above relates only to the diversity of languages spoken and written in India. There should be unity or symbiosis in the thought contents of the literature of all languages in India.

The biggest task in effecting a symbiosis in modern Indian literatures is to proclaim the great truth of the basic unity of thought and ideals embodied in them and to make it a part of our lives and of our national consciousness. Time was when Sanskrit was the dominant language and it effected a cultural unity among the diverse communities and entities in India. Then, for the last century and a half, English has served the educated classes as the unifying cultural force. English did more. It gave us the impulse of modern thought which flowered into the renaissance of all our literatures irrespective of different languages that prevail in many parts of India. It is all the more incumbent upon us to strengthen the basic cultural unity of our country. The great art is that which while it portrays in all its variety and splendour the beauty, also unveils the form and pattern, the infinite suggestiveness of the multiform. Becoming, does also break through

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to the fundamental unity and oneness of Being. In art as well as in life and in our every day living we have to keep alive unity admidst diversity.

The different religious entities based on the Vedas, and Indian classics like the Puranas, the Ramayana, the Mahabharata and so on, form but one common factor of the essential unity in Indian literature. The different linguistic and relgious entities of India have produced separate literatures which, however, reflect the fundamental unity underlying all the religions of India. It has, of course, gone a long way to modulate the manners and customs of society preaching duties of parents towards son, of sons to members of the family for years to come. Although the languages may differ, the fundamental idea expressed in Indian literatures is peculiarly grounded in Indian philosophy, religion and aesthetics and has, therefore, a unity not found in the literature of the west. It has, of course, a beneficial effect on moral, cultural and ethical aspects of Indian life. Our hearts are, therefore, refined with the feelings expressed in literature through various languages of India. A catharsis of our emotions is effected and we become essentially Indian in spirit and culture breathing the moral and cultural atmosphere emanating from the different literatures of India.

The question is "What is the common source ?"

The answer was given more than 150 years ago by Monier Williams and here it is:

"India, though it has more than five hundred spoken dialects, has only one sacred language, and only one sacred literature, accepted and revered by all adherents of Hinduism alike however diverse in race, dialect, rank, and creed. That language is Sanskrit and that literature is Sanskrit literature—the only repository of the Veda or 'Knowledge' in its widest sense ; the only vehicle of Hindu theology, philosophy law, and mythology ; the only mirror in which all the creeds, opinions, customs, and usages of the Hindus are faithfully reflected ; and (if we may be allowed a fourth metaphor) the only quarry whence the requisite materials may be obtained for improving the forms and style of vernaculars or for expressing important religious and scientific ideas."

Six generations have gone by since Monier Williams made that observation. The material and mental environments have however, been changing from generation to generation.

Does that Unity last ?

'Yes'

Is Sanskrit the common source today for the different languages and literatures ?

'No'

How then is the Unity maintained ?

Because the place of Sanskrit is occupied by English. English is the common source for all Indians whatever their difference be in region, race, religion, creed or language.

The similarity in the literatures of Modern India is all the more striking. The main features of the development of Modern Indian literatures, common to all the languages of our country may be noted as :—

(i) Contacts and conflicts with Western culture through the efforts of Christian missions and European trading companies and the consequent dawn of a Renaissance.

(ii) Growth of national and moral consciousness in literature as a result of the Indian Renaissance and the national movements since the time of Raja Rammohun Roy.

(iii) Reaction against moral austerities of the reformist movement in life and literature and birth of romanticism.

(iv) Impact of Marxian ideology.

(v) Experiments to find new forms of expression for the complex experiences of modern intellectual life under the influence of literatures like those of T. S. Eliot and philosophers like Jean Paul Sartre ; and, lastly,

(vi) Expansion of the national-cultural trends with clearer ideals of Universal Brotherhood after Independence.

So far we have investigated the common elements in the theme and the content of Indian Literature, but the similarity of style is no less striking. To all

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the literatures of India, the poetic forms of Sanskrit, namely, the Mahakavya, the Khanda-kavya, the Muktka, the Katha and the Akhyayika, etc., the various forms of Apabhramsha poetry such as the Charita-Kavya, the Prema-gatha (romance), the Rasa and the Pada, and so also some of the patterns of Persian poetry have come down as a common heritage. Beside the varnika metres of Sanskrit, many a popular metre like the Doha and the Chaupai are the favourite vehicles of Indian Poetry. In the modern times, the literary forms of the West, such as the lyric with all its sub-divisions namely the ode, the elegy, the sonnet blank verse have infiltrated into all our languages alike.

Each literature has a sharp individuality stamped with the characteristics of its own region. The regions of Panjabi and Sindhi and of Hindi and Urdu are so mixed up, yet their individual characters cannot be mixed up. The social and cultural life of the Maharashtrians and the Gujratis is so common, yet can these two literatures be confused ? Similarly, the four South Indian languages come from the same stock, they are all Dravidian languages, yet can there be any mistake between Tamil and Kannada or between Telugu and Malayalam ? The same is the case with the languages of Eastern India : Oriya and Assamese are deep-laden with Bengali, yet they have fully absorbed it in their textures and who can for a moment question their independent status ?

All these literatures have their own unmistakable distinctive merits : the Sangam Literature of Tamil, the Avadhana and Udahanana literature of Telugu, the Sandesha-Kavya (Message-Poetry) and the Kilippatu (Parrot-Songs) as also the Manipravalam style (mixed style interwoven with Sanskrit and Malayalam) of Malayalam, the Pawaras (a form of the heroic ballad) of Marathi, the Akhyana and Phagu of Gujrati, the Bargeet and Buranji Literature of Assamese, the ballads and poetical romances of Panjabi, the Ghazal of Urdu and the Riti (a kind of rhetoricalerotic poetry) and Chhayavad Schools of Hindi poetry are some of the special features of the various Modern Indian literatures which are remarkable in themselves.

Yet, possibly, this distinction is not of the essence. Just as Indian culture is one in spite of a vast multiplicity of religious, ideologies and modes of living, in the same way it is not difficult to discover the essential unity of Indian literature in the variety of languages and media of expression. In a way, this fundamental unity of Indian literature is in no way less impressive than its enormous variety and vastness. Unfortunately, till we regained our independence, greater emphasis had been laid on the elements of diversity. Its essential unity is yet to be revealed in its fullness.

This requires, in the first instance, an objective and systematic investigation into the elements of uniy in variety and for that a basic change in our methods of study and research will be necessary. An enquiry into any trend of Indian literature cannot be confined to one language only, for such an enquiry will always be very incomplete. For example, if a researcher in Madhura Bhakti confines his studies to Hindi or Bengali alone, he will not discover the whole reality : he will have to explore the literatures of Gujrati, Oriya, Aassamese, Tamil, Telugu, Kannada and Malayalam as well wherein this current flows with almost the same force. There will be obviously many gaps in our study, if it is limited to one language only.

A comparative study of the poems based in the Ramayana and the Mahabharata in different languages solves so many problems easily. There are countless designs in the plot-structures of our medieval romances which cannot be properly understood without a close comparative study of these forms in various Indian literatures. To appreciate the essential meaning of Sufi poetry, we shall have to traverse the realms of North-western literatures such as Kashmiri, Sindi, Panjabi and Urdu, besides Persian, of course.

ENGLISH IN INDIA

By N. NANJUNDA SASTRY

It was E. M. Forster who observed with real concern a quarter of century ago, "you cannot understand the modern Indians unless you realise that Politics occupy them passionately and constantly." He was pained to see that "artistic problems and even social problems—yes, and even economic problems—are subsidiary." He was present at a meeting where the importance of English was discussed and he found that "the debate, if I may say so, continues, and into it, as into every thing, come politics." This was before India attained independence. Since then much water has flowed under the bridge. The importance of English for our all-round progress has been realised, though the place it should have in India remains a moot question. The issue needs to be viewed from an academic angle, instead of from a purely political point of view.

English has been in use in India for nearly two centuries. It became all important when the East India Company gained control over the whole country. The rulers naturally "imposed"* the language on us since it would be of advantage to them. Looked at from another angle it was not an imposition at all. It was a natural growth, something which grew out of the prevailing conditions of the time. Political, economic and commercial connections with the West necessitated and encouraged the use of English. It should be remembered that there was no "popular" all-India language of the day which could satisfy external needs and internal requirements. There was, besides, a spread of education. The impact of the West on India was a mighty and fruitful impact.

The impact brought two very different races together and this produced results of great import. "English literature and English political thought influenced a tiny fringe of those who had learned English."[1] But the masses were also affected and even shaken because "the impact of Western Culture on India was the impact of a dynamic society, of a 'modern' consciousness, on a static society wedded to mediaeval habits of thought."[2] This impact served in the long run to shake us out of our torpor, to widen our horizon, to broaden our mind and to deepen our understanding. This impact, be it remembered, was made possible by English. As British rule came to be firmly established, the East India Company turned their thoughts to the most important question of deciding the educational pattern of the country.

All educational work in India had come to a stand still owing to an irreconcilable difference of opinion in the committee of Public Instruction. Five members were for maintaining and extending the old scheme of Oriental learning; the other five were for imparting instruction in the higher branches in English. Macaulay's view on the subject in his memorable note of 2nd February, 1835 is eminently apposite to the India of today where the contentions of over-zealous linguistic loyalists are more acrimonious than ever. "(English) stand pre-emiment among the languages of the West.....Whoever knows that language has ready access to all the vast intellectual wealth which all the wisest nations of the earth have created and hoarded in ninety generations.....In India.....the English tongue is that which would be most useful.....There are in modern times memorable instances of a great impulse given to the mind of a whole society, of prejudice overthrown, of knowledge diffused, of taste purified, of arts and sciences planted in countries which had recently been ignorant and barbarous.....I refer to the great Revival of Letters among the Western nations .....Had our ancestors acted as the Committee of Public Instruction has hitherto acted, had they neglected the language of Cicero and Tacitus, had they confined their attention to the old dialects of our island, had they printed nothing and taught nothing at the Universities but Chronicles in Anglo-Sexon.....would England have been what she now is? What the Greek and Latin were to the contemporaries of More and Ascham, our tongue is to the people of India."[3]

In addition to increasing our awareness, English enabled us to have a wider reach. The

*This is not historically correct. The introduction of English education in India had to be intensively fought for by Indians against British opinion to the contrary. This fact has been fully authenticated by Major B. D. Basu in his book, *Education Under The East India Company*—Editor.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rich treasures of Sanskrit Literature were made available to the scholars of the West. This Indo-British intellectual co-operation wrought a revolution in Indian thought and letters. "The introduction of English education into India has led to greater changes in Indian social, economic and political life and the Indian way of thought than any other single factor in India's long history."[4] English thus not only deepened our understanding, but widened our horizon as well. The three-phase Indo-British co-operation helped India attain the benefit of the three dimensions of lofty height, great breadth, and impressive depth.

In the crucial years of our heroic struggle for independence it was English that forged the bonds of unity. The Indian National Congress which was the real *Vox populii*, consisted of well-read, eminent, English-educated men. The deliberations of the national Organisation were in English, and this not only made better understanding possible, but helped to rally all Indians under one banner. The organisation grew from strength to strength and secured the support and sympathy of a large number of English-speaking peoples all over the world.

Meanwhile rapid progress and significant and original research were made in physical, natural and social sciences, in technology and other fields of intellectual endeavour. We owe this progress to English. The Voice of resurgent India was heard in international councils and conferences. "The Cyclonic Hindoo", Swami Vivekananda, took the countries he visited by storm. This truly international language, English, helped India drink deep at the stream of knowledge and feel refreshed and re-invigorated. English has been the language of our modern cultural renaissance and nationalism, scientific endeavour and academic scholarship, administration and diplomacy, courts and assemblies, the Commonwealth and a possible new World Order based on liberty and democracy."[5]

The attainment of independence in 1947, is a turning point in the eventful history of English in India. There was a natural, inevitable and understandable reaction to the use and continuance of this language in India. "Under the leadership of the Great triumvirate, Mahatma Gandhi, Jawaharlal Nehru and Vallabbhai Patel, the initial task, on which the survival of the new State depended, was successfully accomplished in the first two years.

"India then turned to build a nation."[6] Any nation worth the name must have her proud flag, her inspiring anthem and her own language. Hindi was chosen as the national language of India. We should know it, use it and be proud of it. The Central Government has been doing all in its power to make the language rich, popular, effective and useful. In the changed context the question naturally arises—what is the position to be accorded to English ?

The merit or competence of a language depends upon its effectiveness and its usefulness. "The English language is spoken or read by the largest number of people in the world for historical, economic and political reasons ; but it may also be true that it owes something of its wide appeal to qualities and characteristics inherent in itself".[7] A few of these characteristics are its extraordinary receptive and adaptable heterogeneousness, simplicity of inflexion and relatively fixed word-order.

We can regard a language in one of two ways—either as a tool or as a spontaneous natural growth. If regarded as the former it should be sharp, handy and useful. If regarded as the latter it derives its strength and power from its environment and mode of cultivation. One cannot force its growth, nor make it yield its fruits before its time. The plant is the promise of the bud, and the bud that of the fruit. English in India has already borne fruit. It would be wrong, grievously wrong indeed, to hack it or to dry it up before the new graft is strong enough to stand high and straight, is able enough to bear rich and succulent fruit.

The problem at present is whether English should be continued as the official language of the land and as the medium of instruction in the institutes of higher learning. "The continuation of English as the medium of instruction at the University stage is a much simpler problem than the question of its continuation as the official language".[8] If English were discarded as the official language, so runs the argument of a section of the public, it would mean the greatest handicap to a vast number. Hindi, these people say, has yet to become fit and strong and rich before it can replace the all-useful language, English. But replace it will. Instead of hastening the pace, it would be wiser to allow the language to grow, to create a congenial atmosphere, to encourage

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

creative activity, to stimulate translation work, and to rationalise or simplify as far as possible the rules of grammar. The official language should, however, be the same all over India and should be introduced, when it is done, at the same time in all parts of the country.

The continuation of English as the medium of instruction at the College and University levels is a vital necessity at the present moment. The medium of instruction naturally means medium of examinations well. The change to any other language is not quite so simple as some imagine. The retention of English is imperative. "English has been taught in this country for the last 150 years and any attempt to push it out now would affect educational standards. The importance of English was much greater today than at any time before".[9] There is perfect concurrence of opinion on this. In the words of Prime Minister Nehru, "It is absolutely clear to me, and it is not an arguable matter, that scientific and technological training has to be given in English". In his powerful plea for the retention of English as the medium of instruction H. H. Jayachamaraja Wodeyar said in Madras, "We should carry on with English which has not only been our language of education in the last century and a quarter, but has also become an outstanding language of modern learning and world communication". The University Grants Commission has pointed out after a careful scrutiny of the issue "that the change-over from English to an Indian language should be carefully prepared for . . . . We should like to emphasize that the medium of instruction is an academic and not a political question".

The argument that it is humiliation to use a foreign language as the language of education at any stage does not hold water. In the Temple of learning there is no individious distinction between language and language, between subject and subject. In India, we have been using English for such a long time that we have made it ours, have adapted it and have cherished it. Countries whose language is not English have adopted it as the medium of instruction (Eire, French Canada, Scotland, Wales). In Japan, English is accorded a place of importance.

The foregoing analysis leads us to conclude that English should be allowed to continue as at present. "If Indians had not spoken English, my own life would have been poorer".[10] The change-over to Hindi when it does come, should come over the whole of India at the same time. A national language when fully and completely developed fosters unity, furthers progress, builds strength and makes for emotional integration and patriotic pride. But one must wait till it is fully and completely developed, till it has built a great tradition of its own, till it becomes the natural and spontaneous utterance of the people of the land.

An aircraft spraying a heavily infested field

WAR AGAINST THE WINGED MENACE : ANTI-LOCUST OPERATIONS IN DESERT AREAS

A silent but successful war is being waged in the interior of what is known as India's "dry belt" comprising Gujerat and the Thar desert of Rajasthan and the Punjab. The foe is the arch enemy of the farmer—the desert locust, which is an international pest.

Busy in the field round the clock are 500 men with 160 jeeps and technical equipment. Their ammunition—over 5,000 tons of insecticides. These are the men who, working in close cooperation with farmers, prevent the "winged menace" from ravaging precious crops in the country.

Unprecedented Menace

The menace this year, as we know, is unprecedented, infesting, as it did over 17,000 villages. But thanks to the Anti-locust Organisation working in the field, locust infestation has been kept under effective check by use of scientific methods like dusting BHC, and spraying aldrin and mechanical methods like trenching and burning. Wherever ground operations are difficult, aerial spraying is resorted to.

Occupying a key role in these operations in the vast desert tract is a network of outposts set up by the Plant Protection Directorate of the Union Ministry of Food and Agriculture. These outposts—55 at present—collect information about swarms and breeding activities and then the personnel move in with control equipment and insecticides to fight the pest.

Role of Panchayats

Panchayats and Panchayat Samitis play an important part in this battle. The Locust Control Officers, through the Sarpanches, organise villagers for operations ; hand-dusters and exhaust nozzle sprayers are generally used. In emergencies, Collectors also place at their disposal additional revenue staff. As soon as an anti-locust jeep enters an infested area, word quickly goes round the village and the farmers enthusiastically join hands with control personnel to destroy swarms.

At the zonal or district level, the control activities are supervised by Locust Warning Officers—ten in the scheduled desert areas presently, —who coordinate the work of the outposts and divert additional staff wherever there is heavy infestation and egg laying. There are also five "circles" at Bikaner, Jaisalmer, Jodhpur, Palanpur and Sikar, which draw up various short and long-range anti-locust schemes and give direction for their implementation.

For quick transmission of information about locust swarms, there are 39 wireless stations

which are situated in remote areas. Spread over from Bhuj in the south-west to Narnol in the north-east, this network is an asset to the anti-locust organisation.

The aerial unit consists of four aeroplanes—three Beaver aircraft and one Auster Auto-car. Aerial operations are carried out either in areas of contiguous infestation or at places which are inaccessible such as high hills, thick forests, sand dunes and river beds.

International Collaboration

Since locust swarms continue multiplying in various countries from year to year depending on rainfall and moisture left in sandy soils, a round-the-year watch becomes necessary. At the international level, therefore, the Plant Protection Dierctorate holds periodical meetings with representatives of Pakistan to exchange information on subjects of mutual interest. This year, three such meetings have been held, at Lahore (Pakistan), Gadra Road (India) and Khokropar (Pakistan) in July, August and September respectively. Study teams also visit Saudi Arabia periodically.

According to official figures, 108 locust swarms entered India from the west from the middle of May till the end of September this year. Of these, all but 20 were destroyed. The swarms are now confined to three States only; 14 of them are in Rajasthan, five in Gujarat and one in Uttar Pradesh.

The number of villages in which locusts laid eggs is unusually large this year. As against about 4,400 villages infested during 1961, the number this year is over 17,000, so far. Of these, more than 14,000 villages have already been cleared of hoppers. Control operations are in progress in the remaining villages and will continue as long as the breeding season lasts.

As a result of successful destruction of hoppers, no new swarms have been allowed to form on Indian soil. Thus colossal losses to crops have been averted.

———:O:———

TWO TRIBAL CO-OPERATIVES

The mellow light that bathes the uplands of Ranchi poured in through the window and etched in lines of white the rods of cane which the craftsman was fashioning into a basket chair. It fell on his deft hands, along the length of his arm and a part of his profile. But the eyes were left in shade—like the world for ever left in darkness as far as this craftsman was concerned. For he is blind.

He is a member of a small co-operative in Ranchi. There are about twenty members and all of them are blind. One of them is a Muslim, another a Scheduled Caste and all the others belong to the Scheduled Tribes, mostly Oraons.

The co-operative was started a few years ago. It is engaged in the production of chairs, baskets and similar items out of cane and bamboo. The members have a small, but tidy, two-roomed house with a fairly spacious verandah. Every year since the inception of the co-operative, a few more members have been joining—all of them blind and initially helpless, but inspired by the example of their colleagues to earn their livelihood by work, and not by begging.

The Verrier Elwin Committee on Special Multi-purpose Tribal Blocks has pointed out that most of the tribes of India have a very strong social sense and that it would not be too much to claim that every tribal village is in its own way a co-operative society. In their traditional milieu they all go to work at the same time and usually in the same general area. Should a house be burnt down or a widow be unable to cultivate her field, the community comes together to give relief.

Though the members of the Blindmen's Co-operative hail from different regions, in their new milieu they have been able to prolong the traditional social cohesion. They live on the premises and have a common mess. With their small earnings they have been able to buy several musical instruments and have regular concerts in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Tribal women seen working on embroidery

evenings. Sometimes young blind boys drift this way and they are accepted into the community and given food and shelter and training which will enable them ultimately to be members of the co-operative, the share of which is low-priced, Rs. 10

The Elwin Committee pointed out that formal programmes for developing the co-operative movement in tribal blocks should be simplified in procedure and closely related to the corporate practices which the tribes have inherited through a long tradition. The Blindmen's Co-operative is a modest but significant example of what can be done in this field. Another example is the Kala Kendra Adivasi Women's Industrial Co-operative in Ranchi.

This co-operative began in a modest way in 1958. Tribal women have a gift for embroidery and they quickly pick up lace work. The Co-operative offered full or part time employment to Adivasi women so that they could enhance their family income. Though about three hundred women turned up, only seventy five could be employed at first. The work was chiefly embroidery. As soon as sufficient work had been finished, an exhibition was organised in New Delhi, the success of which encouraged the co-operative to expand and hold similar exhibitions in New Delhi and Calcutta in subsequent years also.

Today, over 150 women are working here, the great majority of them are members of the Co-operative, the shares of which are also priced at Rs. 10 each. The Co-operative has received a fair amount of assistance from the State Government. The old social cohesion of tribale communities, which makes the co-operative organisation particularly effective, is yielding results in the case of this society also. As the women cannot leave their children at home they bring them to the Centre and for the benefit of these children the Co-operative has managed to start a small school. In addition, the Co-operative has opened a dispensary which gives free treatment and medicines to the women and their children.

Slowly but steadily, the co-operative is expanding. It has obtained the services of a trained worker from the Government of India's pilot centre for doll-making in Bombay. The All India Handicrefts Board has lent a trained worker for *chikan*, the fine lace-work of Lucknow. An artist trained in Santiniketan has recently joined the Centre to look after the designs.

In addition to being a modest but moving experiment for the economic rehabilitation of a backward community, the co-operative is emerging also as a centre where many traditions are beginning to blend. The tribal tradition is itself rich

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

One blind man is seen engaged in bamboo work

in folk designs and decorative motifs. That tradition is now being cross-fertilized by the very elegant motifs of chikan work which go back to the aristocratic culture of the Muslim nobility of Oudh and also by the experimental styles evolved by Santiniketan which have absorbed both traditional and modernist impulses. This is a small but significant instance of integrative forces quiety at work, as they have always been in the Indian tradition, forming the backdrop, in this case, for a co-operative way of earning the livelihood which, again, is but the reflection of that larger spirit of harmony in the field of economic activity.

———:O:———

GANGA NARAIN AND THE BHUMIJ REVOLT OF 1832-33

By Dr. J. C. JHA, M.A., PH.D. (London),
Lecturer, Department of History, Patna University.

In 1832-33 the British had to face an unprecedented revolt of the Bhumijes in Manbhum and Dalbhum. This rising commenced with the cold-blooded murder of Madhava Singh, the half-brother and diwan of the zamindar of the Barabhum pargana, at the hands of Ganga Narain Singh, a disgruntled cousin of the zamindar and the diwan, on 26th April, 1832.

Ganga Narain provided a unique type of leadership to the tribesmen. Long years of destitution had made him a man of iron will. Ever since his father was deprived of his ancestral property he had been planning to take revenge upon all those who were instrumental in bringing about his ruin.

In fact, the father of Ganga Narain had been the legal heir to the throne because he was the son of the chief queen. But the British had ignored his claim because he was not the first born child. This had led to a long series of dispute between British notions of primogeniture and the tribal custom which had held that it was the son of the chief queen, and not necessarily the first born, who succeeded to the zamindari. But in spite of the support of the people, the fight of Ganga Narain's father and uncle had proved in vain towards the end of the 18th century in the face of the military help that their adversary had got from the British.[1]

So Ganga Narain, when he came of age,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

took recourse to trickery and brutality. When the same sort of succession struggle began in the Barabhum Zamindar's family after 1798, he supported Raja Ganga Govind Singh against his rival, Madhava Singh. Naturally enough, when the contenders reached a compromise and Madhava became the diwan, he deprived Ganga Narain, his personal foe, of the revenue of tariff Punj-sardari which he "had been permitted to hold after father's death."[2] He even persuaded the Raja not to provide Ganga Narain even with the means of daily subsistence. Consequently the latter had been reduced to such distress that he had embraced orthodoxy and become a vaishnava (a follower of God Vishnu) and had gone on a pilgrimage as an ascetic.[3] According to his own statement, he had once been accused by the mukhtar (Agent) of the Raja of Barabhum of introducing illicit salt (by which probably he had begun to gain his subsistence) for which he had been apprehended by the British troops, though he had later been acquitted.[4] Ganga Narain was seized and sent up to the Magistrate of the Jungle Mahals on several pretexts by Madhava Singh. He was vexed in several other ways. To quote his own words, "I was destitute of food and if I asked any person in Barabhum for anything the zamindar and Madhava Singh fined him 1 rupee 4 annas, and forbade his giving me anything in future. Madhava Singh Baboo has all along oppressed me, and I represented the circumstance to the Zamindar who said as long as Madhava Singh remained he could do nothing for me."[5] Therefore Ganga Narain developed life long bitterness against the diwan.. Moreover, he had a double grievance against the British who had overridden the local succession customs and ignored his repeated representations, leading to the imprisonment of his father and uncle and his own destitution. He had a grievance against the Raja of Barabhum as well. He still vividly remembered that his father had been seized and ill-treated with the connivance of the father of the Raja and that he himself had been ill-treated by the British troops several times at the request of the raja or his diwan.[6] No wonder, therefore, that he made several allegations against the Raja and his family[7] and once even tried to seize the person of the Raja's son.

All through the early years of the 19th January, Ganga Narain was always planning his revenge. First he extended his family connections with the neighbouring Rajas. One of his wives came from the Bishnupur Raja's family and the other from Manbhum. One of his daughters was married to one Kanu Babu[8] of Ambikanagar, the second to Hari Babu of the same paragana, the third to Amru Babu of Manbhum and the fourth (by a concubine) to an illegitimate Babu of the Panchet Raja's family.[9] These matrimonial alliances stood him in good stead, and he was "generally countenanced by them" during the revolt. Even during those sorry days he won over the zamindar of Ambikanagar with the offer of marrying his son to the latter's daughter.[10]

Then he developed the closest contact with the tribal sardars and the Bhumij masses. In course of time he came to possess "great influence among the Bhumijes, and was latter indebted to their kindness, ... for almost all the necessaries of life."[11] They could not, therefore, ignore the call of "their favourite, their abused Ganga," specially when they themselves were very much looking forward to having such an able, cool and stern leader."[12]

A word on the character of Ganga Narain is, perhaps, necessary here. Both Ganga Narain and his foe, the diwan were cunning, but while the latter, because of his money lending business and several oppressive acts, became extremely unpopular among the tribal people, the former, making play with his destitution and showing great organizing capacity, won over the whole tribal masses to his side. Moreover, Ganga Narain was able to combine a campaign to relieve the people of Madhava's oppressions with his own personal plans for revenge. As a result, long after his death, people remembered him with esteem for his gallantry, exploits and organizing capacity.[13] Indeed, Ganga Narain was popularly held to be "a Victim of curcumstances"—his "nearest relations dishonouring (sic) and oppressing him—debarred from his rank from seeking employment either in trade or in the profession of the army . . . . . , what course could he adopt ?"[14] Through years of suffering he had become cruel at heart and at the same time cunning, making him peculiary capable of leading a ferocious band of tribesmen (According to an eye witness account of the murder of Madhava Sing) "after striking the first blow he caused each Sirdar present to fire an arrow into the body of Madhava Singh. . . . . ."[15]

Ganga Narain's influence over the Bhumijes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and especially over the Ghatwals (guards of the passes) was unlimited. They believed that he was an *awatar* of *Kal* (an incarnation of the God of Death) and under the all-powerful protection of the goddess Kali.[16] Thousands of tribesmen were always moving with him to do or die and he would lead them on his horse back, traversing the whole of the Jungle Mahals district and a part of Midnapur from one corner to the other, and thus he remained defying the British strength for about a year.

It was only by accident that he was killed on 7th February, 1833, not by several battalions of troops as some writers boasted,[17] not by any traitor among his followers, but by the forces of Thakur Chetan Singh in Kharsawan' (Singhbhum) where he had come over to seek help against the British. The news was so unexpected, so much a bolt from the blue, that the Kharsawan chief was at pains to have as many people as possible to identify the body before he sent the news to the British authorities.[18] The Thakur had the pleasure of sending his head to Captain Wilkinson, with a letter quite in the style of Falstaff when after the battle near Shrewsbury, he said, "here is Percy. If your father will do me any honor so ; if not, let him kill the next Percy himself. I look to be either Earl or Duke".[19] His message was followed by the severed head of the rebel which was identified in camp by Ganga Narain's son-in-law, several other relatives and at least a hundred other individuals. Even so, the Thakur had not done this fearlessly or without any loss. Three of his men had been killed and thirty men and horses wounded, and when he wrote to the Commissioner for the promised reward, he also requested for adequate protection of his person and property.[20]

Captain Wilkinson, the Supreme Commander of the military operations, expressing his sense of relief thought the Thakur entitled to the reward of Rs. 5,000, though he admitted that the intense operations since 19th January, had been indirectly responsible for the consummation of this object.[21] The announcement of Ganga Narain's death had a demoralising effect upon other rebel leaders, but there was great rejoicing in the military camps at this news.

The very fact that the tribal rising of 1832-33 (Ganga Narain's *Hangama*) is linked in the popular legend with the name of Ganga Narain serves as a reminder of the particular part played by the personality of this great hero of the revolt. But for this gifted leader the tribal discontent might have continued to simmer without boiling over into violence.

It is true that Ganga Narain was "of violent temper"[22] and during the unrest he was directly responsible for the murder of several people. His pass words for putting anybody to death, according to an anecdote, was *"Ghaut par kur"* (show him across the pass).[23] Thus "whenever a prisoner was brought before his tribunal on the Dulma (hill) and when he had heard all he had to say and urge, he either dismissed him with that or some other significant phrase. No man who heard Gunga order him to be shewn across the Ghaut, ever heard mortal voice an hour afterwards. He was led down the hill and killed at the bottom". However, had Ganga Narain not possessed several qualities of a leader he could not have led his people successfully against a mighty power for several months. He may not have been a patriot,[24] but he undoubtedly "saw his friends groaning under the oppression of Madhava Singh and perhaps wished to aid them and at the same time revenge himself."[25] He undoubtedly showed considerable organising ability . . . . . in his brief career."[26] He struggled upto his last breath, even though deserted by his friends and relations. According to Thompson, he was long remembered for his exploits : "Good looking women were sure of his esteem, and when I was in India he was still reverenced for his gallantry."[27]

Such was Ganga Narain who was able to secure the support of the tribal chiefs against his personal foes and against the British might. His diplomatic skill was fine. He once wrote to the chief of Kharsawan that he had taken up arms because the Jungle Mahals Magistrate (Russell) had insulted the Rajput (Hinduised tribal chief) Zamindar of Patkum by searching his private apartments (during the Kol Insurrection in January-February, 1932).[28]

His sole motive was to arouse the feelings of the neighbouring chiefs against the British. He had also convinced the Laka Kols of Singhbhum to fight the British and had he not been killed by accident the Bhumij revolt would have probably continued for long.

The story of his end shows that he fought till his last breath.[29] According to an officer who fought here, "Ganga Narain, deserted by almost all his followers of whom some were killed and many had submitted or been taken prisoner, fled to Singhbhum and endeavoured to rouse the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Kols to join him. To this they would not agree unless they had a specimen of his talents as a leader, and they proposed an attack upon Thakoor Chetan Singh's estate.....One of his Namhatas or personal servants, subsequently taken, mentioned the particulars as follow: That on the attack being made . . . . , the Thakoor's forces repulsed them and that Ganga Narain who was already hit with two arrows, endeavoured to run away across a gramfield. That he was pursued and overtaken by Chetan Singh's barber who sprung on him and held him to the ground while some of his friends cut his head off."[30]

KUNJALI THE GREAT ADMIRAL AND THE PORTUGUESE

By SHRIKRISHNA VANJARI

Whether you believe in Oswald Spengler's theory of 'historical recurrence' or just in poetic justice, it must strike you as significant that the Indian general who administered the **coup de grace** to the four-and-a-half century Portuguese occupation of the Indian soil in Goa should be a lineal discendant of the Malabar Nairs who fought the Portuguese, against heavy odds, and succeeded finally in containing the Portuguese in the narrow coastal strip of one-and--half thousand square miles.

The Portuguese first touched the Malabar coast, where they were guided by a couple of Gujarati Muslim seamen including a man called Davane and described as a 'Moorish broker' of Bombay in the beginning of the 16th century. The behaviour-pattern they exibited in Calicut where the Zamorin treated them with typical hospitality and consideration which they were not long to abuse and their methods of warfare of barbaric cruelty were also repeated in Goa.

The effective resistance put up against the foreign invaders who possessed great superiority in naval warfare with their long-range guns and accuracy of gunnery generally was spearheaded by four generations of Kunjali Marrakars, traditional admirals of the Samurin or Zamorin of Calicut. The lion-hearted seamen of Malabar, Moplahs, and the warrior Nair soldiers dealt hammer-blows against the **firangi**. The Kunjalis (Kunjali means 'beloved one') combined great courage with naval genius that could improvise appropriate tactics including employment of commando **paros** or light craft. The strategy and tactics employed by the Marrakars bear family likeness to those of what Liddell Hart describes as typical of 'indirect approach' of the Marathas. The land horse of the Maratha soldier and the Marrakkar **paro** represented speed while the long lance represented the principle of fire-power for the horseman.

The Portuguese adventurers headed by Vasco da Gama were guided to the Malabar shore by a Gujarati Muslim broker of Bombay of the name of Davane. This man later acted as Portuguese agent who introduced the **firangis** to the Zamorin. According to accounts of Portuguese chroniclers, the Zamorin followed rules of Mahabharatic warfare and civilized humanity while the Portuguese proved themselves as sadistic barbarians. They thus looted ships including Haj ships, butchered even women and children and set fire to them. They invariably cut off hands, noses and ears of innocent travellers. Vasco da Gama, Cabral and others came to Indian shores to destroy the Arab monopoly of overseas trade and to establish their own. The Arabs or **muirs** or moors were naturally hostile to the European interlopers. When the menace of the Portuguese pirates incrased and affected the international trade, the Sultan of Egypt sent naval expeditions and the Calicut forces joined hands with the Egyptian naval units. The Nairs and Moplahs of Calicut also fought the Portuguese in Ceylon during the time the Portuguese tried to build a fort in Colombo.

The Portuguese exploited the local power-politics and rivalries throughout. They joined the Raja of Cochin, a traditional rival and enemy of the Raja of Calicut; and the system of alliances and hostilities was based on power-politics of the moment. When Calicut attacked Cochin at the beginning of the 16th century with a land army supported by a naval flottila, Albuquerque's squadron fought on the side of Cochin. Albuquerque himself visited Calicut in 1504 to negotiate a treaty..

One of the terms of the treaty was that the Arabs in Calicut should not be allowed to carry on trade with Arabia and Egypt; and the Zamorin accepted it as he realized that the Muslim countries had not acted upto their promise of supply of ships

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and men for fighting the **firangi.** But the treaty was soon breached by the Portuguese who seized and looted a Calicut ship. After Albuquerque left Goa in 1504, Calicut attacked Cochin defended by Durate Pacheco. Owing to the Portuguese superiority in gunnery, Zamorin's naval forces suffered a great deal. But the battle brought into relief the defensive tactics such as covering the sides of Calicut ships with bags filled with cotton as protection against Portuguese cannon, chaining of paros at the mouth of the river as obstruction for entry of enemy reinforcements and use of floating craft on fire to start fire among Portuguese ships.

The founder of the Marakkar family was Muhammad Marakkar who was originally a Moplah sea-merchant living in Cochin. He left Cochin because of Portuguese harassment and settled down in Ponnani in Calicut territory. He and his brother Ibrahim approached the Zamorin and placed their services and ships at the disposal of the Zamorin in the war against the Portuguese whom they found to be perfidious. The Zamorin appointed Muhammad admiral of the fleet. The Portuguese were scared of the alliance and Menezes and Sampayo attacked Ponnani to destroy Marakkar's fleet. Kunjali now set out to pursue his relentless war against the **firangis**. He and his brother, Pachi Marakkar, engaged the Portuguese wherever they met the hateful pirates. As the Portuguese had blockaded all inland and foreign trade by sea, the naval engegements safeguarded such foreign trade as Calicut could retain. Later, both the brothers were killed in the naval battle in Ceylon. Kunjali's captain, Kutti Ali, now employed tactics that could outflank the Portuguese.

He had hundreds of war-**paros** constructed and stationed them in river-mouth and creek. This was a light craft rowed by 30 or 40 men. He had had men posted on hill-tops to watch movements of the Portuguese ships and transmit intelligence to the **paros**. which would then converge on the Portuguese ships. As the Portuguese naval ships were heavy and therefore slow in movement and depended also on the whims of the wind, the **paros** which, owing to their diminutive size, could not form a target for cannon fire would attack the Portuguese ships. The men could land or set the ship on fire and engage the Portuguese in hand-to-hand lighting in which the Indians were superior.

Kutti Ali now provided naval escort to Arab and other ships carrying spices and other merchandise to foreign countries. The war-**paros** would also attack Portuguese ships which had to be conveyed and Albuquerque himself admitted to the King of Portugal that Portuguese ships in Cannanore, a port on the Malabar coast, could not proceed to Cochin for fear of the Calicut **paros** which would at once pounce on them. It is recorded that Kutti Ali brought to Calicut a fleet of 200 ships. He filled 8 ships with pepper and sent them to to Red Sea with an escort of 40 vessels under the very nose of the Portuguese. Kutti Ali had had a brother known to the Portuguese as younger Kutti Ali and he commanded another squadron and cruised about Goa in the north while his brother was based near Cochin.

Two other naval leaders, namely Pattu Marakkar and Balia Hassan of Cannanore and a relative of the Raja of Arakkal near that city, had specialialized in this type of naval guerrilla tactics. Vasco da Gama was therefore compelled to attack Cannanore and demand surrender of Balia Hassan. Da Gama imprisoned him, but he was executed by Gama's successor, Menezes. The Raja of Arrakkal had offered a ransom for him and the Raja of Koathiri also had intervened in behalf of Balia Hasan unsuccessfully. Despite the undoubted supriority of Portuguese naval power, Kunjali for a period of two years, made it impossible for Portuguese ships in Goa to visit Cochin and the Portuguese pepper trade received a formidable blow.

Once when, in 1564, a corpse of a Moplah sailor was washed ashore, Hindus and Muslims led by Raja Ali besieged the Portuguese fort, overwhelmed the coastal defences and destroyed 30 ships. The Zamorin ordered Kunjali II to proceed with his fleet to Bhatkal and cut off reinforcements from Goa. Paulo da Lima was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sent from Goa with a well-armed fleet for the relief of Cannanore. Kunjali met him with 8 **paros**. After the initial exchange of cannon fire, Kunjali attacked Lima's ship with three ships and boarded it. Kunjali, in studied contrast, was a gallant man and, unlike the Portuguese, merely ordered the Portuguese captain to return to Goa. Two fleets were then despatched from Goa and Kunjali beat them both times. In 1566 the Portuguese were forced to sue for peace.

During the time of Kunjali II, Pattu Marakkar, the Portuguese taking advantage of the weakness of then ruling Zamorin and alarmed at the widespread anti-Portuguese sentiment along the coast which the Konkan seamen and others shared, and afraid also of the fate of Goa, obtained a concession for building a fort at Ponnani near Calicut. The admiral of the Zamorin was opposed to the grant of the concession and realized its danger. He therefore secured the Zamorin's permission to build a fort in Kotta. After two years, Pattu Marakkar died and was succeeded by his nephew, Muhammad, or Kunjali IV. After the Portuguese built their fort at Ponnani, Kunjali IV sent out his nephew Kutty Moosa, to the Coromondal where the captain captured several Portuguese ships. The Portuguese Viceroy then sent a large naval force under Furtado. The Marakkar gamely attacked it. The Indians fought with their usual bravery but were overwhelmed. Kutty Moosa plunged into the water with his sword between his teeth and escaped. The Malabari seaman were men of great courage and pluck. They used to swim 20 miles at a stretch when forced in battle to escape and save their lives.

Kunjali IV played havoc with Portuguese shipping and ships and the Goa Portuguese hit on the idea of driving a wedge between the Zamorin and his admiral. They sent an envoy to Calicut to negotiate peace. The admiral, for his part, tried to strengthen himself by perfecting the fortifications of Kotta fort. He supported Malik and the Rani of Ullal when they rose against the Portuguese. In 1592, he captured a treasure-ship from China near Goa.

The Portuguese, taking advantage of the power, political position and gullibility of the Zamorin, succeeded including the Raja of Calicut to join forces in punishing Kunjali who was estranged from the Raja and who also was guilty of certain acts of iniquity. Despite this, the Marakkar family enjoyed great prestige and Hindus and Muslims had high regard for it. Even some Nair zamindars shared this sentiment. He had formed bonds of friendship with the coastal Rajas. This position also upset the Zamorin who was finally persuaded to collaborate with the Portuguese in joint operations against the fort and town of Kotta. A Jesuit of the name of Antonio, who was a prisoner in Calicut but who had had interviews with the King and had ingratiated himself into his favour, played an important role in the intrigues culminating in the alliance.

Despite formidable handicaps faced by him, Kunjali gave a good account of himself and inflicted considerable damage on the invading Portuguese forces. Kunjali realized his position and offered to surrender to his master, the Zamorin. The Portuguese had however hatched a plot to grab Kunjali when he and his followers surrendered to the Zamorin. After his initial victory in which he killed many Portuguese leaders, Kunjali had hoped that the Zamorin would pardon him and save his life. Kunjali had told his guards that he had dreamt that the Zamorin was handing him over to the Portuguese and he therefore resisted surrender for a long time, but was persuaded not to believe in the dream. He had placed a black kerchief on his head and he surrendered his sword. But Andre Furtado, the Portuguese leader, treacherously seized him and took him away. The Calicut Nairs resented this breach of their code of honour and fell on the Portuguese in an effort to recue Kunjali. But the prisoner was removed under a big escort.

When Furtado reached Goa with the prisoners, Kunjali had to be secretly smuggled into the notorious Tronco prison as the mob stoned to death four or five Moplahs who were landed earlier. The mob got out of control and destroyed the decorations put up for the victory ceremony. In the prison, several Moplahs committed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

suicide to end the tortures to which they were subjected. The Viceroy staged a mock-trial by judges who were the ancestors of the judges of the military tribunal who used, in recent years, to sentence Goan nationalists to savage terms of imprisonment and exile. The Viceroy ordered them to cut short the proceedings and finish off the terror to the Portuguese which they did. He was executed and the execution of other prisoners was carried out for several days. Kunjali's body was quartered and exibited on the beach of Bardez across the river and in Panjim. His head was salted and conveyed to Cannanore there to be stuck on a standard for striking terror to the moors'.

When Kunjali had had his last meeting with his mother, she had embraced her brave son, taken away from his neck his silk **rumal** (handkerchief) and said, 'Son, if they do any harm to you, send me a sign. Be brave, Allah preserve you'. When the axe fell and severed that valiant head of the Zamorin's great admiral, the **rumal** was splashed wih blood and the sign came. It was buried in the memorial tomb beside the tomb of the mother.

There is a little sequel to the tragic execution narrated by Nambir. Between June and October 1608, a Frenchman of the name of Pyard de Laval, a traveller, met a young handsome man of 30 years in Goa. He was a cousin of Kunjali and brother of captain Kutty Ahmed of Badagara whose hospitality the Frenchman had enjoyed during his sojourn in Malabar. The youth, when he was 15 years, had gone with Kunjali's fleet and was captured by Furtado. He had married a Portuguese orphan and was treated better because of his noble birth but was all the same in chains. This youth had taken the name of Pedro Rodrigues and was in the city when Kunjali was executed. He spent 17 years in captivity but managed to effect his escape at last with his family.

This scion of the Kunjali family collected a few devoted followers, armed some **paros** and cruised the coast. He paid particular attention to the priests in the Portuguese settlements and plundered them. The old sailors of Kotta, hearing of his exploits, joined him. In 1618, he possessed five war **paros** well-armed and manned by sailors from Malabar and the Konkan. The Portuguese described this man's attacks on Portuguese shipping and settlements as piracy and launched punitive measures. The Portuguese were however on the run so far as their mastery of the sea was concerned. The Dutch in 1616 were in correspondence with the **Zamorin. The** Dutch, English and French were jealous of the Portuguese and all along the coast from Cambay to Konkan and Kerala, Indian seamen attacked Portuguese vessels with impunity. The Rajas of the coast assisted these seamen in return for a share of the booty. The European rivals of the Portuguese supplied cannon and other armaments to the Indian princes. The Portuguse, during this time, found themselves in such a pitiable position that they could not venture out into the sea without having **kaflas** or convoys of 300 and 400 ships despite their boast of great and epic Portuguese courage, fighting prowess and seamanship. It marked the historical phase of decline of their military and naval power.

The tomb of Kunjali IV, which is, of course, a memorial tomb, lies in his hometown of Kotta. It deserves to be treated as a national shrine since Kunjali remains a great Indian admiral who was inspired by patriotism and engaged himself, like his illustrious ancestors, in a series of naval battles with an enemy overwhelming in strength. The Kunjalis have made their valuable contribution to the task of weakening an enemy on the sea whose military power was based on naval superiority and superiority in weapons. But for this heroic action, the Portuguese could easily have occupied the entire western coast and eventually the whole country. The country, therefore, owes a great debt of gratitude to the naval heroes of Malabar coast led in battle by the great Kunjalis.

THE URGE FOR MEANING

By IAN TRAVERS-BALL

RIGHT across the face of our modern world lies a heavy paradox. Its roots go deep—deep into the heart of man. On the one hand, we are making tremendous advances with our nuclear power, our deep thrusts into space, our miracles in medecine, our technology, our revolution in agriculture. We are at war with hunger, disease and ignorance. We are fighting our way to independence and democratic forms of government where men are free and responsible. We are making huge efforts towards greater understanding and respect among different nations, races, colours and religions.

And yet, on the other hand, to make the paradox complete—and tragic—we have a very different picture. Something goes wrong somewhere, for the poor world of the 'sixties finds itself torn by terrible tensions. It is like a great arsenal that is threatened on all sides by sparks that could work havoc everywhere at any minute. There are two mighty power blocs glaring across at each other, while every corner of the world has its own smaller, but no less intense, conflicts. Is there a nation anywhere that does not have its own particular enemy ?

We can go further; within the borders of each country we find groups of men violently working against other groups. We find high and noble aspirations towards development and the uplift of the depressed, the hungry, the wretched; we find tireless efforts to raise the people—and yet we see at the very hub of these efforts corruption, favouritism and selfishness that drain off the life-flow of great schemes into unscrupulous pockets.

But our paradox doesn't even stop here, for it reaches right into the heart of each individual. It is not just the poor who suffer and taste the bitterness and anguish of our times. The prosperous and privileged, enjoying a bountiful leisure and having everything that money can buy, find thick gloomy clouds in their lives weighing heavily on them, bringing uneasiness, anxiety and an awareness of emptiness and futility. Intellectuals, businessmen, diplomats appear to many as the favoured sons of fate, but they too acknowledge that this strange paradox presses on all.

All this is a gloomy picture, but we are forced to admit that it is realistic if nothing else.

A contemporary school of Psychiatry in Vienna, led by Professor V. Frankl, heavily stresses man's will-to-meaning. A man must find a meaning to his life or else his personality slowly disintegrates. The goals of providing for a family, of striving for success and advancement in a profession are certainly real and gripping, but sooner or later the need of a deeper and more fundamental meaning is somehow sensed—an existential meaning for one's whole being and for one's family too. Anything less doesn't fully satisfy a man.

INADEQUATE SUBSTITUTES

Many substitutes for this deeper meaning offer themselves; they may satisfy for a while, but they do not last. One of these is the struggle for wealth. Anyone not living the life of a recluse has seen men whose god is money, their whole life becomes a dedication to this captivating master. Some of them are paid well in return. They have everything they want. And yet how often their god leaves them empty and hollow. A few years ago the writer came into regular contact with a man who had inherited a small business from his father. He married a girl who was the only daughter of wealthy parents. He expanded his plant, merged with another firm and forged ahead. His children attended the right schools and colleges, went overseas, had their own cars. Nothing was lacking. And yet to have a meal in that house was an ordeal. No one was happy, all were quarrelling. You got a feeling of hollowness and emptiness in their lives. Somehow meaning was lacking.

Another substitute for meaning is the pursuit of sensual pleasure. No rare case is the young girl in a recent English play who, on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

leaving high school, throws herself into a life of licence, laughing: "Hockey's all very well in its way, but it isn't really living is it ?" And even on the stage her harvest is a string of broken lives and frustration ending in tragedy.

A man can sell himself too, to one of the current ideologies in his pressing quest for meaning. Communism has won many an idealistic and generous recruit in this way. In his autobiography, 'I Believed,' Douglas Hyde, for years editor of the British Communist paper, 'The Daily Worker,' who grew disillusioned with Communism and became a Catholic, describes a Communist girl he knew. She had gone from the university through journalism into the Party. She had lost her Communist faith, but kept on working in the Party, "You see," she said, "I'm terrified of the vacuum that would be left in my life if I went." And Hyde adds, "one has to be potentially good or intelligent even to be aware that it is not enough simply to drift along without sense of purpose or direction with neither faith nor ideal." That, he asserts, is why Communism so often claims the most generous, and why it has spread in our day and no other, for we live in an age that has lost its belief.

But Communism, too, proves itself a pseudo-meaning. So many upright men have left it disillusioned. In Russia, after forty years, the regime still has to urge its teachers to eradicate the desire for religion from the youth of the country. The Soviet press features frequent exhortations to parents and Party members to remember their duty in this matter. Its artists and writers, like Pasternak, can still put meaningful questions on the lips of a Dr. Zhivago : "What will happen to YOUR consciousness (after death)? YOUR consciousness, yours not anyone else's. Well, what are YOU ? That's the crux of the matter." Always, that search for meaning.

At the other extreme are the ultra-conservative ideologies that are springing up all over the world today by way of reaction to a fast changing world. America has its current John Birch Society, while in India we have the continuance and even the resurgence of reactionary conservative movements, which easily tend towards fanaticism. Much of this can be explained by the need many feel for meaning in a society that is changing with alarming speed.

Many other phenomena throughout the world could also be explained by this drifting without an anchor, by this lack of a satisfying maning; there are existentialists who see life as absurd; there are beatniks and angry young men who just have to take a plunge into something, be it violent criticism of the *status-quo* or just eccentricity for its own sake; there is the problem of student indiscipline which can be the result of a youth that is adrift and disillusioned, ready to throw itself into any cause or riot that offers some escape from meaninglessness.

Obstacles to Meaning

But on the path towards meaning lies a heavy obstacle. Today's intellectual climate tends to be sceptical and agnostic. We are not happy with the man who takes a firm stand or makes a positive assertion. In fact, to profess an absolute view becomes almost an act of indecent exposure. But the danger is that this may well preclude the possibility of reaching any meaning. The man of conviction stands further condemned if he acts accordig to his conviction ; when he marries a girl just because he loves her, or when he mixes freely with other communities.

Another enemy in the quest for meaning is that we all tend to be such sheep. We have to conform to the crowd, and to step out and 'go it alone' in another direction is asking too much. But this again may be a fatal restriction in this vital search.

Writers in India today feel this weight of convention very heavy upon them. Our country and its society is in a tremendous ferment. A new world is coming to birth. We have only to consider the impact of a more universal education, industrialization, community development, equality, the wooing of the masses by political parties and communal groups. The writer feels strongly the urge to be in the thick of this effervescence and to capture its quickly passing stages with his pen. Reality today is rich and inviting, but convention and conformity are a heavy weight.

In Communist countries the artist, the writer and the student are stirring. They find the halter of the 'party line' heavy and constricting. Its meaning proves inadequate and doesn't touch one's inner depths.

In the West too, an 'avant-garde' feels sated with the glittering but hollow pleasures of a technological culture that thought it could manage

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

without the Christian values on which it grew. Some look for relief in a denial of all meaning to existence. There is just the present situation in which I find myself and it is absurd. Others look to a return to religion for their meaning. The renewed interest and examination of religion is witnessed to by the regular place given to it in magazines like 'Time' and by the number of articles on religion in other papers and reviews with world circulations. Many have doubted their faith, but now more and more are coming to doubt their doubts. A reporter of 'The New York Times,' after a wide investigation, declares that college students who "would not be caught dead talking about religion now discuss it as a live campus topic." Today, of course, a man may not be satisfied with the religion of his childhood, but as an adult, he can bring his critical faculties to the task of judging the reasonableness of any expression of religion.

Personal Courage Demanded

For all his progress, modern man is uneasy. The state of his world, of his country, of his community, his own inner tensions do not allow him to feel otherwise.

If the Vienna School of Psychiatry is on the right path, then it is a meaning that man in the 1960's must find, a fundamental meaning for himself and his own existence. The first step for the person who feels this uneasiness would be the readiness to face up to his need for meaning, to ask himself if his present position is adequate or not. Then with this frank awareness, he would require a lot of courage to begin his quest, for it may well draw him along unexpected paths.

And he can preclude no possibility for he is seeking the truth and meaning of his very being —and truth will not compromise.

KOOTHU AND KOODIYATTAM

By G. RAVINDRAN NAIR

Among the classical dance-dramas of Kerala the earliest types of theatrical art known and bequeathed to us are Chakkiar, Koothu and Koodiyattam. Efforts are under way to revive and popularise them even outside Kerala. A number of scolars including the late poet Vallathol Narayana Menon have contended that Koothu and Koodiyattam are older than Kathakali and that, in fact, the roots of the latter must be traced to the former. Kathakali is by all means an indigenous art of the South, but Koodiyattam seems to have been introduced into Kerala by the immigrant Aryans to convert the local people into the Aryan way of life and to propogate the knowledge of Sanskrit.

Koothu and Koodiyattam, the performance of which is monopolised by the professional Chakkiars, prodigiously endowed with a deep knowledge of Sanskrit and Malayalam and armed with weapons of humour and sacrasm, combine religion and art. Koothu is a solo performance in which the Chakkiar recites episodes from the **Puranas** and explains them in moods varying from the dramatic to the quick-witted. In the wide range of **Puranic** themes the usual selections of the artiste are the birth of Rama, his marriage with Sita, Hanuman's visit to Sita soon after her abduction by Ravana, the burning of Lanka (all from the Ramayana), the marriage of Panchali, Subhadra, and Rugmani, Rajasuya Yagnam, Krishna's mission from the Pandavas to Duryodhana for the partition of the kingdom (all from the Mahabharata), as well as **Duthavakyam, Kountheyashtakam** and others composed by illustrious authors like Melpathur Narayana Bhattathiripad.

Koodiyattam (lit: "dancing together") is a variety of Koothu in which two or more Chakkiars appear on the stage, dressed in costumes varying according to the characters in the epics whom they are said to represent. In certain performances

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Chakkiar acts the part of the male characters while the Nangyar (his wife), that of the female characters. In another the Nangyar declaims verses while her husband interprets them. The entertainment starts off with a prologue by the Nambiar who, as the veritable virtuouso on the beating of **mizhavu** (a kind of drum), provides the overall background music. In front of the stage on the left side is lit the bell-metal lamp (Nilavilakku), a feature prominent in the Kathakali ensemble. Like Kathakali these two histrionic arts also attach great significance to choreography and costumes. Koothambalams which form part of some of the Kerala temples are the theatres where, originally, people belonging to the high castes and the intellectual elite alone gathered to witness these entertainments. Apart from this, Koothu and Koodiyattam form an essential item of the temple festivals in some parts of the State even today.

A sidelight on these dance-dramas is that while explaining the stories, the Chakkiar digresses to cite some incident, political or social, from the mosaic of contemporary life in order to make his interpretation clear beyond doubt. In other words, an attempt is made at the complete identification of the **Puranic** world with the existing society. Here the Chakkiar gets ample opportunities to sit in judgement on the follies and the foibles of the age. He is at once an ideal satirist and a public critic. His biting sarcasm spares none, not even his audience. Custom has granted him the privilege of immunity from interruption while performing the Koothu or Koodiyattam.

The first reference to Koothu is found in the classical Tamil work **Silappathikaram** composed by Ilango Adikal in the 2nd century A.D. Koodiyattam had its palmy days under the Perumals who ruled over Kerala until the 8th century A.D. Kulasekhara Perumal, Bhaskara Ravi Varman and Cheraman Perumal were well-known patrons of this art. It is recorded that during the reign of Cheran Chenguttuvan a Koothu was performed for the first time outside Kerala, viz., in the Nilgiris. The famous poet Tolan who was a Nambudiri Brahmin from a village near Trichur and whose name is associated with Koodiyattam was the contemporoary and court poet of one of the Kulasekharas. He composed two monumental works on these histrionic arts solely for the guidance of the artistes.

Koothu and Koodiyattam possess enough potential for future development. Government and voluntary organisations can make co-ordinated efforts to secure for them a pride of place alongside other folk arts of India.

PICTURE POST CARDS AS AIDS TO EDUCATION

(A Review)

Colour Post Cards of Works of Sudhir Chatterjee, an Indian Artist, reproduced by Obpacher, A.G., Munich, printed in Germany. To be had of Messrs. W. Newmans and Thacker Spink, Calcutta. Price not stated.

Women with veil

The use of Picture Post Cards as cheap and convenient instruments and aids to the study of Art, Archaeology, and the History of Art has long been recognized in Europe and America. And the foreign museums have published post cards, in enormous quantities, representing important masterpieces of art—in their collections, which are very popular among art-students and connoisseurs of art. The British Museum Post Cards are, perhaps, the largest issues, covering all departments of art and archaeology. Following this practice, our Indian Archaeological Department has also issued some quantities of post cards (unfortunately very poor in their clumsy half-tones) reproducing Indian sculptures in outstanding specimens. In this respect, the post cards of the Nizam's Archaeological Department, reproduced in fine collotypes and colour facsimiles, printed in England, are perhaps the best in quality. But this series of six post cards in accurate colour reproduction—breaks new grounds—in publicizing and popularizing the works of an individual artist. And the fact that a firm of German printers have covered the works of an Indian artist—Sudhir Chatterjee—is no mean compliment to him and to India. The six pictures reproduced—are all in Post-Impressionist technique, chiefly reminding one of Van Gogh. They are very strong in their composition and colour, though the arbitrary distortion of human anatomy with "giraffe-like" necks may be disconcerting to many of us. As a novel form of publicity of individual artists—this example of publicizing colour post-cards deserves wide emulation.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But Reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

Reviews and notices of books in Gujrati :

Authors and publishers of Gujrati books, desirous of having them noticed or reviewed in *The Modern Review*, should send them direct to, Shri Rangildas Kapadia : Gandevi, Dist. Surat, instead of sending them to the Editor, *The Modern Review*.

ENGLISH

AKBAR THE GREAT, Vol. I : *By A. L. Srivastava. Shiva Lal Agarwala & Co. (P.) Ltd., Agra, 1962. Pp. 581. Price Rs. 20/-.*

Since the publication of the last authoritative work on the subject, *Akbar, the Great Mogul*, by the well-known historian Dr. Vincent A. Smith in 1917, some valuable fresh material till then buried in manuscripts in the archives of the library of the quondom Indian princely States and the *bhandars* of the Jaina monasteries, have been discovered by the efforts of scholars. The list consists of such works as *Tarikh-i-Akbar Shahi* (written in Persian by a revenue officer of Akbar's administration), the *Dalpat Vilas* (written in Rajasthani for one of the Rajput proteges of Akbar, *viz.*, Maharaja Dalpat Singh of Bikaner), the *Vir Vinod* (in Hindi by Kaviraja Shyamal Das), the *Bhanu Chandra Charitra* and the *Karam Chandra Vansa Prabandha*, (both in Sanskrit, giving contemporary accounts of Akbar's relations with Jaina religious teachers). A careful study of Dr. Smith's work, again, has revealed some of its serious defects such as the author's dependance upon English translations of the Persian sources and his rejection of the testimony of contemporary Indian writings in favour of later European compilations. It is, therefore, no exaggeration to state that our knowledge of the history of Akbar's reign in all its aspects, notwithstanding the richness of its sources, has remained imperfect till our own times. This gap is now being sought to be filled by the author in a series of three volumes of which the first dealing with political history forms the subject matter of the present work, the second and third volumes being intended to be devoted respectively to the administrative system and the state of civilization during the reign. The standard of scholarship reached by the author in the volume under notice is as high as we have been led to expect from his earlier work on the Sultanate of Delhi. The bibliography comprises a list of thirty-one works in Persian, nine works in Sanskrit, four works in Hindi and Rajasthani and two in English under the heading of original sources, along with twenty works in English, five works in Hindi and two works in Urdu, not to speak of a number of British Indian gazetteers and well-known research journals among the secondary sources. The author, while making full use of the ample original material, has discussed the views of recent authors on different points of detail with sound judgment. The description of the military and political incidents of Akbar's reign entitling him to be called the real founder of Mughal rule in India and of his enlightened policy leading for the first time in the history of Muslim rule in India to the loyal co-operation of Hindus (and especially the Rajput princes) in favour of that rule, are unusually full and detailed, and they are always supported by references to original authority. The concluding chapter contains a thoughtful account of the emperor's personal characteristics and of the evolution of his religious beliefs, together with a valuable critical estimate of his capacities as a general, a diplomat and an administrator, of his justice and statesmanship, of his patronage of the fine arts and his place in history. A perusal of this scholarly work suggests the possibility of a number of further improvements in its arrangement and contents. A complete classified list of the original sources with a critical estimate of their historical value should have come at the beginning of the volume. The concluding chapter containing a general account of Akbar's administration and the bibliography of original sources at the end should have contained some account of the emperor's reform of the coinage, the most important coin-types being illustrated at least by drawings. The description of Akbar's build-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ings with their sculptures and paintings should have been accompanied with some reference to the different styles of art (indigenous and foreign) that entered into their composition and enriched with some illustrations. To the two valuable maps of our country, (one at the beginning and the other at the end of Akbar's reign) which are given in the course of this work, might have been added an economic map indicating the industrially advanced areas with their characteristic types of industries.

U. N. GHOSHAL

ANCIENT INDIAN CULTURE AT A GLANCE : *By Swami Tattwananda, Oxford Book Company, Calcutta-16, New Delhi-1. Pp. 237. Price Rs. 10/-.*

'This book is an attempt to give a true picture of the pristine glory and depth of Indian culture in Ancient India, upto the 12th century A.D. . . .' And we are glad to announce that while the attempt has greatly and pleasurably fulfilled the purpose, it bespeaks highly of the 'glance' of the author, erudite and discerning.

In the chapters—1. Civilization of Ancient India, 2. Philosophy, 3. Religion, 4. Education, 5. Literature, 6. Science, 7. Arts, 8. Social and Economic Conditions, 9. Law and Administration, 10. Mahenjodaro and Harappa and 11. Greater India—with a wise marshallling of facts derived from findings of old and modern scholars the author has successfully proved his points in a scientific shorter compass than would otherwise be possible.

The references are copious and speaks highly of the Author's uptodatedness in the matter of Oriental Research.

We are glad to herald this remarkable book, expected to be useful to all the English-reading public throughout the world. It is suggested, however, that an index of names in the book be added in the next edition to make this document more useful to the busy readers of the modern time.

When all the chapters are well written, the the last two excel and we congratulate the Author for the simple style of language and treatment likely to draw even the general readers.

MONORANJAN GUPTA

MAHAYOGI SRI AUROBINDO : *By R. R. Diwakar, Bharatiya Vidya Bhavan, Bombay, pp. 298. Price Rs. 2/-.*

This is a book on the life, *Sadhana* and teachings of Sri Aurobindo. Sri Aurobindo, third son of Dr. Krishnadhan Ghosh and Sm. Swarnalata Debi, was born in Calcutta on the 15th August, 1872. Dr. Ghosh was a "Pucca Saheb" and wanted his sons to be brought up in English ways and Sri Aurobindo was sent as a hoarder together with his two brothers, to Laretto Convent School at Darjeeling. Barely two years at school, the parents took Sri Aurobindo with his brothers and sister Sarojini to England in 1879. During 1879-84, he was with Mr. and Mrs. Drewitt in Manchester for education and the Drewitts had instructions from Dr. Ghosh that his sons should not be allowed contacts with Indians. Barindra was born in Croydon, London in 1880, Sri Aurobindo had a brilliant academic career and his father wished that he would return to India as an I.C.S. But he deliberately neglected and failed in riding test and was debarred from entering the I.C.S. He returned to India in February 1893, and entered Baroda State Service (1893-1907). His knowledge of Bengali was extremely meagre so Dinendra Kumar Roy, well-known writer who was at Baroda, (1898-99) helped him to develop his knowledge in his mother-tongue. During ten years he wrote articles in *Indu Prakash* of Bombay and published for private circulation his first library publication "Songs to Martella." His maternal grandfather Raj Narayan Bose died in 1899 and Sri Aurobindo wrote a poem in his memory. He married (1901) Mrinalini aged 14, daughter of Bhupal Chandra Bose, Ranchi, according to Brahmo rites. He had contact with revolutionaries both of Maharashtra and Bengal during his stay in Baroda although he began *Pranayam* practices and *Yogas*. He attended Bombay Congress in 1904. He came to Calcutta in 1906 on leave and finally resigned from Baroda State Service on 15-6-1907.

1906-1910 were eventful years as Sri Aurobindo was in the political field although his politics were more spiritual (or entirely political ?) than political. He was fast advancing towards the great soul of *Life Divine*. His literary activities, his trial at Alipore Bomb Case (1908-09) are matters of history. Sri Aurobindo was acquitted and released on 5th May, 1909 : some of his historic announcements and literary productions acme at this time and he went to Chandernagore in February, 1910. As the British Government was always after him and was disturbing him in his *Sadhana*, he left Chandernagore on steamer "Duplex" and reached Pondicherry on 1st April, 1910. Since that arrival he was there till his passing away on 5th December, 1950.

Although, the world outside considered him as a retired sage living is isolation, Sri Auro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bindo was in touch with the affairs of the world affecting human destiny. Deeply in *Sadhana* he refused invitations from Bombay and Bengal to return to politics and lead the country in the struggle for India's freedom. He was always working for it, nay for the liberation of humanity from the bondage of ignorance.

In Pondicherry, C. R. Das saw him on 5th June, 1923 and asked for blessings for the Swaraj Party. He was advised not to leave politics. Dilip Roy, Kapali Shastri (1924), Lala Lajpat Rai and P. D. Tandon (1925) also saw him there.

On 15th August, 1924, Sri Aurobindo made a statement regarding his *Yoga* and the main distinction between the old *Yoga* schools of thought and his own. Reference to bringing down of the supermind for transforming mind, life and matter was also made in this statement.

Nov. 24, 1926, was the date of Victory, the coming down of the over-mind leading to the descent of the supermind to the earth-consciousness. Twenty-four persons were present on the occasoin. Since then this day is observed as the day of victory. This was the day of the regular foundation of the Aurobindo Ashram and the Mother (Mira Richard) took entire charge of it. Sri Aurobindo retired entirely and cut-off all connection except through the Mother. When asked later, he said that this seclusion was inevitable. In 1942, Sri Aurobindo supported Cripp's offer which was rejected by Mahatma Gandhi and the Congress. On 15th August, 1947, he issued a statement regarding Indian Independence and a general review of objectives and on the 30th December, 1948, he gave a message regarding physical culture. On 26th Nov., 1956, he fell ill and had intense suffering from kidney trouble. But the Darshan ceremony was not abandoned. The great son of India had Mahasamadhi at 1.26 A.M. on 5th Dec., 1950, but there was no decay in the body for 111 hours.

The learned author has made a wonderful presentation of the life, works and philosophy of Sri Aurobindo within a compass of 298 pages divided into 12 chapters. The times, personality, environment and the intricate *Sadhana* and its philosophy have been brought out in great relief and any reader will find the book a great help as an introduction to understand not only one of the greatest personalities of the age but his wonderful philosophy of Supermind, herald of a New Age.

The book first published in 1953, has been much revised and to the author and publishers we offer our best congratulations for offering the work at a cheap price.

A. B. DUTTA

BHARATBARSHEY RASTRABHASA O LIPI EBANG PARIBHASA SAMASAYAR SAMADHAN (in Bengali) : *By Debal Kumar Gupta, published by the author from 19C, Rajendra Lala Street, Calcutta-6. Re. 1.25 only.*

The author has gone to considerable labour to array his arguments against the claims and imposition of Hindi as the national-*cum*-official language of India. It is a known fact that in this democratic country—Hindi was adopted as our national-*cum*-official language in 1947, in the Constituent Assembly presided over by Dr. Rajendra Prasad and by the casting vote of the President—thereby making a farce of democracy. Since then—the Hindiwallas are carrying on a mad, irrational and illogical campaign to impose Hindi on the non-Hindi speaking States. The advocates of Hindi say that for national integration Hindi must be the order of the day. But in actuality the reverse has happened.

In the Language Commission—the minority report was not published. Whatever the public could know was from the brief press reports. most of which were blacked out in the Northern Indian Press !

The author has quoted the opinion of men like Sir Jadunath Sircar, Sri Prakasa, Mr. Subramanium, Mr. Rajagopalachari, Sri Vinoba Bhabe, Dr. A. Lakshman Swami (Vice-Chancellor, Madras University), Dr. Suniti Kumar Chatterjee, Dr. Sukumar Sen, all of whom consider the imposition of Hindi on non-Hindi speaking linguistic groups as not only most undesireable, but harmful to the future generations of India and the country at large.

Sir Jadunath Sircar, the world-famous historian wrote in 1954 : ". . . . . the Hindi fanatics will create an intellectual atrophy in Hindusthan, destroy for the next generation the progress we have so long made and cut off India's connection with the rest of the progressive world by forcibly excluding the English language : . . . What Nehru has aptly called 'imperialism of the Hindi language' can destroy and not create. Literature and philosophy are too delicate products, they cannot be pressed out of the official oil mill."

Mr. Sri Prakasa once, while addressing a meeting said, in giving his reasons for not supporting Hindi—"I must confess I had very often to close my ears when even Gandhiji was speaking Hindi." In addition he also said that Hindi "had the richest vocabulary of abusive terms." This will be enough for the present.

The author pleads for Sanskrit as very fit to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be the national language of India. This will certainly be better than Hindi in all respects. But just like Latin, Sanskrit cannot be revived and made current again in India. It is and must remain a language for Pundits only. However, the author has established his case against Hindi on solid logical grounds. The book under review should have been written in English for the benefit of the non-Bengali speaking linguistic groups of India. The author can even now act up to this suggestion. It is well worth it.

C. K. H.

SEX TREASURE : *By Prof. S. P. Goel, Lecturer in Economics, D. A. V. College, Muzzaffarnagar, U.P., and published by himself at the above address ; Pp. 312. Price Rs. 6/-.*

This is one of those many books and compendiums published in the country during the last several years on sex and sexology, which is not just a rehash of a collection of pornegraphic literature, Indian and occidental and ancient and modern. I do ot know what especial qualifications the author, a lecturer in the social science of economics, had to carry out a scientific study of the physiology and hygiene of sex, but it is apparent that he has brought a great deal of reading and thought to the treatment of a subject which, unless very carefully handled, would be bound to exude a certain inevitable measure of ugliness. A great deal of ground has been covered in the volume under review from the origin of sex, its physiology, hygiene, psychology and its bearings upon social health and morality. Taboo as sex has publicly been more many centuries in this country and in the West in polite society, deep and paralyzing ignorance on the subject naturally prevails which has not been altogether healthy or desirable since it is not possible to conjure away its existence as a vital factor of life merely by ignoring it. A certain measure of knowledge and healthy information on the subject would, therefore, be considered ordinarily desirable as an essential ingredient of preparation for facing the facts of life. A great deal too much sophistication on sex, however, may not altogether be desirable either, as that would be likely to eliminate the mysticism of romance from life. Romance may be old fashioned but the obvious frustrations of too much sophistictaion may, I feel, be healthily leavened over by an overlay of this old fashioned ingredient and thus help to make life a little more challenging, a great deal more desirable than it seems to be today. Prof. Goel, I am glad to find, has not, in his treatment of the subject, altogether discounted the place of romance, a difficult feat, indeed, in any scientific discussion of sex. It is, therefore, a book which might be of some assistance to the really mature in his dealings with life without tending to make it too obstreperous.

KARUNA K. NANDI

SANSKRIT

JNANASRIMITRANIBANDHAVALI : *Edited by Prof. Anantalal Thakur, Mithila Institute of Post-graduate Studies and Research in Sanskrit Learning, Darbhanga. Tibetan Sanskrit works series, Vol. V. Kashi Prasad Jayaswal Research Institute, Patna.*

The volume under-review comprises twelve tracts on different aspects of Buddhist Philosophy, especially logic, by Jnanasrimitra, a great pillar of the University of Vikramashila. The name of the learned author and some of his views were so far known through second-hand sources. Of his works one, the *Karya-karanabhavasiddhi*, alone was known to exist in Tibetan translation. Hopes of getting his original works were almost given up. Searches by Mahapandit Rahula Sankirtayana have brought to light mss. in Tibet containing the texts of a number of his works, on the basis of photographic reproduction of which they have been edited here. The work supplies a wealth of information otherwise unknown and gives us a clear picture of the scholastic rivalry prevailing between Hindu and Buddhist logicians after Dharmakirti. Not only does the author refute the views of the reputed Vachaspati Misra, but we find him quoting from and criticising little-known authors like Sankara, Trilochana, preceptor of Vachaspati, and a host of others. It reflects credit on the learned editor that he has been able to evolve a readable text with the scanty material at his disposal especially taking into consideration the fact that the works deal with rather obscure matters with which the scholarly world lost touch for a long time. The editorial introduction contains an account of the author, a brief description of the contents of the works edited, a discussion on their authorship and chronology, a note on the Buddhist and non-Buddhist authors and works utilised by Jnanasri and a reference to his influence on later philosophical literature. The present volume with a previous one, the *Ratnakirtinibandhavali*, will be of immense help to scholars in understanding the Yogacharya-Vijnanarada views and the mutual relation between Brahmanic and Buddhist logic.

Social Transformation is Essential for National Integration

Writing under the above caption in the October, 1962 issue of the Quarterly *National Integration*, Prof. Prasanta Chandra Mahalanobis, Member, Planning Commission, has something to say which should be of vital interest to the country at the present moment. The following are excerpts from the article in question :

The problem of improving the material and cultural conditions of the poorer countries of the world has been engaging serious attention during the post-war period. . . . It is being increasingly realised that political freedom is necessary, but not enough. In most of the underdeveloped areas attention is being given increasingly to economic development to improve the level of living. It is also being increasingly appreciated that rapid economic growth can be brought about only by an increasing accumulation of capital to supply modern tools and machinery for new and expanding productive activities which would, in time, solve problems of unemployment or under-employment, and would continually improve the level of living . . . . The choice of productive activities (that is of investment) must also be such as to secure the best possible rate of growth over a time horizon of a generation or more.

It is necessary to give opportunities for participation in productive activities to the largest number of people, and as soon as possible, to all such people as are capable of undertaking such work, and also to utilize available resources in the most effective way for the benefit of the nation as a whole. To create fullest opportunities for rapid growth, it is necessary to remove all barriers to the effective utilization of productive forces, by the people, for the benefit of all the people in the country.

The heart of the problem is to make changes in all necessary directions at the same time, in a balanced way, so as to bring about a structural transformation as quickly as possible. A structural transformation of the whole society is, however, indispensable to make conditions fit for rapid economic growth. Without such transformation any amount of help from outside would be ineffective. The experience of many countries during the post-war period corroborates this.

It is also necessary to develop the outlook of science and the experimental attitude of the mind in order to acquire knowledge of natural and social laws and to invent new techniques for initiating material and changes. This is the only way in which decisions can be made increasingly in a rational manner, in accordance with the principles of objective or scientific validity based on relevant data and correct reasoning, instead of on the sanction of authority based on statute and power or custom or conventional or revealed rules and laws.

The scientific and industrial revolution took place in West Europe and North America roughly over a period of three or four hundred years. It is not possible to wait for such a long time for the underdeveloped countries to attain reasonable level of living. The historical process of transformation must proceed five or ten times faster. Such speeding up of the process of transformation has always been a characteristic feature of biological evolution and can be achieved.

There is general agreement about some of the most important contents of or elements or aspects of the social transformation, such as land reform, mass education, technical training, increasing equality of opportunities, the possibility of a labourer or an initiator securing the fruits of his labour, or the need of medical and health services and cultural amenities, etc.

Historically land reform has been a most important factor in economic development of all advanced or rapidly developing countries. Agriculture and industry must advance at the same time. It is, however, important to note that generally *agricultural surplus* (or the surplus from extractives) *is essential for industrial development.*

The aim must be to secure the fruits of his labour to the cultivator so that he has the incentive to improve the land and to introduce more advanced technological methods. The tenancy laws must protect the tenant against eviction so long as he is using the land efficiently, and to secure to him the right of fair compensation upon the termination of the lease for all unexhausted improvements made by him. It is also necessary to eliminate the unproductive consumption of the surplus from land by intermediaries and landlords, who have no productive functions, by abolishing their rights.

The question of economy of scale of production may, admittedly, introduce difficulties. The breaking up of large farms may lead to a reduction of the surplus; however, the beneficial effects of greater equality of income and wealth may compensate for the other loss. Also, in countries where there are too many cultivators,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

often with scattered plots, further breaking up of the holdings may easily have adverse effects on the efficiency of production. In such a situation it may be necessary to promote consolidation of holdings either voluntarily through co-operatives or by legislation, or both. *Redistribution of land has limits and is a complicated question. It is wise to recognize that steps taken at one stage may have to be reversed at a later stage.*

It is indispensable that every one in the working age-group should be fully utilized to increase the national product. It is necessary, therefore, to remove all social, economic, legal and political barriers which prevent individuals or goups or sections of individuals to become fully productive. Conditions are worst in a country stratified by caste, colour, creed, or language and where sections of people are sometimes deprived of opportunities by customs, law, or social and political prssures by ruling groups.

It is essential to help every one to make himself fit for the highest type of productive work of which he is capable. Opportunities for education and training and for productive work must be made as widely available as possible. Sufficiently rapid progress would be difficult or impossible in societies in which there is lack of vertical mobility and where small sections try to preserve their privileges based on heredity, custom or law without any relation to their productive contribution.

A characteristic feature of modern underdevelopment is the segmentation of the country into innumerable regions, castes, tribes, languages, religious communities, occupational and other groups which focus attention on the welfare of small sections of the people without any awareness of the best interests of the country as a whole. *It has to be recognized that rapid progress is impossible without painful adjustments and damage to sections of people whose interests are based on special privileges or old techniques, and that old beliefs, customs, and social institutions have to be discarded and all barriers of caste, customs, creed, colour, language and sectional interests must be ruthlessly eliminated.*

The removal of social and economic barriers is an indispensable condition for the emergence of the sense of national solidarity without which national development is impossible. It is not possible to isolate the scientific, or the social, or the industrial aspects of the transformation from one another. Advances must be made at the same time on all fronts. This creates difficulties but also has its advantages. Progress in one direction stimulates and promotes progress in other direcitions. It is the task of leadership to maintain a proper balance between the different aspects and phases of the process of modernization in its full sense. The aim continually must be to create a society from which social, economic and political privileges have been completely eliminated.

In underdeveloped countries there is sometimes a tendency to adopt *too expensive or too sophisticated schemes* of education, care of health, public buildings and construction, wages or salaries of government employees or labour legislation. The educational system must be viewed as a pyramid ; the lower the stage the wider should be the base and lower the scale of expenditure compared with those of advanced countries, while at the highest stage of advance studies and research the number involved would be extremely small but scales of expenditure may approximate to those of advanced countries. The remedy is to adopt a system which would be in keeping with basic aims and yet within the means of the country.

Government expenditure often tends to become unduly large in underdeveloped countries owing to the adoption of the much higher standards of the advanced countries. This leads to unecessary high scales of wages and salaries for government employees or costly public buildings; which in turn would increase the feeling of separation between government and the people and hamper national integration.

Legislation in imitation of the more advanced countries at too early a stage may lead to increasing ineffciency of performance in countries with surplus labour and may increase cost of production so much as to have serious adverse effects on exports. The most important thing is to establish a definite link between remuneration and output in the case of all types of work of which the volume and quality can be estimated even roughly. It is necessary to recognize that trade union movements can gain real strength only on the basis of increasing productivity.

The transfer of modern technology from the advanced countries also calls for much adaptation to suit the needs and local conditions of underdeveloper regions. To profit by the experience of the advanced countries and yet to introduce modern technology and modern social and political institutions in a way suitable to the particular stage of development of the country is a matter of crucial importance in the process of modernization. Ultimately, success would depend on the growth of a rational outlook and the experimental attitude of the mind first, among the leadership at all levels and then gradually among the general mass of the people.

FOREIGN PERIODICALS

Is a New Literature Possible ?

Literature is easily one of the most limited of the arts. It is limited because it has as its materials words, which have meaning apart from their use in literature. And this meaning—even if stretched—must be maintained with a literary work. In painting and music, the cards with which the game is played can be replaced by a new pack. In literature, the pack can only be reshuffled.

It follows that literature can never become new in the way the other arts can. For if the literary artist could revolutionize his medium for the purposes of his art as a painter or sculptor can his material, or even a composer the instruments for which he writes, then literature would become not merely divorced from "life," but from language.

There have, of course, been attempts to invent a special literary language of images, symbols, or sounds separated as far as possible within a literary work from outside associations and from prose meanings. In the nineteenth century, for example, there were the Symbolists, led by Mallarme, and more recently, the movement known as the Imagists.

Imagist poets such as H.D. attempted (perhaps without fully realizing they were doing so) to write an unanalyzable kind of poetry, close to painting, by concentrating on the creation of an image rather than a statement. They advocated a kind of poetry which could not be completely paraphrased, the kernel of which was an unanalyzable word-picture. They wanted to release poetry from the burden of past conventions and traditional ways of thinking by reproducing the image which springs naked into the mind from the impact of some aspect of modern life. Yet, ironically, their influence developed critical consciousness far more than it did poetical creativeness. Every poet-critic produced ten critic-poets.

Moreover, the most intelligent of the Imagists soon realized that a poetic medium which was entirely special would cease to have meaning. An art made from such a medium would be calligraphic or onomatopoetic, approaching painting or music. Attempts, like those by the Dadaists and Kurt Schwitters, to produce a poetry of typography or of sounds, totally devoid of prose meanings, point up the fact that such attempts could only succeed if they produced a completely new art, which of course would not be literature.

Thus a "revolution of the world," in the sense of the words changing completely their meaning and becoming something else, is one kind of revolution that is impossible. It may be theoretically possible to discover an entirely new form in which a poem might be written, but from is only one aspect of a poem, and its being unprecedented would only make a superficial break with the unavoidable continuities of grammar and usage.

But the fact that language of its own nature repudiates a complete break between past and present leads to the opposite and, as it were, complementary error to that of those who think a literary work should be new in the way painting, sculpture, and music can be. This is the error of those who think that modern creativity must be tied down to the values of certain established masterpieces. The exponents of the Great Tradition and like theories argue that modern conditions are unprecedented (by which they mean in the line of no continuous tradition); therefore, work of value cannot be created from these conditions. They only hope—the argument runs—is for writers to study the works of the Great Tradition, works which were written in a time when literature was the crystallization of the organic life of the community.

If this attitude is applied not just to modern conditions, but to the language and idiom which arises from them, it follows that writers should confine themselves to writing within the context of the literary languages hallowed by tradition and avoid the language which has been corrupted by unprecedented modern circumstances. Yet, for a writer at any given moment in history, the potential material of his art is the whole of the language surroundinig him in his circumstances.

In effect, both views—that writing can be entirely new and that it must be attached to the values of selected critically interpreted reading matter—limit creativeness within the development of language, the first by separating the modern from the past, the second by separating the past from the modern. Language, the material of literature, is neither completely new nor completely traditional. It is always evolving and cumulative.

What can be done within the literary medium once this fact is recognized is illustrated by the work of James Joyce. He is often confused with "experimentalists" like the Dadaists, the Surrealists, and Gertrude Stein, but his aims were as different as possible from theirs, and the difficulties his work offer are of an entirely different kind. The difference between Joyce, and, for example, Gertrude Stein—with whom he particularly hated to have his work associated—can be summed up by saying that her tendency was to produce a non-language, his to produce a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

true literary language, extremely difficult because packed with meanings the clues to which are almost inaccessible.

Joyce attempted, in "Finnegans Wake," to invent a language in which several themes can be combined in the chords of portmanteau words formed from other words in several tongues with meanings fused on several levels. The ideal reader of "Finnegans Wake" (a figure Joyce had constantly in mind) should be equipped with a knowledge of all the referents—languages, places, history, autobiography—to which the work alludes. Given all this, he would find "Finnegans Wake" by no means impenetrable. It would appear to him a complex, difficult, translucent, but paraphraseable work, as susceptible of extensive elucidation as "The Divine Comedy."

Yet I question whether the absorption into modern poetry of a good deal of the idiom of the street and of scientific and philosophic discussion makes modern poetry, in the completest sense, idiomatic. It seems to me that the idiomatic is a style of language in which it should, ideally, be possible to conduct a dialogue with the people from whom the idiom is borrowed. It should be recognizable by those from whom it is derived as being about them, and not seem to be merely their involuntary contribution to a monologue which does not concern them.

What the moderns did was to invent new literary idioms brought up to date by the intelligent awareness of writers like Joyce, Eliot and Pound of the nuances of contemporary idiomatic speech. They absorbed and selected idioms, parodying them, turning them to ironic effect. They were writing not so much for those who belonged to the modern world as for those who, hating it, knew about it and could think in its terms. In the work of these writers there was an increased sophistication of language reflecting a consciousness of the way in which contemporaries think and feel. This was an immense gain, but it did not have the result of bringing modern literature closer to the people who used the idioms, nor even to those who discussed science or philosophy. In the Thirties, when there was an especially serious attempt to bring poetry close to the ordinary people, writers succeeded in writing about the people—but not in a language the people would understand.

What the idiomatic writing of Eliot and Pound did was to break through the crust of poeticisms which enclosed the Edwardians and Georgians. It enables poets to write about modern ideas in a language open to contemporary sights, sound, phrases, and habits of thought.

Probably the aim of this idiom was that which Eliot described as the achievement of Dryden who, he writes, "for the first time established a *normal* English speech valid for both verse and prose, and imposing its laws which greater poetry than Dryden's might violate, but which no poetry since has overthrown."

But the moderns—as distinct from the Wellses and Bennetts and Shaws, who were contemporary without being modern—were writing for trained readers, poets writing for critic-poets. They transformed the literary medium into one which could discuss the kind of ideas Tennyson had already grappled with in "Locksley Hall" and "In Memoriam" in an idiom which, inside the club of writers and readers, was ironically responsive to the nonliterary language spoken outside. When Auden started to write in the late Twenties, he had at his disposal a language that could discuss current ideas without having to translate them into a poetry where they became as awkward and incomprehensive as the gestures of the deaf conversing with the dumb.

Nevertheless the languages of modern poetry still remains to a great extent that of a literary elite. The mandarins have absorbed into their converse highly intelligent, witty—and sometimes even appreciative—echoes of and references to the world that goes on outside, but fundamentally they are agreed in being opposed to the aims of this world even when they feel a bit humiliated by the unparalleled penetration and flight of its scientific thought and philosophic reasoning. They are secretly intrigued by the idea that they might in their own medium produce works as difficult, inventive, and intellectual as scientific theories.

The invention of the "interior monologue" by Joyce, the time theories of Proust, the "continual present" of Gertrude Stein have all been defended on the ground that they are inventions in literature corresponding to the theories of modern scientists. Yet, in English, "Finnegans Wake" is perhaps the only work which suggests a true parallel to science. Like some theory put forward by a physicist and as incomprehensible to other physicists, it postulates an ideal and a perhaps as yet unborn interpreter who will be able to receive the message. It regards "communication" not as continuous intercourse between a great many similarly attuned minds, but as the potentiality of an extremely abstruse truth which one mind has objectified in statements to be comprehended in ideal circumstances by an advanced specialist.

The Joycean obscurity is the result of the writer's creating his work as specialization. The formula is only communicable to the ideal reader

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

110 849

Digitized by Arya Samaj Foundation Chennai and eGangotri

who has devoted his whole life to understanding it, and yet it is about the world which concerns all men, and it may, in its results, shake the world. This means that the language, however much it many exploit the current idiom, does so in an esoteric way intelligible only to the most devoted readers. If the "school of Joyce" writers were the only poets and novelists, within 100 years there would be a special literary language for the elite, quite removed from idiomatic speech.

In one respect the machinery of dream and metaphor of "Finnegans Wake" comes close to modern painting. For the central mythology of some of the best modern paintings derives from the concept of metamorphosis. And in "Finnegans Wake" there is constant metamorphosis: the waker changes into the sleeper who in his dreams becomes one with the landscape and with not only his own but all history.

We still look at Surrealist painting. But I doubt whether anyone today reads Surrealist poetry, and the attempt in "Finnegans Wake" to use language as a medium whose nature in itself is perpetually being transformed is that which, even more than the difficulty of the language itself, makes sustained reading of Joyce's book so difficult—perhaps impossible. Painting is the art best adapted to the mythologies of matamorphosis, largely because it is an art whose own nature can undergo the most fundamental transformations in sympathy with, on the one hand, the dreams and the historic condition of modern man and with, on the other, advanced techniques of representation.

Language can describe, define, explain, represent change, but only in words which themselves cannot be matamorphosized. The endeavor to invent a metamorphosizing language, as in some modern poetry, presses at a barrier beyond which words might shed their meanings and become *things*. As I have said, in the present century the imagist poets tried to write a kind of poetry which made a complete break with the past. They had the aim which Herbert Read attributes to modern visual artists: "a unity of intention that completely distinguishes it..... from earlier priods." But it became evident that a completely new poem would consist only of a pattern on the page, unrelated to meaning outside itself.

Thus the development of modern poetry has been for poets to turn away from the invention of poems as visual objects to an interest in the extension of poetic meaning in traditional forms and language. The shift of aim can be show by comparing, say, Eliot's "Preludes" with "Four Quartets." In "Preludes" the tendency is for a situation, though related to modern life, to be isolated within a poem and have a meaning as an impression or image concentrated in the poetry itself. In "Four Quartets," meanings borrowed from theology, philosophy, and literature flow into the poetry from outside, theatening at times to dissolve it in ratiocination. A way of putting the difference might be to say that the tendency of "Preludes" is to produce a concentrated essence of poetry in which the unpoetic elements of prose experience and ideas have been eliminated; the tendency of "Four Quartets" is to attack surrounding ideas and expreriences by using the poetic concentration as a solvent which can purify and test them. But perhaps the second attempt would not be possible unless the elements of pure poetry had first been isolated.

This brings up the matter of traditions as it relates to the arts, especially to literature and painiting. The question most often asked today about a considerable poem or novel is: "Is it in the line of the tradition?" The question that should be asked about a paining is: "Is it, although entirely different, analogous with some past work which we admire?"

Epstein, standing before one of the great African sculptures he had collected, is reported to have said: "We shouldn't in any way wish to imitate this. What we want is to make something which, in relation to our own time, is as strong." It is difficult to think of a poet claiming that he could establish, a relationship traditional by analogy with Negro tribal poetry. The thought would at once suggest to him the lack of any connecting line between African languages and English.

Literary influences are communicated like sap that reaches from the soil up through the trunk and branches of a tree into the leaves. Visual influences flash their messages directly across spaces and centuries dividing different cultures. A contemporary interpretation like that suggested by Epstein's remark can make all visual art of the past available to the living artist. And the values of the visual arts—where these consist of proportions, harmonies, and combinations which the critic discovers in works of all periods and cultures—are universal in a way in which those of literature can scarcely be generalized.

Language barriers have not collapsed between the literatures of different modern countries. We are today no nearer the world literature foreseen by Goethe than he was in his day. In some ways we are further from it. But we live today in the midst of world painting, with the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

advantages and the disadvantages for visual art that the almost uncontrollable intercommunication of artistic influences between contemporary cultures entails.

When modern literature was closest to painting, Joyce, Pound, Eliot, and Wyndham Lewis had an attitude toward tradition which was that of the visual artist. The reaction against the extremes of futurism was concommittant with the splitting up of the international all-the-arts movement into its components. The writers turned back to tradition because they turned back to language which cannot—as can the media and symbols of painting—reinvent its own terms.

It seems to me possible that just as, in the early phase of the modern movement, poetry turned to painting in order, through concentration on the creation of a pure image, to release itself from conventions, so painting may have to turn to literature to rediscover standards.

Towards A New System of the World

In the following article, Professor Dr. Walter Hallstein, President of the European Common Market Commission, points out the world-wide significance of progressive integration in the European Economic Community :

In all discussions about the functional expansion of the European Economic Community (E. E. C.) and the possibilities of a political union it should be stated at the start that the Community's organs have already fully proved that they are working well. In particular, it has become clear that the Council of Ministers of the E. E. C. is in a position to solve even the most difficult problems. It is already a genuine organ of European responsibility. Unfortunately many misunderstandings have been caused by confronting with each other the two phrases of economic community and politiical union. It must be made clear that the true issue is not a transition from the economic dimension into the political one.

Although the European Economic Community has economic effects and an economic significance, it is essentially political. This goes both for its goal and for its structure and functions. It represents the poolings of the governments' economic-political and social-political activities which have been kept separate so far and which are now being led together for the six member countries of the Community. The modern state sets essential conditions for the economic activities of its citizens through legislation as well as by the day-by-day individual actions of its organs which are termed "policy". It is this activity of the six states which is being pooled, but not the "economy". The organs of the Community do not produce goods, nor do they buy or sell. They are neither a supra-national trade union, nor a consumers' co-operative.

Three Deep-reaching Processes

What now are the effects of the E.E.C. on the world outside ? From the day when it came into existence it has always aroused a great deal of interest in the surrounding world. Three processes prove that it marks, in fact, the start of a new situation : The first process is a truly momentous change : Britain reaching out towards Europe. If this move is successful, it would be a historical event of the first order. The second process is the initiative of the Kennedy administration which on the technical level has become known under the name of "Trade Expansion Act", while "Atlatic Partnership" is the catchword in the political sphere. Had the E. E. C. not achieved what has, in fact, already been achieved, the policy of the biggest power on earth would surely not have oriented itself towards Europe, thus giving the old continent a chance, undreamed of only a few years ago. The surrounding world's reactions to the E. E. C. include another one—the reaction of Mr. Khrushchev. The West has already witnessed a whole series of deliberate attacks against the E. E. C. ; this creates the impression that Moscow has launched a large-scale political-psychological attack.

At the root of Moscow's attacks against the E. E. C. is the Soviet Leadership's clear, if late realisation that something is going on here, unexpectedly, rapidly and successfully, something which must not happen at all in the Marxist-Leninist view. After all, capitalist states are not supposed to overcome their differences and to unite. It must not be true that this unification is creating the prerequisites for a large-scale, long-term economic policy which in addition promises stability and insensitivity towards crises. Nor does the Communist camp like to see that the European process of integration is touching off economic impulses which are leading to steady, sometimes stormy economic expansion. In the view of leading communists it must simply not be true that as a further result of these events an economic system is taking shape in Europe which one day might span the entire free world.

Understandably Moscow is opposed to this scheme. This is understandable for theoretical as well as for practical reasons. The economic development within the East Bloc is, after all, in a crisis which is apparently giving growing concern to the Soviet leadership. It is only a crisis of the Soviet economic system, but at the same

time, a crisis of the integration inside the Communist bloc. Added to this a situation which is not without danger for Moscow and which has been caused by the aid to developing countries. Soviet propaganda would be only too happy if it could make the young countries, especially those in Africa, believe that the Western European groupings were aimed at exploiting the poorer peoples and keeping them in dependence. But in this it has no success. Even if Moscow fails to mention it—the striving young peoples are not ignoring the gradual creation of a new system for world trade and world economy, based on a spirit of genuine solidarity of all peoples which love freedom and which want to co-operate in mutual respect. They recognise that the European Economic Community is making an honest effort towards bringing together all forces capable of peaceful collaboration.

It would be unrealistic to strive for a world state. The development of a new entity is possible only in a regionally limited framework, at least for the time being. But what can be done on the part of the West and what must indeed be done, is to safeguard a system, supported by two strong pillars, the United States of America and —Europe. This partnership needs no new institutions. For Europe, the thing to do is to advance on the road to unification, fast and unswervingly. Apart from that, it should be clear that there is no limit to the partnership between the USA and Europe. There is to be no discrimination against any country in the rest of the world which does not only want to live in freedom but is also prepared to serve this freedom. The Atlantic partnership can indeed accomplish a world-wide function by bringing a free economic system within reach of the entire free world.
